Page 426, col. i, line 9. For "timber" read "tinder."

The Nation.

NEW YORK, THURSDAY, JULY 2, 1896.

The Week.

THE Democratic convention in Wisconsin on June 23, like that in Minnesota a fortnight earlier, declared in favor of the gold standard and against the free coinage of silver. As the Republicans in these States had previously taken the same position, both parties in Wisconsin and Minnesota are now committed to the doctrine of sound money that is really sound. The same thing is true of the Republicans, who are the dominant party, in North Dakota; the Democrats there have not yet held their convention. These three States constitute that section of the Union where the foreign element is the largest anywhere to be found, the proportion of the population whose parents, one or both, were foreigners, being 73.69 per cent. in Wisconsin, 75.42 per cent. in Minnesota, and 78.98 per cent. in North Dakota. Those persons who think that foreign ignorance is what threatens the stability of American institutions, will do well to contrast the financial history and present position of these three States with the record and attitude of three such States as Kansas, where the foreign element is only 26.78 per cent., Missouri with 24.98 per cent., and Kentucky with but 9.87 per cent.

The Democrats of Illinois went wild last week for free silver and free riots. "The arbitrary interference on the part of the federal Government in local affairs," they say, "by ignoring the lawful authorities, is not only a violation of the Constitution of the United States, but a crime against free government, and is destructive of the very foundation of democratic and republican institutions." This refers to Debs and the great strike and boycott of the American Railway Union. It affirms virtually that if a riot breaks out in any place which stops the running of cars, the movement of interstate commerce, and of the United States mails, and if the Governor of the State is in sympathy with the rioters and neglects to suppress their unlawful acts, then the President of the United States must do nothing but allow the rioters to have their way. This is Altgeld's theory of free institutions—freedom to throw trains off the track, to burn loaded cars in the midst of great cities, to kill conductors and engineers if they attempt to perform their duty, and to strangle the trade and commerce of the whole country. Naturally the passage of this resolution by the convention is followed by another cordially endorsing the administration of Gov. Altgeld. Illinois would be in a pitiable condition if such a man could be re-elected as her chief magistrate after all that he has done to produce chaos in her principal city. It was right for the convention to renominate Altgeld. It is time to find out what sort of people inhabit the State, and whether life and property are really safe there—a question which can be determined in no other way so speedily and surely as by putting his name before the voters for their suffrages once more. Four years ago they did not know the man. Now they know him very well.

Mr. Whitney's absurd New York Democratic platform has been received by the silver Democrats in just the way that might have been expected. It heartens them greatly. If that is the best the Democracy of New York can do, the silverites may gayly run down their steep place into the sea. For argument, all they need to do is to point to Mr. Whitney's concessions. He gives the whole case away. All he lacks is the courage of his convictions. *That* they will supply in unlimited quantities, with the courage of their ignorance thrown in. He is all very well as a philosopher to point out the way where he dare not go, but they are the men of action who will translate his reasoning into deeds. What the silver Democrats dreaded was an outspoken and uncompromising gold platform from the New York Democracy, with a bolt distinctly threatened. If such a platform had been put out last April, it would have had a powerful effect in other States. But to wait till the end of June, and then give forth a lot of mushy bimetallism, was the surest way to make New York Democrats contemptible in the eyes of the party and the nation.

The Democratic nomination for the Presidency will not be made for a week, and the canvass never really opens until some weeks after the last of the conventions. But the fight for control of the next House of Representatives is already on, and, as we have previously said, that body will hold the key to the situation. The Senate, from 1897 to 1899, will surely be controlled by the silverites. With either the nominee of the Chicago convention or McKinley in the White House, we can no longer depend upon the President for protection from the silver madness, as has been the case under Cleveland. The only assurance of salvation will be in the election of a House of Representatives a majority of which will prevent any concession whatever to silver. The pressure for some concession will be tremendous. If McKinley shall be elected, he will come in pledged to give the country a high tariff. The Senate will "hold up" any tariff bill until the ransom price is paid in the shape of an agreement to coin more silver dollars, or buy more silver bullion, or coin the seigniorage. What is absolutely essential is a majority in the House which cannot be inveigled or bulldozed by the protected interests into a surrender to the silverites.

In order to secure such a majority, the sound-money men must go to work without a moment's delay. Two members of the next House have already been elected—Republicans from Oregon who favor "doing something for silver." Two Republicans have already been nominated in Kansas districts upon silver platforms. Silver Republican newspapers in the West, like the Detroit *Tribune*, are urging the immediate organization of the silver forces to capture the caucuses and secure the nomination of Representatives who will pledge themselves to favor silver legislation. Congressman Aitken of the Sixth Michigan District, a Republican who seeks reëlection, declares that he is "bitterly opposed to a single gold standard, and will not tolerate it." Republican Representatives in other Western States are explaining that the St. Louis platform really commits the party only to opposition to free coinage, and declaring that they will favor other silver legislation if they shall be returned to the next House. Such developments as these show the imperative necessity for equally vigorous action on the part of the sound-money men at once. Nominations in a large proportion of the districts will be made before the Presidential canvass really opens in September. If the believers in a gold standard postpone work until then, they may find that it is too late to avert the danger of an untrustworthy House of Representatives.

All the outgivings from Canton indicate that McKinley and his managers will try to make the tariff the issue of the campaign. "The tariff is the only issue, of course," says the great Hanna, after a conference with the candidate. "There is but one issue, and that is the tariff," says Thomas McDougall, a Cincinnati politician, after a similar conference. "The drift of all McKinley's speeches and conversation thus far," writes William E. Curtis, who knows him well, to the Chicago *Record*, "is towards a revival of interest in the tariff, which the national committee will force to the front as an issue in the campaign." It is easy enough to say that the tariff shall be the issue, but how are McKinley, Hanna, and the rest going to make it such? A new tariff can be secured only through a trade with the silver men, like the one in 1890, when Teller & Co. insisted upon the silver-purchase act before they would let

the McKinley bill become a law. So long as this is the case, the financial question must be the chief issue. To say that all the country wants is revenue, and that the Republicans will pass a tariff bill that will give this revenue, will deceive nobody when every one knows that the Senate will never let such a bill through unless another blow shall be dealt at the stability of our currency system. It is right to say, however, that McKinley on Friday made a speech at Canton, in which for the first time he defined his dollar satisfactorily. He said it must be a dollar "good for a dollar, not only at home, *but in every mart and market-place of the world.*"

It is a curious survival of the Blaine campaign that clergymen should have taken to writing letters to the newspapers calling attention to McKinley's exemplary church-going habits. The objections to Blaine were, indeed, of a sort which a good record for church attendance would tend to rebut; though it would also be consistent with the theory that he was not only a dishonest man, but a hypocrite as well. But McKinley's personal character is not called in question, and testimony as to that can hardly be taken as a conclusive reply to the doubts about him which are really troubling people. What they want to know is, if he is the man, by knowledge and conviction and force of character, to take charge of the nation's finances at a crisis of unexampled gravity. They crave assurances that a man who endorsed notes up to ten times the amount of his property will not consider that method a safe one in conducting the business of the Government. They are anxiously trying to find out whether he will resolutely veto a bill for the further purchase of silver and inflation of the currency, and whether he will exhaust every power lodged in the Executive to maintain gold payments before he will see them fail. Really, we must point out to the reverend logicians, it is no answer to say that McKinley is regularly in his pew on Sunday mornings, or that he does not beat his old mother.

The working of the McKinley magic is already visible in business, as all earnest thinkers knew it would be, though it is a little hard to follow the process. A surprising falling off in our worsted and cotton imports from England is reported for the past four months. This is as it should be. McKinley simply will not have imports. The trembling Britishers know this, and would not, of course, risk their goods in a land where the eye of a McKinley is upon every recreant American who dares to wear a foreign coat or shirt. To be sure, the falling off appears to have occurred under the wicked Wilson tariff, of which the main design was to strengthen England's "hold" upon us, but what we would ask is, did it occur until McKinley was "sure to be nominated"? We rather think not, and we believe a careful comparison of dates would show that the diminution of exports from Bradford was coincident with the visit of the *Tribune's* London correspondent to that unhappy city. The manufacturers learned from him that it was all up with them, and that no more of their exports would be received in this country. Then there is the closing of our own cotton mills, threatened on an extensive scale on account of overproduction. At first sight, one would say that McKinley should have stopped this. Can the manufacturers have forgotten to appeal to him, instead of simply consulting the market, before ordering the shutdown? He might have told them that their trouble was all due to the cursed Wilson tariff. He might have believed it; but they would not, because they have testified, through their spokesman, Senator Aldrich, that the cotton schedules of the Wilson bill were the most scientific and thoroughly protective ever framed. Like talking with Mrs. Tulliver, this is all "puzzling work," and we fear that the puzzle of it will grow denser from week to week.

The London *Economist* explains why the adoption of the gold plank at St. Louis did not send up the price of American securities abroad "with a sharp bound." In the first place, it says, there is not in the resolution a "a breath of strong conviction," and the long dodging and bad record of McKinley had filled foreign investors with fears which the platform alone could not allay. But further than this, not a hint, not a suspicion of a suggestion, is given in the platform as to the way in which the existing gold standard is to be preserved. President Cleveland, with his heart in the work, has been struggling to do that all through his administration, and by the only method now available. For doing so he has been denounced like a pickpocket by Republicans. They now say they are going to maintain the gold standard, but of measures to do it they breathe not a word. Foreign investors, says the *Economist*, want to see a definite programme of currency reform before they will be prepared to pin their faith and their money to a platform generality. On top of all these doubts come the militant and extravagant policy of the planks relating to foreign affairs, and the general threat to trade involved in the promise of a return to Chinese-wall protection. Thus the gold plank at St. Louis, while it undoubtedly prevented something like a panic which would have resulted from a free-silver or straddling platform, did not positively and efficaciously reassure foreign markets. For the reasons mentioned by the *Economist*, "they have failed to respond as was expected," and, it adds, "it cannot be said that their caution is unjustifiable."

Gov. Morton's selection of ex-Mayor Gilroy as member of the Greater New York Charter Commission, in place of Mr. Fitch, who declined to serve, is a most indefensible act. It would have been difficult to find in this city a more thoroughly unfit man. Certainly none more so could have been found outside the membership of Tammany Hall. Mr. Gilroy is nothing except a Tammany man, and the Governor has no reason for putting him upon the Commission except as a representative of that organization. He is certainly not a representative of the city and its interests, as he has had no training which fits him to be of assistance in evolving a system of government for the proposed great city. The only science of government that he has ever studied is that which Tammany carries out when it is in possession of public office. Everybody knows how Gilroy executed that as Mayor. He put Scannell the murderer into the Fire Department, put Sheehan the Buffalo defaulter into the Police Department, and obliged Tom Platt by giving Sheehan as associates two Republican Boys, Mike Kerwin and Charlie Murray; made Barney Martin and Joe Koch Police Justices, and Mike Daly Commissioner of Public Works. He has no idea of public office except to turn it to the personal profit of himself and his political associates, who are mainly persons of disreputable character, dissolute and irregular lives, and general ignorance. It is an insult to every reputable man on the Commission to ask him to sit with Gilroy as an associate.

The city of Milwaukee has been the scene of the most extensive application of the boycott ever seen in this country. On the 4th of May the men employed by the company which operates the street-car lines struck for higher pay, which the company refused. The usual concomitants of such a strike followed for a few days—difficulty in operating the cars until a full force of new men could be secured, with more or less disorder and assaults upon the "scabs." This state of things did not last long, however. The company had soon manned the cars, and its full service was resumed. Then came the novel feature of the strike. The former employees declared a boycott of the cars. Such orders have been issued under similar circumstances in other cities, notably in the great Third Avenue strike in New York a few years ago, but never before were they regarded by more than a small portion of the laboring element in the community. In Milwaukee, on the other hand, the strikers were at first able to make practically the whole population abandon the street-cars, and either patronize the 'busses and

other conveyances which they put on the principal streets, or walk. It is actually true that for days cars would go along routes where they were ordinarily well filled at all times and crowded sometimes, and not average more than one passenger a trip, even in the "rush" hours. Business men, professional men, all classes, were threatened with loss of patronage, law-suits, damages of every sort, if they should ride in the cars. For some time the public was so much dazed that hardly anybody dared to defy the boycott. Gradually, however, most of the people recovered their senses and their courage, resumed patronage of the cars, the 'busses lost their passengers, and at last the managers of the strike declared the boycott "off," having secured nothing for themselves out of the strike, and only diminished the power of the company for a long time to pay the higher wages that they sought.

Judge Wright of the Illinois Circuit Court has declared unconstitutional and void the State law requiring the national flag to be displayed over every schoolhouse. The case came before him in the form of a motion to quash indictments found against certain school trustees and other officials for failing to execute the law. The Legislature had made such violation of the law a misdemeanor, and therein, so Judge Wright holds, had exceeded its powers. The decision hinged on this point. There was no question of the right of the State to order the flag flown on any of its buildings, at such times and in such a manner as it saw fit. The effect of this decision will be to make patriotism, in so far as it consists in flinging the flag to the breeze, optional. This may seem a horrid conclusion to some perfervid brethren, but, after all, it simply puts patriotism in the same category with the other leading virtues. It is perhaps unfortunate that we cannot by law compel all citizens to be sober, saving, honest, kind to wife and child, but we cannot; nor can we, if Judge Wright's exposition of the law is sound, compel them to be patriotic. Illinois school-children may incur great civic dangers by not being allowed to see the flag above their heads. Certainly they will be as much at sea as the rest of us about the great McKinley definition of "sound money"—that it is something "as untarnished as the flag." Still, they may learn in their school histories that the flag was very badly tarnished in the Mexican war, Gen. Grant being witness, and so not lose so much after all. Anyhow they will have to be patriotic, as they will have to be virtuous, from an inward spring if at all, and not by act of Legislature.

At the meeting of the Tory members of the House of Commons on June 15, when the melancholy announcement was made by Mr. Balfour that not one of his pet and promised bills could be passed, a remark was made by the veteran Sir John Mowbray which elicited the only real applause of the afternoon. It was to the effect that he hoped one result of the grand fiasco, as of the experience of the late Liberal Government, would be to teach parties the folly of overloading their legislative programme. In other words, this thing of promising the millennium out of hand, and then going on to leave Satan just as visibly unchained as before, is getting to be wearisome. For nothing did Mr. Balfour and Lord Salisbury and Chamberlain rail more caustically at the Liberals than for having undertaken so much more than they could possibly perform. Yet they at once promised three times as much—very naturally, having three times the majority. But here is their first session gone to wreck, and all their promises gone to protest. Whether parties will learn wisdom from the unexampled breakdown, may be doubted, despite Sir John Mowbray's pious hopes. Parties are bound to bid against each other for popular support, and the highest bidder seems to carry off the prize. If one side promises the millennium, the other must pledge itself to bring in two, with the Golden Age and the *Saturnia regna* thrown in. Of course the bigger the promises, the bigger the smash when they are unfulfilled; but the temptation to win votes by the easy process of making promises seems to be too much for mortal politicians. The Republican platform, for example, contains a tremendous array of solemn undertakings to do things that the framers knew would not and could not be done. All they had their eye on was the election, which they hoped to win by promising everything, and then afterwards get up some diversion, like a foreign war, to appease the disgusted and enraged voters.

Mr. Balfour's failure as leader of the House of Commons is partly the fault of his party and more the inevitable result of his temperament. An impossible task was laid on him—the task which Mr. Bright described as that of driving six coaches-and-four abreast through a street where but one at a time could go. Too many and too complex bills were given him, with orders to pass them this session. The thing could not be done. But the great incapacity is that of Mr. Balfour's own mental make-up. He is infinitely bored by the dreary speech-making of the House of Commons. Nine hours of it is more than his refined and subtle intellect can endure. He will not sit it out. But the prime requisite in a successful leader of the House is constant and watchful attendance. Even the cynical Disraeli recognized this fact and was unflaggingly at his post. Mr. Gladstone, up to the very end, especially when the home-rule bill was pending, was always on the Treasury bench, except when he was springing to his feet to controvert some dullard over whom Mr. Balfour would only have groaned inwardly and then gone out. So notoriously slack is his attendance on the House that the fact is frequently thrown in his face. He attempted to reply to Sir William Harcourt, the other day, when the Liberal chief turned on him roughly with the question how he could venture to answer a speech he had not heard. Such things are fatal to the discipline of party and the prestige of the leader. As Mr. Lucy says: "The House of Commons is a team that may be successfully driven only by an undeputed coachman always on the box-seat." Mr. Balfour's ability is unquestioned, but the ablest man that ever lived could not succeed in his place unless he made up his mind to chain himself to his seat in the House, to suffer fools gladly, and to have the run of business and debating always accurately in mind. All this is no doubt distasteful to a speculative intellect like Mr. Balfour's, but then, as the man said about writing a sonnet, it is so easy *not* to be leader of the House, and the speculative intellect essaying it must take on the air and the methods of the hard-hitting, practical, galley-slave intellect.

The Pope's latest encyclical on Christian unity is a very elaborate argument for Roman supremacy, but how it touches existing conditions and problems it is hard to see. His long and careful demonstration that the Church of Rome is the most likely centralized and authoritative exponent of Christian doctrine and practice, will be shed as so much water from the backs of those who, like the Protestants, deny the desirability of having any such authority at all, or, like the Greek Christians, affirm that Rome has widely departed from the primitive faith. Thus the whole encyclical necessarily has an unpractical air, like a bit of laboratory experimentation, with little regard to the hard and ugly facts. The Pope has before made friendly and charitable advances to both the Greek and Anglican Churches. Nothing resulted in either case except a polite but firm refusal to take a step towards that union of Christendom which consists in submission to Rome. After these rebuffs in the practical sphere, it looks as if Leo XIII. had determined at any rate to put on record the reasons he has for believing that he is right. His encyclical will make an excellent thesis for use in Catholic seminaries. Those who are already convinced will find it irrefragable. It is very learned, very logical (granting the premises quietly assumed), and is argued through with the air of a disinterested and detached philosopher. But the philosopher is, unfortunately, so detached from the facts confronting him that his reasoning cannot be expected to have any practical results.

THE ISSUE OF THE CAMPAIGN.

MR. MCKINLEY, in his speech at Canton on Saturday, made an allusion to the money question as one of the issues of the campaign. It came out rather slowly, but it came nevertheless, and what he said encourages us to believe that he will say more by and by. He said that it was one of the missions of the Republican party to give the country a dollar which would pass for a dollar in every marketplace in the world. Now, the only dollar that passes for 100 cents in all the markets of the world is the gold dollar. It certainly is the mission of the Republican party to preserve this dollar, and it is equally the mission of the gold dollar to preserve the party, for everybody can see that this is to be the overtopping issue of the campaign. The men who are prating about the tariff, and pretending that protection is in danger under schedules of duties averaging 42 per cent. ad valorem—a tariff higher than Mr. Morrill ever drew in his palmiest days—will not be heard of two months hence, or at all events will not be listened to. Their voices will be completely lost in the 16-to-1 whirlwind. Mr. McKinley's speech shows a dawning recognition of the kind of campaign that is now beginning.

The Sunday papers contained an interview with Mr. Whitney in which he acknowledges that he does not expect to change the purpose of the silver majority at Chicago. They are too many and too stubborn, he says. They are going to adopt a platform which will disrupt the party because honorable men cannot stand on it. Very true. We have foreseen that catastrophe to the party for some weeks. We say now that it is best for the country that the silver majority should go on and do what they were appointed to do, for if they should turn around at the instance of Mr. Whitney and go against their instructions, the country would put no confidence in their change of heart. People would say that they had been false to their constituents. Moreover, a change on their part would not change their constituents. All the poison of 16 to 1 would be rankling among them as before, and would be more virulent than ever by reason of such treachery. It would have to be doctored just the same. The delegates to Chicago, in the improbable event of their being lured away by sirens, would simply disappear beneath the waves. Their successors, whether calling themselves Democrats, or Populists, or Teller men, would be in full panoply, if not this year, then next year and thereafter until beaten in fair fight, perhaps more than once.

There is still another reason why it is best that the silver majority at Chicago should do what they were appointed to do. If they should turn around and adopt a straddling platform, the sound-money Democrats, or most of them, would then vote their own ticket. The Democratic party would be no safer than it is now, but the sound-money vote would be divided. It is not impossible in that event that the Democrats might elect enough Congressmen to make a majority, with the aid of the Populists and the Teller Republicans. It is needless to point out the dangers of such a combination. The thing most to be desired is that the sound-money vote of the country should be united on the Presidential ticket, and united on Congressmen wherever the silverites are anywhere near one-half of the total vote.

Still another reason for wishing the Democrats at Chicago to do what they have been bidden to do is that the business of the country will never be on a sound footing as long as the present uncertainty about the money standard continues. Even our esteemed contemporaries of the McKinley League ought to see this now. They have been telling us that their candidate was the advance agent of prosperity, that he was sure to be nominated and sure to be elected, and that his very name was going to make good times. Yet business does not improve. Last year was bad for trade, but this year is worse. There has been no lack of McKinley to account for the dulness. He is nominated. He will probably be elected, but there is just enough doubt about it to leave a shadow on the standard of value, by which credit is impaired. The banks are putting themselves in condition to meet the worst. Men who have money refuse to lend it because they do not know what they will get back. There is much less talk about the advance agent of prosperity now than there was two months ago.

The question what shall be the issue of the campaign, is one which cannot be settled by McKinley, or Hanna, or the Republican national committee. It is settled by the people. The issue of any campaign is that question in which the people are most deeply interested. That question this year is the currency. The free coinage of silver is advocated earnestly as the only cure of the hard times. It is a dogma which finds a host of men ready to accept it as the true faith. It will be preached upon every stump in every doubtful State. It will carry such States unless it is met. If the Democratic campaign in such States as Nebraska, Kansas, Iowa, Illinois, Indiana, and even Ohio, were to be made for free coinage, and the Republicans, instead of meeting these arguments, were to do nothing but talk high tariff, they would deserve to lose them, and probably would get their deserts.

The time has come for every man who has saved anything, even though it be only ten dollars in a savings bank, to fight for the ownership of it. The demand for free-silver coinage is a demand for a division of property. It is even worse than that, for a division might conceivably be made without losing any part of the whole, but a division by changing the value of the dollar would involve enormous losses by which nobody would be the gainer. Such losses are taking place now through the interruption of industry, the lack of enterprise, the curtailment of credit which everybody feels and for which there is no visible or ascertainable cause except the threatened change in the measure of values. It is proposed to divide the dollar in two parts, to give one-half to the owner, and have a scramble for the other half with the chance of losing it altogether. This is the vital issue, and the Republican party will win if it has the sense to make its campaign on it. If we could imagine the party to be so stupid as to allow the Democrats to fill the land with free-silver literature and stump speeches, and attempt to meet them with tariff arguments (especially McKinley tariff arguments), we would not give much for their chances at the end of the campaign.

THE NEW YORK DEMOCRATIC PLATFORM.

WE had hoped that the efforts of the Eastern delegates to the Chicago convention might be effectual in preventing that body from taking a plunge to the silver standard, and that the New York delegates especially would go thither with a weighty declaration of principles—one that should present a very stiff barrier to the mad rush of the South and West. We have been disappointed, notwithstanding some excellent features that have been incorporated in the platform adopted at Saratoga.

The first thing in this platform is an appeal to the party faith as revealed unto Thomas Jefferson that "the monetary unit must stand on both metals." If Jefferson were alive, he would be astonished to learn that this was an article of party faith and that he was the author of it. The saying came about in this way. Hamilton, the leader of the Federalists, was preparing his report on the establishment of a mint. He took facts as he found them—among others the fact that both silver and gold were in use as money throughout the world at ratios differing somewhat in different countries. So he decided that both metals ought to be received and coined at our mint, at a ratio coinciding as closely as possible with their value in the market. He put this idea in his report, and sent it to Jefferson for his advice and criticism before sending it to Congress. Jefferson read the paper, made certain remarks upon it in writing, and returned it to the author. Among his notes were the words: "I agree with you that the monetary unit must stand upon both metals." In citing the passage the platform-makers at Saratoga omit the words "I agree with you." Those words show that it was not the original conception of Jefferson, and that it was not "a declaration of party faith," but merely an expression of Jefferson's concurrence

with his chief political opponent on a matter of business.

This misconception or misquotation is not, however, the chief point of objection to the platform. The chief objection is that it confirms the silverites in their present beliefs. When you tell them that party faith requires that "the monetary unit must stand upon both metals," they say, "That is just what we are fighting for." When you tell them that this article of party faith cannot be realized until something else is done by some other country or countries, they reply that articles of party faith cannot wait for ever for realization; that they have waited twenty years for Europe to come upon Jefferson's platform; that as often as Europe has been invited to do so, she has declined, and that it is useless to wait longer. If the declaration of party faith is to be kept alive, if it is ever to become a vital principle, it must be put in force by ourselves; and why not now as well as at any other time?

The next paragraph of the platform is as malapropos as the previous one. It "arraigns" the Republican party for demonetizing silver in 1873. "The action of a Republican Congress and a Republican President," it says, "deprived silver of its equality with gold for the money and currency of the nation." "Exactly so," replies Bland; "Exactly so," echoes Tillman; and the words go reverberating through the ranks of the silverites from the Potomac to the Rio Grande and the Columbia. This was "the crime of 1873"; we are going to punish it now. "From this act," continues the Saratoga platform, "(for which the Democratic party was in no wise responsible), and from the action of other nations following in the same course, it has resulted that silver has greatly declined in commercial value, and there now exists a wide departure of the two metals from the coinage standard of value—bringing disturbance to the financial systems of European countries as well as to our own, and awakening there, as here, the earnest apprehension of statesmen and financiers." All of which, besides being a gratuitous assumption, serves to confirm the silver men in their opinion that they are redressing a great wrong, and that if they succeed, they will bring back prosperity instead of plunging the country into a deeper abyss than it has ever known before.

The truth is, that no disturbance was produced by the adoption of the single gold standard either in this country or in Europe. On the contrary, the most frequent and serious cause of disturbance previously existing was removed, namely, the oscillations due to the changes of market value of the two metals. Great prosperity followed, especially in this country. From 1879 to 1890, with a few brief intervals, due to over-speculation, the United States enjoyed a most prosperous career. It was in the last-mentioned year that the Sherman silver act was passed. It was in that year that confidence in the standard of value was first seriously shaken, and from that year to this it has been subjected to frequent shocks, and will continue to be as long as there is a party formidable in numbers threatening to reduce the dollar on which business now rests, to the value of fifty-two or fifty-three cents. The only financial disturbance caused by the demonetization of silver exists in the imaginations of the bimetallist philosophers.

The resolution of the Saratoga platform which calls for the retirement and cancellation of the greenbacks, while commendable in itself, will not cure the mischief which has been done by telling the silverites that they are all right except as to the particular method they have adopted for carrying out their views.

THE MENACE TO RAILROADS.

THERE is probably not a railroad manager in the United States who is not lying awake o' nights thinking of the results of the free coinage of silver to him and his property and his employees. If he has any gold bonds outstanding (and nearly every one has them), the first question is how he is to get gold to pay his interest if the standard money of the country is silver. No railroad can live and maintain solvency if its receipts are in the form of silver and its payments are made in gold. The silver dollar is worth somewhere between 50 and 60 cents, varying like a shuttlecock, but not likely to rise above 60 cents for any considerable time. A railroad which has a million dollars of gold interest to pay must expend nearly 2,000,000 of silver dollars in order to meet this single liability. It is very easy to say, "Raise your rates; charge the public $2 freight where you now charge $1; make them pay 4 cents per mile for riding on the cars instead of 2." The thing cannot be done, or, if done at all, only at the end of a protracted turmoil and struggle during which bankruptcy will overtake every road so situated.

This is not all. The gold-interest problem is only a part, and not the largest part, of the green cloud in the railroad horizon premonitory of a cyclone. The cost of labor and materials will rise in proportion to the fall in the value of the money. It must be so because that is the law of money. Men cannot do the same amount of work for a silver dollar that they can for a gold dollar, because it is not worth so much. It will not buy so much. It will not bring in the same amount of flour, meat, clothing, and other commodities. Consequently the railroad employees and material men must have more dollars than they get now for a given amount of labor and supplies. Iron, lumber, coal, oil, and everything else will cost more. But where is the money to come from? The people who are served by the railroads must pay it. But they will resist any advance as long as they can, and, while they are resisting, the roads will be unable to pay the increased wages and prices demanded. The President of the Atchison Road pictures the situation in its true colors, thus;

> "There is not a Western railway, with a few exceptions, that does not pay out 70 per cent. of its gross receipts for labor and supplies. The exceptions pay out 60 per cent. The margin of profit for capital is very small. If, as the free-silver advocates themselves claim, free silver will raise the price of products and labor, the railways will have to raise their charges accordingly. Furthermore, if we are to receive 50 cents in place of $1, the railways will be driven into confusion and bankruptcy. The proposal is to revolutionize the money basis in the face of the world. If it carries, it will be followed instantly by a widespread panic and havoc, blacker and more disastrous than any business calamity that ever swept America. The situation which now confronts railway managers and the managers of great investments and capital is that of awaiting the settlement of this tremendous question and the wiping out of the menace against their property and money."

What is true of the railroads is true of nearly all large business undertakings. Most of them have some debt. Most of them have been brought into existence by borrowing. They have obtained capital cheaply by promising to pay interest and principal in gold. They have borrowed gold under contracts to return gold. All such undertakings are exposed to the same hazard as the railroads. There is no difference between them except that the railroads are a little more in evidence by reason of the daily quotation of their securities in the newspapers. Coal mines, gas works, iron works, electrical companies, cotton and woollen mills, cities and States that have bonds outstanding, are in the same plight. As we write these lines an official circular comes to us from Utah asking proposals for $200,000 of "State of Utah *Gold* 4 per cent. twenty-year funding bonds, principal and interest payable in *United States gold coin*." Here's richness! The delegates of Utah to the St. Louis convention seceded from that body and left the Republican party because a gold-standard platform was adopted, and yet these very men must have taken part in passing the law authorizing this gold loan; or if they did not personally take part in it, must have approved it. The same may be said of their newspapers that are indulging in blackguardism against the gold-bugs and against Wall Street seven days in every week. They are all shocked at the issue of gold bonds by the United States. They insist that when the federal Government borrows money it shall pay the principal and interest in silver, or at least reserve the option to do so. Yet when their own State wants to borrow, they print the word gold in capital letters on the circulars which they send to the Wall Street sharks, and they never recognize the humor of the situation.

The main fact, however, is that every State and municipality that has gold

bonds outstanding will have to increase its taxes if silver becomes the standard, unless it repudiates its debt. Repudiation would not be difficult under the circumstances, for a community or people that could authorize all debtors to cheat their creditors out of one-half of their private obligations would not hesitate long to apply the same principle to public obligations. There would be Tillmans and Altgelds in plenty to point the way. The only class of creditors of the States and cities who would be helpless would be the office-holders. Their expenses would rise like those of the railroad employees, but they could not strike for higher wages. They could no nothing but petition the Legislature for an increase of salary, and it would be a long time before they would get it. The employees of the federal Government would be in the same plight, for Uncle Sam must pay out the same kind of money that he takes in.

THE CANADIAN ELECTIONS.

For the second time only since confederation, the Canadian Liberals have carried a general election. Steadily beaten since 1878, they have now won not only a victory, which they were expected to do by a narrow margin, but a sweeping victory which leaves the Conservatives dazed. Even in the province of Quebec, where the Government candidates counted upon gaining six seats, the Liberals were almost everywhere successful. Mr. Wilfred Laurier will be the first French Canadian Premier the country has had, and is assured of a good majority in the House over all opposing factions.

The two great issues in the campaign which ended on June 23 were the school question, or the religious-school question, and the tariff. Of these the first was doubtless the more important, and cut most sharply through party lines. The controversy is an old one and has raged mainly about the schools in the province of Manitoba. That province entered the Dominion in 1870, and in 1871 established a system of schools such as exists in other Canadian provinces—that is to say, separate schools for Protestants and Catholics, under the supervision of a school board composed of two sections, one Catholic and one Protestant, each managing its own schools. So things went on till 1890, when the Protestants, having become largely in the majority through the influx of settlers, abolished the two-headed school board and practically withdrew all public money from the Catholic schools. An appeal was at once taken to the Governor-General in Council, as provided in the British North America act of 1867, and judgment was finally given in favor of the Roman Catholics in 1895. A remedial order was drawn up restoring to the Manitoba Catholics the right to a share in the legislative school grant. The Manitoba Legislature refused to act upon this order. Thereupon a bill was brought into Parliament to compel the Manitoba Protestant majority to give the Catholics their school money. This bill passed its second reading on the 20th of last March, by a vote of 112 to 94, but was killed by the famous obstruction in committee, after two successive sittings of 129 and 80 hours continuously.

In the appeal to the country the Conservatives made the Manitoba school bill their leading campaign cry. Sir Charles Tupper even carried the war into Manitoba itself, where he fairly told the electors that the bill would be forced down their throats if he won the day. But it was, of course, in the strong Catholic provinces that he expected to score his gains, and he had the influence of the higher clergy most outspokenly on his side, despite the fact that Mr. Wilfred Laurier is himself a Catholic. In the churches of Quebec and elsewhere Catholics were told from the altar that it was their religious duty to support the Conservatives, and one bishop denounced Laurier as no better than "a rationalistic Liberal" for having maintained that "a Catholic is not required to be a Catholic in public life." But it appears, from the issue, that thousands of even the priest-ridden French Canadians resented this interference and voted for the Liberals, while, of course, ultra-Protestants must have been detached in great numbers from the Conservative party so openly bidding for priestly support. From the event it is clear that this religious question, upon which the Conservatives counted so much, hurt them severely, both going and coming.

The other leading issue was tariff reform. Mr. Wilfred Laurier is a free-trader and a strong advocate of reciprocity with the United States, though he has frankly said in his speeches that the necessity of raising revenue by customs duties will prevent any radical reductions in the tariff for some time to come. All that he promises is a moderate readjustment of the tariff. But Sir Richard Cartwright, who will probably be finance minister in the new Liberal cabinet, is strongly in favor of unrestricted free trade, and he has been held up as a bogey-man by the Conservatives. The voters, however, do not appear to have been frightened. The truth is, the country has not been prosperous under protection, trade depression having persisted for some years. By the very logic of protection, therefore, which risks the whole case on prosperity, the electors were justified in turning towards free trade. It is somewhat puzzling to see a nation on one side of an imaginary line attributing all its ills to protection, and one on the other side to the lack of protection. But it is a comfort to reflect that there is One who knows all about it—McKinley, of course.

On the whole, accordingly, the result of the Canadian elections must be taken as an encouragement to the believers in popular government—which is, of course, the Q. E. D. of all elections. An overbearing priestcraft has been rebuked, fiscal follies and fallacies shown to have lost a part of their power, and one more pin thrust into Chamberlain's Imperial Zollverein. The Conservatives made much of this particular inflation of the Colonial Secretary's, giving the people to understand that Chamberlain was greatly interested in Sir Charles Tupper's success. So much the worse for Sir Charles then, said the people, and down went the Zollverein in Canada. As far as the result affects the United States, we should say it meant a more cordial policy in general on the part of the new Government, and in particular an excellent disposition to return to a generous treaty of reciprocity, such as the arrangement of 1854, which was repealed to mutual disadvantage and under a good deal of false pretence in 1866.

JAMESON COMMITTED.

London, June 16, 1896.

There are a number of men going about the streets here bearing large yellow placards to the effect that a picture entitled "Jameson's Last Stand," by R. Caton Woodville, R.A., is now on exhibition. This was probably painted at the height of the Jameson furore last January, for it is doubtful if laureates and academicians would find "Dr. Jim" a figure so entirely heroic since his commitment for trial yesterday at the close of the police magistrate's examination at Bow Street; but it would be a mistake to say that interest in the raiders has altogether abated, or that they are much less popular.

On June 11 the adjourned session of the examination of the men charged with a violation of the Foreign Enlistment Act by making a raid into a friendly state was brought on at the Bow Street Police Court, before as brilliant and interested an audience as can be imagined. The "great crowds" at previous sessions must have stood outside the gates, for at this session no more could have been accommodated within. To the American mind, Bow Street suggests something vaguely disagreeable and disreputable, like the Old Bailey or the Tombs, yet it is by no means such a bad street; and as the Covent Garden Opera-house stands just across the way from the police court, there was a curious air of propriety about the elaborate toilets that filled the commonplace little room where real dramas were acted in the light of day.

The ostensible purpose of the examinations was to ascertain whether or not the defendants had committed an offence for which they should stand trial. Whatever the Government's original intention with regard to the matter may have been, the necessities of the situation have compelled it to a strenuous and successful effort to bring the conspirators to trial; so the many adjournments of the case (which the Opposition called dilatory tactics) now seem quite justified. As this proceeding must inevitably affect the South African question, a slight sketch of it and of the principal figures in it is perhaps worthy of record.

The court-room at Bow Street is small, somewhat dingy, but clean. Across one side of it runs the bench, which is raised above the

level of the floor, railed off from it, with the Judge's desk in the centre. So many chairs and benches were filled with ladies and gentlemen, to his right and left, that both Judge and bar lost something of their usual imposing appearance, especially as both were without wigs and gowns on this occasion. The fifteen defendants filled the whole of the first of the floor benches usually allotted to spectators, but everywhere else the interested and the curious were packed in—ladies and gentlemen in about equal numbers, seated and standing—as many as the bench, the floor, and the aisles could comfortably accommodate; and the little room had more the appearance of some academic feast-day than of a court of justice. The visitors were no better dressed than most of the defendants, to whom they nodded and smiled as lightly as if the whole affair were a splendid joke. With one exception the defendants also seemed to share the same delusion. That exception was Jameson himself, who came, first of the fifteen, into the room, with a grave face, which showed a full appreciation of the seriousness of the case, and which never lightened for a moment. The others—most of them typical English gentlemen of the fashionable set—took the matter very jauntily; and, sitting there in their long frock-coats, smooth-cheeked and well-groomed, seemed very unlikely persons to have gone rough-riding through a strange country in such a Quixotic adventure as they ended at Doornkop last January.

Jameson has an interesting and by no means a bad face, though not as strong as one would expect. His eyes are fine—wide apart and rather pathetic—and he has a good big forehead, perhaps a little exaggerated by baldness, but his mouth and chin do not look unusually positive. He wears a brown moustache, trimmed close, and in age appears to be about forty. His eye is clear and his color good, but fatigue and care were evident from his whole appearance and demeanor. In physique he is thickset and short—quite the least imposing by far of the party; but he has the only intellectual face among them. Henry Frederick White, one of the leaders, is the handsomest of them, a tall, military man, with an air of good breeding and distinction. The Hon. Robert White, the "Bobby" of the dispatches, is quite vacant-looking, as is also Capt. Coventry. Col. Grey is also handsome, in a way, but heavy; Sir John Willoughby looks intelligent enough, in all conscience, but his face is cynical and repellent.

The Crown was represented by the Attorney-General, Sir Richard Webster, large of stature, deep of voice, and impressive. A legion of barristers appeared for the defence, notably Sir Edward Clarke, Sir Frank Lockwood, and Mr. Gill. The proceedings were very slow, for the depositions of the witnesses were taken by the clerk in narrative form in longhand, to be sworn to and signed then and there; and the delay between question and answer or question and question would have made the most exciting story tame. Nevertheless, some of the first day's stories were exciting in spite of this, particularly the tale of a boyish Dutch lieutenant, who had been under arrest by Jameson's column and had afterwards taken part in the first skirmish near Krügersdorp, all of which he described simply and with much dignity. They met him on patrol duty, took his horse away, and disarmed him, and he asked them why they did, "when no war had been declared or anything"; he refused to tell them how many men he had, saying "he did not see how they could expect him to answer such a question." They finally gave his horse back, and left him behind them on a two hours' parole to stay where he was, at the close of which he joined the Boer forces and reached his battery at Krügersdorp ahead of them, where, he said, "some of them were killed and we beat them off."

After him came two or three Dutch officials, who produced the two large tin boxes, one black, one yellow, and the now famous leather portfolio, stamped "L. S. J."—the Pandora's box which Oom Paul opened as a gift of plagues for all his enemies. These were found on the field at Doornkop, the fustian conspirators having left them for the heroes of the piece to discover, as naïvely as if they had been the villains of an ordinary British melodrama. The proof as to the identity of boxes and contents was slow but interesting; and as paper after paper was put in evidence—letters to "dear Bobby" and others, dated in early November and December, full of arrangements for an early start; of solicitude for sound horses, mules, and plenty of ammunition; of fears about Foley's "blabbing" and the premature disclosure of the plan; of the necessity for "drilling all the men inside out"—the little conspirators looked exceedingly foolish, and their leader put his hands over his crimson face and hid it for a long time. The spectators, however, heard the testimony as complacently as if it were all of a highly honorable nature, and seemed quite to miss the point of it. The magistrate had nothing to do, at the close of testimony so convincing and carefully submitted, but to hold the six leaders for trial, under £2,000 bail each, and to discharge their dupes. Jameson, with a generosity that is said to be characteristic of him, and accounts in part for the devotion he is capable of arousing, offered by counsel to be held alone responsible; but the evidence was so damaging against the Whites, Willoughby, Coventry, and Grey, that the offer could not avail them.

The defence outlined by Sir Edward Clarke is distinctly a thin one—that the expedition started from Pitsani, outside British jurisdiction; and that, though it was led by an officer in the British service, and recruited and armed on British soil, its place of final departure converts it into a sort of piratical raid from no-man's land, which should have been punished, if at all, by the Boers; and that it is not an offence of which the British courts are cognizant. No defence on the merits is longer possible; and even the excuse of chivalry and Hotspur thoughtlessness has been perforce abandoned.

The Government appear to be acting in good faith, and so far to have proceeded with ability. The future alone can tell what they will do in the ensuing criminal trials, and what effect Jameson's acquittal or conviction will have on the South African situation. Meanwhile, the newspapers here grumble at Krüger, and even at the necessity of going further with Jameson, for whom they are now clamoring for a "fair trial." The defects in the Boer Government are for ever harped on, and the iniquity of the conspiracy against that Government quite glossed over. One finds daily defences of Cecil Rhodes, open or covert, in the papers; and the street posters show how venial the people consider "Dr. Jim's" offence. The truth is, that South Africa holds the imagination of England, just now, as a sort of El Dorado, which must not be given up to Dutchmen or negroes. The progress of the Matabele war is proclaimed with trumpets; whole pages of the papers are given up to advertisements of mining ventures and Cape investment companies; a popular burlesque takes a head waiter turned millionaire at the Rand for its hero; and Mr. Barney Barnato—who, they say, was once a circus-clown—is now giving a touch of realism to all these fables about the wealth of the Cape by erecting a very ostentatious house facing the Park. What all this will end in, no one knows; but the Jameson affair, a misdemeanor under the act, is at any rate no ordinary misdemeanor. It is already an historical one, and its end is not yet. L. McK. G.

THE TRIUMPHS OF LEO XIII.

ITALY, June 10, 1896.

WHEN the present Pope (who, as chamberlain after Antonelli's death, exercised supreme authority during the conclave) was the virtual head of the anti-Jesuit party, which, without formally renouncing the temporal power of the papacy, yet saw the wisdom of finding some *modus vivendi* with the civil authorities of the new kingdom of Italy, recognized as such by all European powers, it was confidently believed that, if elected Pope, he would carry out the intentions of his party. That he intended to do so is certain, but the Jesuits, the *Intransigenti*, prevailed against him and the moderate party, reinforcing the *non-possumus* of Pio Nono: and the Vatican, as far as Italy was concerned, was regarded as an enemy to be watched incessantly—not to be specially feared; one whose hostility was decidedly preferable to its friendship. There is no country in the world where religious indifference amounts to the total oblivion of any religious question as in Italy. During more than forty years' residence and intimacy with men of thought and intellect, I have never heard one purely religious discussion, and should not know to whom to address the question, "What are the central doctrines of the Trinity and the Incarnation?"—which, according to Mr. Gladstone, ninety-nine professing Christians out of a hundred believe in. What thoughtful, patriotic Italians dreaded was the dominion which, in exchange for a cessation of hostilities towards the royal authorities, would be given to the Church over education. Eighteen years have passed since Cardinal Pecci assumed the tiara, and ostensibly he has made no progress in this direction. Although the proclamation of universal, gratuitous, compulsory lay education has become a dead-letter in Italy, we have not yet heard that instruction in the catechism and attendance at mass are compulsory in State schools. Nevertheless, the Pope's inordinate ambition, tenacity of purpose, persevering energy, vast learning, knowledge of human nature, and tact in dealing with it, have not been spent in vain: he is at the present moment the person most talked of, most looked up to in Europe. This fact, without awakening any really religious emotion or reviving controversial discussions, is one which appeals to that side of the Italian character which is neither its noblest nor its highest—to national vanity.

For some time past, all religious ceremonials have been revived throughout the kingdom. Though not expressly abolished by the law of 1847, religious processions had fallen into total disuse. Prefects were allowed to forbid them if disturbance of the public peace was likely to follow, and they did forbid them; for in the days when the people believed that Italian unity would give them a roof over their

heads, clothes to their backs, and at least one good meal a day, priests, monks, sacristans, all the confraternity in short, were jeered at and even hissed. I remember, just fourteen years ago, on the very green opposite, a stand-up fight between the populace and the processionists who, for the first time after sixteen years, ventured on a renewal of the ceremony of transporting the Madonna from her own church to the place where she first appeared. In this fray the cross of a valuable antique image of Christ was injured and broken. Now, on this last 4th of June, in the smallest village hamlet as in the largest city of the peninsula, the Corpus Domini procession paraded the streets in all its former grandeur. Even Bologna, the last stronghold of the opposition, celebrated it with extraordinary splendor, and in Rome, for the first time since Italy took possession of her capital, the Corpus Domini was accompanied in its triumphal procession by the entire populace. Italy, exclaims the *Tribuna*, in a bitterly sarcastic article, is transformed into a cathedral: prostrate yourselves, Freemasons, free-thinkers, misguided patriots, kings, soldiers, ministers of Italy; the Church is triumphant.

Say the optimists: This means nothing but that our people have an unappeasable appetite for feasts and festivals and spectacles of every kind. This is true, but once they believed that liberty would add some enjoyments to their life. Now, finding that the theatres, on which millions of the public money has be n expended, and which are maintained at public cost, hold no gratuitous places for them—nay, that often, as in the Politeamo of Palermo, the lowest price for sitting-room is five francs—they take their diversions where they cost them nothing. Leo XIII, therefore, was wise in his generation when he ordered all the minor and major Church ceremonies to be celebrated throughout the land as in the days of yore, reëstablishing rigorous religious ceremonial at the Vatican court. Wiser still was his practical following up of his encyclical on the social question by enjoining on all the confraternities, the Catholic associations and clubs (*circoli*), the formation of mutual-aid societies, whose members, on contributing a very small monthly sum, are assisted in sickness and convalescence, of rural banks where the interest is not usurious, where loans are not granted to favorites, whose cashiers do not decamp with the funds. By these spectacular and mundane methods the Church is attracting the people back to its ample bosom. On the other hand, the terror inspired in all the property-possessing classes by the spread of theoretical socialism and the practical organization of the "masses" by the leaders, has engendered in the authorities and in the "classes" a strong conviction of the necessity of finding a rallying-point whereon to take their stand and organize their forces for defence against the encroaching multitudes. You will remember Crispi's speech at Naples, in which, altering Mazzini's famous formula of "God and the People," he proclaimed the necessity of uniting with God and the King for the salvation of the country.

Not only the Jesuits, but the entire Catholic Church, and, during his reign, Leo XIII., have waged emphatic warfare against the Masonic order. The Pope's encyclical of 1892 was one of the fiercest on record—and for good reason. For many years previous to 1860 the Freemasons, owing here to persecution and there to indifference, had become inert or acted in entirely private groups, of which the most important existed in Sicily and Naples. There were lodges in Calabria, in the Abruzzi, in Emilia, in Leghorn, in Liguria, in Piedmont, Turin and Venetian Lombardy; and in Rome existed, in strictest secrecy, the Fabio Massimo Lodge. Their object was chiefly political, the overthrow of existing governments; but they were distinct one from the other, and had no common action. After the liberation of Naples and Sicily, the Dante Alighieri Lodge of Turin, to which most of the members of the old parliamentary Left belonged, set on foot a unitarian movement, founding the first Italian Great Eastern (Grand Oriente), which was accepted and recognized by most of the Italian lodges at Florence in 1864. The supreme council of the thirty-three, in Palermo, refused to acknowledge Masonic unity until Rome should be proclaimed the capital of united Italy, and the Supreme Council of the Thirty-three of Turin also retained its separate authority and was the lodge chiefly recognized by the Masons of other countries. After 1870, owing chiefly to the exertions of the old triumvir of Tuscany (then Senator Mazzoni), and of Frederic Campanella, who, with Aurelio Saffi, was Mazzini's chief continuator, a constituent Masonic assembly was held in Rome in 1862. Most of the lodges adhered, Turin and Palermo still holding aloof, the Thirty-three of Turin insisting on its supremacy as the sole recognized authority of the Masons who held the Scottish rite; but the Great Eastern, established in Rome, rallied to it the most numerous adherents. On the death of Petroni, who succeeded Mazzoni, they elected, as Grand Master of the Order, Adriano Lemmi, who, by the great ascendancy he had acquired through his life of patriotic exertion and his immense expenditure of his honestly earned wealth in patriotic and benevolent purposes, succeeded in procuring the fusion of all the lodges, even of the Supreme Council of Turin.

The Assembly presided over by Aurelio Saffi established a sole supreme council of the thirty-three, with its seat in Rome. Lemmi, who remained Grand Master of the Great Eastern in Italy and chief of the Scottish rite, having established the central lodge in the magnificent apartments in the Borghese Palace in Rome, made a tour of all the Italian lodges, delivering really magnificent speeches, in all of which Mazzini's doctrines were enunciated and enforced (Garibaldi and Mazzini were both Freemasons), the moral preached being that all the efforts of martyrs and heroes would be in vain unless the whole Italian people, redeemed from misery, ignorance, superstition, and crime, should be made partakers of the benefits of unity and liberty. The Vatican was pointed to as the one enemy of Italian autonomy, of scientific, intellectual, and moral progress everywhere; hence the renewed thunders of the Vatican, and, as all the prominent Liberals of Italy were or became Freemasons, the Conservatives (who are mostly professing Catholics) rallied to the Opposition for a long time, covertly and silently. As this great Masonic organization was and is mainly political, though its vast funds are applied to secular education, to benevolent schemes, and to the direct assistance of needy and unfortunate brethren at home and abroad, not only did the Conservatives dread it, but parties, cliques, and ambitious individuals viewed it with increasing jealousy. A violent attack, founded on an old, disproved calumny, was made on the Grand Master by the press, and even brought into the House of Commons. Adriano Lemmi, after laying before the Grand Council of the order every fact and document relating to his life and action, resigned. The members of this order, including Carducci, Rizzoli, Ceneri (the first jurisconsult in Italy), and other notabilities, after minute examination and mature discussion, declared that there was not a flaw to be found, and entreated him to withdraw his resignation. He, however, in a letter made public last year, declared that it had never been his intention, once the discipline, finance, and organization of the Masonic forces were established on a broad basis, to retain in his own hands the double office of Grand Master of the Great Eastern and that of Grand Moderator of the Scottish rite; that to the latter he intended henceforward to dedicate his chief energy, and they must decide upon his successor.

Glad tidings of great joy were these to the opponents of Freemasonry, who shrewdly guessed that it would be difficult to find any other man who would devote such exceptional energy and such wealth to the support of the association. As soon, therefore, as Lemmi's successor, Ernest Nathan, a staunch Mazzinian, was elected, the question of demolishing the Masonic society on the plea that it was a secret one, was brought before the House of Commons and the Senate. To the anti-Masons in the House Rudini replied that it was his intention to take careful but decisive steps against all secret and subversive associations ("Especially against us," said the Socialists). In the Upper House Senator Rossi took up the cudgels, observing that societies exist whose aims and members are unknown to the public, which give their united support to ministers who are members of their association, and make equal opposition to those who are not. These were clever tactics, as the Masons were (up to the banking scandals certainly) Crispinos, to a man, nor has their support of Rudini been much to count on—not because he is not a member of the confraternity, but because he is a Conservative. Parenso, a Liberal Senator and one of the first and staunchest opponents of the African folly, agreed with Rossi as to the uselessness and possible harm of secret societies, but said that if they were to be extirpated, a just and logical Government must commence with the most widespread and deleterious, that of the Jesuits. Rudini repeated the declarations made in the House; he thought that the Freemasons ought to become a public association, that no secret societies ought to exist, that the moment had not come when special provisions should be made, but that if necessity and an opportune moment should occur, the Government would not shrink from taking the necessary steps.

The publication of Mr. Gladstone's letter concerning Anglican orders, announced in most of the papers, is regarded as another great triumph of the reigning pontiff, although considerable confusion prevails as to what is meant by the validity of Anglican orders. One paper gravely informs us that, in the expectation of a speedy return of the Anglican churches to the bosom of Holy Mother Church, the Pope is anxious to facilitate the return of the prodigals by not insisting on their reordination. The story of the negotiations may be briefly summed up. About a year since a book maintaining the validity of Anglican orders was laid before the Pope. It showed great erudition and vigor. The Pope ordered the question to be studied with a view to decreeing the validity of the ordinations. The English Catholic bishops at once protested, and brought to the Pope's notice the fact that the book, written by the Jesuit Berroyer,

had been condemned by the highest authorities and consigned to the Index. Cardinal Vaughan went deep into the matter, and sent the theologians Dr. Moyes, Dr. Gayquet, and Father David to Rome to inform the Pope that the decision of the English Catholic clergy was final—nay, that many of the English Romanists would be inclined to abjure allegiance should he recognize the Anglican orders. The Pope, who was decidedly compromised by his expressed approval of Berroyer's book, submitted the question to the Holy Office, and the cardinals of this congregation also decided against the validity, as did Cardinal Galimberti, who had so much influence with the Pope until his recent death. Not choosing to publish with his sanction the decree of the Holy Office, the Pope took the whole question into his own hands, rather to avoid than to reach a decision, and it is the general opinion at Rome that the matter will be allowed gradually to drop. When we remember how firmly Archdeacon Manning believed in the validity, held that he was already a priest, and yet was compelled to admit that in the eyes of the real Church he had only been a simple layman, we can understand the sweeping condemnation of Cardinal Vaughan, and, while comprehending the extreme anxiety of the high Anglicans for a recognition by Rome of the validity of Anglican orders, we doubt their satisfaction being shared by the large body of Anglican or Dissenting Protestants. These, while anxious to strengthen the forces of faith and the Church against "secularists and Unitarians," as Hugh Cecil put it in his bitterly sectarian speech on the Education bill, are not yet clearly prepared to approve steps which are certainly an advance towards a reunion with Rome. The triumph scored for the Pope lies in the cordial sentiments of "reverence, gratitude, and high appreciation" expressed in Mr. Gladstone's letter, which has been transmitted to Cardinal Rampolla, the Pope's *intransigente* secretary of state.

A far more important triumph will be obtained if his Holiness succeeds in inducing Menelik to liberate and restore the Italian prisoners detained in Shoa. The *Osservatore Romano* of the second inst. announced the despatch of a letter from the Pope to the Negus, urging the release of the prisoner. To-day's papers affirm that Menelik has already consigned them to Makonnen, who will send them to Zeila, where they will be embarked on English vessels sent to Massowah and thence to Italy. Should the prisoners be restored to their country and their homes, through the intervention of Leo XIII., a sense of the power and might of the Church superior to that of the civil arm will mingle in a very large degree with the joy and gratitude with which the unfortunate victims of the insane African policy will be welcomed by their families and their countrymen. J. W. M.

Correspondence.

MINNESOTA AND SOUND MONEY.

To the Editor of The Nation:

Sir: In connection with the strong sentiment in Minnesota in favor of sound money there are some facts which are encouraging. Minnesota has had a campaign of education on the subject of sound finance, and the results show.

In 1858 the State, by direct vote of the people, issued railroad bonds to the amount of $2,275,000. The bonds were to be paid to the company at $10,000 per mile, one-half for grading and one-half for completed track. The company, instead of straightforward work, picked out easy places and left all the difficult ones, so that nothing of real value was done, and no consecutive miles of road were finished when they failed, leaving the State nothing to show for its more than two million dollars indebtedness. Times were very hard, the population was small, and for some years nothing could be done. Then the war came on, and Minnesota did her full share for the country besides quelling an Indian outbreak within the State.

By the time prosperity had returned, a new population had come in—people who knew nothing about these old bonds except that they represented a railroad swindle. The interest which, by agreement, the railroad company was to take care of, accumulated until in 1881 the whole amount, principal and interest, was $8,400,000. Demagogues were fond of denouncing the idea that the State was responsible for these bonds, and hardly one man in one hundred could be found who would consent to their redemption, much less advocate it. But a champion came who was honest and fearless and persistent, and the sound financial sentiment of Minnesota to-day is his reward.

When Gov. John S. Pillsbury, in his first message in 1876, advocated the payment of the bonds, to use his own words, "everybody looked black." This first term was the time of the grasshopper plague. Gov. Pillsbury, by his personal kindness and his efficient aid, travelling throughout the State to get information and give assistance, advocating plans for relief and carrying out schemes for prevention, won the hearts of the people. But while he was administering to their necessities, he never lost an opportunity to urge them not to disgrace the State by dishonesty. His business ability, which rescued the University and saved the State large sums in other ways, won him esteem, and he was reëlected in spite of his persistent advocacy of the payment of the bonds. But, even in his second term, a measure looking towards payment was overwhelmingly defeated. The stanchest friends of the measure, ex-Govs. Sibley and Marshall and Mr. Horace Thompson—men who felt that they would move out of the State if its credit was dishonored—were now almost ready to give up. Senator Windom and Senator McMillan were openly taunted with representing a repudiating State. But Gov. Pillsbury resolved to fight it out, and strong friends rallied round him. His personal popularity was thrown into the scale, and had great weight, but still a large majority of the people regarded the bonds as "a steal," and could not see that the honor of the State was at stake, no matter how unjust had been the dealings of the railroad company.

At last the Legislature was induced to authorize a commission part of whose duty it was to pronounce on the legality of the bonds. Perhaps the most discouraging thing in the whole struggle was the fact that one after another of the district judges, fearing the unpopularity of a decision they knew they must render, declined to serve on this commission. But at last five honest judges were found. Before they could render a decision, the opponents of payment brought action to prevent the reference to the commission. This threw the whole question into the Supreme Court, and a straight-out decision was rendered in favor of the validity of the bonds. In the meantime the holders of the bonds, who knew very well that the State had reason to complain of the value it had received, offered to accept one-half the amount in new bonds.

Now came the final tug of war. Mr. Joseph Wheelock, editor of the St. Paul *Pioneer Press*, then, as now, honest to the core, was, throughout the whole struggle, a tower of strength, and he was ably supported by the Minneapolis *Tribune* and by nearly all the papers of the two cities. They brought forward every argument that could affect character or interest, and at last, by herculean effort on the part of all the friends of redemption, the Legislature voted to issue the new bonds. This was in the fall of 1881, just before the maturing of the old paper. Gov. Pillsbury, who had now served his third term and declined another, had to work early and late to get the bonds signed before the expiration of his term, for he was succeeded by a man who was not in sympathy with the payment. So, by the skin of the teeth, the measure was carried through. But the glory of it, the prosperity and high financial standing which it gave the State, could be appreciated by all; and that is why Minnesota is sound on the money question to-day. A. L.

Minneapolis, June 24, 1896.

INTERNATIONAL ARBITRATION.

To the Editor of The Nation:

Sir: The following passage, which I have just come across in Chateaubriand's 'Génie du Christianisme' (vol. ii., p. 271), would seem to indicate that the idea of an international court of arbitration is not new:

"S'il existait, au milieu de l'Europe, un tribunal qui jugeât, au nom de Dieu, les nations et les monarques, et qui prévînt les guerres et les révolutions, ce tribunal serait le chef-d'œuvre de la politique et le dernier degré de la perfection sociale."

Yours truly, L. Oscar Kuhns.

Wesleyan University,
Middletown, Conn., June 26, 1896.

JOHN SPARKS, OF PIKE'S EXPEDITION.

To the Editor of The Nation:

Sir: In January, 1807, when Capt. Z. M. Pike was struggling to cross the Sangre de Cristo Mountains of present Colorado, several of his party were frost-bitten. Two of them, John Sparks and Thomas Dougherty, were abandoned with frozen feet January 22, as it was impossible for them to proceed further. Pike afterward received, from one or both of these men, some of the small bones of the feet which had come away with the sphacelus that had set in. These men were rescued eventually, but never rejoined him in his tour through Mexico, and at the close of his book remain unaccounted for, together with five or six others left behind in Mexico. It has always been supposed, no doubt correctly, that nearly or quite all of them regained the United States; but I have hitherto seen nothing definite upon the subject, excepting that the *Nation's* reviewer of my edition of Pike's 'Travels' mentions the finding of the name of one of them on rolls of the War Department subsequent to 1807. But now John Sparks turns up, thoroughly identified by name, by his stumpy feet, and by local tradition of his connection with Pike's expedition. This information is given me in several letters from

Mr. A. H. Wilcox, of C. P. Wilcox & Co., lumber merchants, Frazee, Minn.

In 1854 Mr. Wilcox went to Licking County, Ohio, and soon became county surveyor. The name of "old John Sparks" was then a household word there. Mrs. Wilcox, now a woman of sixty-five years of age, knew him well. She first saw him when she was a child about eight years old, and had been sent to watch a gap in a fence through which hay was being hauled out, to keep the cattle from straying in. She was frightened at his peculiar dress and appearance as he came hobbling along, but was reassured by being told that that was "only old John Sparks," who would hurt nobody. She remembers him as a man of medium height, slender and wiry, with remarkably piercing eyes, who managed to get along as well as anybody, though both his feet were partly gone; and perfectly recalls the stories that were rife of his adventures with Pike, as well as the general complaint in the neighborhood that he killed more than his share of turkeys and pigeons, in spite of his crippled condition. He was a Virginian by birth, and at the time of which I am speaking was a pensioner; he used to go regularly to Newark, the county seat, to draw his pension, and in passing would stop over night at her house (her people being also Virginians), but could never be persuaded to go to bed, as he preferred to roll up in a blanket on the porch. When the Mexican war broke out, he was on hand to enlist, but was rejected on account of age and the partial loss of his feet. He was quite uneducated, and, like many others of his class, was fond of indulging in flights of rhetoric. On the completion of the Sandusky and Newark Railroad, before it was open to the public, he was given a free ride on the locomotive, and never afterward tired of describing this trip on an "enginuity," which had caused in him a settled conviction that the works of "nacher" were wonderful, but the works of art "wonderfuller." Mrs. Wilcox remembers his military funeral, as he was buried with the honors of war, and the passing by of the squad of soldiers in uniform, with drum and fife, impressed her mind. This was *circa* 1850, when he was about seventy years of age.

ELLIOTT COUES.

1726 N STREET, WASHINGTON, D. C.

Notes.

LITTLE, BROWN & CO. have just issued, in advance of completion of Prof. J. B. Thayer's 'Preliminary Treatise on Evidence at Common Law,' Part i., which deals with the "Development of Trial by Jury."

Edward Arnold's announcements for speedy publication include 'The Cruise of the Ant arctica: A Voyage to the South Polar Regions in 1895,' by H. J. Bull, and 'Persia Revisited (1895),' by Gen. Sir Thomas Edward Gordon, K.C.I.E., etc.—both works provided with illustrations and maps.

A book on Japan, by W. E. Curtis; 'The Thlinkets of Southeastern Alaska,' by Francis Knapp and Reta Louise Child; and (in the fall) 'A College Year-book,' are forthcoming publications of Stone & Kimball.

D. Appleton & Co. will bring out 'Familiar Trees and their Leaves,' by F. Schuyler Matthews,' with illustrations, and an American historical romance, 'Sir Mark: A Tale of the First Capital,' by Miss Anne Robeson Brown.

Ginn & Co. have in press 'Glaciers of North America,' by Prof. Israel C. Russell of the University of Michigan.

Last year we had a reprint in four handy volumes of Thomas Shelton's translation of 'Don Quixote,' prompted by Mr. Justin Huntly McCarthy, and now Mr. James Fitzmaurice-Kelly has taken it in hand for Mr. David Nutt's superb series of Tudor Translations, and half the work is before us, namely, volumes i. and ii. Apart from typography, the two editions differ in the spelling, which is modernized in Mr. McCarthy's; but Mr. Fitzmaurice-Kelly implies that the sources are different also, and avers that he now reprints "for the first time from the excessively rare edition of 1612," the *editio princeps*. Such random comparison as we have made would point to identity, but we will not dispute the present editor, who in a liberal Introduction sketches the life of Cervantes, tells what is known of Shelton and of the circumstances of his version, confirms the claim of the Brussels edition of 1607 to be the one used by Shelton, and points out some of his errors of haste or ignorance along with instances of his felicity in truly rendering the original. Everybody will prize Shelton in his new dress. On the first page of volume ii. a significant *no* has been dropped before *lesse* in the eleventh line of the first paragraph.

With the eighth volume Mr. Henry B. Wheatley finishes the editing of 'The Diary of Samuel Pepys' proper (London: Bell; New York: Macmillan), with its pathetic ending in view of the condition of the diarist's eyes, of which he could never "command the pleasure." No other portion of the work more perfectly reveals the man in his private capacity, or presents more curious material for reflection to the moralist. Mr. Wheatley has now in hand a ninth volume, embracing an Introduction; a paper on the London of Pepys's time; corrections of some of the notes; a corrected pedigree; appendixes; and an elaborate index. He also intimates that he may annotate hereafter Pepys's numerous letters. The present volume contains portraits of Monk and of Charles II.

The bound volume of the *Century* from November to April last is not easy to characterize in a few words; but as the sheets of our topographic atlases are designated by some larger town in the field, this volume might be fixed *in time* by Prof. Bryce's article on the "Armenian Question," or by Prof. Allan Marquand's illustrated paper on "The Old Olympic Games" in connection with an editorial article on the New. To be remarked also are J. G. Vibert's poetic little autobiography and expanded picture-labels for the baker's-dozen of his paintings here engraved; a story by Kipling; "A Midsummer Night," by Benjamin Kidd, who essays the rôle of Thoreau and his imitators. The poetry of the volume is signed by many well-known names, and reaches its high-water mark, we think, in Mr. Woodberry's lines to his brother-professor Jackson. But, altogether, in the case of this magazine as of its rivals nowadays, one echoes Miss Thomas's desire for "the era of rich verse again."

Mr. Hamilton, in 'Across an Ulster Bog' (Edward Arnold), gives us one of the stories of Irish life, truest to nature of the many we have read of late years. A character such as that of Mr. Duffin is, we trust, an anomaly in even the fiction relating to the Irish Church, and the culmination of the tragedy is too horrible. But the delineations of character, the conversations, the tender touches, the descriptions of scenery are admirable. The reader will not soon forget Ellen and her father, Miss McFadden, Mary Anne and her dogs. The narrative never drags; we are carried on irresistibly from opening to finish. This little book is especially interesting in that it depicts life among the poor of the Protestant population of Ulster. But why should these Irish sketches so uniformly be sombre or sad? Surely the sun shines in Ireland as elsewhere, and life there is not without its brightness, its joys, its successes.

An abridgment of Mr. H. S. Salt's 'Life of Thoreau' appears in the "Great Writers" edited by Eric Robertson and Frank T. Marzials (London: Walter Scott; New York: Scribners). It is chiefly noticeable—apart from its readableness—on account of a Thoreau bibliography compiled by John P. Anderson of the British Museum. This extends to nine pages and more than two hundred titles—a sufficient proof of the interest of the subject. Mr. Salt's Life, which appeared, in England only, in a fuller form, six years ago, does not, so far as we perceive, throw any new light on Thoreau. Of course, as an admirer, he strongly objects to Lowell's view of his hero, and assures the reader that it is all a mistake to suppose that he imitated Emerson or was an egotist. If not an egotist, Mr. Salt should add a new word to the dictionary framed to describe the quality which leads a man to declare that, after living some thirty years on this planet, he has "yet to hear a word of valuable advice from his elders."

It is not only students of ecclesiastical history who will be benefited by Messrs. Gee and Hardy's 'Documents Illustrative of English Church History' (Macmillan Co.), but all who desire to follow the development of political life in England; for in the Middle Ages it is impossible to dissociate the sacred and the profane. The Statutes of Mortmain, of Provisors, and of *Præmunire* were acts of statesmanship exercising a wide influence on the community in general, and there were few measures of more importance in the stormy seventeenth century than the Solemn League and Covenant, the Five-Mile Act, the Test Act, the Bill of Rights, and the Toleration Act. The one hundred and twenty-four documents here printed are gathered from a wide range of publications, accessible as a whole to few scholars, and it is a real service to sound learning to collect and present them in a handy shape. Many students would have preferred them in the original language, but it is perhaps a prudent concession to the multitude to give them in translations.

Both the subject and treatment of Brightman's 'Liturgies, Eastern and Western,' of which volume i., containing the Eastern Liturgies, has just been issued (Oxford: Clarendon Press; New York: Macmillan), are too technical for detailed notice here, but acknowledgment is due to the author for the learning and thoroughness with which he has handled his complex theme. Even those not specialists can, however, find interest in the glossaries, where they will learn how many forms the Christian ritual can assume.

The exceptional number of periodic comets renders very acceptable the new and fourth edition of Mr. W. T. Lynn's 'Remarkable Comets' (London: Edward Stanford), it being the only popular monograph on these extraordinary bodies. Not only are periodic comets treated, but also those which may be considered remarkable either on account of their brilliant physical appearance, or because of any other circumstance respecting them. The scope of the work is almost purely histori-

cal. The comets connected with the great meteoric displays are not omitted, nor those interesting comets seen on a single occasion only, during total eclipses of the sun—in 1882 in Egypt and in 1893 in Chili. It is somewhat singular, too, although the coincidence has not been remarked, that during two previous eclipses, also at eleven years' interval (1871 and 1860), comets are thought to have been depicted in the streamers of the corona. Mr. Lynn touches lightly on the subject of the composition of comets, and concludes his valuable treatise with a list of the dates in the order of the next returns of those periodic comets now expected to reappear. Only one or two of these are likely to exhibit extraordinary brilliancy, such as any comet from the interstellar spaces casually encountering the solar system may do. Small as the monograph is, its author has not neglected to provide a brief index.

A new 'Paris Directory' for 1896 comes to us from the compiler and publisher, Donald Downie, 61 Rue du Faubourg St.-Honoré. It is convenient for the pocket, and consists of a guide for sightseers, with directories of the diplomatic corps and of the residential section (Anglo-American chiefly), and much miscellaneous information concerning railroads, hotels, cafés, etc. The theatres are so exhibited (in perspective, not in plan) that one can readily choose his numbered seat

A recent issue of the *Berlingske Tidende* of Copenhagen contains an account of a new enterprise of the leading Icelandic publisher, Sigurdur Kristjansson, who is now bringing out a cheap edition of all the Icelandic sagas. The latest issue from the Reykjavik press is a series of biographies of twenty leading Icelanders, in as many volumes, of which two have already appeared. The subjects of these first two volumes are the historian Jon Espolin and the poet Magnus Jonsson. The first work consists in part of an autobiography, originally written in Danish, translated and completed by Espolin's favorite pupil, Gisli Konradsson. An interesting feature is the introduction by Dr. Jon Thorkelsson, describing the life of the Icelandic students at the University of Copenhagen during the middle of the last century. From the biography it appears that Espolin was born in 1769. After spending three years in Denmark, where he made an unsuccessful attempt to obtain a permanent official position, he returned to Iceland and became Syssellmand or judge in various districts of the island. His most important literary work is 'Arbækur Islands,' in thirteen volumes, which treats of the history of Iceland from 1262 to 1832. Besides being the foremost Icelandic historian of modern times, Espolin may be regarded as the father of modern Icelandic prose. Of Magnus Jonsson's life and works less is known, as he lived in the sixteenth century. Unlike the majority of his fellow-poets, Jonsson was very wealthy, and, both on account of his politeness and his sumptuous retinue, he received the surname of the Magnificent. The book contains many contemporary documents which throw light on obscure points. In selecting the subjects for the later volumes, an attempt will be made to include prominent Icelanders whose lives are comparatively unknown to ordinary readers.

A year ago the Bunker Hill Monument Association held a memorial service in celebration of the hundredth anniversary of the death of Col. William Prescott, who commanded in the battle. The orator of the occasion was Dr. William Everett, and his address has just been printed by the Association. It was when delivered an admirable peace tract, but its worth and timeliness have been vastly augmented by the Jingo mania under which we have labored for the past six months. Dr. Everett aptly defends the fitness of his invocation of international peace in a commemoration of Bunker Hill by instancing the call of Webster to be orator in 1843, at the dedication of the monument, just after he had concluded the unpopular extradition and boundary treaties with England. Dr. Everett's address was mainly historic, but the weight of it is in his fervid denunciation of war, which may fairly be called prophetic.

The seventh Bulletin of the Bureau of Rolls and Library of the Department of State proceeds with the miscellaneous index to the papers of these depositories, in which each item is a *précis* of the document recorded. We miss here a repetition of the personal name (or other rubric) at the head of a page when a number of items are "let in" with a dash. The bulk of the Bulletin, however, consists of "The Amendments to the Constitution and Ratifications by the Several States," forming Part iv. of the 'Documentary History of the Constitution, 1786–1870,' and concluding volume ii.

Capital topographic draftsmanship and a cultivated graphic style distinguish Mr. Bolton Coit Brown's paper, "A Trip about the Headwaters of the Middle and South Forks of King's River," in the eighth Sierra Club Bulletin (Academy of Science Building, San Francisco). There is a brief description, with photographic views, of an ascent of Mt. Le Conte, and the other articles convey practical information for the Sierra mountaineer.

In the *Scottish Geographical Magazine* for June Mr. G. S. Fort gives an encouraging account of Rhodesia as a grazing and farming country. The want of machinery has prevented the development of the extensive gold areas which have been discovered, but he looks forward with confidence to the not distant time when its output of gold "will equal, if not exceed, that from the Rand." The success of this industry, however, depends wholly upon obtaining reliable native labor. In the Transvaal this is becoming increasingly difficult on account of the treatment of the natives by the Boers. "Marriage rights are not recognized. A native Christian woman properly married in the Cape Colony loses all conjugal rights, even the position of wife, as soon as she goes to reside in the Transvaal." "If more than five families settle on any piece of ground, they are broken up, practically, and handed over as slaves to the surrounding farmers." They are denied the ordinary rights of justice, and "are able to buy drink." Mr. A. Silva White, in a paper on aërial navigation, says that his ten years' experiences in ballooning show that "a flying-machine, heavier than the air and capable of withstanding the impact of the wind, is the only promising airship of the future." The great difficulty with Mr. Maxim's aëroplane, he thinks, lies in the fact that there is no "automatic mechanism which will enable it, *without altering its direction*," to pass from one air-current into another blowing in an opposite direction. Herr Andrée's project of reaching the North Pole by balloon is characterized "as foolhardy in the extreme, even suicidal."

The latest statistics of suicide in Germany from 1881 to 1894, published by Georg G. Mayr in the 'Allgemeiner Statistischer Archiv' (Tübingen: Laupp), show a startling increase in the number of self-murders during these thirteen years—from 8,987 to 11,112, an increase far greater than that of the population during the same period. It is also a curious fact that about four times as many men commit suicide as women. This disparity is due, in part at least, to the prevalence of suicide in the rank and file of the army as the result, in most cases, of maltreatment, but cannot be thus wholly accounted for. In England the proportion is somewhat less, being about three men to one woman. Evidently the female sex is either more patient in bearing those ills we have, or less resolute in flying to others that we know not of. The German is reputed to be phlegmatic, and is certainly less vivacious than the Frenchman, but is irascible, and easily loses his self-control on slight provocation. This is especially true of the lower classes. We may add that these statistics do not include unsuccessful attempts at suicide, but only actual deaths.

The Prussian Minister of Instruction has recently issued a circular stating the conditions on which women can be permitted to attend the lectures in the University of Berlin. In the first place they must obtain permission from the Minister of Instruction, and in their request for this official document must state what studies they intend to pursue and what lectures they wish to attend; they must also give an account of the nature and extent of their preparatory instruction and of their "personal relations," whatever that may mean. After these testimonials have been examined and the certificate of permission secured, they are to make application to the professors or tutors directly concerned. The rector's certificate must be renewed every semester, and should always be carried in the pocket, as it may be called for at any time. Only candidates for a degree are provided with the *Anmeldungsbuch*. These concessions to women indicate no little progress, although necessarily accompanied, in bureaucratic Prussia, with the unwinding of considerable red tape. On May 16 six women took the degree of M.D. at the University of Brussels, of whom five were English and one a German from Berlin, who passed her examination "with great distinction."

The coat of mail presented to Joan of Arc by Charles III. has been discovered in the Vatican. Before the death of the Maid of Orleans this coat of mail came into the possession of the Marquis de Courvel. Later it was brought to Rome, where it remained apparently unnoticed among other articles from the Middle Ages, until a descendant of the old marquis, after having obtained the necessary permission, conducted a search with the result noted above.

The Norwegian Storthing has passed a bill introduced by Emil Stang, the former Conservative prime minister, providing for the exercise of the right of suffrage by Norwegian sailors while on voyages. The measure, which was passed without regard to party feeling, has received the unqualified endorsement of the class it is intended to benefit.

—Historical students have awaited with interest the appearance of the complete compilation of the messages, proclamations, and inaugural addresses of the Presidents from 1789 to 1897, authorized by concurrent resolutions of Congress. The importance of this undertaking was recognized by the editor, Mr. James D. Richardson, Representative from Tennessee, who says: "The utmost effort has been made to make the compilation accurate

and exhaustive." The first volume, 1789-1817, covers the first fourteen Congresses, whose papers are almost inaccessible. It shows that Mr. Richardson has been unfortunate in his assistants, and that the work is badly planned, inaccurate, and incomplete. The arrangement is roughly by sessions of Congress, and the papers are arranged chronologically for each session under four sub-headings, viz., Annual, Special, and Veto Messages, and Proclamations. To find a given document is very difficult, as the volume of six hundred pages is not indexed. Mr. Richardson announces that from this "complete compilation" he has omitted messages nominating persons to office, transmitting treaties, and transmitting reports of heads of departments, though in fact he has not rigidly followed this rule. Routine nominations and regular, formal reports might properly be neglected, but the omission of messages relating to treaties, and to special reports of the highest importance, renders the collection incomplete and unsatisfactory. Moreover, apart from these, some fifty important messages have been incomprehensibly omitted, for it is only necessary to follow page by page the journals of Congress to make a complete list of the messages. The following schedule illustrates the character and importance of the missing messages: September 26, 1789, Rhode Island desires to maintain friendly relations with the United States; June 14, 1790, Ratification of constitutional amendments by New Hampshire; June 14, 1790, Similar action by Maryland; December 30, 1793, Affairs with Spain; January 15 and 16, 1794, Relations with France, being the important messages on the Genet incident; January 22, 1794, Relations with Great Britain; March 12, 1794, Relations with Spain; March 25, 1794, American commerce; May 23 and June 4, 1794, Relations with Great Britain; January 12, 1795, On Indian troubles; February 29, 1796, Negotiations for a treaty with Spain; June 24, 1797, Relations with Algiers; January 29, 1798, Explanatory article of treaty with Great Britain; June 5 and June 18, 1798, Two important messages on relations with France; December 13, 1799, Relations with Tunis; February 17, 1800, Negotiations with Prussia; December 22, 1800, Confidential instructions to Envoy to France; December 6, 1804, On public buildings at Washington. To add to this list is needless.

—It is to be regretted that, as Mr. Richardson prints a letter of Louis XVI.'s on Jefferson's quitting the French court, and other extraneous matter relating to Jefferson's service in France, he did not print with the message of January 26, 1791, the letter from the French Assembly regarding its three days' mourning for Benjamin Franklin, as the title of the message conveys no idea of its subject-matter. The letter of Thomas Jefferson, President-elect, fixing the time and place for taking the oath of office, is published, but a similar letter of John Adams, laid before the Senate February 9, 1797, is omitted. It is to be hoped that Mr. Richardson will supply the missing messages by errata pages in volume ii. The unsystematic method of compilation is indicated by the failure to find Washington's proclamations of March 1, 1791, and March 1, 1795, until the volume was practically completed, so that they were printed on an errata sheet. Adams's proclamation of July 16, 1798, convening the Senate in extra session, is omitted, and the proclamation of July 16, 1803, is drawn from a newspaper, as are others, instead of being taken from official publications. Madison's proclamation of December 22, 1815, in connection with the very important commercial convention with Great Britain (see message of December 23), is also wanting. The excision of the treaty of Ghent from the proclamation of February 18, 1815, emasculates the document. The following messages of President Washington, which are printed as being addressed to the Senate alone, were addressed and sent to both houses of Congress, namely, August 7, August 10, September 16, and two of September 29, 1789. Mr. Richardson has incorporated the Declaration of Independence, Articles of Confederation, and the Constitution. The illustrations are typographically unsuited to the volume, and the biographies of the Presidents are unsatisfactory. Washington's grandfather, Lawrence, is said to have come to Virginia in 1657, whereas it was his great-grandfather, John Washington.

—In 1889 the Historical Society of Pennsylvania authorized the publication of the writings and correspondence of John Dickinson, "the penman of the Revolution." The first fruit of this undertaking was Stillé's 'Life and Times of Dickinson,' published in 1891, and reviewed at length in these columns at that time; we now have the first of three volumes of the 'Writings,' edited for the Society by Paul Leicester Ford. While the present collection does not claim absolute completeness, owing in part to the inability of the editor to obtain access to some of the Dickinson papers, and in part to his wise decision to exclude broadsides and newspaper pieces whose authorship could not be determined by other evidence than that of style, Mr. Ford assures us that such omissions as there may be are probably of "small moment," and "that the present edition includes all that is essential and important of Dickinson's works." As the only other collection of Dickinson's writings, that compiled by himself and published in 1801, contains less than a third of his works, and is no longer very accessible, the present edition is certain to make a valuable addition to available material for the study of the period which it covers. About a third of this first volume is taken up with the speeches and published writings of Dickinson, in connection with the agitation in Pennsylvania, in 1764, for a change in the government of the colony —a movement to which he was vehemently opposed, and against which he fought vigorously, but without success. Besides the great speech of May 24, we have Dickinson's protest against the petition drafted by Franklin and adopted by the Assembly, his scathing arraignment of Galloway in an elaborate reply to the latter's "pretended speech," his satirical "Receipt to make a Speech," and his protest against the appointment of Franklin as additional agent of the colony in England. To this last protest Franklin, though on the eve of his departure, felt bound to reply. Dickinson's rejoinder, closing his side of the controversy, is here printed for the first time.

—In the discussion aroused by the Stamp Act, the revenue acts, and other coercive measures Dickinson was a leading participant. He prepared the original draft of the resolutions adopted September 21, 1765, by the Pennsylvania Assembly, on the Stamp Act, and the "Declaration of Rights" and "Petition to the King" put forth by the Stamp Act Congress, besides publishing, later in the same year, a short "Address to Friends and Countrymen," and a pamphlet on the "Late Regulations respecting the British Colonies." A garbled version of the letter of the Barbados Committee of Correspondence in 1766, in which, by a misprint, or worse, the American colonies were charged with "rebellious" instead of "present" opposition, gave Dickinson an occasion for stating more in detail the position of the colonies, and of repelling accusations of disloyalty; while in 1768 appeared the most popular and influential of all his writings up to that time, the "Letters of a Farmer." In the heat of controversy and invective over the conduct of Great Britain, there had come to be, as Mr. Ford points out in his introductory note, much confusion of arguments, and not a little difficulty in attempting to reconcile perfect independence in taxation and perfect loyalty to the crown; and the "Letters of a Farmer," with their distinction between "external" and "internal" taxation, seemed to point to a common ground upon which all the patriot party could stand. The distinction was a shadowy one at best, but it undoubtedly served a temporary purpose and helped on the cause of union, upon whose necessity Dickinson repeatedly insisted. As the conflict approached, however, the essential limitations of Dickinson's mind, and in particular the curious hesitancy at critical moments which was later to turn public opinion against him, began to appear, and one is almost forced to believe that he failed to see the natural and inevitable outcome of the steps he was doing much to hasten. While urging uncompromising resistance to the aggressions of Great Britain, he insisted upon the adoption of peaceable measures only, declared again and again that the only hope of prosperity for the colonies lay in union with the mother country, and refused to consider the possibility of independence. So he threw himself into the movement for non-importation, and drew up, in 1771, a petition from the Pennsylvania Assembly to the King, while attacking the tea tax in two letters published in 1773, and in 1774 once more reviewing the controversy in four "Letters to the Inhabitants of the British Colonies."

—Mr. J. P. Gordy, professor of pedagogy at Athens, Ohio, has compiled 'A History of Political Parties in the United States,' in three volumes, of which volume one, covering the period from 1787 to 1809, has been issued at Athens by the Ohio Publishing Co., and, according to the preface, the book is written primarily for the teacher "who has not had the advantage of a higher education." The author says: "Until normal-school training is required of American teachers, a considerable part of their training must be obtained through private study." The book is therefore intended for the "thoughtful reader without much previous knowledge of the subject." Mr. Gordy wishes to concentrate the attention of the unqualified teacher, desirous of learning how to teach history, on "those phases of history which it is important for American citizens to know in order that they may perform their duties as American citizens intelligently." He also hopes that the book may commend itself to some of "that large class"—business as well as professional men—who are "beginning to realize that the present has its roots in the past." To judge by the present volume, the book may be read not only by beginners, but by almost anybody, with profit. It is written in a clear and simple style, is entirely non-partisan, and makes the causes of the early party struggles much

clearer than many a more elaborate account. We have space but for two criticisms. The exact nature of the relations between the judiciary and the legislature might be made plainer. Again, the author seems to think (following Prof. Burgess's treatise on 'Political Science and Constitutional Law') that it is only the force of public opinion which, after a law has been, in a given case, held unconstitutional, operates to prevent the executive or the legislature from enforcing it in other cases. This is a mistaken view. When a court of last resort holds a statute unconstitutional, the effect is to wipe the law off the statute-book, and the moment the judgment is pronounced, any official who attempts further enforcement lays himself open, if he interferes with private rights, to a civil action in which he may be subjected to heavy damages. It is common sense and the fear of the consequences that make people refrain from trying to carry into effect laws once held to be void. The judiciary is, with us, above the legislature as to these matters — not coördinate with it.

MACAN'S HERODOTUS.

Herodotus: The Fourth, Fifth, and Sixth Books, with Introduction, Notes, Appendices, and Maps. By Reginald Walter Macan, M.A. Macmillan & Co.

SINCE the learned and comprehensive work of Rawlinson, this is undoubtedly the most important English contribution towards a scientific study and sympathetic appreciation of the labors of the Father of History. Some good excuse should be offered for the appearance of a new edition which expends eight hundred pages on one third of the history, and we really believe that Mr. Macan has justified himself. Whether he might have spared his readers a hundred or more pages by rigid self-denial and condensation is another question. But there is a luxury in taking plenty of sea-room; and Mr. Macan, if sometimes diffuse, is never tiresome. He uses occasionally hard and strange words which one must search for in the very largest dictionary, or perhaps in an American newspaper; it makes one's eyes open to see such oddities of expression as "gold galore," "to sleep six months on end," "not but what," "they gat them away," "contagmination," and "to penalize," used by a scholar who dwells not far from the fountain of pure English, which used to flow in Balliol. But at any rate Mr. Macan's style is strong in itself and strong in the weight of matter and research which it presents.

The special value of his attitude is that, while recognizing most fully the transcendent merits of Herodotus's narrative and achievement, he also points out with great penetration his numerous defects when judged by modern historical standards, and the sources of these defects. Finally, he sets himself to work to discover, by a searching analysis, the precise historical facts which underlie the various portions of narrative which he has undertaken to edit. His attitude differs fundamentally from that of Mr. Sayce, who found but little save abuse for the Egyptian and Persian episodes of the history—who suggests to us a bizarre picture of Herodotus listening open-mouthed to his dragoman and taking notes which he afterwards disarranges, highly gullible yet withal ready to gull his fellow-creatures, a "malignant" plunderer of the ideas and observations of his rivals who tries to conceal his theft; in short, an arrant liar and rogue, who poses under the mask of honest candor and simplicity. Mr. Macan does not join the side of the out-and-out sceptics like Sayce and Delbrück. He gives us a picture at once completer, fairer, and more flattering—more like that masterly and most satisfactory delineation which M. Hauvette offers with so much learning, measure, and sobriety; a delineation which reconciles so completely our spontaneous impression of the character of the man with the peculiarities of the historian.

Although not indebted to M. Hauvette, Mr. Macan agrees in general with his point of view. He gives us, in fact, the keenest, the most discriminating, the most exhaustive presentation of the methods and the merits of Herodotus which we have yet seen in English. Even as to that conglomerate of "traditions, legends, memories, and imaginations" of which the first three books are composed, where it would be, as he says, a "veritable labor of Psyche to sort and separate the fictitious from the true"—even in these, the least historical of the Histories of Herodotus, when tried by careful and discriminating methods, "there remains a great deal of almost infinite value for the historian proper, apart from its secondary value as illustrative literature, which the harshest critic cannot deny." Of the remaining six books, "large portions of particular statements may pass unchallenged into the historical order." "Yet, if the time is gone by when the work could be dismissed 'as a pack of lies,' the time is also gone by when the mere citation of a chapter of Herodotus can be taken as definitive. The historical value of the work varies from volume to volume, from book to book, almost from sentence to sentence."

To discover and to weigh these varying values by a detailed application of the critical method must be the business of the critical historian; it is the object of Mr. Macan's edition to apply this sifting process in detail to Books iv., v., and vi. The results are contained in the elaborate foot-notes of vol. i. and the fourteen dissertations which make up vol. ii. It is not possible here to catalogue the results, but there is no doubt at all that Mr. Macan, by a combination of good sense, keen penetration, and ample learning, has shed a useful and novel light on many important questions. To take a single instance, there is the battle of Marathon. This ancient problem, which has been so often attacked and with such varying solutions, is all the more fascinating because it involves many unknown quantities and so few data that are fixed. Indeed, the data given by Herodotus are so vague and inconsequent that it is possible the great traveller never took the trouble to visit the battle-ground, or to consult the evidence of documents and monuments for information. Dr. Evelyn Abbott professes himself somewhat tired of this question and hopeless of any further solution. Instead of discussing it once more, he gives his readers the sources, and leaves them to draw conclusions for themselves. Mr. Macan is more courageous. He has attacked the question once more, in an excursus which is the largest and most elaborate of his fourteen appendices. It is a choice specimen of his thoroughness and acuteness—perhaps we may add of his prolixity; for he writes as if he had all day and night before him. He permits himself to conjecture the probable value of a possible narrative by Aristotle, nor does he deny himself an allusion to the midges which, as Aristotle affirms, arise from the marshes of Marathon after a warm and pleasant day. But these are the foibles of an enthusiast who is eager to neglect nothing that may pertain to his topic. As a matter of fact, Mr. Macan does extract from his exhaustive discussion a reconstruction of the motives and strategy of the battle which is quite plausible, reasonable, and consistent. The outlines of his theory are not novel, but the combination is on the whole novel and satisfactory.

The hinge of his theory is this: The Athenians finally made the attack because the Persians had just begun a forward movement toward Athens by land and sea with the intention of assaulting the city. This movement was furthered and timed, to a certain extent (though not started), by the signal of a shield displayed to the Persians by Athenian sympathizers on the Pentelicus or Agrieliki. The Persian cavalry were therefore partly aboard the fleet, partly *hors de combat*, while the army was marching southward toward the main road to Athens. The Persian line fronted the mountain pass of Avlona whence the Athenians issued; their right rested on the "Charadra," or water-course, to the north; their left on the smaller marsh, Brexisa, to the south. This plan, varying in detail from that of Crusius, Delbrück, and Busolt, solves equally two main puzzles, or *cruces:* it accounts for the facility with which the Persians, after the defeat, got away with most of their fleet; it accounts also for the absence of the cavalry—that harrowing difficulty of all strategic critics. It does not find room or special occasion for the mile long running charge of the Athenians which Herodotus mentions with such emphasis, and which has been generally disbelieved. In view of certain French military experiments for longer distances, M. Hauvette accepts this charge as a possibility for well-trained athletes, and utilizes the movement in his scheme of the battle (which seems to us *pro tanto* preferable to Mr. Macan's) as part of a rapid change of front, executed to face and surprise the Persians. It will be remembered that Herodotus first states that Hippias chose the plain of Marathon because "it was suitable for the manœuvring of cavalry," and yet, in his account of the battle, absolutely ignores the cavalry, as if they had slipped clean away, or clean out of his mind. It is, in fact, quite likely, as Mr. Macan suggests, that they had slipped out of his mind when he was writing his somewhat misty sketch of the battle.

Such forgetfulness seems to us highly unscientific; but Herodotus was neither a soldier nor a scientist. He did not care much—his hearers cared even less—for accurate tactics and topography. He could not have obtained such information from the veterans of Marathon, if he had tried. What they and his hearers liked best, undoubtedly, was his stories of individual prowess, his epic history of a grand national achievement, his tales of the marvellous, and, above all, his moralities. In these tastes Herodotus was like his audience: he holds the mirror up to his own time; he reflects the popular spirit, the superstition, the beliefs of his age, much more exactly than the scientific Thucydides. Thucydides is a modern, a mind of the nineteenth century. He had some intellectual comrades (of his own way of thinking) even in his own age. Yet it is likely that Herodotus has given us a work of greater value than if he had attempted prematurely to apply the method of Thucydides—the modern method—to the complex mass of material with which he dealt. The result would have been more sophisticated and less trustworthy. Herodotus has, of course, his standards; he is far from believing everything he hears. He

is by no means destitute of the critical faculty, but he applies it unequally and capriciously. "A modern critic," says Mr. Macan, "might charge him with a failure of political insight"; and, notwithstanding examples of marked shrewdness and penetration, his rationale of the movements of events "falls far short of the policy and statecraft of the age which he describes and represents." This statement is probably truer of the politics of the Greek than of the Eastern world of his day. The Orientalism of his motives, the personal whim and caprice which we see in his story of Polycrates, of Crœsus and Cyrus, must certainly have ruled to some extent the fortunes of that Eastern world as they ruled at the court of Haroun al-Rashid, or in the adventures of Hajji Baba of Ispahan. But there is no denying that Herodotus loved to point to the turns of the wheel of fortune; he is fond of the *deus ex machina*. He looks at the world and mankind through colored glasses: to him human "life is a sphere for the realization of divine judgments, and human history a book of fables with a moral." Hence he is like a novelist with a purpose—he writes history with a motive; his dearest delight is to point a moral and adorn a tale. Indeed, that is a main object in rehearsing the failure of the Persian invasion, and a subsidiary object in a multitude of minor episodes—in the story of Crœsus and of Miltiades.

A most striking and unsuspected instance of these tendencies and of the pitfalls which they offer to the historian has been unearthed by Mr. Macan, aided by a suggestion of Mr. Arnold C. Taylor. Curtius, in sketching the career of Cleisthenes of Sicyon, accepts in detail with a certain amount of confidence the celebrated tale of the wedding of Agariste. It is related by Herodotus with a kind of epic pomp and circumstance, and the gathering of the suitors is an echo, we may think, of some Homeric account of the assembling of the suitors of Helen. The affair, indeed, reminds one of the Hindu custom of "swayamvara" such as that in which Nala won Damayanti. The story ends, it will be remembered, with the reckless behavior of the Athenian Hippocleides, the cleverest and wittiest of the suitors, who lost his head at the final banquet, disgusted his prospective father-in-law by his pranks and indecent performances, and "danced away" his marriage. Now the startling fact which Mr. Macan's appendix brings to light is that the parallel of this very legend is contained in one of the Buddhist birth-stories translated by Mr. T. H. Rhys-Davids. In this tale, the king of the birds, the Golden Goose, holds a *swayamvara* for his daughter to which he assembles all the birds of the Himalaya region, and bids his daughter choose a husband. Her choice rests upon the peacock, with his brilliant plumage, whereupon the peacock, proud of the distinction and anxious to display his charms still further, spread his wings and began to dance, exposing himself "in breach of all modesty." The royal Golden Goose is shocked by this indecent exposure and bestows his daughter on his nephew, an exemplary gosling. There is hardly the ghost of a chance that this tale travelled to India from Greece, and that the Golden Goose is a metempsychosis of Cleisthenes. All scientific probability points the other way. The Greek story is an historic tradition entangled and overgrown with the decorative ivy of a popular fable. Less than two centuries were required for this growth and transformation; and Herodotus simply handed down what he heard, dressed up in his own admirable manner. The historic facts are not obliterated, but they are considerably disguised.

We have here a clear proof of the caution with which the details of Herodotean narrative must be sifted, more particularly when it involves folk-lore. The folk-lore is quite patent in the story of Atys, foredoomed to be slain by steel, in the clever thief of the treasury of Rhampsinitus, in the ring of Polycrates, in the beautiful tale of Helen of Therapne bestowing the gift of beauty on the future wife of Ariston. All these are still echoed in the 'Arabian Nights' or elsewhere, and are themselves melodious echoes of folk-lore older than Herodotus, but crystallized and adorned by his consummate literary art.

THE MERRYMOUNT MISSAL.

The Altar Book: Containing the Order for the Celebration of the Holy Eucharist according to the Use of the American Church MDCCCXCII. By Authority. [Boston: The Merrymount Press (D. B. Updike).]

Mr. Updike deserves well of his church for the labor of love which has produced this magnificent volume. The Anglican liturgy, like all its sister Rites, lends itself easily to decorative art. What was accomplished by the missal painter of the Middle Age by creamy parchment and a wealth of color and exquisite miniature work, Mr. Updike gives us in the measure of our days by the most careful bookmaking and by decoration in black and white.

The origin and development of the English Prayer-Book make neither a long nor an unfamiliar story. Up to the time of Edward VI. there was, in the Church of England, no one precise order of celebrating the Eucharist binding upon all churches. In the centuries between the mission of St. Augustine and the beginning of the sixteenth century the original liturgy, if indeed there were only one, had developed into many and various local "Uses." These variations, however, were relatively slight; they did not touch the structure of the liturgy at all. A liturgy, or Mass—to use a more convenient technical word which ought to be colorless—has a structure of its own as distinct and as much a matter of rule as the structure of a symphony is. It is, in fact, a mystical drama, in which is shown symbolically the Life and Passion of Christ. Every liturgy from the very earliest shows this with more or less plainness, though it is perhaps set forth with greater clearness in the later Roman Rite than in some of the earlier ones. These Uses, then, at the beginning of the sixteenth century, divided the Church of England among them. The great Sarum Rite, "Insignis Ecclesiæ Sarisburiensis," seems to have prevailed in the south of England, and was carried so far as to certain churches in Ireland and in Scotland. In the north of England, the Use of York was followed; west of the Severn, that of Hereford seems to have been adopted, and, in North Wales, the Use of Bangor. But all these churches appear to have retained peculiarities of their own. Maskell shows, for instance, that there was an ancient Use of the Cathedral of St. Paul in London, held in high esteem till the year 1414, when the Use of Sarum was substituted. But though this last regulated the order of saying and singing, St. Paul's is expressly said to have retained its ancient ceremonies and observances as they were from the beginning.

These diversities, most interesting as they are from a liturgiological point of view, and giving as they did great scope to beautiful ritual development, met with little favor in the eyes of the Reformers, just as the Roman authorities within the present century disliked and have destroyed the Paris rite and many another, and would doubtless be glad to root out thoroughly even the Ambrosian. So the English Reformers were determined that "now from henceforth all the whole realm shall have but one Use." This was said at the time of the setting forth of the first Prayer-Book of Edward VI. in 1549. The revision of the old offices had been going on since 1542. Edward's First Book may be described, somewhat generously, as a severe recension and revision (if not a reconstruction) of the Sarum Use. It lost much in point of liturgical beauty, and was made awkward by the introduction of much didactic and hortatory matter. For the first time in ecclesiastical history what are practically sermons were introduced into a missal. But the English form was of high excellence, and the Mass itself not substantially changed. The Second Book, which appeared in 1552, showed more important changes, some of which must be called nothing less than wanton, like the removal of the *Gloria in Excelsis* from the beginning to the end of the Mass. This simply destroyed the sequence of the liturgic drama. Some "Ritualists" find, we believe, a certain doctrinal satisfaction in the change, but with doctrinal considerations we have nothing to do. From the point of view of the liturgiologist it was a great mistake and is a blemish. The other changes in the Second Book were all in the direction of restriction and narrowness. The book had, however, but a brief existence, for it was superseded within a few months by the revival of the Latin Mass at Mary's accession, and is interesting chiefly as forming the basis of the restored Prayer-book under Elizabeth in 1559, and, through that, of the later revisions.

All these revisions, one after another, down to the last one in America in 1892, have been, on the whole, liturgical improvements. The Anglican liturgy, while not perhaps "incomparable," save in the stately and beautiful flow of its English speech, is still, no doubt, the best known and best loved by the people who use it of all Christian religious formularies. It is not entirely unlike many a church which may be seen in England, with Saxon or Norman arches in its crypt and Gothic architecture of two or three periods appearing in its nave and chancel, with a Renaissance porch, and perhaps a Georgian three-decker blocking up the east end. Time and use have blunted the sense which perceives many of these incongruities. Age has made them venerable in some sort, and has inspired affection for them. Their distant origin even seems to make them blend, as distance blends inharmonious voices. It may possibly be that what are, when viewed with a severely critical eye, the defects of the Anglican liturgy, have themselves only added to the devotion with which the Prayer-Book is cherished, and which has enshrined it next to the Bible in the English religious mind.

Mr. Updike, then, has had a worthy field in which to display all his ability, his judgment, and his knowledge of his art. He has drawn upon these unsparingly, and, besides, has lavished time and pains and money upon the perfection of his book. Many difficult questions he must have had to consider and settle. Some people, doubtless, would have been glad to see full and minute ritual directions introduced

into the volume, and additional prayers for the priest's own use, and perhaps Collects, Epistles and Gospels for votive masses, and would fain have made the present volume something like Mr. Orby Shipley's 'Ritual of the Altar,' which was published by Longmans in 1878. Mr. Updike has wisely avoided this snare. His book is exactly and precisely what the Church prescribes, and nothing else. The text follows exactly the Revised Standard Book of Common Prayer of 1892. The most scrupulous pains have been taken that the text should be as correct as possible, and the book has the great advantage of being issued "by authority." So far as we know, no other similar missal possesses this. Among those who have collaborated with Mr. Updike, the highest praise is perhaps due to Mr. Bertram Grosvenor Goodhue, who has not only furnished the elaborate and intricate borders in black and white, but has also designed the initial letters throughout the volume, and the type by which it is printed. The type is most satisfying—clear and round and handsome, suggesting the best sixteenth-century fonts. Mr. Goodhue's symbolism in his borders and initials has been worked out with much care and is not too recondite to be easily understood. Most of all, the arrangement and application of the symbols deserve notice and praise. The illustrations include pictures suitable to the great festivals of the Christian year and a Crucifixion facing the Prayer of Consecration. They are the work of Mr. Anning Bell of Liverpool. These have at least one great merit, which is enough to make them shine in their own *genre:* they are, with one possible exception, neither sentimental nor weak. The drawings for Easter and for Trinity Sunday are especially to be commended. Only so far as in any, however distant, way they suggest the work of Dürer do they give occasion for regret. The musical notation of the book has been in the hands of Sir John Stainer, who in it has followed Merbecke with praiseworthy closeness. Of his own work there is but little, except a few notes to the *Kyrie*, and the Summary of the Law; the latter based on the cadences of the Comfortable Words. He adds, also, some notes on a separate sheet with tones for the Collects, Epistles, and Gospels, which will be found useful. The music is printed with the old square notes on a red staff.

The book would have been more conveniently arranged, no doubt, if the Communion Office had been put in the middle of the volume after the Gospel for Easter Even, as is common in missals; but this convenience would have been dearly bought, for it would have prevented the publication of the book "by authority." The order of the offices in the Standard Book is rigidly fixed. So, too, it would have been a convenience if the Canon, or Prayer of Consecration, had been printed on two pages facing each other, so that no leaf need be turned during its recital. But this would have left no place for the picture of the Crucifixion. The binding of the volume is of pigskin, strong and handsome. The covers might, perhaps, have been with advantage a trifle thicker and the metal clasps stouter. The type of the book has been set under the publisher's personal supervision at his Merrymount Press, in Boston, and the printing, in red and black, executed at the De Vinne Press.

Mr. Updike has endeavored, as he says, "to make a volume on ideal principles with satisfactory practical results." His aim has been nothing short of perfection, and we have tried to judge his book by his own standard. We believe that we have found all the fault with it that can fairly be found—save one, that the edition consists of only three hundred and fifty copies, and that the book will therefore soon be out of print.

The Red Badge of Courage: An Episode of the American Civil War.—*Maggie:* A Girl of the Streets. By Stephen Crane. D. Appleton & Co.—*George's Mother:* By Stephen Crane. London and New York: Edward Arnold. 1896.

Mr. Stephen Crane is said never to have seen a battle; but his first book, 'The Red Badge of Courage,' is made up of the account of one. The success of the story, however, is due, not merely to what Mr. Crane knows of battle-fields, but to what he knows of the human heart. He describes the adventures of a private—a raw recruit—in one of those long engagements, so common in our civil war, and indeed in all modern wars, in which the field of battle is too extensive for those in one part of it to know what is going on elsewhere, and where often a regiment remains in ignorance for some time whether it is victorious or defeated, where the nature of the country prevents hand-to-hand fighting, and a *coup d'œil* of the whole scene is out of the question. In such an action Mr. Crane's hero plays an active part. It is what goes on in his mind that we hear of, and his experience is in part so exactly what old soldiers tell young soldiers to expect that Mr. Crane might easily have got it at second-hand. The hero is at first mortally afraid that he is going to be afraid, he then does his duty well enough, but later is seized with a panic and runs away, only to come out a hero again in the end. His panic and flight are managed well; the accidental wound which he luckily gets in running, helps him to a reputation for bravery before he has earned it. When he fights in the end, he fights like a devil, he saves the regimental flag, he is insane with the passion of battle; he is baptized into the brotherhood of those who have been to hell and returned alive. The book is undeniably clever; its vice is over-emphasis. Mr. Crane has not learnt the secret that carnage is itself eloquent, and does not need epithets to make it so. What is a "crimson roar"? Do soldiers hear crimson roars, or do they hear simply roars? If this way of getting expression out of language is allowable, why not extend it to the other senses, and have not only crimson sounds, but purple smells, prehensile views, adhesive music? Color in language is just now a fashionable affectation; Mr. Crane's originality does not lie in falling into it. 'George's Mother' is the story of a degenerate drunkard who breaks his mother's heart; 'Maggie' is a story of the Bowery, in the "dialect" of "Chimmie Fadden."

Taking all three stories together, we should classify Mr. Crane as a rather promising writer of the animalistic school. His types are mainly human beings of the order which makes us regret the power of literature to portray them. Not merely are they low, but there is little that is interesting in them. We resent the sense that we must at certain points resemble them. Even the old mother is not made pathetic in a human way; her son disgusts us so that we have small power of sympathy with her left. Maggie it is impossible to weep over. We can feel only that it is a pity that the gutter is so dirty, and turn in another direction. In short, Mr. Crane's art is to us very depressing. Of course, there is always the crushing reply that one who does not love art for the sake of art is a poor devil, not worth writing for. But we do not; we do not even love literature for its own sake.

It is only fair to say that what we have called animalism others pronounce wonderful realism. We use the word animalism for the sake of clearness, to denote a species of realism which deals with man considered as an animal, capable of hunger, thirst, lust, cruelty, vanity, fear, sloth, predacity, greed, and other passions and appetites that make him kin to the brutes, but which neglects, so far as possible, any higher qualities which distinguish him from his four-footed relatives, such as humor, thought, reason, aspiration, affection, morality, and religion. Real life is full of the contrasts between these conflicting tendencies, but the object of the animalistic school seems always to make a study of the *genus homo* which shall recall the menagerie at feeding-time rather than human society.

Regeneration: A Reply to Max Nordau. With Introduction by Nicholas Murray Butler. G. P. Putnam's Sons. Pp. 311.

The anonymous author of this work assures us that Max Nordau's book has become a nightmare to millions of human beings, that people have been aroused by it from the "lethargy produced by the din of clashing opinions and contradictory systems" (an ill-fitting figure!), and that he knows cases of people of sensitive mind who imagine that, "thanks to this book, their friends will look upon them as on the road to lunacy." It is evident that so much misery is in crying need of being alleviated, and we hasten to inform these sufferers that they will find in 'Regeneration' a perfect remedy for all their ills. The author has set himself the task of replying to the exaggerations of Max Nordau with great detail; one cannot rise from reading his book without being fully convinced that Nordau has failed to establish his position, and that his indictment against humanity as being well on the road to lunacy is, to say the least, not proven. The author takes up in turn the attacks which Nordau makes on the pre-Raphaelites, on Ibsen, Tolstoi, and Wagner, and it is safe to say that those timid souls who have felt constrained to give up their admiration for these great artists for fear lest they were following after erratic and irresponsible will-o'-the-wisps, may now return to their allegiance with recovered peace of mind. It is true that our author does not do all this with the brilliancy which William James devoted to the same thesis in the pages of the *Psychological Review*, but he does it with perfect effectiveness; and if only the brilliant people were allowed to write, of the making of many books there would soon be an end. The scientist, and especially the psychologist, will not make much account of this volume, but then the author has a poor opinion of these misguided people anyway, and he had small hope of turning them from the error of their ways.

It is true that his idea of just what it is that the scientists believe on various points is sometimes rather hazy, as the following sentences will show:

"A hundred years ago the scientists would have laughed to scorn any one who had told them that their senses deceived them with regard to light, darkness, colors, silence, and sound, and that all these presentations received by our senses were simply movement, or manifestations of energy."

"It is not surprising that a scientist by erudition (!), and especially an alienist, who by dint of studying the mechanism which connects what some call the soul, and others designate

as the trinity of the consciousness, the judgment, and the will (!), with the body, has persuaded himself that there is nothing beyond nerves, cells, and the gray matter (!), should look with contempt on the imagination."

One would gladly know who is this enviable scientist who has been able to get at the "mechanism which connects" soul and body, and to study it!

"Psychologists are prone to speak of a man's consciousness, though scarcely two scientific men would agree as to what it is. But this does not prevent them from dividing consciousness up into divisions and subdivisions, all with their special names, in order to be able to express their ideas in words."

It must be admitted that this looks like a laudable motive on the part of the psychologist, whatever may be thought of the means which he employs to attain it. But not all scientists are as bad as psychologists:

"All scientists are not affected by scientific superstition. . . . Thus, astronomers rarely exhibit any such symptoms, while biologists are more apt to do so, and psychologists are more scientifically superstitious than any other class of scientists. It might be hazardous to attempt an explanation of this fact, but may it not be found in the obviousness of outward infinity, and the impalpability of inward infinity?"

Lest these examples may not be a sufficient indication of what the author is capable of in the way of style, we add one more:

"Should we find, on the other hand, that the deplorable state among the poorer classes—their suffering, their degradation, and their joyless lives, coexisting with large fortunes, and irremediable under present laws and institutions—leads to the conclusion that the altruistic feelings of the wealthy are useless, and thus prompt among the upper classes selfishness and egomania, and the determination to drown their higher emotions in a giddy life, and in the poorer classes to foster destructive tendencies and the desire for revenge, we turn our attention to social remedies."

Occasionally even the author himself loses his way in sentences of this kind, and ends with *deny* where he means to say *affirm*, or *folly* where he means to say *wisdom* (pp. 105, 67). He has a curious way of saying *ego* for soul, and "personal responsibility" for a future state of rewards and punishments. He says: "It is not the well-meaning, plodding scientist, striving to arrest disease, lessen pain, and dispel superstition, that can bounce us into the belief in personal irresponsibility." And here is a curious bit of thinking: he believes that in the Franco-German war the victory of the Germans was due to the moral quality of the German army, while the defeat of the French is to be attributed not to lack of moral qualities, but to bad leadership.

But it should not be supposed that the book is all quite as bad as this. There are two subordinate topics, in fact, which the author treats at considerable length, and on which he writes with a good deal of freshness and with a degree of intelligence that would seem to indicate an acquaintance at first hand. These are his description of the peculiar character and tone of feeling of the people of Norway, in refuting Nordau's charge that Ibsen is writing in the air; and his picture of the average German man in the character of husband of the average German wife. Under this latter head, he points out that the Germans are perfectly sensible to the charm of high-spirited, talented, well dressed, and lively women, and that they are also aware that leisure, exemption from hard work, good food, exercise, suitable friends, artistic surroundings, books, a fair amount of pleasure, and considerate treatment are essential to the production of women of this kind. But it is not this kind of woman that they wish to marry—it would clash too widely with the traditional type of a good wife, and would set their whole circle of acquaintances talking; nor is it the kind of woman that they wish their daughters to develop into—they must not have a distinct individuality, or it will go hard with them in the marriage market. Women must eschew romantic ideas, they must practise a demure demeanor, they must notice the evils that follow upon poverty and be content with a prosperous though unattractive husband; men seldom marry young, and girls are taught to ask no question about their past, to sacrifice their own ideals of purity, their dreams of love, their future happiness, their healthful youth, upon the altar of Philistine respectability. It is fortunate for the race of human beings that different ideals have prevailed in other countries, and that a different sort of woman has had opportunity for development. The dreariness of social intercourse in Germany which results from cutting off half the race from the intellectual life is something which it would be difficult to exaggerate.

A Fauna of the Moray Basin. By J. A. Harvie-Brown and Thomas E. Buckley. In two volumes. Edinburgh: David Douglas.

THE printed title-pages of these volumes bear no dates, the photographic titles both have 1895, and 1896 is stamped on the back of each. The books are technically called small quartos, being deeper but not taller than large octavos. The work forms ostensibly volumes vi. and vii. of a series of local faunas in part by the same authors, and all brought out by the same publisher in similar elegant style. Volume v. deals with the vertebrate fauna of Argyll and the Inner Hebrides, 1892; iv., with the same fauna of the Orkney Islands, 1891; iii., with the birds of Iona and Mull (by the late H. D. Graham), 1890; ii., with the vertebrate fauna of the Outer Hebrides, 1887; i., with the vertebrate fauna of Scotland. The two last are out of print. Each of these works is of monographic character, complete in itself, and independent of the rest; and they collectively form part of a still larger series of books of the same general character, several of which we have already had occasion to notice, always with approbation. Such are Charles St. John's 'Natural History and Sport in Moray' (1882), and his 'Tour in Sutherlandshire,' the second edition of which (1884) has a faunal appendix by Harvie-Brown and Buckley; 'The Capercaillie in Scotland,' by Harvie Brown; and Muirhead's 'Birds of Berwickshire.' The set of books is distinctively British, but not confined to sport and natural history in those islands, as it includes Gätke's 'Heligoland,' H. C. St. John's 'China,' the Earl of Southesk's 'Saskatchewan,' and others.

The general character of these works is high, with all the appointments of fine manufacture, and profuse illustration in various styles of art, from thumb-nail sketches in the text to elaborate engravings of compositions from the portfolios of well-known artists, among whom Millais and Keulemans may be named; photogravure is also much used, with striking effect in many cases. The present volumes are among the most elegant of the lot, and may fairly be called sumptuous. They show leisurely and experienced authorship, based on great resources in the way of materials, and abundant pecuniary means for effecting the desired result. They are also among the more formal and technical volumes of the series, in which scenic effect and the freehandedness of "outings" are subordinated to serious scientific work.

Lest "Moray Basin" may convey no very definite notions to the average American, we may say that it is practically the watershed of Moray Firth in Scotland, and some considerable adjoining country lying on the whole northwest of Aberdeen. Sutherland, Ross and Cromarty, Inverness, Nairn, Elgin, and Banff are included in the area to be treated faunally. The greater part of the first volume is occupied with an elaborate physiography of this region, which will abundantly satisfy the cravings of nearly all readers for information in that regard, and probably leave none but some of the most critical special students of the subject anything to require further. The rest of the work is a formal and systematic fauna, in so far as this is represented by vertebrates, carried into great detail. Of its thoroughness there is no question, and none but a local expert could pretend to criticise it minutely. The authors find in their bailiwick just about one-half of the British mammals—42 species out of 81.

As is invariably the case in works of this nature, birds are the most conspicuous and extensive feature of the lists, and also the subjects most elaborated. Out of 360 to 370 species which the authors allow to the holy canon of "British Birds," they give 255 a place in these volumes, and sum them up in nine distinct categories, one of which we observe to be a list of 26 species "recorded on insufficient evidence." Herpetology is at a minimum, only nine species of reptiles and batrachians together being found in the Moray Basin. Fishes would seem to be called for, by the title, for treatment like that accorded to the higher vertebrates, but there is nothing of the sort in either volume; perhaps recent ichthyology is reserved for due recognition hereafter. In place of any recent fish fauna to match the rest of the work, we have a monograph of entirely different and strictly technical character, on the fossil vertebrates, of which fishes constitute the greater number by far, though a few reptiles are included, and the recently extinct mammals (reindeer, elk, ox, beaver, and wolf) are also noted. Dr. Traquair's memoir includes a geological bibliography, and is illustrated with a series of nine special plates of different character from the other illustrations of the work, besides several cuts in the text.

This publication is thus highly praiseworthy as far as it goes, but would appear to require several more volumes to meet fully the requirements of the extremely comprehensive though curt title.

The Roman See in the Early Church, and Other Studies in Church History. By William Bright, D.D. London: Longmans, Green & Co.

THERE is significance in the fact that the Regius Professor of Ecclesiastical History at Oxford should devote nearly half the present volume to refuting the Roman theory of the continuous tradition of Papal supremacy as recently set forth by the Rev. Luke Rivington. This he accomplishes with abundant learning and acuteness, somewhat marred by occasional obscurity of presentation, but his success or want of success in this is of less account than the fact that he should have deemed it worth his while to undertake the task in the *Church Quarterly Review*, and then to re-

print his argument enlarged in the present volume. To us the contest between the two champions is chiefly of interest as a manifestation of the curious movement towards Rome on the part of a portion of the Anglican Church, and of the anxiety, if not alarm, which this tendency is producing in the minds of the sturdy adherents of the Edwardian Church. So sagacious a Pontiff as Leo XIII. would scarce have ordered a fresh examination into the old question, decided so long ago, as to the validity of Anglican orders, without an expectation that some concession, in form if not in substance, might result in a "bolt" which would strengthen the cause of Catholicism in England, while Mr. Gladstone's letter to Cardinal Rampolla bears traces of that singular longing for reunion which would seem to justify in some degree the anticipations of the shrewd and far-seeing men who direct the policy of Rome.

To a disinterested onlooker it is suggestive to watch the development of this revival of the mediæval conception that the Church must be one, like the seamless garment of Trèves. It is true that, during the ages of semi-barbarism and brute force, there were advantages in the powerful organization which controlled Europe and transmitted, in a spiritual disguise, the imperialism of ancient Rome to modern times; but monopoly bears within its bosom the seeds of inevitable evils, and the popular antagonism to "trusts" in the commercial world shows how instinctive is the appreciation of the benefits of competition. The mediæval Church was a trust which controlled salvation and sold it at its own price in power and wealth, resulting in a worldliness and corruption scarce conceivable by the present generation. There are dreamers who deplore the sundering of the Church in the sixteenth century, and who imagine that abuses could have been reformed from within, on some such basis as that which Erasmus suggested; but, so long as the Holy See retained a monopoly, such a reform could have been only superficial and temporary, as may be seen by the career of Spain, which allowed no intrusion on the exclusive claims of Catholicism, and consequently was virtually untouched by the Counter-Reformation.

Spiritual dissension may be an evil, but it is a less evil than spiritual torpor, and dissension at least connotes spiritual vitality. So far from the multiplication of sects being an evidence of error, as Bossuet endeavored to show, it is an evidence of earnest seeking after the truth, and, so long as modern ideas prevent persecution for conscience' sake, it merely stimulates a healthy competition to advance the kingdom of righteousness. No greater misfortune could befall the Christian world than a restoration of unity under Latin Christianity, and, in this, Latin Christianity itself would be one of the chief sufferers. Fortunately such reunion is impossible, however much the advanced type of Anglican priests may long for it; and although we cannot look upon the labors of Mr. Bright as a very efficient instrumentality in preventing it, they deserve recognition as a sufficient exposition of the hollowness of the claims of the Petrine Church that the Vatican decree is securely rooted in apostolic principles and practice.

The other essays in the volume are fair academical discourses, manifesting sufficient acquaintance with the subjects discussed, but presenting nothing new.

Memoirs of an Artist. By Charles Francis Gounod. Translated by Annette E. Crocker. Chicago: Rand, McNally & Co. Pp. 223.

Charles Gounod: Autobiographical Reminiscences, with Family Letters and Notes on Music. From the French by Hon. W. Hely Hutchinson. Philadelphia: Lippincott. Pp. 267.

Two translations of Gounod's autobiographic fragment have appeared almost simultaneously. Both are well done, and while the first-named has the merit of cheapness, the second is more terse and idiomatic, and free from the occasional blunders which occur in the first (pp. 111, 118, 125, 127, 139). Mrs. Crocker's version contains only the memoirs and a few letters; Mr. Hutchinson's includes further letters and five articles of Gounod's on Berlioz, Saint-Saëns, Nature and Art, The Academy of France at Rome, The Artist and Modern Society. Both versions are elegantly printed and bound.

The noblest trait of Gounod's character was his affection for his mother. "If I have worked any good, by word or deed, during my life, I owe it to my mother," he says, "and to her I give praise." He had reason to adore her, for she was one of the most devoted, self-sacrificing women in the annals of art. Her childhood had been unhappy because of parental dissensions, and, as the family was poor, she began giving piano lessons at the age of eleven. She gradually saved enough money to go from Rouen to Paris (a three days' trip by coach) once in three months, for a lesson of Adam at the Conservatoire. At twenty-six she married François-Louis Gounod, well known as a painter, a man of talent, but of frail health and a weak will. He took pleasure in drawing the essentials of a picture—face, expression, etc.—but left the accessories and drudgery to his wife, who luckily also had talent for drawing, and was thus able to finish what he left undone. In 1823 she found herself a widow with two boys, Charles, aged five, and an older brother of fifteen. The widow now took it upon her to support the family by continuing her husband's drawing-class as well as her music lessons, but found ere long that she was overtaxing her strength, whereupon she dropped the former and confined herself to music lessons, to which she devoted twelve hours a day.

Charles Gounod also had to make his choice between music and painting. His talent for both was about the same. He remembered how, as a boy, he used to lie on the floor drawing eyes, noses, and mouths with a white crayon on a varnished blackboard, and he had no doubt that if his father had lived he would have become a painter too; this opinion must have been confirmed when no less an authority than Ingres, after seeing some of his amateur sketches at Rome, told him he might have secured the *grand prix de Rome* for painting as easily as for music. The fates had decided in favor of music, luckily, for France needed another good composer much more than another good painter. His mother used to be proud when, as an infant, he could give musical hints to grown-up girls, and she lived to see him give many other proofs of his talent, including the winning of the Roman prize at the second trial; yet she had her misgivings as to a musical career, and did not live to witness his first lasting success, the opera "Faust."

As holder of the Roman prize, Gounod was obliged to spend two years in Rome. That city was at first a great disappointment. "Instead of the city of my dreams, majestic and imposing, full of ancient temples, antique monuments, and picturesque ruins, I saw a mere provincial town, vulgar, characterless, and, in most places, very dirty." In course of time he not only became reconciled, but enthusiastic, and when he left, after overstaying his time several months, tears rolled down his cheeks. This feeling, however, was based entirely on artistic and social considerations, for musically Rome had little to offer to the talented young composer except a chance to become familiar with the works of Palestrina. As it is almost impossible to eradicate from the American mind the impression that Italy was and is the musical centre of the universe, it is worth while to quote a few of Gounod's remarks:

"As regarded religious music, the Sistine Chapel in the Vatican was the only place where it was possible to hear anything decent, to say nothing of its being instructive. What they called music in the other churches was enough to make one shiver. Except in the Sistine Chapel, and in that called the 'Canon's Chapel' in St. Peter's, the music was not merely worthless, it was vile. It is hard to imagine how such a chamber of horrors could ever have come to be offered up to the glory of God within those sacred walls. All the shabbiest tinsel and trappings of secular music passed across the trestles of this religious masquerade. So no wonder I never tried it twice."

Equally unsatisfactory he found the opera, the only other field of music cultivated by the Italians. Bellini, Donizetti, and Mercadante made up the repertory, and "the performances were very inferior to those at the Théâtre Italien in Paris. . . . The stage management, too, was often literally grotesque." Consequently Gounod went to the opera seldom, finding it more profitable to stay at home and study the scores of Rossini, Gluck, Lulli, and especially his beloved Mozart, whose "Don Juan" remained always his favorite opera. Mozart and Bach were his idols, and "Mozart," he says, "bears the same relation to Palestrina and Bach as the New Testament bears to the Old, in Holy Writ."

When he reached Vienna, Gounod found a very different musical atmosphere—good operas, good singers, and "that universal diffusion of musical knowledge which is such a delightful and peculiar feature in Germany." In Leipzig he was most cordially received by Mendelssohn, who called a special meeting of the famous Gewandhaus orchestra to play his Scotch symphony for him, and who commented on a passage of the "Dies Irae" which Gounod had composed in Vienna—"My boy, that might have been written by Cherubini."

The last forty pages of the Memoirs are devoted chiefly to an account of Gounod's early efforts as an opera composer, up to "Faust," which had been in his mind nearly twenty years before it appeared on the stage. Here the autobiography breaks off suddenly, probably for the reason that there were episodes in Gounod's later life which he did not care to dwell on. Of the essays appended to Mr. Hutchinson's version all contain some good things, besides a considerable amount of declamation and "fine writing." The best are those on Berlioz, whom Gounod calls "one of the greatest emotional influences of my youth," and on Saint-Saëns, to whom he pays this tribute:

"He has an enormous power of assimilation. He can write you a work in any style you choose—Rossini's, Verdi's, Schumann's, Wagner's. He knows them all thoroughly—the surest safeguard, it may be, against his imitating any. He never suffers from that bugbear of the chicken-hearted, the dread of not

making his effect. He never exaggerates; thus he is never far-fetched, nor violent, nor over-emphatic."

Notes of the Night, and Other Outdoor Sketches. By Charles Conrad Abbott, M.D. The Century Co. 1896.

SOME nature-lovers tell us of the dawn and of the twilight, and the sunlit hours we may know for ourselves; but it has been Dr. Abbott's ambition to learn what goes on at every moment of the entire day, nor has he discriminated between the seasons. There is nothing absolute, and on the darkest night something may be seen, although the images are distorted and magnified. Neither does perfect silence ever prevail, for multitudes of living things have nocturnal pursuits, and even those whose chief business is by day are wakeful, and recognize the moon or the aurora with inarticulate comments. Perhaps they, like men, suffer from mysterious terrors when darkness deepens, realizing how helpless they are without the sense of sight. We think of night as dark and damp and chilly; but, as Dr. Abbott reminds us, there are moonlit nights when nearly the whole world can be seen in different attire from that of the day, and when the air is warm and dry. The stories of his nocturnal rambles are very pleasantly told, and they open a new field of travel, more accessible than central Africa or the Arctic zone, and almost as little trod.

"Notes of the Night" is the longest and most original of the essays collected here, the others following more conventional lines. In style they remind us of Thoreau, whom Dr. Abbott highly appreciates and defends against unsympathetic critics. We need, he maintains, "an infusion of intellect into the lower strata of man's activities"; and "the intellectuality that Emerson deplored as dissipated was put to the very highest of uses, that of making the lower or simpler things of life shine out in their proper light." We need not pass upon this point, but only remark that while Thoreau's style is richer in literary allusion and in profounder thought, Dr. Abbott keeps somewhat closer to nature—is, in the technical sense, more of a naturalist. His book is daintily printed and bound, and is to be considered by those who are getting together their vacation reading. The author's modest hope, that it contains some "profitable reflections readably expressed," is certainly justified.

BOOKS OF THE WEEK.

A Stumbler in Wide Shoes. Henry Holt & Co.
Holdrewood, Rolf. Old Melbourne Memories. 2d ed. Macmillan. $1.75.
Bunner, H. C. Jersey Street and Jersey Lane. Scribners. $1.25.
Clarke, George. The Education of Children at Rome. Macmillan. 75c.
Cockburn, Rev. G. John Chinaman: His Ways and Notions. Edinburgh: J. Gardner Hitt.
Colonel Hungerford's Daughter. Chicago: C. H. Kerr & Co.
Cooper, J. F. The Sea-Lions; or, The Lost Sealers. [Mohawk Edition.] Putnams. $1.25.
Cossins, George. Isban-Israel: A South African Story. London: Gay & Bird.
Cowperthwait, J. H. Money, Silver, and Finance. 3d ed. American News Co 25c.
Crane, Stephen. George's Mother. Edward Arnold. 75c.
Crane, Stephen. Maggie: A Girl of the Streets. Appletons.
Crashaw, Prof. W. H. The Interpretation of Literature. Macmillan. $1.

Gillet's Euclidean Geometry

By J. A. GILLET, Professor in the New York Normal College. 12mo, half roan, $1.25 net.

This book is "Euclidean" in that it reverts to purely geometrical methods of proof. It attempts no literal reproductions of Euclid's demonstrations or of his propositions, but does aim at absolute faithfulness to his spirit. Even in the crucial chapter on proportion, a strictly geometrical treatment is maintained, without, it is believed, complicating the subject for beginners, and certainly with a clear gain in logical rigor.

Metrical applications and illustrations of geometrical truths are interspersed with unusual freedom, but are always so managed as to keep clear and sharp the radical distinction between the methods of pure geometry and those of pure algebra.

Exercises ("originals") are made an integral part of the logical development of the subject; that is, they include theorems and problems which are ordinarily found in the regular series, and thus, by devoting the pupil's inventive energies to these instead of to merely incidental "originals," he secures the necessary power at a smaller expenditure of time. Besides these exercises, which it is assumed all pupils do, there are numerous others of the supplementary sort for additional drill or for particularly apt students.

Gillet's Algebra.

12mo. Half roan. $1.35 net.

J. B. Coit, Professor in Boston University: "I am pleased to see that the author has had the purpose to introduce the student to the *reason* for the methods of Algebra, and to avoid teaching that which must be *unlearned* when the student moves on into higher studies."

E. L. Richards, Professor in Yale University: "If I were teaching Algebra I should certainly give it a trial."

J. G. Estill, Master in Hotchkiss School, Lakeville, Conn.: "It impresses me very favorably so far as I have had time to examine it. The order in which the subjects are taken up is the most rational of any Algebra with which I am familiar."

Charles A. Pitkin, Thayer Academy, So. Braintree, Mass.: "I am pleased with the arrangement of it, and in general with the explanations, some of which are particularly good."

John E. Clark, Professor in Yale University: "It covers the ground requisite to prepare candidates for Sheffield, and the study of the subject can be begun with it—an advantage which teachers will appreciate. I see several features in it which I would gladly speak of in detail if I had more leisure."

William A. Francis, Phillips Academy, Exeter, N.H.: "I find many things in it to admire, especially the shortening of algebraic processes."

James Lee Love, Instructor in Harvard University: "It is unusually good in its arrangement and choice of material, as well as in clearness of definition and explanation."

Arthur Latham Baker, Professor in University of Rochester: "It is an excellent book in every way, and thoroughly up to date in many little ways that only a practical teacher can appreciate."

NEW YORK, THURSDAY, JULY 9, 1896.

The Week.

We have received a number of letters asking us whether, after the Chicago convention adopts a free-silver platform, the sound-money Democrats ought to nominate a ticket of their own or to vote the Republican ticket. This is a question which we should not attempt to answer if we could, but which we cannot answer because we do not know how the action of the convention will be received by the persons most immediately concerned. Perhaps they do not themselves know at this moment. Sufficient unto the day is the evil thereof. There are several things to be taken into consideration. One is the question how many Democrats would be likely to vote for the Chicago nominees if they had no alternative but to support McKinley. How many would vote a sound-money Democratic ticket if it were offered to them, but would vote for McKinley if it were not offered to them? What will be the effect on State and local officers and members of the Legislature if there is no national ticket which they can conscientiously support? These questions must be duly weighed by those whose decision is binding. They must cast their eyes beyond the present year also, and see what will be the effect of their present action on future campaigns. For these reasons it is impossible to make a prediction or to give advice. The only thing absolutely certain is that the sound-money Democrats consider it dishonorable to stand on a free-coinage platform. That was the word used by Mr. Whitney. Of course no Democrat who agrees with him will sacrifice his honor merely because a majority of delegates at Chicago have invited him to do so.

The difficulties in the way of the Chicago platform-makers are really more serious than those which confronted the St. Louis artificers. With free silver agreed upon, the rest might be thought to be plain sailing; but the truth is that free silver is going to make every other plank most refractory. How can you say anything about the tariff when you have got to get your free-silver votes from both free-traders and high protectionists? On the other hand, what sort of a figure would a party calling itself Democratic cut, after its record for the past dozen years, by now saying nothing about the tariff? Then there is the income tax. Several State conventions have instructed their delegations to insist upon that being made one plank. Of course, a constitutional amendment would be required, but that would take years to secure, and this convention is to bring the millennium instanter. Any party can promise general happiness and prosperity five years after date, but our Chicago divinities do not propose to be hampered by time or space, facts or figures. Hence their perplexity in dealing with anything so inevitably remote in operation as the income tax. Probably there would be little difficulty in agreeing upon a foreign-policy plank, inviting the rest of the world to come on, if it dared, or in any case to keep a civil tongue in its head and quit being so particular about what kind of money we pay our debts in. But Altgeld, who vows he is going to be chairman of the committee on resolutions, will also demand a free-riot plank, condemning the federal authorities for protecting interstate commerce. That, too, is bound to make trouble. On the whole, the suggestion of J. R. McLean seems to us the wisest made. He advocates a single short plank —namely, "Free silver; get there." He is willing to run for the Presidency on that platform.

The Republican newspapers, one after another, are yielding to the logic of the situation, and accepting the inevitable conclusion that silver is to be the issue of the campaign. The first to recognize the necessities of the case were those in the Western States, where free-coinage sentiment has always been strong. Many party organs in the Eastern part of the country, which had committed themselves to the tariff idea, have been holding off from a surrender of their original position on a theory that the issue might be varied in different sections, so that, while Western stump-speakers and papers should talk sound money, the Eastern orators and editors might talk tariff. But the discovery is being made that the silver propaganda is already so active and effective in the East that earnest work against it will be required. The infection is spreading among the farmers of New England, New York, Pennsylvania, and New Jersey, as anybody will soon learn who makes any investigation. The free-coinage people evidently have abundant funds for the circulation of campaign literature in their interest, and they are sending out large quantities of stuff that is plausible and will make silver votes if nothing is done to counteract its effect.

It would be a fatal blunder if the Republican managers should take the ground that these silver documents are so absurd that they can be ignored, and should meet the arguments and pleas of the free-coinage men only with talk in favor of a high tariff. They should take a warning from the experience of their party in Maine, when a similar craze prevailed nearly twenty years ago. The Portland *Press* declares that the greenback cause gained the great headway which it secured there in 1878 and 1880 largely through the failure of the Republicans to face it squarely. They sneered at it and belittled it, and did not meet it with serious argument. The people construed this conduct as a virtual admission that the doctrine had a good deal in it, and before the Republicans knew it the craze had swept over the State and taken possession of two Congressional districts. Yet Maine is a New England State with a high level of popular intelligence.

In the Sixth Congressional District of Michigan, which went Republican by 9,000 majority in 1894, Jay P. Lee, the leading candidate for the Republican nomination this year, has published a letter repudiating the financial plank in the St. Louis platform, and saying that, if nominated and elected, he will favor the free coinage of silver at a ratio of not more than 16 to 1. In Minnesota, Lieut.-Gov. Day, Congressman Towne of the Duluth district, ex-Congressman Lind, and a number of State Senators have issued an address to the Republicans of the State, declaring that a belief in bimetallism has always hitherto been an article of Republican faith; that the national convention of 1888 adopted a platform "condemning the policy of the Democratic Administration in its efforts to demonetize silver," and the national convention of 1892 one which favored bimetallism and "the use of both gold and silver as standard money"; that in 1894 the Republican party of Minnesota reaffirmed its belief in bimetallism, and declared that "the restoration of silver as ultimate money to the currency of the world is absolutely necessary for business prosperity, proper rate of wages, and the welfare of the people"; that the St. Louis convention "has repudiated this fundamental doctrine of our party" in endorsing the single gold standard, so that "the party no longer stands for both gold and silver as primary money, but for gold only"; and finally that

> "We cannot accept the new faith, and we will hold steadfastly to the old. The policy of gold monometallism means prolonged and intensified depression; an endless and hopeless era of falling prices for our farmers and other producers; continued uncertainty of employment for our workingmen, with lessening wages following the fall in prices of the products of labor; discouragement of all enterprises, and, in the end, universal bankruptcy, and gravitation of all money into the hands of money brokers."

The platform adopted by the sound-money Democratic State convention in Texas will be a revelation to many at the North who have never got over the impression that the Lone Star State is the

abode only of ignorant Bourbons. What could be better, for example, than this clear declaration in favor of the gold standard?

"Holding it to be as impossible for man to measure value by more than one standard as it is to so measure any other quantity, and being firmly convinced that a change in the standard for the measure of value at this time would result in a financial panic to which the history of the world furnishes no parallel, and believing that every government owes it to its own honor and to its citizens that it shall so order its laws as to require all debts to be paid in money as nearly as possible equal in value to the money in circulation at the time of the creation of the debt, we declare that it is the duty of the United States to maintain the present single gold standard of the measure of value, to the end that justice shall be done to all men, and the honor of the nation preserved."

The declaration against free coinage was equally clear and emphatic. "We oppose the free and unlimited coinage of silver by this Government alone," concludes the plank from which we have quoted, "as a measure borrowed from Populism, and fraught, if successful, with dishonor and disgrace to the nation and destruction to the people."

Nor do the sound-money Democrats of Texas stop, as so many men in both parties who profess to favor sound money do, with a mere declaration for the gold standard and against free coinage. They recognize that opposition to a change to the silver standard is not all that the situation demands. They perceive the necessity of positive affirmative action if our currency system is to be placed permanently on a sound basis, and they define what action is needed. They avow their belief that the issue of the greenbacks by a Republican Congress under the exigencies of the civil war, professedly as a temporary expedient, and their retention in circulation by subsequent Congressional action, have

"contributed to miseducate and debauch the public mind upon questions of finance more than all other causes combined. It has miseducated our people as to the proper financial functions of the Government, and has tended to the propagation of the fiatism now so current in the land. It has misled many of our people into the belief that the Government can create value with its stamp, and their constant redemption and reissuance has more than once nearly bankrupted our Treasury, and enabled the money-changers to rob the people. We demand the immediate retirement of this Government from the banking business, and that the law authorizing the issuance of the Treasury notes should be repealed, and such promises be retired and cancelled. We favor the establishment of a safe system of banking under rigid governmental supervision, in order that the people may have at all times a safe, sound, and elastic currency, amply sufficient for the transaction of their business."

The present speculative movement in silver, which touched 70 cents per ounce a few days ago, recalls the similar movement which took place when the Sherman act was pending in Congress in 1890. That measure proposed the purchase by Congress of 4,500,000 ounces per month in place of about 2,000,000 per month provided for by the then existing law. The price of silver was $1.07 per ounce when the movement began. The debate on the bill attracted the attention of speculators throughout the world. Buying was especially brisk in India and in the seaboard cities of China. The price was carried up to $1.16 per ounce, but as soon as the Government began its increased purchases the holders began to unload and the price began to drop. Before the end of the year, it had fallen to $1.03—that is, it was lower than it was when the bill passed. It did not stop there. It continued to fall through the whole of 1891, 1892, and 1893, reaching 73 cents per ounce in October of that year. The reason why it fell was that the whole world knew that the Government would not and could not continue buying for ever, and that the larger the heap of useless silver in the Treasury became, the more disastrous would be the final catastrophe. While the Government continued to buy, the production of the mines increased, and, when it stopped buying, many of them were obliged to close down and discharge their hands. The result was exactly like that of any other speculation which was foredoomed to failure at some time. The present speculation, in so far as it rests on the expectation of free coinage by the United States, is doomed in like manner.

Despite receipts increased by $13,000,000 over 1895, and expenditures diminished by $4,000,000, the Treasury closes the fiscal year with a deficit of $26,000,000. Pensions, though falling off slightly in total, remain far the largest item of national expenditure—larger, in fact, than any other two items combined—and eat up much more than one-third of the entire national income. With the Republicans denouncing the small economies effected in the pensions appropriation, and practically pledged to a service pension at the earliest moment possible, there seems poor prospect of retrenchment in this particular. Indeed, unless business picks up in a marked way, and the Government revenue with it, the deficit for the next fiscal year will be much greater than for the present one, owing to the extravagant appropriations of the existing Congress. We know, of course, that Republican capacity for finance is matchless; otherwise we should have been disposed to blame a Republican Congress that fiercely upbraided the Democrats for not giving the Treasury revenue enough, and then went ahead and voted money as though the Treasury were overflowing with funds.

We advise the Republican papers to say as little as possible about the "deficit-making Democratic Congress" whose work is visible in the Treasury returns for the fiscal year. We advise them thus because we are sure that they will be placed in an embarrassing position whenever the figures are analyzed. The excess of expenditures over ordinary revenue for the year ending June 30, 1896, was, to be sure, not less than $26,000,000. This is, no doubt, as the *Tribune* describes it, a "humiliating record," and both revenue laws and appropriation laws under which this deficit occurred were the work of a Democratic Congress. It will be noticed, however, that the deficit of $26,000,000 this year compares with deficits of $42,805,223 in the fiscal year 1895 and of $69,803,260 in 1894. Curiosity will naturally be aroused as to how this forty-three million reduction in the annual deficit was attained, and here a surprise will await some *Tribune* readers. In the fiscal year 1894 the McKinley tariff was still in operation; in 1896 the hated Wilson law prevailed. Yet the Government revenue for 1896 showed increase of $28,467,206 over 1894, customs receipts alone expanding $28,717,821. In other words, some revenue laws in our recent history have had considerably more of a "deficit-creating" character than the Wilson act.

There is a comic as well as a pitiful side to the solemn warnings addressed to the President by Republican Jingoes, that he must not try to aid his party by anything spectacular in foreign affairs. They imply that it would not be fair, not in accordance with the rules of the game, to try a great sensation of that sort in the midst of a Presidential campaign. Last December the case was different. Then it was a time to talk about "magnificent Americanism" and "standing behind" a noble Executive; but now a Venezuelan message would be a transparent trick, filling all true patriots with disgust. But, through all these alarmed protests, there runs the fear that the Jingoes, even the Republican Jingoes, would be bound to back up Mr. Cleveland in any adventure of the kind he might undertake. They dread the charge of inconsistency if they should not, and, moreover, they dread their own nature. The fact that they made fools of themselves last December would not in the least prevent them from doing it again. They know their own weakness, and feel sure that a loud alarum would at once set them to shrieking and leaping. They could no more help it than a fire-department horse could help rushing from his stable at the clanging of the gong. The President should really have compassion for them, not to speak of compassion for the country, and refrain from giving the signal which would turn them into raving lunatics.

The Raines liquor-tax law must be set down as a success in several important particulars. In the first place, it has reduced the number of saloons in this city at least 500, which is a valuable gain. Those that are to be continued, about 7,400, will be in less objectionable localities than many of the previous ones, for the 200-feet limit of distance from a private residence has been rigorously en-

forced. In the matter of total income from the law, Senator Raines's estimate of $3,000,000 for the State as its third is certain to be exceeded. The State Excise Commissioner reports the grand total already at $10,500,000, giving to the State as its share $3,500,000. There seem to be no serious complaints anywhere about the law's enforcement. Indeed, when we consider what a radical change it effects in the regulation of the liquor traffic of the State, the smoothness with which it has been put in operation is remarkable. We shall be able to judge by the end of a year what its merits in full operation are; but there is no risk now in congratulating the people of the State on the complete disappearance from their system of government of the pestiferous Boards of Excise, with their "pulls," blackmail, and general corruption.

The latest developments in the Venezuelan controversy illustrate the delights of having a lot of semi-civilized countries as our wards, whom we are bound to keep in order as well as protect. It is reported from Washington that the State Department is greatly vexed at the recent arrest by Venezuelan troops of an English engineering party well to the east of the Schomburgk line. President Crespo "has been flatly informed" that this sort of thing will never do, and that he must not only pay an indemnity for the outrage, but make a suitable apology for it also. This is only a specimen of what we are in for if we are going to set up a protectorate over all South America. The amount of boxing of ears of the bad boys which the State Department will have to do, if it is to take charge of the foreign relations of all these unruly republics, will be enough to occupy all the time of a vigorous secretary. We surmise, also, that this unpleasant application of the big-brother doctrine will diminish by much the enthusiasm of the Venezuelans for "the immortal Monroe." They thought he was a convenient and powerful name to invoke to prevent them from getting a deserved whipping; but if they are to be soundly slapped in this way, as a corollary of the Monroe Doctrine, its beauties will speedily pall upon them.

The Cuban war has fallen into such a languishing condition that people are apt to forget what tremendous efforts Spain has made and is still making to conquer and retain the island. In the thirteen months ending April 10, 1896, the Spanish Minister of War despatched to Cuba no less than 121,326 soldiers of all arms and ranks. With them were transported a vast amount of military material—150,000 Mauser and Remington rifles, 60,000,000 cartridges, 72,000 kilogrammes of powder, etc. In addition, 40,000 to 60,000 more troops are to be sent out in the fall. All told, it is probable that there is nothing equal to this in history. We doubt if any nation ever before sent as many as 120,000 of its fighting men 3,000 miles by water for one campaign. Yet the thing has been done with a rapidity and ease that speaks much for the detail of administration in the Spanish War Office. All these men have been transported, equipped, and fed, at a terrible money cost for a country as poor as Spain, yet it has been done. The fatal blight seems to be on the army itself, not upon the Spanish Government. We know, of course, that operations in Cuba are enormously difficult at any time, and almost flatly impossible in the rainy season; yet, even so, the failure of successive generals has been so nearly complete, up to this time, as to argue a woful lack of both discipline and capacity in men and officers.

When the innovation of adopting the closure in the Commons was resorted to, it was felt that it was a great break with old traditions, but that it certainly armed the Government with all needed power to put their bills through the House. Now, however, the closure has become practically useless, unless applied in the form of "closure by compartments." There were pending, for example, no less than 960 amendments to the Education bill when Mr. Balfour threw up the sponge a fortnight ago last Monday. Each of those amendments might have been peremptorily closured, but how long would the process have taken? Assuming that each division requires ten minutes—and two would be necessary on each amendment—at least forty days of eight hours each would have been consumed in "the healthy, but somewhat barren, process of walking round and round the lobbies." The Ministry could not but surrender, unless they were prepared to enforce closure by compartments—that is, by moving that any particular clause be passed irrespective of amendments offered. This form of closure was resorted to by the Conservatives in 1887 and by the Liberals in the last Parliament, but the present Government is pledged not to make use of it. The temptation to pass the Education bill by means of it, nevertheless, would have been very great if the Conservatives had been more strongly united in support of the bill. But there were most serious divisions and actual bickerings among them—even in the Cabinet itself. The arraying of one minister against another was unexampled, and gave point to John Morley's taunt that the Conservatives had promised the country a policy of humdrum, but had given it one of harum-scarum.

The decision of the House of Commons that the expenses of the Indian troops sent to Africa must be borne by the Indian budget was expected, but will none the less be a cause of much exasperation in India. The arguments advanced in favor of making the Indian Treasury foot the bill are (1) that India would have to pay the troops if kept at home, and would therefore incur no extra burden by paying them when abroad; (2) that India is directly and vitally interested in Egypt, since the Suez Canal and the English control of Egypt exist mainly for the sake of the Indian empire. But to this it is forcibly replied that it is absurd to make India pay for what she has not. It is one thing to ask her to pay for troops which she raises and equips and employs in her own service, but quite another to deprive her of their service and still ask her to pay. The principle is not reciprocal in operation. When England sends recruits to India, the cost is laid upon the Indian Treasury from the day the soldiers leave the British coast. Nor can it be said that the present operations in the Sudan closely affect India. The canal is not endangered; English dominion in Egypt is not imperilled. On the Government's own showing, the enterprise was undertaken simply because a favorable moment came to strike a blow at the Dervishes and make a diversion in favor of the Italians. The truth seems to be that the Government are very anxious not to have their rather theatric African *coup* cost the British taxpayer anything. The Chancellor of the Exchequer has stated that it should not, and he is reported to be resolute against including in his budget a penny for African military expenses. First the Egyptian surplus was to be drawn on, and then India was to be asked not only to send troops fit to stand the climate at Suakin, but to pay the expenses of the affair as well. It would seem that at least the £100,000 which, Mr. Balfour said, would be saved by the failure of the Education bill, might be turned over to the burdened Indian Treasury.

So far as Lord Salisbury is concerned, a very ugly quotation from an old speech of his on this subject is ready to be thrown in his face. In 1867, as Lord Cranborne, he opposed charging to India the pay of Indian troops employed in Abyssinia, saying, as if with prophetic forecast of the situation thirty years later:

> "I do not like India to be looked upon as an English barrack in the Oriental seas from which we may draw any number of troops without paying for them. It is bad for England, because it is always bad for us not to have that check upon the temptation to engage in little wars which can only be controlled by the necessity of paying for them. If this garrison which we keep in India is, as all Indian authorities assure us, necessary for maintaining that country in security and peace, that garrison ought not to be rashly diminished. If, on the other hand, it is too large, and India can for any length of time conveniently spare these troops, then the Indian population ought not to be so unnecessarily taxed."

Even his cynical dialectics will be somewhat severely taxed to explain away this old opinion of his.

PARTY DISINTEGRATION.

THE Republican party nominated its first Presidential candidate forty years ago last month. The slavery issue brought it into existence; the slavery issue, in one form or another, remained a fundamental feature of its platform from 1856 down to and including 1892, for the Force-bill policy was the natural outgrowth of the war upon slavery and the enfranchisement of the slaves. The Democrats secured complete control of the Federal Government in 1893, for the first time since the early part of Buchanan's Administration. They repealed the federal election laws which the Republicans, at intervals during the quarter of a century since their passage, had been trying to make more rigorous. This removed from the statute-book everything that made a distinction between the North and the South, former loyalists and former rebels, ex-masters and ex-slaves—for everybody knew that these election laws were designed to operate in the South for the benefit of the negroes. After two years of reflection, the Republican managers decided to drop the whole sectional issue. Their national platform, for the first time since the organization of the party, has not one line which bears upon the principle that led to its formation. The old issue had been a strong bond of union. Northern Republicans who differed on the new questions that were coming to the front, were held together by appeals to support the regular ticket in order to maintain the principles that gave the party birth. On the other hand, Southern Democrats, who were at swords' points regarding the tariff, were brought into line by the declaration that they must stand shoulder to shoulder in order to meet the onset of men who believed in force bills and "negro domination."

Only three weeks have elapsed since the St. Louis platform was adopted, but it is already manifest that the old party fences have been swept down past repair by a new issue, and that, in this campaign, support of one ticket or the other will not depend upon whether a man has been in the past a Republican or a Democrat. The process of party disintegration is now going on upon a clearer and larger scale than has been seen in this country since the slavery issue broke up the old political associations, back in the fifties. The central West has always been the stronghold of Republicanism. The great majority of its people opposed the spread of slavery, sustained the war for the Union, favored the enfranchisement of the slaves, and supported rigorous legislation to protect the blacks in the suffrage. Nowhere else in the North could the bloody shirt be waved to greater effect; nowhere else could hesitating and wandering members of the Republican party be so easily persuaded to vote the ticket once more in order to "preserve the fruits of the war." The elimination of the sectional issue from the platform adopted at St. Louis has been a proclamation of emancipation to the Republicans of the central West. From Michigan to the Rocky Mountains the former members of the party are treating this platform as though it were that of a new organization, which has no other claim upon their loyalty than that to which its central principle of maintaining the gold standard entitles it; and they sustain it, as in the Minnesota convention last week, or oppose it, as this principle commends itself to their judgment. Only one who keeps close track of the Republican press in that part of the country can properly appreciate the extent to which the rupture of old party ties has already gone.

The first sign of the revolution was given by the chief Republican organ in Michigan, which bolted the platform as "damnably unpatriotic and un-Republican" the morning after its adoption. Every day since the Detroit *Tribune* took this stand three weeks ago, it has published columns of interviews with, and letters from, life-long Republicans, who repudiate the gold plank in such deliverances as these:

"I am a Republican, and have always been, but cannot support a gold platform, and, in my opinion, three-fourths of the Republicans of Gratiot County will not."

"You will find that the woods are full of men who will not 'stand pat' on the St. Louis gold plank adopted by the Republican convention. There are very many good Republicans hereabout in this vicinity, especially farmers, who will not 'stand pat' on a gold platform. Silver Republicans are too determined to allow themselves to be whipped back like curs into the ranks of gold-bugs in order to carry out the plans of Grover Cleveland and his Wall Street allies."

"I am engaged as an instructor in the public schools of this village, and I believe that I express the sentiments of the great number of Republicans who live in and about this village when I say to you about the platform that we will have none of it; if to be a Republican one must favor a single gold standard, then we are not Republicans and will not vote the Republican ticket. I believe I am right when I say that, if it is necessary to believe in a single gold standard to be a Republican, there are not 200 Republicans in Genesee County [vote for Harrison in 1892, 5,404]."

The same state of things exists in Kansas. The Atchison *Champion*, edited by ex-Lieut.-Gov. A. J. Felt, always hitherto an earnest supporter of Republican platforms, "spits on the St. Louis platform," pronounces it "a stupid blunder to declare for Clevelandism in the money plank," proclaims that "Kansas is not a gold-standard State," and "not a congressional district in it can be carried for the gold standard if the bimetallists unite," and advises the silver Republicans to nominate Congressmen of the sort they had "before the single-standard gold brand was adopted at St. Louis." The Topeka *Capital*, which defends the platform, does not interpret it as going beyond opposition to absolute free coinage, and publishes a double-leaded appeal to its readers, "Don't leave your party before you know where you are going."

The South has been solid for Democracy ever since 1876. The Force-bill issue could always be depended upon in the last extremity to unite the whites for the party. The elimination of the sectional issue and the assured elevation of free coinage to the first position in the Democratic platform have destroyed the cohesion of the dominant party in that region. Florida had no Republican ticket in the field four years ago. E. D. Lukenbill of Fernandina, one of the delegates to the Chicago convention, says of the prospect this year: "I know that a great portion of the Southern business men, heretofore always voting the Democratic ticket, but who value the business interests of the country more than their politics, will either remain away from the polls or vote for McKinley, rather than help elect any silver man to the Presidency, and it is the opinion of these same business men that a silver candidate will lose a great many of the Southern States." Texas has always been the "Democratic stronghold" of the Union. The Democratic party of Texas has been split in two by the silver issue. Not only have the sound-money men chosen a delegation upon a most excellent financial platform to contest the seats of the regulars, who are silverites, at Chicago, but they have resolved to nominate their own State ticket, and fight the thing out in every city and town until election day. The Austin *Statesman*, the Democratic organ at the capital, says of the situation:

"There never was a broader line of division between two opposing parties than there is to-day between the two wings of the Democratic party in Texas; and, loving the Democratic party for its principles, its traditions, and its glories, the sound-money Democrats could not conscientiously do less than organize for the defeat of what they regard as the heresy of free coinage and fiat money."

We could easily fill columns with equally striking evidence of the disintegration going on in both of the old organizations, but these samples suffice to illustrate the character of the movement. It is a most healthful development. It insures a square fight between radically opposing ideas on the financial question. The Republicans need only to realize the situation and devote all their energies to the one issue of which everybody is thinking, and on the right side of which they placed their party at St. Louis, and they will win, with the help of a host of former Democrats, the victory which maintenance of that platform deserves.

"CORNERING GOLD."

ONE of the commonest sayings of the silver men is that gold has been "cornered," or is liable at any time to be cornered, by "syndicates," especially the Rothschilds, who are interested in making money scarce and dear to borrowers and to people who are in debt. By cornering gold it is assumed that they can make other people pay a higher rate of interest and thus add to their own profits. This cornering process has been going on, they

tell us, ever since 1873, when silver was demonetized. In fact, silver was demonetized here and abroad at their instance, so that they might corner gold. It was all a smart game and "put-up job," and the only way to stop the cornering is to remonetize silver.

One fact militating against this theory is that the rate of interest has been falling instead of rising since 1873. At that date money could not be borrowed by the Government of the United States at less than 4½ per cent. It can now be borrowed at about 2½. In 1873 the rate for endorsed bills receivable in New York was 6 to 7 per cent. It is now 4 to 4½ per cent. The rate for Western farm mortgages then was 10 per cent. and is now 7. The rate for city mortgages was 6 to 8 per cent. and is now 4 to 5. So it appears that if the aim of the syndicates has been to bring about a rise in the rate of interest, they have failed completely. Inasmuch as it costs a great deal to corner a commodity, one would think that the Rothschilds would have got tired in the course of twenty-three years, especially when they saw that their efforts were useless.

What is meant by "cornering" any article of commerce? It means getting possession of all there is in the market, so that people who want some and must have it will be compelled to pay a high price for it. What is implied by the phrase "cornering gold"? It means getting possession of all the gold that has been produced in the world since man first began to dig it out of the ground or from the beds of streams, minus what has been lost in the intervening ages. The difference between cornering gold and cornering wheat, regarded as a task calling for the employment of capital, can be seen at a glance. All the wheat produced in any year is used up within the following year, or, if any is carried over, it is but a small margin, and not cumulative. Therefore, in order to corner wheat it would not be necessary to buy up more than one year's production in any case. Practically it would only be necessary to buy one-quarter of a year's production, since the withdrawal of that amount from the world's markets would accomplish all the rise in price that the cornerers could desire.

When it comes to "cornering gold," however, the task is that of buying not merely this year's supply as it comes out of the ground (estimated by statisticians at $200,000,000), but that of last year and the year before, and so back to the time of Darius and Alexander the Great, many of whose gold coins are still to be seen in museums, although they are not now in circulation. Of course much has been lost by abrasion, by shipwreck, by forgotten hoards, and still more has been used in the arts, although much that has been so used is recoverable for service as money, and would be recovered if the cornerers should put the price up very high. How much gold would the syndicates have to buy and take care of if they should really set out to corner it? This question is answered by Mr. Charles S. Gleed of Topeka, Kansas, in the columns of the *Bond Record*. Mr. Gleed casts out of the reckoning all the gold that was in circulation before the discovery of America. He finds that the amount produced since 1492 has been between nine and ten-and-a-half billions of dollars, equivalent to about 21,000 tons. "This," he says, "would load 2,100 freight cars with ten tons of gold each." It would require more than ten thousand wagons to haul it, each carrying two tons; and the procession of teams so occupied would reach from New York to Philadelphia. The idea of monopolizing such a mass is as absurd as all the other generalizations of the silverites. Yet their favorite pictorial illustration, to show the amount of gold in the world, is an ordinary wheat-bin in a grain elevator, representing a cube a little higher than a man's head, and about ten feet square, or less than the amount that was sent out of New York in one week when the silver scare was at its height in 1893. The gold in the Bank of France alone would make two hundred and fifty wagon-loads, and the procession, moving as closely as possible, would be more than two miles long. Yet that is not so large as the amount owned by the Imperial Bank and Treasury of Russia.

How much would it cost the syndicates to corner gold? Of course they would lose the interest on it while they held it. They could not have their cake and eat it too. Supposing that the rate of interest were as low as 3 per cent. (and we may assume that the syndicates would not work for less), it would cost at the rate of nine million dollars per year to lock up even so small an amount as the stock in the Bank of France. Since they could get that amount of income by lending it, they would lose that amount by withholding or cornering it. But it would be of little avail to corner so small an amount. The commercial world would hardly miss it, because it would be less than two years' supply of new gold. In order to be effective, they would need to rake in several times that amount and hold themselves ready to take all that comes from the mines besides. A few years ago a powerful syndicate, backed by the Comptoir d'Escompte, the second largest banking-house in France, was smashed flat by an attempt to corner copper, a metal that does not pile up from year to year as gold does, but whose yearly product enters into forms from which it cannot be detached without losing the chief part of its value. The copper syndicate was broken by the increased output of the mines, plus the old junk that was brought to market by reason of the advance in price.

To corner gold, if that were possible, would produce a panic and general bankruptcy. It is assumed by those who believe in the gold-cornering theory that this is the very object and aim of the cornerers. In other words, the chief bankers in the world are interested to break their customers, in order to get possession of their property by sheriffs' sales and foreclosures. Now, every instructed person knows that bankers are the very first men to tremble at the approach of a panic. All their liabilities are payable on demand. They are the only class of business men so exposed. Consequently the blast strikes them first. Their ability to meet present demands upon them depends upon the solvency of their customers. Their future profits must come from the same source. When their borrowers are wiped out, they are mostly wiped out also, and even the survivors among them are weakened and sickened for a long time afterward. Their expenses run on and they have no business. They must live on their capital till times get better.

The gold-cornerers are a myth. They have no more solid substance than the spectre of the Brocken. In these later days and in civilized countries, with their enlarged banking facilities, clearing-houses, credit systems, and note issues, gold is seldom seen. The more perfect the banking system of any country is, the less occasion is there for the handling of gold. The less it is seen, the higher is the state of civilization. But when it disappears from sight and touch altogether, and becomes an unknown quantity, it is well fitted for the purposes of witchcraft, and the men who are supposed to have it under their control become, in the minds of very ignorant persons, a lot of wicked conjurers around a hell-broth conspiring against the welfare of the human race.

A FREE-COINAGE CATECHISM.

Q. WHAT is the fundamental contention of the free-coinage advocates? A. That the amount of money in circulation has been decreasing since the demonetization of silver, and that this decrease has caused a general fall in prices.

Q. Is it true that the money supply has been decreasing? A. It is not.

Q. What are the facts? A. So far as the United States is concerned, there has been an enormous increase. In 1860 the money in circulation in this country was $442,102,477; in 1872 it was $738,309,549; by the Treasury bulletin, at the beginning of the present month of July, it was $1,509,725,200.

Q. What does this show? A. It shows that our money supply has increased 240 per cent. as compared with 1860, and 104 per cent. as compared with 1872.

Q. Has the money supply increased faster than the population? A. Very much faster.

Q. How do you prove this? A. By dividing the total money in circulation at each date by the total population of

the country at the same date, and thus finding the circulation per capita.

Q. What does such a process show? A. The per-capita circulation of the United States on July 1, 1860, was $14.06; on July 1, 1872, it was $18.70; at the beginning of July in 1896 it was $21.15.

Q. But has not the money supply of the world at large been decreasing? A. On the contrary, it has been increasing rapidly.

Q. How is this proved? A. By the statistics of new gold production.

Q. How large has this production been? A. The reports of the Director of the Mint, which are acknowledged authority, show that from 1873 to 1894 inclusive the world's total new gold production has been $2,526,834,900.

Q. Is this new product of gold increasing or decreasing? A. It is increasing with enormous rapidity.

Q. Give the figures. A. In 1873 the world's gold production was $96,200,000; in 1880 it was $106,436,800. In the year 1890 it was $118,849,000. In 1894 it was $180,626,100. For 1895 the exact total is not yet compiled, but it is closely estimated at $199,500,000.

Q. What does this mean? A. It means that the amount of gold annually added to the world's money supply has more than doubled in the last twenty-three years.

Q. Is not this annual rate of production liable to decrease? A. On the contrary, all experts in the American, Australian, and South African gold fields look for a further and very heavy increase over the present rate of production.

Q. But has not the disuse of silver with full coinage privileges cut down the total annual addition to the world's metallic money supply? A. It has not.

Q. Why? A. In 1873 the world's gold production was $96,200,000; its silver production, $81,800,000; total, $178,000,000. Last year the production of *gold alone* was $199,500,000.

Q. Was not the combined annual production of gold and silver larger than this in the "bonanza days"? A. It was not.

Q. What was the highest record of that period? A. Between 1856 and 1860, the world's average annual production of gold was $134,083,000; of silver, $37,618,000; total, $171,701,000, or less, by $27,800,000, than last year's production of gold alone.

Q. What are we to say, then, of the argument that the money supply, since silver free coinage was abandoned, has been contracting? A. That it is utterly false as applied to the world at large, and especially so as applied to the United States.

Q. Is it true, nevertheless, that the price of wheat and many other farm products has fallen heavily? A. It is.

Q. How are such declines, in wheat for instance, to be explained? A. By the enormously rapid increase in grain-growing area throughout the world.

Q. Has this increase been especially rapid since 1872? A. The increase in grain-growing area in this period, especially in North America, South America, and Asia, has never been approached in any equal period in the history of the world.

Q. How do we judge of actual competition in the sale of wheat? A. By the supplies thrown annually on the world's great distributing markets.

Q. What market in particular? A. England, where most of the buying nations go to purchase their grain.

Q. What are the figures? A. As recently as 1880, Great Britain imported, for consumption and reëxport, 55,261,924 hundredweight of wheat—a large increase over the preceding annual average. In 1895 it imported 81,749,955 hundredweight.

Q. What has made possible this remarkable increase in wheat production? A. The exceedingly rapid development of transportation facilities in newly cultivated grain countries; among them India, Russia, and the Argentine Republic.

Q. Has there been an increase in the United States itself? A. An enormous increase.

Q. How large? A. In 1875 there were 26,381,512 acres of wheat cultivated in this country; in 1891 there were 39,916,897, an increase of 50 per cent. The yield in 1875 was 292,136,000 bushels, a heavy increase over preceding years. In 1891 the yield was 611,780,000. Even last year, with a greatly reduced acreage and a partial crop failure, the yield was 467,100,000 bushels.

Q. Has the yield of other crops increased correspondingly? A. It has.

Q. Give instances. A. The cultivated area of corn in the United States in 1871 was 34,091,137 acres; it 1891 it was 76,204,515; increase, 124 per cent. The yield of corn last year was more than double that of any year prior to 1875. Both the acreage and the average annual yield of oats have doubled since 1871. Our cotton crop in 1894 was 50 per cent. greater than in any year prior to 1887.

Q. Was a decline in grain and cotton prices, under such conditions, inevitable? A. As inevitable as a decline in the price of clothing, or furniture, or books, or steel rails, or pins, when competition in their manufacture has extended enormously.

Q. Would free coinage help the producers of grain to a larger profit, under such conditions? A. Not in the least.

Q. Why not? A. Because if the nominal price of grain were to rise through inflation of the currency, the price of everything else would rise also, and the farmer would be relatively no better off than he was before.

Q. Do the free-coinage advocates use in their speeches these statistical facts which we have examined? A. They do not.

Q. Can the subject be understood without examining them? A. It cannot; the whole question rests on these facts regarding money and production.

Q. Why do the free-coinage speakers not use these facts and figures? A. Because the facts and figures are against them.

Q. Is there any dispute over the truth of the figures quoted in these answers? A. They are undisputed, even by free-coinage men. They are taken from the reports of the United States Treasury, of the Department of Agriculture, of the Director of the United States Mint, of the United States Bureau of Statistics, and of the British Board of Trade; all of them, in their respective spheres, the highest known authorities.

HARRIET BEECHER STOWE.

THE late world-famous authoress who died on July 1 was, when she removed to Brunswick, Me., with her husband, Prof. Calvin E. Stowe, in 1850, a woman possessed of hereditary seriousness and earnestness; intellectual and accustomed to the exercise of intellect in others; having a father and six brothers in the clerical profession, and so being familiar with discussions on ethics and theology. She had, moreover, while a resident of Cincinnati, become acquainted with the facts and incidents of slavery, and had been strongly interested in the anti-slavery agitation; her house in Cincinnati had been a refuge for fugitive slaves, and Lane Seminary itself had been threatened by a pro-slavery mob. Her friend Dr. Gamaliel Bailey had established an anti-slavery newspaper in Cincinnati, and his office had been twice mobbed. A little colored boy, one of her favorite pupils, had been offered at a sheriff's sale as belonging to the assets of an estate in Kentucky. She had often written letters in behalf of a servant in her own family to the woman's husband, who was still a slave, and would never break his promise to his master when sent on errands into a free State and pledged to return. All these things had prepared her mind for being absorbed more and more in the most exciting question of the day; and the passage of the Fugitive Slave Bill, with its consequent agitations, brought the matter to a crisis in her mind. She read in an anti slavery magazine an account of the escape of a slave-woman and her child across the Ohio River on the ice, and the incidents of her story began to crystallize in her imagination. The faithful slave husband to whom she had written so many letters for her maid occurred to her as the pattern for her hero, and the story that was to make her famous came rapidly into shape. One day, while sitting, during the communion service, in the little church at Brunswick, there occurred to her the scene of Uncle Tom's death. It excited her so much, she tells us, that she could not restrain her sobs. Returning home, she wrote it out, and then read it aloud to her two boys, ten and twelve years old, and found them as much impressed by it as she could desire. She then began at the beginning, wrote two or three chapters, and arranged for its publication in the *National Era*, then edited by her friend Dr. Bailey at Washington, D. C. The publication began at once, and she was called upon for weekly instalments. She had, at this time, a young infant, and had resident pupils in her

family whom she taught with her own children. To this household she read each instalment of the story before sending it to Washington.

From the moment of its commencement the story attracted the greatest interest, but publishers were not yet sure that it was to command success in book form. It has always been reported that Ticknor & Fields refused it, although Mrs. Stowe, in her historical introduction to the Centennial Edition, makes no such statement. She tells us, however, that Mr. John P. Jewett, who offered to publish it, demurred at its length and wished it compressed into one volume. It finally appeared on March 20, 1852, and had the very greatest success from the first moment. It took but a few days to sell 10,000 copies, and over 300,000 were sold within a year, eight power-presses barely keeping pace with the demand. This is Mrs. Stowe's own statement in the Centennial Edition, but it can hardly be reconciled with the fact that the publishers in 1868 announced only the 314th thousand. Such a sale, however, even in sixteen years, was a thing probably unexampled in history for a purely literary work. Its success in England, and then in Europe generally, was as startling. Macaulay wrote to her in October, 1856: "I have just returned from Italy, where your name seems to throw that of all other writers into the shade. There is no place where 'Uncle Tom' (transformed into *Il Zio Tom*) is not to be found." Dickens, Kingsley, Helps, Lord Carlisle, Lord Shaftesbury, Frederika Bremer, George Sand, wrote to her with enthusiasm. Within eight months, according to Sampson Low, twelve different shilling editions had appeared in England; the total number of English editions was forty, and the aggregate number circulated in Great Britain and its colonies was estimated by Mr. Low some years since at a million and a half. According to Mr. Bullen of the British Museum, that library contains translations of the book into twenty different languages, in some of which there are many different versions or adaptations—ten in French, nine in German, six in Spanish, and so on. Pains were taken to collect these for the Museum, on the ground that no purely secular book had ever been so widely translated.

It is plain that no immediate literary success, tried by the ordinary standards, was ever greater than this. If now the question be asked, how far 'Uncle Tom's Cabin' has vindicated its claim to be one of the great and permanent works of literature, it can only be replied that it is too soon to judge, but that the probabilities now seem rather against such a destiny. It had, like Cooper's novels, the immense advantage of introducing to the reading world a race of human beings practically new to literature, and it had, beyond the writings of Cooper, the advantage of a distinctly evangelical flavor, such as had of itself secured a great success for the novels of the Warner sisters, now almost forgotten. Finally, it roused the world's resentment against a mighty wrong. All these things together could not sufficiently explain the success of the book, but they helped to explain it. There had already been anti-slavery fictions which had attained but a moderate success, as for instance Hildreth's 'Archy Moore,' which had got so far as to be reprinted in England, but had attracted comparatively little attention. Miss Martineau, also, both in her little story of 'Demerara' and in her novel of 'The Hour and the Man,' had made slavery her theme. It must therefore be owned that the vast success of 'Uncle Tom's Cabin' implied a marked literary ability in its author. Characterization, grouping, incident, all were good; but, in view of the favorable conditions offered by the subject and the occasion, it is not necessary to account for its success by calling it a work of pure genius, nor is it likely that this will be the judgment of future criticism. The simple fact that the same publishers issued soon after a story of the most mediocre quality, called 'The Lamplighter,' which, without any especial interest of theme, yet made a tour through Europe and was abundantly translated, seems to imply that there may have been something favorable in the conditions of the time.

A further question has sometimes been raised as to how far the book was correct in its pictures of slavery. One result of this debate was to induce Mrs. Stowe to publish, in 1853, a 'Key to "Uncle Tom's Cabin,"' giving chapter and verse, so to speak, for every incident she had employed. It is certain that many Southerners of high standing, beginning with Senator Preston of South Carolina—in a conversation with Prof. Lieber—admitted that every fact it contained might be duplicated from their own observation. All this might be true, however, and yet the general atmosphere of such a book might be unfair; there might be unfairness also in the omissions. It is stated by Mrs. Stowe herself that she expected more criticism from the abolitionists than from the slaveholders themselves. Perhaps the keenest criticism ever made upon 'Uncle Tom's Cabin' was from a Southern lady who, while conceding the probable truth of all the incidents, complained that Mrs. Stowe had described neither the best nor the worst class of slaveholders. Those who could not accept Legree as a sufficient approach to the latter type must have had a terrible experience. As to the former, it is enough to say that Mrs. Stowe was consciously engaged upon an anti-slavery tract, not, like Frederick Law Olmsted, in an economic study; and that the very impotence of the more humane slaveholders either to emancipate their slaves or to extricate themselves from the toils of the system, is not the least weighty part of the indictment against American slavery. The fury of Southern criticism was and still is directed against the veracity of the picture of the every-day tortures inflicted on chattels over whom the law gave absolute control to the owner. The statutes of the slave States, the advertisements in the Southern press, the burnings at the stake which continue to the present hour, demonstrate the absurdity of the general challenge of the veracity of 'Uncle Tom's Cabin.' There is a problem, far more curious, as to the absolute effect of a work whose appeal to the feelings was so powerful and which was so universally read, in producing a real opposition to slavery. In the height of its first impression it did not save the Free Soil vote from dwindling, and how little it has done to remove color prejudice, everybody knows who but looks about him.

It was inevitable that the immense success of this book should give to its author a great personal following, especially in England, where the memory of West India emancipation was still fresh. In April, 1853, Mrs. Stowe visited Europe with her husband and her brother Charles, and found her path through England a continuous triumph. In town after town she had public receptions, and she met at Stafford House the highest and best of England. The Duchess of Sutherland presented to her a gold bracelet whose successive links bore the dates of the English abolition of the slave-trade and of slavery in the British West Indies. Before the recipient died, she had the pleasure of inscribing on its other links the successive dates in the progress of American freedom.

After Mrs. Stowe's return from her first visit to Europe—for she revisited England in 1856 more quietly, to obtain a copyright for her next book—she entered on a long career of literary production. In this, it must be owned, her artistic standard—if she can be said to have had one—went on lowering, while her sales kept up, and she undoubtedly felt that she was doing good. 'Dred: A Tale of the Great Dismal Swamp' (1856)—republished ten years afterwards under the weaker title of 'Nina Gordon'—was a work of some power, especially in its negro sketches, but seemed tame after its greater predecessor, and had but a small circulation in comparison. This was the last of her expressly anti-slavery novels; but 'The Minister's Wooing' (1859) bore somewhat indirectly upon the same subject, and had vigor in its historic picture of Rev. Dr. Hopkins and his experiences at Newport, R. I. From this time forward her books may be said to have declined. 'Agnes of Sorrento' (1862) had little of the atmosphere of Italy, nor did the 'Pearl of Orr's Island' convey the flavor of the coast of Maine; yet both were, on the whole, pleasing stories, and they were widely read. Some very sensible 'House and Home Papers' (1864–5) were reprinted from the *Atlantic Monthly*, followed by a series of essays on minor ethics called 'Little Foxes' (1865–6), a small book of religious poetry (1867), and a volume called 'The Chimney Corner' (1868). She published at Hartford (1868) a subscription-book entitled 'Men of Our Time,' containing sketches of Lincoln, Grant, Garrison, Phillips, Sumner, and others. She was one of the editors of *Hearth and Home* (1868–70), and wrote a volume called 'Oldtown Folks' (1869)—perhaps her best book after 'Uncle Tom's Cabin.'

During that same year she startled the repose of society by publishing in the *Atlantic Monthly* (September, 1869) what she conceived to be the true story of Lord Byron's quarrel with his wife, afterwards amplified and published (1869) as 'Lady Byron Vindicated.' It was a revelation so utterly ghastly that it aroused a large part of her readers against it; and as it was incapable of further proof—resting entirely upon verbal statements of Lady Byron—it never succeeded in establishing itself in the public mind. That Mrs. Stowe fully believed her own theory as to Lord Byron is unquestionable, but the motive of the exposure still remains unexplained. Had Lord Byron been a falsely canonized saint, there might have been some possible object in unveiling his sins; but as he occupied no moral eminence, it was not worth while to disgust the public in order to settle the mere question of more or less, and as Lady Byron had died in the odor of sanctity, there seemed no reason for vindicating her from the charge of a too zealous and exacting virtue. In the long run the publication neither helped Lady Byron's reputation nor hurt that of the poet, and it gave temporary stimulus to the sale of his works, which were steadily losing their influence.

Mrs. Stowe next wrote (1870) a children's book, 'Little Pussy Willow.' Her fiction was still in great demand; 'Pink and White Tyranny' (1871) began with an edition of 20,000 copies, a thing then almost unexampled, and

it was followed in the same vein by 'My Wife and I' (1872) and 'We and Our Neighbors' (1875). In these stories she entered on a new mission, that of the reformation of fashionable society; and so far as mere sales were concerned, she attained success. In all literary aspects they were the profoundest failure; the grade of their execution being like that of Mr. T. S. Arthur's stories, then popular, and far below those of Miss Sedgwick and Mrs. Child. She created a class of literature which corresponded to the "social dramas" now so popular on the American stage, combining unexceptionable morality with the absence of all intellectual value. Yet these books had what was then an enormous sale. To an author not trained to a high or exacting literary standard, such a test is conclusive; from a sale of 20,000 copies there is no appeal. In 'Sam Lawson's Fireside Stories' (1871) and 'Poganuc People' (1878) Mrs. Stowe reverted to the vein where she was strongest, that of the now fading vernacular of rural New England. She had a true, though thin, vein of humor, and the types of character which she could really draw were village Yankees, negroes, and country clergymen. The family tendency to the milder subdivisions of theological opinion was strong in her, and it was hard for her to finish a book without giving her reasons why a descendant of Puritans could consistently become an Episcopalian. The clerical figures in her books were, however, usually Congregationalists or Presbyterians. They sometimes fatigue you; but in this respect also they have verisimilitude.

From 1852 to 1864 Mrs. Stowe had resided with her husband at Andover, Mass., where he had become a professor in the theological institution, after his two years at Bowdoin College. In 1864 the professorship was resigned, and the family took up their residence at Hartford, Conn., where Mrs. Stowe had been at school in early girlhood. Her later life was divided between this home and an orange plantation at Mandarin, Florida, where she built, with the proceeds of some public readings at the North, a little church in which her husband used to preach. She has written animated descriptions of the way of living in that sunny land, and of the orange-culture, in a book called 'Palmetto Leaves' (1873). Her married life was a very happy one, though she had her share of burdens and sorrows. She outlived her husband, and, what was sadder, her own strength of mind, having been herself only at intervals for a number of years past.

HIGHER EDUCATION OF WOMEN IN ENGLAND.

OXFORD, June 27, 1896.

THERE is no more interesting chapter in the history of modern education than that which records the movement for the higher education of women. And while it is true that the battle for their rights has been won more completely in America, it certainly is no less true that the struggle in England presents many features far more interesting and instructive than those of the comparatively easy victory on the other side. As the campaign here is not yet over, in view of the last great engagement (the defeat of the proposition that women should be admitted to degrees at Oxford) and of the forthcoming one (the action on the report of the committee appointed by Cambridge to consider the question, which is but a few months off), it may be of interest to sketch briefly the present situation.

It is impossible here to even touch upon the women's struggle for recognition in the past fifty years. Those who are interested in the subject will find invaluable a pamphlet by Miss Emily Davies, "Women and the Universities," a careful chronological survey of the movement from its inception about 1848 till now.* I shall attempt only to consider some of the more important results of this movement, as shown in the position taken towards it by the universities of the United Kingdom. Of these at present nine admit women to membership and degrees on much the same footing as men, namely, London, Victoria, Durham, Edinburgh, Glasgow, St. Andrews, Aberdeen, Wales, and the Royal Irish University. In most respects they are on essentially the same footing as the ordinary American co-educational institution, and require no special notice. It is the state of the question elsewhere, in particular at Oxford and Cambridge, which is of especial interest just now.

The assertion is hardly too sweeping that in both of these places, with the exception of being ineligible for official matriculation into the University and for taking a degree, there is practically no difference between the position of women and that of men. Women are required by their college or delegacy to pass essentially the same entrance examinations as men, with a very few exceptions they attend the same lectures, they work in the same laboratories, they are more or less under the same tutorial system, they take essentially the same examinations during their stay at the university and the same final examinations on completing their residence, they have their own colleges and halls, they even have their own athletics. So that, as far as life and education go, they are on almost exact equality with the men. The whole difference lies in the fact that their connection with the university is to a certain extent unofficial, with all that that implies. Technically, they have no university existence; their presence, while recognized, perhaps, in a semi-official way by the university in so far as it permits them to take university examinations and receive certificates to that effect, is not in any sense on the same footing as that of the men. They are here by courtesy, not by right, and their anomalous position leads, of course, to many complications both in the university and outside.

Of these, probably the most serious is the practical question of the financial value of a degree as an aid to securing a position, especially in teaching. And as some 60 per cent. or more of these women engage in teaching on leaving the university, and as a university degree counts towards obtaining a position as a teacher quite as much in England as in America (perhaps even more), this is a very serious question indeed. Again, of course, either the university or any college might decide at any moment to discontinue some or all the privileges now accorded to women, who in that case would have no recourse. Though this is by no means likely to happen, the possibility emphasizes the extra-university position women now occupy. Their position, indeed, at present is not unlike that of the students of Radcliffe College towards Harvard University, with the advantages, if any, on the side of Radcliffe. The position taken up by the university is, of course, totally different in most respects from that of the American co-educational institution, and has certain advantages in excluding the problems raised by the class system, especially on its social side, which the latter has had to face, it must be owned not altogether with success.

Educationally, as has been said, women enjoy practically nearly all the privileges of men, and it is highly probable that if the universities frankly recognized the responsibilities of the position into which they have been drawn, and admitted women on exactly the same footing as men, it would greatly increase the number of women both at Oxford and at Cambridge. In Oxford there are at present some 180 women: Lady Margaret Hall (founded 1879) with 43 students; Somerville College (1879) with 68; St. Hugh's Hall, 25; and 44 Home Students, or those unattached to any college or hall. In Cambridge the numbers are considerably greater. There are some 120 students in Girton (1872), and 160 in Newnham (1875). There are no "unattached" women students in Cambridge, though a few students of Newnham live out of college. In Oxford the direction of this movement is in the hands of the Association for Promoting the Education of Women in Oxford, to which all women students belong. With the assistance of its staff of teachers, the Association organizes and arranges the work of the women as a whole. It is managed by a board of delegates representing the women's colleges and halls, the Hebdomadal Council of the University, the delegacies of Local Examinations and of University Extension, besides certain individuals elected by the Association. In Cambridge the two colleges act independently, and there is not now any central organization representing women students as a body.

For admission to university examinations, which means virtually to university privileges, candidates must pass entrance examinations which, as has been said, are the practical equivalents of those taken by men. At Oxford they must pass at the same examination in

I. Any two of the following languages: Greek, Latin, French *or* Italian, German.

II. Arithmetic.

III. Euclid, Books I. and II.; or Algebra.

These differ from the examinations set for men only in allowing a choice between ancient and modern languages. Certain persons are exempt from this examination, notably graduates of American universities who are members of the American Association of Collegiate Alumnæ, provided they become candidates for Honor certificates at the Second Examination. Having passed this entrance examination, or, in some cases before, women join a college or hall or enter as unattached or home students, and are eligible without further requirements for both Pass and Honor Examinations for B.A., B.Mus., and D.Mus. The B.A. examinations are in Theology, Classics, Mathematics, Ancient History and Philosophy, Modern History, Jurisprudence, Natural Science, Oriental Languages, or English Language and Literature. Women are also eligible for an Honor Examination in Modern Languages, which is open to them alone. Those women who take the full B.A. course (open since 1894) must comply with the same conditions as the men, viz., a minimum residence of three years of twenty-four weeks each, the passing of the same intermediate examinations after the first examination of the university, and the final examinations. No previous residence is required of others for admission to any of these examinations, nor need the course be strictly adhered to, though

*Cambridge: Macmillan & Bowes. 1896.

as a matter of fact the same terms of residence are usually observed by all.

For this work, women at Oxford receive certificates from the university for each examination passed, but no final certificate as to residence, course, and standing such as is given at Cambridge, which, while not the equivalent of the degree given to men, corresponds to it in the assurance it conveys on these three points. The Council of the Oxford Association has, however, since the defeat of the proposition to grant degrees to women, just now decided to give its own certificates to those of its students who have taken the degree work with the requisite residence, and also certificates of another kind to such as have passed a specified course of examinations or resided a certain time. This, it is thought, will strengthen the hands of those who are working for the granting of degrees to women, by enabling them to point to a body of fully qualified students who are refused the degree to which they have a reasonable claim, and are obliged to be content with an inferior substitute. Similar certificates given by Girton College, Cambridge, and Somerville College, Oxford, confer rights of membership of the college. In addition to these various certificates, the names of those who pass the examinations are printed in the *University Gazette*, and the names of those taking honors also appear in the *University Calendar* in the same way as those of men similarly distinguished.

For admission to Girton College, Cambridge, candidates must satisfy the examiners as to their knowledge of

I. Principles and practice of Arithmetic.

II. English Grammar and Composition.

III. Physical and Political Geography.

IV. English History, a general knowledge and a special period.

V. Scripture History (the New Testament), unless objection is raised.

Further, they must pass in any two of the following subjects:

I. Latin. Latin-English and English-Latin translation, and Grammar.

II. Greek, as above.

III. French.

IV. German.

V. Elementary Mathematics.

For entrance to Newnham the examination consists of:

I. Mathematics—Arithmetic, Euclid, Algebra—three papers of two hours each, all of which the candidate must pass.

II. Classics—Latin, Greek—three papers, two in Latin, one in Greek, two of which must be passed.

III. Modern Languages—French, German, Italian—three papers, of which two must be passed.

The passing of certain extra-university examinations under certain conditions—the Cambridge Higher Local Examinations, Cambridge and Oxford Senior Local, Oxford and Cambridge Schools Examination Board, and examinations of affiliated colleges—also admits students to either Oxford or Cambridge, corresponding in essentials with the examinations already noticed.

After passing these examinations, women at Cambridge must fulfil the same terms of residence and standing for admission to the Triposes or final Honor examinations as men. This involves three years' residence and the passing of certain intermediate examinations. These Triposes correspond roughly to the Oxford Schools examinations, and one learns from the Girton and Newnham reports that last year women attended lectures and did work in Mathematics, Classics, History, Law and History, Mediæval and Modern, Languages, Moral Sciences, Natural Sciences, Divinity, and Music. Though women are not admitted to Pass Examinations in Cambridge, they are permitted to reside for a certain time, as at Oxford, for purposes of study even though not candidates for certificates. The names of successful candidates, as at Oxford, are printed in the University lists; and they are given general certificates by the University which state their having satisfactorily fulfilled terms of residence and examination with their standing in the latter, which, in so much, is an advance over the Oxford system of separate certificates. With the exceptions that have been noted and a certain greater strictness of regulations at Cambridge, practically the only differences that exist between the two places are such as arise from differences in the educational aims and opportunities of the two universities.

At both Oxford and Cambridge many scholarships and exhibitions have been established by private benefaction. University prizes or scholarships are, of course, not open at either place. At Oxford all scholarships are entrance scholarships—*i. e.*, students in residence are not eligible. Some eight or ten scholarships, ranging in value from £25 to £50, are offered annually for competition, several exhibitions somewhat less remunerative, and several prizes ranging in value from £5 to £20. These are nearly all confined to members of certain colleges or halls. At Cambridge there are both entrance and resident scholarships. Newnham alone offers some twelve or more scholarships of £35 to £50 value, certain studentships of £75 and £80 value, exhibitions of £5 a term, and various prizes. Girton has rather more and comparatively more valuable scholarships, ranging from £30 to £88 in value, besides certain exhibitions and prizes. Various scholarships included in the above are open to members of either college, in addition to which certain loan funds for the benefit of poor students are available at both Oxford and Cambridge.

The net result, then, of the movement for the higher education of women in England is that in most universities, though not in the most powerful or most representative, women are recognized and received on much the same terms as men as candidates for most of the degrees offered by these universities. In Oxford and Cambridge, women have demonstrated their ability to do the same work as men in the same way and under the same conditions. Their claims in this respect have been recognized in so far as they are permitted to enjoy the same educational advantages and to attempt the same feats in the way of examinations as men. The difference lies in the limited official recognition given them by the two universities for the successful accomplishment of these tasks, from a reluctance based, so far as one can see, chiefly on a disinclination to grant a degree which would apparently lead to an M.A. and a share in university management and university affairs of every sort. This would mean little less than a revolution in the general condition of things, which at present more conservative members of the university seem most strongly disinclined to bring about, but which is regarded in by no means so unfavorable a light by many others.

WILBUR C. ABBOTT.

GONCOURT'S LAST VOLUME.

PARIS, June 18, 1896.

ANOTHER volume of the 'Journal des Goncourt' has appeared; is it the last? It would seem so, as it extends from 1892 to 1895. I have read this ninth volume with as much interest as its predecessors; it seems like a conversation between clever people, free to say to each other what they think and all they think. The conversation, to be sure, in this case becomes a mere monologue; and the *moi* (the hateful *moi*, to use Pascal's word) is too omnipotent, too startling. But, with all its defects, this Journal of Goncourt has the great merit of sincerity. You see in it as in a mirror the fluctuation of the thought of a man of imagination, who looks on the world's stage with some fastidiousness and with an independent mind. As he grows older, much older, Goncourt lives more and more in retirement—his horizon is contracting; but there remains much in this horizon which is of interest. The Daudets (I mean Alphonse Daudet and his wife) have now become the most intimate friends of Goncourt, and their name recurs constantly. On January 7, 1891, the Journalist writes:

"Great dinner at the Daudets, with Schoelcher, Lockroy, the two Simons, Coppée. Decidedly this Jules Simon has a charm, a grace, composed of a certain delicacy of thought with a great softness of voice. As for Coppée, he is quite extraordinary for boyishness; the whole evening it was a *feu d'artifice* of odd things. Yes, Coppée is preëminently the Parisian talker in this age of *blague*, with all the admirable *sous-entendre* of the conversation of his kind. Phrases begin, ending in an ironical smile, odd allusions to things or facts known in the select and rotten world of intellect. They told us that at Maupassant's, there is now only one book on the drawing-room table—the Almanach de Gotha! It is the beginning of the *folie des grandeurs*."

Goncourt was not mistaken in this, as Maupassant had soon after to be shut up again in an asylum; but shall we quite agree with him when he adds, two days afterwards: "Saturday, January 9.—Maupassant is a very remarkable *novelliere*, a most charming *conteur*; but a stylist, a great writer—'No, no!'" On February 2, Goncourt writes: "Doctor M. told me yesterday that he had often seen Musset take his absinthe at the Café de la Régence; after which a waiter gave him his arm and took him, supporting him all the way, to the fiacre which was waiting for him."

The Goncourts were in their youth the intimate friends of Gavarni, and Goncourt is just now the president of a committee formed for the erection of a monument to the great humorous designer who flourished under the July Government. Gavarni's place has been taken in our time by Forain, and the comparison between Gavarni and Forain makes you feel distinctly the difference of the times. "Ah," says Goncourt justly, "the cruel legends of Forain! No, Gavarni in his legends has not so implacable a character, and his sayings were tempered by a philosophy at once good-natured and elevated. The work of Gavarni provokes a smile and does not chill the spine like the *comique macabre* of Forain." In the pages written on March 18, 1892, Goncourt, in a fit of melancholic dreaming, gives us many interesting details regarding his family.

"To-day, at this hour, when the day becomes insensibly the night, I am trying to find again the dear creatures who are no more. . . . By and by the image of my father, whom I lost when I was twelve years old, appears before me, . . . and, in the vague memory

of my eyes, I see on a long body a thin face, with a great nose, slender whiskers, lively and witty black eyes ('les pruneaux de M. de Goncourt,' as they were well called); the hair cut in military fashion, the head on which the seven sabre cuts which the young lieutenant received at the battle of Pordenone, had left straight lines. . . . I saw him with his military gait when, after having read the papers in that old reading-room which still exists in the Passage de l'Opéra, he walked for hours on the Boulevard des Italiens, from the Rue Drouot to the Rue Laffitte, in company with two or three gentlemen wearing the red ribbon of the Legion of Honor and the long Bonapartist redingote. . . ."

"I saw him again in the salon of the De Villedeuils, daughters of a minister of Louis XVI., old cousins of my mother—that cold and immense salon, with its white woodwork, its scanty furniture covered with linen, where always, on the back of a chair, was forgotten the reticule of one of the sisters; with the upright flower-stand bearing a few poor faded flowers, and the cabinets which contained Legitimist works of art in line—I saw him in this salon, which might have been the salon of the Duchesse d'Angoulême, against the chimney-piece, his devilish black eye full of irony.

"I saw him again in the Haute Marne, at Brevannes, where I used to spend the summer in my youth, in the sunny mornings of July and August; walking with a long step, which I could hardly follow, and taking me to drink at a spring in the midst of a flowery meadow, which gave one the wholesome and refreshing sensation of a water which he compared to the *acqua felice* at Rome. . . ."

I must cut short this citation. I pass over the pictures which Goncourt gives of his mother at different times; I mention them only to say that these descriptions have a strange sensation of reality mixed with a sort of dreamy and poetical feeling. They have a minuteness which appears almost exaggerated, but the result is sometimes very powerful. Goncourt has pushed almost *ad absurdum* the descriptive mania; he gives us, for instance, a description of his *Grenier* (the name he bestows on the rooms where he keeps his collections), and of the works of art of all sorts which he keeps in it; in this curious catalogue, you will find elaborate accounts of Japanese drawings, bronzes, vases, which are really astonishing, and are at the same time almost untranslatable. This curious inventory will serve when the Grenier becomes a museum (it is said that Goncourt intends to leave all his works of art to the public, in some way or other). The two Goncourts, when they were young, lived much in the ateliers among artists; they painted a little themselves, they formed their taste in the conversations of Bohemia; and they amused themselves by collecting drawings of the French masters of the eighteenth century, at a time when people thought not much of them, and when there were shops where the remains of their ateliers could still be found, mixed up with a lot of rubbish. The Goncourts then became possessed, at very little cost, of some beautiful drawings, engravings, and eaux fortes. They discovered some Fragonards, some Watteaus, etc.; they collected the drawings of Gavarni and others. When Goncourt lost his brother, he devoted himself chiefly to Japanese art, and he knows more than anybody in France about Hokusai and the other Japanese masters.

Goncourt's style becomes particularly picturesque when he speaks of Japanese art; here is a specimen:

"A drawing by Hokusai: a very fine surimono, representing, on Japan's New Year's Day, a longish little woman, bearing under her arms a casket containing a present, in a meditative walk, clad in a gown of delicate colors as if they were diluted in a bath; a surimono framed in a stuff in which shine, on a golden ground, small white flowers, coming out of turquoise leaves. A line of poetry on the top: 'The spring air, which has passed over the flowers of the prune tree, perfumes her hair, which resembles willow leaflets.'"

He delights in these Oriental stuffs, and I imagine him spending hours before a theatrical decoration, a great piece of red stuff, entirely covered with broad leaves of nenuphar; in this red and gold shines the white of a chrysanthemum and the bluish tint of a branch of glycinium.

Goncourt considers, however, the great curiosity of the Grenier the collection of portraits of his literary friends, of the visitors to the Grenier, painted or drawn each in one of their books, the work which he himself prefers, and always on choice paper, and with a manuscript page of the author's. The list of these books is a rather singular one; it contains many names whose reputation, very limited in France, is not likely ever to cross the Atlantic. Of the better known I will cite Alphonse Daudet, painted in oil by Carrère in a copy of 'Sapho'; Zola, painted in oil by Raffaëlli, in a copy of 'L'Assommoir,' a Zola somewhat materialized; Théodore de Banville, painted in oil by Rochegrosse, in a copy of 'Mes Souvenirs,' a portrait having a screaming resemblance; Coppée, painted in oil by Raphaël Collin, in a copy of 'Toute ma Jeunesse,' an elegiac portrait, in which you see nothing, in the physiognomy, of the laughing gayety of the talker; Huysmans, painted by Raffaëlli, in a copy of 'À Rebours.' Shall I complete the list? Octave Mirbeau, Rosny, Paul Margueritte, Rodenbach, Gustave Geffroy, Henrique, Descaves, Hervieu, Hermant, Ajalbert, Frantz Jourdain, Rod, Jean Lorrain, Gustave Toudouze, Burty, Claudius Popelin, Robert de Montesquiou, Henri de Régnier; these two last are poets of a new school. I have looked in the Journal for details as to many of these writers, whose names are almost unknown, but have found very few. Goncourt, who spent his youth in Bohemia, the Bohemia of Henri Mürger, now divides his time between the Princesse Mathilde, with whom he dines regularly every week, and who has a salon, and a new sort of Bohemia, very different from the old one, composed of all the aspirants to celebrity. He has the honor of being counted among the friends of the niece of the great Napoleon; he does not refuse to associate with the most advanced Republicans and Socialists, but he is never tired of alluding to his Legitimist family and relations. He is very eclectic in the choice of his acquaintances, but he never forgets himself, and he feels himself much, to use a favorite expression of Saint-Simon's.

On the whole, his Journal will be chiefly consulted for its detailed documents on the literary period which covers the end of the nineteenth century. It teems with small anecdotes and sayings which throw light on many writers and many artists. People will not care for all the endless details which Goncourt gives concerning the representations of his plays, of his difficulties with the managers of theatres, with the critics; he is morbidly sensitive on this subject, and can write page after page on it. It would have been better if he had left out a number of such pages, as well as certain anecdotes which are improper and disgustingly indecent. I can imagine an edition of the Journal in which the present nine volumes would be reduced to three or four. In this condensed state, I believe that it would gain much in value and have a more lasting interest.

Correspondence.

IN STRICTEST CONFIDENCE.

To the Editor of The Nation:

Sir: One peculiarity of the Republican nominee for President has been noticed, so far as I am aware, in only one paper. The *Advance*, "published weekly in the interest of Congregationalism," in a leading article in its issue of June 25, informs its readers that the neighbors of Major McKinley "remark with much satisfaction that he blacks his own boots, shaves himself, hoes in his garden, and talks to them over the fence." Does not this picture of the Major blacking his own boots and talking to them over the fence deserve wide circulation? What he talks to his boots about is, most unfortunately, not disclosed. Does he confide to them what he has withheld from anxious inquirers—his views on the silver question—or does he educate them in the doctrine that the foreigner pays the tax? Would that the *Advance* had not left us so unsatisfied.—Respectfully,

Rochester Ford.

The Owls, Tucson, Arizona, June 30, 1896.

CAIVANO'S GUATEMALA.

To the Editor of The Nation:

Sir: On p. 176 of the last volume of the *Nation* you printed a letter, purporting to be written by the Vice-Consul of Guatemala in New York, who implied that a book on Guatemala by Sig. Tommaso Caivano contained calumnies on that country inspired by a spirit of vindictiveness. The Vice-Consul alleged that Sig. Caivano appealed to the Guatemalan Consul, in June, 1895, for money wherewith to publish his book, and that, being refused, he inserted in it falsehoods in regard to the Government of Guatemala and the Barrios dynasty. Being a friend of Sig. Caivano, I forwarded to him the letter in question, but I have only now received a reply, because early in the winter he was in Venezuela, and subsequently he was detained by serious illness for more than a month at Teneriffe. Writing from No. 22 Via Saluzzo, Cuneo, Italy, June 17, 1896, he says (I translate from the Italian):

"Concerning the article published by the Guatemalan Consul, it shows itself to be a mere calumny of the Guatemala variety—which it really is, for, as you know, my book was already printed in June, 1895, so that I could not at that time have asked for money to write in one way or another a book already printed, and much less to write in it lies and falsehoods through spite and vindictiveness at being refused. The Consul of Guatemala who signs the aforesaid calumniating article is wholly unknown to me. Probably he was aware of my presence in New York in June, 1895, either through the hotel where I put up, or from one of the many Central Americans who were at that hotel, or from the New York *Progresso Italiano*, which announced my arrival there with a long article of welcome. In view of this, I have determined to bring suit in the New York courts against the said Consul for calumny and defamation."

I may add that at the time you printed the letter in question I could not credit its allegations: first, because I had read a copy of Sig. Caivano's book in print before he or it reached New York last year; secondly, because I knew Sig. Caivano to be a gentleman of independent fortune, who would not, conceivably, ask a subsidy from the representative of the

very government whose corruption his book was written to expose.

WILLIAM R. THAYER.

CAMBRIDGE, MASS., July 3, 1896.

THE HARVARD DIVINITY SCHOOL.

TO THE EDITOR OF THE NATION:

SIR: A distinguished Boston clergyman, in speaking before a large number of readers of the *Nation* at the Harvard commencement dinner the other day, had somehow conceived the idea that the number of students of theology at Harvard is decreasing, and, by way of spreading this notion further, took as his text for a thoughtful and admirable speech the fact that this year ten candidates—a distressingly small number, he assumed—received the degree of Bachelor of Divinity. Any inquiry on the reverend doctor's part, or a glance at the Quinquennial Catalogue, would have brought him the information that ten is not the smallest but the *largest* number of degrees of Bachelor of Divinity that Harvard has ever conferred. Since that degree was established in 1869, the largest number hitherto given in any one year was seven, in 1891. Some of the earlier years of the Divinity School (for example, 1859) seem, indeed, to show thirteen and even fourteen alumni, but the lists of so-called "alumni of the Divinity School" which the catalogue gives down to 1874 are composed in such a way as to make any comparison with the lists of recipients of degrees since that time wholly misleading; in fact, similar lists if made nowadays would unquestionably be longer than the old ones. The number ten is, further, by no means contemptible when compared with the classes graduated this year from most of the denominational seminaries in New England.

It may be worth while to add that of the ten graduates of this year, one is a Baptist, three are Orthodox Congregationalists, two Methodists, one a Presbyterian, three Unitarians, and that all are looking forward to service in their own denominations. Many of the men, including representatives of all the non-Unitarian communions, have regular denominational work already arranged for.

It is perhaps not generally known that a large number of the courses primarily intended for Divinity students are now, through Radcliffe College, accessible to women.

Yours very truly,

JAMES HARDY ROPES.

CAMBRIDGE, June 29, 1896.

Notes.

D. APPLETON & Co. announce 'Yekl, a Tale of the New York Ghetto,' by A. Cahan; 'The Sentimental Sex,' by Gertrude Warden; 'A Humble Enterprise,' by Ada Cambridge; 'Dr. Nikola,' by Guy Boothby; 'An Outcast of the Island,' by Joseph Conrad; and 'The Monetary and Banking Problem,' by Logan G. McPherson.

D. Van Nostrand Co. will publish next month 'Roentgen Rays, and Phenomena of the Anode and Cathode,' by Edward P. Thompson, M.E., E.E.

Henry Holt & Co. will issue immediately 'International Bimetallism,' by Francis A. Walker, President of the Massachusetts Institute of Technology.

The Macmillan Co. have nearly ready 'The Crowd: A Study of the Popular Mind,' by Gustave Le Bon; a translation, by Dr. Charles R. Eastman, of Von Zittel's 'Palæontology'; and 'Rheumatism: Its Nature, its Pathology, and its Successful Treatment,' by T. J. Maclagan, M.D.

The forty-seventh volume of the 'Dictionary of National Biography' (Macmillan) makes a good advance into the letter R, and is not devoid of great names—Raleigh's for one, and Pym's for another. Pym is admirably delineated by Prof. S. R. Gardiner. The architectural Pugins, the eminent composer Purcell, Pusey the divine and Quin the actor, Mrs. Radcliffe, Sir H. Rawlinson, the Marquis of Dalhousie, Charles Reade, are other if lesser lights; and one is glad to have particulars also concerning that much esteemed teacher and writer on education, Robert Herbert Quick, and Turgeneff's translator, William R. Ralston, whose real name, it appears, was Shedden. Even there is something to be learned from the initial sketch of James Puckle, inventor of a mitrailleuse in 1720. Raleigh of course belongs to the New World as well as to the Old, and so, by a different title, do Mayne Reid and Henry Reeve, the translator of Tocqueville's 'Democracy in America.' Most interesting we have found the sketch of James Ralph, Franklin's friend and beneficiary till the latter intruded upon his amours; afterwards a respectable historian and a precursor of Walter Besant and the Authors' Society.

Each new issue of 'Burdett's Hospitals and Charities: The Year-book of Philanthropy' would afford a text for much discourse, owing to the annual revision and the absolute freshness of the fore-matter. Of that for 1896 (London: The Scientific Press; New York: Scribners; Boston: D. C. Heath & Co.) we can only say that it maintains the position of this publication at the head of works of its kind, thanks to the enormous diligence of its editor. For the first time it gives comparative tables of the cost of patients in leading institutions, by way of meeting charges of misapplication and waste of funds—a very useful check. Mr. Burdett still complains of the diversity of hospital accounts in this country, and the general difficulty of obtaining official information. He is particularly severe on Chicago for its dereliction in this latter respect. The statistics of the volume are brought down to December 31, 1894.

To the various academic song-books previously issued by them, the Ditson Company have added a 'Columbia College Song-Book,' including the latest songs and glees, making a volume of 496 pages. Another collection, of wider scope, is the 'Academy Song-Book,' published by Ginn & Co. It begins with an introduction to the study of music, and includes "patriotic and national songs," "school and college songs," "familiar songs," and "songs of devotion."

From C. A. Ellis we have a volume of 876 pages, comprising the analytical programmes of the twenty-four concerts given in Boston during the last season by the Boston Symphony Orchestra. These volumes are well worth preserving, as the analyses are from the pen of Mr. W. F. Apthorp, who was called upon to comment on 105 pieces by forty-six composers, and nearly always has something of interest to say. A special feature of these programmes is the entr'actes, in which the editor writes about various epochs and incidents in musical history, or indulges in reminiscences of Boston musicians. If any fault can be found with Mr. Apthorp's analyses, it is that he sometimes indulges too much in what a London critic has called "parsing" a symphony. Such parsing may, however, benefit students, and in any case it is less out of place in a programme than it would be in a newspaper. It is interesting to note that Wagner leads even in the concert hall and under a leader who is not avowedly a Wagnerite. He had twelve performances, Beethoven coming next with ten.

A useful pamphlet for singers and teachers of singing is W. Bottermund's 'Die Singstimme und ihre krankhaften Störungen' (Leipzig: Vogel). The author is a specialist for diseases of the throat, nose, and ear, and begins with the anatomy of the vocal organs considered as a musical instrument or organ blown by the lungs as a bellows. He then discusses the development of the voice and the manner in which it is affected by physiological peculiarities and pathological conditions, defective teeth, malformations of the tongue, stoppage of the nose, nervous disorders, indigestion, etc., and the changes produced by age.

One of the cleverest and most readable of recent literary histories is Dr. Karl Borinski's 'Geschichte der deutschen Litteratur seit dem Ausgang des Mittelalters' (Stuttgart: Union Deutsche Verlagsgesellschaft), covering the period from the birth of Luther in 1483 to the death of Goethe in 1832. It is not a dry compendium of facts and dates, but the work of a scholar who has thoroughly mastered the subject, and has a clear perception of the manifold intellectual forces which combine to produce a national literature. The book is exceedingly suggestive, and treats nearly every topic it touches from some new and striking point of view, so that the object, as Matthew Arnold expresses it, "is made to flash upon the eye of the mind." Remarks on Protestant hymnology and the German choral, the polemics, satire, and humor of the period of the Reformation, the popular literature of middle-class life in the sixteenth century, the influence of the revival of letters and the epoch of the Renaissance, are followed by an admirable survey of the evolution of German literature from Haller and Gottsched to Schiller and Goethe. As a specimen of lucid and compact exposition the chapter on Lessing can hardly be surpassed. The inherent value of the volume is enhanced by an excellent index.

That somewhat eccentric personage, Joséphin Péladan, who calls himself Sar Péladan, appeals from Philip drunk to Philip sober against the decree that his "Prince de Byzance" (Paris: Chamuel), a Romanesque drama in five acts, is not suitable for public performance. Both Porel of the Odéon and Jules Claretie of the Comédie-Française refused the play, politely but firmly, and the perusal of the piece, by one not a "Kabbaliste," justifies the action of these worldly-wise directors. There are fine passages, unquestionably, in this Wagnerian drama, and some striking situations, but it is full of mysticism of a very vague sort, of mysterious allusions and incomprehensible people, so that even in reading it one wonders what they really are, what they want, and what the whole business is about. If performed, the play would probably prove generally unintelligible and therefore very wearisome.

A recent issue in the Johns Hopkins University Studies, 'Slavery and Servitude in the Colony of North Carolina,' is notable as being the product of the professor of history in Trinity College in that State, Dr. John Spencer Bassett. It may be profitably read in connection with Dr. Weeks's 'Southern Quakers and Slavery,' lately reviewed by us, and in con-

nection with 'Uncle Tom's Cabin' by those who still find that fiction stranger than truth. Dr. Bassett's exposition is candid and not devoid of feeling for the victims of the "peculiar institution," though his pity and censure are somewhat oddly expressed and distributed. Of the punishment of negroes and Indians, "bond or free," for false testimony—viz., cutting off both ears after they had been successively nailed to the pillory, with the addition of thirty-nine lashes—he says it was, "it must be confessed, vigorous enough to reach the conscience even of a pagan." He praises the Quakers for finally reaching a unanimous decision as to slaveholding in the denomination without passion, in contrast with Congressional debate on the subject—as if slavery affected the North only on the side of its philanthropy.

The article of most general interest in the *Geographical Journal* for June is on the Shan country in Eastern Burma, by Col. R G. Woodthorpe. Of a somewhat desultory character, it mingles descriptions of physical features and resources with entertaining sketches of the people and their customs. Among these was a ceremony witnessed at the burial of a chief. The coffin containing the body was placed upon a heavy wooden sleigh, to each end of which were attached two long bamboo ropes. To these about two hundred men and boys, women and girls, harnessed themselves, and, at a given signal, began a regular tug-of-war. For two or three hours till sunset the corpse was dragged up and down hill amid much merriment, and then was put in a grave. No explanation could be given of the signification of the ceremony, but it naturally suggests the struggle of the powers of good and evil for the dead man's soul. Extraordinary was the dexterity of the boatmen on Lake Inle. "The rower holds the paddle lightly in one hand to guide it, and, balancing himself on one leg, he works the paddle with the other by hooking the foot round the upper portion of the blade." In his unoccupied hand he carries a spear with which he transfixes a passing fish. The article concludes with an earnest appeal for the careful study of the language and customs of the various wild tribes of this region, before their isolation shall have ceased, and contact with the world shall have modified their languages and assimilated their customs to those of the Shans and Chinese. In a discussion upon Mr. Marr's paper on the waterways of the English Lake district, at the time of its reading before the Royal Geographical Society, we remark with much satisfaction several references to the "inestimable service" rendered to scientific geography by Prof. W. M. Davis of Harvard University.

Prof. Davis begins, by the way, in the June issue of the *National Geographic Magazine* a paper on the Seine, the Meuse, and the Moselle, of which our readers have had a foretaste in these columns during his study of those valleys. The discussion is beautifully illustrated by maps from the best French and German sources, and may be recommended for wide reading.

A noteworthy contribution to scientific political geography is to be found in Prof. F. Ratzel's account of the laws governing the territorial growth of states, in the fifth part of *Petermann's Mitteilungen*. He enumerates seven, the first of which is culture. There is also an interesting map, with explanatory tables, showing the progress made in the provinces of West Prussia and Posen by the Colonization Commission.

Dr. Quidde, whose brochure on 'Caligula' created considerable sensation in Germany some two years ago, has now been sentenced to three months' imprisonment for leze-majesty. His offence consisted in the assertion that William I. was a man of very ordinary capacity, and that to call him William the Great is a piece of political shamelessness (*politische Unverschämtheit*). This remark was regarded as an insult to William II., who has endeavored to confer upon his grandfather the aforesaid title, and thus led to Dr. Quidde's condemnation. The prosecuting attorney proposed six months' imprisonment, which would have involved penal labor and a convict's dress; but the court passed a sentence of three months' imprisonment, which is the longest term possible without subjecting the condemned to these harder and more degrading conditions. The Munich *Allgemeine Zeitung* published a brief account of the trial merely as an item of news, and, for the information of its readers, quoted the words which Dr. Quidde had used and upon which the accusation against him was based. Thereupon the editor of that paper was in turn indicted for leze-majesty. This attempt, however, excited such general indignation that the prosecution was finally withdrawn, and the whole arbitrary and utterly absurd affair ended simply in a solemn warning against future journalistic indiscretions of this kind.

Prof. J. Minor, the well-known biographer of Schiller, delivered last winter before the Grillparzer Gesellschaft at Vienna an address on 'Wahrheit und Lüge auf dem Theater und in der Literatur,' which he now publishes in Prof. Sauer's *Euphorion* (vol. iii., parts 3, 4). The moral estimation of truthfulness in modern times, as contrasted with that of antiquity (*e. g.*, Ulysses) and of the middle ages (*e. g.*, Tristan), is referred to by way of introduction, and not far from fifty works of the imagination dealing with the moral aspect of lying are touched upon in the essay. All more recent character-comedies of the class here considered proceed, directly or indirectly, from Alarcón's 'La Verdad Sospechosa' (1634), the "famous three lies" of which recur, for instance, in Corneille's 'Le Menteur,' in Steele's 'The Lying Lover' and Foote's 'The Liar,' and in Goldoni's 'Il Bugiardo.' Of philosophers, Kant and Schopenhauer, and Paul Heyse and Ibsen among contemporary dramatists and novelists, have more especially arrested the writer's attention. The treatise is, of course, far from exhaustive, and Prof. Minor generously places his notes (thirty-six closely printed 8vo pages) at the disposal of future investigators of this subject, which may well be developed into an important chapter of the moral history of the race.

Two articles in the *Revue Internationale de l'Enseignement* for June testify to the earnestness of the efforts now making in France to turn the interest of foreign scholars and students to the French universities. The first article treats of the "Meeting Franco-Écossais" recently held at the Sorbonne; the second, which deserves especial attention, is by Mr. William Henry Schofield, a graduate of Harvard, now at Paris, who writes on "Les Universités de France et d'Amérique." This frank, not to say bold, discussion by an American, in a leading French periodical, of the relative merits of the universities of the two countries cannot fail to interest thousands of American students if it chances to fall into their hands. That the facts should plainly justify the writer in urging Frenchmen to pursue their advanced studies in English at Harvard, or at some other great university in the United States, may well awaken a sense of satisfaction in readers who remember that, twenty years ago, such a proposition would have been preposterous. The French authorities upon whom devolves the shaping and development of their university system, can do no better than heed some of the suggestions of their plain-spoken but sympathetic counsellor *d'outre-mer;* for, under present conditions, the tide of American students in Europe is not likely to turn from Germany to France.

The Boston Public Library has issued, in a handsomely printed pamphlet of thirty-two pages, the first four numbers of its new Monthly Bulletin, containing a classified list of additions to the Library from January to April, inclusive, together with a supplemental list of books on the Transvaal and the Boers. "The next number will contain titles from April 15 to June 15. After that each issue will contain titles to the 15th of the month preceding."

We learn from *Science* that Helen Kellar, the young girl who, though totally blind and deaf from an early age, has already shown signs of very remarkable intellectual powers, is to be sent to the Gilman training-school in Cambridge next autumn, with a view to preparation for Radcliffe College. It is only a few years ago that the experiment of giving the higher education to the female brain, even under the most favorable circumstances, was regarded as a dangerous leap in the dark, and already it awakens little surprise that it should be expended upon a girl who is so terribly handicapped as is this poor child. So rapidly does the world now move.

—In the pleasing article, "A French Friend of Browning," by Th. Bentzon (Mme. Blanc), in the July number of *Scribner's Magazine*, the space that is not taken up by reminiscences of Browning himself, of Mrs. Browning, and of their child, is given to Joseph Milsand, the brilliant reviewer and interpreter to the French of the Brownings' work. Letters to Milsand from the poet and his wife, showing the strength of their attachment to him, are freely quoted, but of letters of Milsand's own writing there are none. It is perhaps not to be wondered at that he should have suffered here the usual fate of bodies placed too near a bright luminary, although the attractive glimpses of him obtained from this article and elsewhere furnish another proof that unto those to whom gifts and talents have been abundantly given, charming and talented friends are also usually added. In writing of "Some Portraits of J. M. W. Turner," Cosmo Monkhouse has had in one sense a somewhat thankless task. It has fallen to his share to have virtually to explain to the uninitiated reader that Turner was an ugly man, as unlike as possible to any preconceived notion of a great artist's appearance. There is but one of the portraits that gives a flattering impression of even the youthful looks of Turner, and this, though accepted by Mr. Ruskin, is of doubtful authenticity. Several of the drawings taken at a later stage of his life reveal a figure and features of grotesque homeliness. The spectacle of "mighty genius run to seed" is, however presented, a sad one, and though interest and curiosity may be gratified by this article, which departs scarcely at all from explanations of the likenesses, little pleasure is to be derived from it. In the article "A New Art," Mr. J. Carter Beard makes out, in text and illustrations, as strong a case as the evidence at hand will permit for

his subject, which is taxidermy. Prof. Brander Matthews presents, interwoven with comments on the "Poetry of Place-Names," the practical, if impracticable, suggestion that the name of New York city be changed to Manhattan.

—In an article on "English Elections" in the current *Harper's*, Mr. Henry Cabot Lodge makes short work of the Anglo-American newspaper writers and of the obscure handful of readers who fancy there may be lessons for ourselves in the plan on which the English carry out their campaigning and balloting. With scuffling and free fights, stoning and rioting, and mobbing of candidates still going on at the hustings, how can it be seriously supposed there is anything besides in the political system worth our while to dwell on? Mr. Lodge industriously made newspaper clippings last summer to show how these and other things of the sort can still be seen in England, and how, in spite of the corrupt-practices act, money is still spent there on voters at the rate of four shillings and a penny a head. He himself is sure of a large following for his advice not to weakly and nervously imitate other people in their reforms. For the great majority there is comfort in the thought that other people are no better than themselves, and these will no doubt rejoice to hear that "there is no perfection to be found in English election methods," and that human nature over there, as far as political corruption goes, is very much the same as here. President Charles F. Thwing of Western Reserve University writes in the same number of "Ohio." His enumeration, among other things, of the thirty and more colleges and the three universities which represent higher education in the State, is a reminder that these two words have, like coins, different values in different communities. In the name of the higher education there is, however, a movement fortunately on foot that no charter shall henceforth be granted to any institution "unless it is in the beginning properly endowed." W. E. Norris's neatly turned little story, "The Dowager's Companion," is a pleasant variation on the formlessness and pointlessness of the general run of magazine stories.

—The fact that Mr. E. J. Phelps's article in the *Atlantic* on "Arbitration and Our Relations with England" is in a measure composed of truisms, does not at all lessen its value for the public in the midst of which it is written. To argue with a Congressman, a political orator, or a certain class of newspaper writers that "it is well to understand that among nations, as among individuals, friendly relations are largely dependent upon good manners," would probably be a waste of breath; but there is always hope that through a body of intelligent readers such doctrine may be filtered down to the less intelligent classes. It is, moreover, a timely thought on Mr. Phelps's part to remind an enlightened and patriotic class of persons that it is not to be expected that arbitration can under any circumstances become a substitute for diplomacy, or relieve us from the necessity of reconstructing and improving our diplomatic machinery, on the basis of a divorce of foreign relations from the business of domestic politics, "which mean, not the adoption of policy, but the acquisition of office." Prof. George Burton Adams, in an article on "The United States and the Anglo-Saxon Future," points out the peculiar fitness of this country—as compared with Great Britain—both by geographical position and by methods of federal and territorial government, for leadership in an organization of the scattered branches of the Anglo-Saxon race which shall make its world-empire a certainty. Plausible and interesting reasons for the ultimate necessity of such a universal federation, if the race is to maintain its present position of supremacy, are found in the warnings, already dwelt on by other writers, of a coming commercial and industrial competition with Oriental races whose rivalry has never yet been felt. The increasing interest of Rossetti's letters, edited by Dr. Birkbeck Hill, will be a gratification to those who were disappointed in the earlier instalments. Mr. E. L. Godkin considers "The Real Problems of Democracy" in a review of Mr. Lecky's latest work.

—In the *Century* Mr. Bryce's "Impressions of South Africa" rise to their climax of interest in the third and concluding paper. The immigration of a mixed multitude into the Witwatersrand gold-fields, in the Transvaal Republic, has introduced fresh political complications into the involved relationship already existing between the peaceable and sluggish but sturdy Boers and the more progressive English settlers in this and other districts. But the social as well as political problems which grow out of the existence of a dominant white race side by side with a numerically larger but inferior population of blacks, outweigh all others presented by this singular colonial territory. Politically, the difficulties of the preponderance of a colored race equal in the eye of the law with the white have, in Cape Colony, so far been avoided by a combined property and educational qualification. In the two British colonies there is special legislation regarding the blacks, designed both to protect and to restrict them, while in the Dutch Republics, where no person of color is allowed to vote, the laws which control them are more stringent. The result most deplorable at present of the contact between the white and black races is the effect of the large supply of cheap labor upon the character of the former, who lose the habit of performing manual labor and acquire the habit of despising it. In the future, the more educated and capable the natives become, the more will their industrial competition press upon the whites, and the peace and prosperity of the country will, in Mr. Bryce's opinion, depend largely "upon the wisdom and temper with which the higher race treats the backward one and leads it onward and upward." The novelty of the number is an account, with drawings of Eskimos, of "An Arctic Studio," by Frank Wilbert Stokes.

—With all its sophistication, the idyll of Jean-Jacques and the Misses Galley and Graffenried in book four of the first part of the 'Confessions' will never cease to charm. One of Rousseau's countrymen contributes to the Berlin *Nation* for May 30 an account of his visit to the Grange at Thônes (or Toune, as Rousseau writes it phonetically after the vulgar pronunciation), where the happy day was spent which was marked by the episodes of the ford, the mount behind Miss Graffenried, and the cherry-gathering. Sir Henry Taylor tells, in his autobiography, of being invited to Tennyson's house to meet Garibaldi, and of all the celebrities being eclipsed for him at sight of a pretty girl in the company. Our Bernese writer explains on the same principle Rousseau's unusual neglect to dilate upon the scenery of the route from Annecy to the Grange, though it is sufficiently romantic, passing through a deep gorge with its mountain torrent the Fier, and its Morette cascade; and he essays the task himself, adding some interesting particulars about the landed estate, which is still owned by the Galley family. The building which Rousseau styled "château," and our writer a "schlossähnliche Bauerngut" or "Ferme," was gutted by fire some twenty years ago and has been completely renovated within, but the thick walls remain, and the stone lintel of the doorway bearing the Galley arms. The landscape is much as the picnickers might have viewed it if not absorbed in themselves. Tourists on the Continent could scarcely devise a pleasanter and less hackneyed excursion than to Savoy "in den Spuren J. J. Rousseau's," beginning with Mme. de Warens's well-preserved house at Chambéry.

—The quarterly July portion of the Oxford Dictionary (Macmillan) is Dr. Murray's, and ranges from Diffluent to Disburden, thus advancing us in the domain of the great prefix *dis*, which has emancipated itself from classical fetters and become "living," attaching itself freely to words irrespective of their origin, but no longer deforming itself by assimilation. A considerable number of familiar words in this section cannot be traced etymologically, and such are *dimple*, *dingle*, which dropped out of literary usage from the 13th to the 17th century, *dingy*, which first appears in 1736, and *dirk*, which first turns up as *dork*, to the confusion of much ingenuity expended on analogies depending on the present spelling, fathered by Johnson in 1755. This incident well illustrates the value of "an English Dictionary on historical principles." Another more palpable one is to be found in the quotations under *Diggers*, which compactly display the nature of this communistic sect of commons cultivators which flourished in the Puritan Revolution; or again in the series of fossil "enfants terribles," the *dinoceras* (Marsh, 1872), *dinornis* (Owen, 1843), *dinosaur* (Owen, 1841), and *dinothere* (Kaup, 1829). Bretonneau of Tours invented *diphthérite* in 1821, and in 1847 we were using the corresponding adjective *diphtheritic*; but in 1855 our Frenchman substituted *diphthérie* for the earlier form, and in 1857 the newcomer was already established in English. We remark that Dr. Murray does not give the countenance even of a cross-reference to the spellings dip-theria and dip-thong. History comes to the front again under the adjective *direct*, from which we quote as follows:

"*Direct tax*: one levied immediately upon the persons who are to bear the burden, as opposed to *indirect taxes* levied upon commodities, of which the price is thereby increased, so that the persons on whom the incidence ultimately falls pay indirectly a proportion of taxation included in the price of the article. . . . The chief direct taxes in Great Britain are the Income and Property Taxes; local and municipal rates are also examples of direct taxation."

We had noted much else for comment, but will close with remarking that *dilletant* was ventured attributively by Carlyle in 1851, and substantively by Hamerton in 1875; Dr. Murray places *dilletantism* before *dilletanteism*.

—The proper pronunciation of *g* in German has long been a matter of controversy. Directors of theatres have repeatedly endeavored to regulate it so as to make the usage of the stage uniform in this respect, but with only partial success. In 1887, instructions of this

kind were issued by the intendant-general of the Royal Theatre of Berlin, enforcing the views of Tieck and Devrient, who are no longer recognized as competent authorities on the subject, and who ignored, if they were not wholly ignorant of, the historical evolution of the language in this direction. Recently Dr. Grabow, a member of the school board in Bromberg, delivered a lecture on "Die Aussprache des G," a full report of which may be found in *Mittheilungen des Deutschen Sprachvereins*, just published at Berlin. In this discourse he maintains that *g* has a different pronunciation according to its place at the beginning, in the middle, or at the end of a word, and adduces linguistic, physiological, and statistical reasons in support of this statement. Thus, in *Gabe*, it is like *g* in English gave; in *hinweg* it has the sound of ck; in *Könige* that of *j* (English y), and in *Tag* that of *ch* in *ach*; in *Tage* it has a softer, and in *König* a sharper sound of *ch*. This applies to North and Middle Germany; in South Germany final *g*, he says, is pronounced *k*. We may add that the Bavarian, at least in Munich, simplifies the matter by not pronouncing it at all; in his tongue "König" is "Kini," and "neugierig" becomes "neugieri." As an example of difference of meaning corresponding to difference of pronunciation, Dr. Grabow states that in North and Middle Germany "lang' geblieben" refers to duration of time, and "lang (langk) geblieben" refers to bodily dimension; but this distinction is untenable as a general rule. Where this phrase refers to time, the adverb should be used: "Er ist lange geblieben" (he remained a long time). In the phrase, "Die Zeit wird ihm lang" (langk, according to our author), the reference is also to time, but the adjective is used. It is impossible to lay down any fixed and universal laws on this subject. Dr. Grabow's discourse is commended to the consideration of teachers of German.

SUMNER'S HISTORY OF BANKING.

A History of Banking in All the Leading Nations. Vol. I. A History of Banking in the United States. By William Graham Sumner. New York: The *Journal of Commerce and Commercial Bulletin*. 1896.

THE undertaking here assumed by the *Journal of Commerce and Commercial Bulletin* is rare if not unparalleled in the range of monetary science, involving an enormous amount of labor by first-class talent and training, and large pecuniary expense, in order to illuminate the very darkest part of the "dismal science." Few persons, however high their attainments in general cultivation, pretend to know anything about money in its scientific aspects. Very few, we are obliged to add, are willing to make the effort to know. The country, having got into a "trough of the sea" on the currency question, cannot get itself out, because only a small number of citizens understand the question, and these are left to do battle with the hosts of ignorance and prejudice who know much less than nothing, but think they know it all. But if the hosts of ignorance and prejudice carry the day now, it will not be for want of supplies and ammunition on the other side, for here we have so ample a presentation of both fact and theory touching banks and money that anybody can equip himself for the battle who has a mind to.

It may console us, although it cannot help us, to know that the fight for sound money in this country has been continuous for nearly three centuries. It began with the first settlement at Jamestown, Va., and has been going on with variations ever since; for, says Prof. Sumner, "all the doctrines of currency have to be learned over again apparently every ten or fifteen years, if, indeed, they are ever learned at all. From the landing of the first settlers at Massachusetts Bay until to-day the country has never enjoyed ten years of peace, rest, and security with an established and satisfactory system of currency" (p. 415). Sometimes the fight has been over "bills of credit"; at other times over commodity currency, such as tobacco and raccoon skins; again, over land banknotes, State banknotes, United States banknotes, railroad and canal scrip, private shinplasters, counterfeits, Treasury notes of various kinds, cheap money, wild-cat money, bogus money, silver money, etc., etc.

"A community forced to do its business in that way [the ante-bellum way] had no money. It was deprived of the advantages of money. We should expect that a free, self-governing, and, at times, obstreperous people would have refused and rejected these notes with scorn and have made their circulation impossible, but the American people did not. They treated the system with toleration and respect. A parallel to the state of things which existed, even in New England, will be sought in vain in the history of currency" (p. 455)—

unless (we venture to add), its parallel be looked for in the same country before or during the Revolutionary war.

The question how a history of banking in the United States should be written—*i. e.*, on what plan the facts should be presented after they are collected—is one not easy to answer. Probably nobody would be able to answer it to his own satisfaction until he had done the work once. The difficulties in the way of laying out a plan are more formidable here than in a country like England, where banking capital has mostly been concentrated at one place, and where accordingly ideas relative to banking have had a continuous and traceable development. In the United States before the civil war, banking was sporadic and epidemic. It "broke out" at different places in different forms and ran a certain course. It grew better or worse—generally worse—but presented the widest diversity of ideas and practice. It left a perfect jungle for the historian to make his way through. Prof. Sumner has collected the facts as they have never been collected before. To say that his history of banking in the United States is much superior to any other would not be saying much, since there is no other except the one which the late John Jay Knox left in an unfinished state, and which has been published only in separate numbers in a magazine. We may add, therefore, our opinion that this field will not need to be explored again in a very long time, except for the purpose of working over the wealth of material here displayed.

The method adopted by the author has been composite. Periods of about twenty years have been taken in which the facts have been arranged under each State separately—the two Banks of the United States falling within two of these periods and being carried along simultaneously. Thus the reader, after learning what was done in Massachusetts in a given period, learns what was done in each of the other States in the same period. Then he comes back to Massachusetts for the next period and then to each of the other States for the corresponding period. This arrangement has its advantages in that it gives us a continuous social history of the United States in so far as relates to the money question—and the reader will be surprised to find how large a part of our social history is embraced in that question. Yet it has one marked disadvantage, that the reader's attention is frequently interrupted, and he becomes overburdened with facts which he cannot assimilate unless he is an expert in monetary science.

In his preface Prof. Sumner says that his treatment "is not evolutional, for scarcely any genetic development can be traced." We think that the rule holds good in banking, as in other affairs of this world, that the things which exist to-day are what they are because something else existed yesterday, and that the proof of it is to be found in abundance in the book under review. On page 464 we are told that "the national banking system is a product of the history of American banking," and that "every important point in it stands out as the result of some long and important line of experience during the previous seventy or eighty years." Here, at all events, the course of banking was evolutional, although the opportunity for bringing in the new system was accidental. The law of genetic development had been at work all the time, and, when the opposing force of particularism was shot away, took possession of the entire field. Still, it is easier to say how such a history should be written than it is to write it, and it is probable that any one attempting it for the first time would do it as Prof. Sumner has done it, as a condition of doing it at all within any reasonable time.

Some idea of the amount of labor embodied in this book may be formed from the fact that the session laws of all the State legislatures, south and west of Maryland, have been examined, and not only the features of all the general banking laws in the Union, but the distinctive features of all separate bank charters, noted. This unique presentation was brought within the compass of one man's powers by the superb collection of session laws in the library of the Bar Association of New York, which was placed at the service of the author. In addition to this compilation all court decisions of any importance touching the banking laws are referred to and quoted so far as needful. Documentary matter other than the laws and decisions has been consulted so far as it was possible to obtain it without making the circuit of the several State libraries. All secondary authorities of importance, such as State histories, diaries, biographies, *Niles' Register*, the works of Gallatin, Gouge, Raguet, and Mathew Carey, debates in Congress, records of law suits, besides many newspaper files, have been brought under contribution.

Perhaps the most interesting part of the work is the account given of the liquidations following the bursting of the speculative bubbles of 1819 and 1837-'42, including the "relief" measures adopted to save those persons who had plunged into wild speculations, at the expense of those who had abstained. "The bubble having burst, the time had now come for 'relief.' Relief meant that some were left 'long' of goods on a market which had dropped. They wanted something to raise prices again long enough for them to unload on somebody else" (p. 120). The relief laws of Pennsylvania, Kentucky, and several other States were really revolutions under legislative forms. The fact that society survived them at all is perhaps the strongest available proof of the tenacity of our institutions.

Prof. Sumner's ideas of monetary and bank-

ing science in the abstract are introduced here and there as they serve to illustrate the particular facts he is dealing with. This is certainly the best way to fasten the truth in the reader's mind. Thus, coming to the suspension of specie payments in most of the States in 1814, it becomes convenient to exhibit the difference between money, cash, and negotiable paper. Money is that which constitutes payment itself—*i. e.*, metallic money; cash is anything which passes in all transactions without hesitation or dispute; negotiable paper is that which passes at some sort of discount, with more or less doubt and higgling. Such paper may be bank paper, or Government paper, or private paper; it may be a negotiable instrument at one time and cash at another time—the former when it is received with some distrust, the latter when it passes instantly and universally as money of account, even though depreciated in comparison with gold.

"In 1814 the notes of each bank were at a different rate of discount. Each town or county accepted some one kind as its local money of account. Others in the same place, and groups of them in other districts, were quoted with reference to that one, but the great character of the period was that the varieties were so great, and the badness of all was so extreme, that there was no money of account. The state of things is very difficult to understand and is almost incredible. It was the *differences* at the same time between the existing mediums of exchange which produced the result that there was no medium. Exchanges were made by barter of such paper as one had, for the goods which the other had" (p. 65).

One of the oddities of the time was that the Government received in payment for duties the banknotes of the port where the goods arrived. Consequently those cities whose notes were at the greatest discount had an advantage in foreign trade over others. New York, Philadelphia, and Baltimore had an advantage ranging from 14 to 20 per cent. in the matter of duties over Boston, which paid specie.

Prof. Sumner condemns the ante-bellum system of State bank issues utterly. It is a misnomer to speak of it as a system. It was chaos, and there is no reason to suppose that it would be other than chaos if the federal tax on such notes were repealed, since the decision of what kind of notes should be issued would be left to more than forty different legislatures.

As to the national banking system, most people will agree that

"its first great feature was that it was national and federal - a thing which, in the days of misery under the local bank system, people had sighed for as an unattainable hope. It is a great point which must be put to the credit of the civil war, that it brought about what was otherwise a political impossibility. . . . It was a tremendous gain—one which people nowadays do not realize or appreciate, unless they know what the previous history has been, that currency banking, and with it to a large extent the whole system of banking, were brought under federal control" (p. 465).

Prof. Sumner is an adherent of the "currency principle" as distinguished from the "banking principle," *i. e.*, he believes that banknotes should be issued against deposited securities, and that the greater or less amount needed at particular times and seasons should be supplied by gold. This is the Bank of England system. It is also the national banking system. He acknowledges (p. 466) that such a system can never be elastic, but he does not consider elasticity of banknote issues desirable. The reason is that bankers would inflate and contract at their own pleasure. This is the coming question in the United States, and will be upon us as soon as the silver question is disposed of. There is already a sharp division of opinion among those who give their attention to the subject, both here and abroad. In the second volume of the present series, by Henry Dunning MacLeod, the contrary view is maintained. The gist of Prof. Sumner's doctrine is embraced in the following paragraph:

"This system of currency has put an end at once and for ever to the old banker's trick of expansion and contraction. The present generation knows of that trick hardly by tradition. It is now complained that the national banknote currency is not elastic. That is very true. The old local banknote currency had the highest conceivable elasticity, and, instead of varying with the requirements of the market, the banker was for ever operating on its elasticity by his arbitrary will, and imparting fluctuations to the market. In order to stop him from doing that, a stringent system has been made, which has taken away the elasticity altogether, but if there was no other currency than a national banknote currency, limited far within the requirement, and combined with a large component of specie, the specie margin would give all the elasticity which would be required."

Space does not permit a discussion of this question here, but we may point out that, in modern banking, inflation and contraction take place by means of book entries, otherwise called discounts and deposits, rather than by note issues, and that the national banking system offers no more obstacles to such fluctuations than the old methods did.

In two pages at the end of the book there is an impressive summing up of the present situation—the situation being merely one stage of the struggle which has been going on for nearly three centuries, in one form and another, to effect a national gain by means of cheap money. Although our quotations have already been copious, it would be an injustice to the reader to omit this one:

"This gain has been pursued, as alchemists pursued the philosopher's stone, by trial and failure. Whether there be any such gain or not, our attempts to win it have all failed, and they have cost us in each generation more than a purely specie currency would have cost if each generation had had to buy it anew. . . .

"At the moment of this writing, the turmoil and confusion, the conflict of opinions and projects, the clash of political schemes, in and around the currency, are as great and mischievous as they ever were. The banks have but a very subordinate share in it, and are not to blame for any part of it. Eight or nine hundred millions of paper rest on a specie reserve which was originally planned for three hundred and forty-six millions, and that upon a fallacious plan. The stability of this currency has been maintained for two years by arbitrary purchases of gold, involving a manipulation of the foreign exchanges. Such manipulation may be excusable under great stress of other dangers, but it is perilous to some of the greatest and most delicate interests of the country. Theoretical and practical financiers must agree that this manipulation is a subject of grave apprehension, all the more because it is beyond the power of any man to foresee or estimate the consequences in their remoter reactions and more extended complications. The operation only wins time. It is no remedy. When the respite expires, if no sound measures have been adopted, the problem is still there, greater and more oppressive than ever, and complicated with the consequences of arbitrary interference with one of the most important and most delicate parts of the financial system. In the meantime, the factions produced by various dogmas about the currency, by interests engaged in it, and by party intrigues to profit by it, have grown fierce and stubborn. They exhaust their strength in making a deadlock. We are in a financial crisis which is becoming chronic, and which will be solved by a great disaster, unless we can rally knowledge and statesmanship to deal with it."

ITALY AND FRANCE IN 1870.

Souvenirs Militaires, 1866-'70. Préliminaires de la guerre. Par le Général Lebrun. Paris. 1895.

General Lebrun attempts to prove that France would never have entered on the war with Prussia without the pledge of an offensive and defensive alliance given by Italy; the moral certainty of the same given by Austria. Italy gave no such pledge, though Victor Emanuel did promise to further such an alliance on one condition, the withdrawal of the French troops from the Papal territory—not a return to the Convention of September, 1864, which bound Italy neither to enter nor permit Garibaldi and the volunteers to enter the Papal States, and which had been violated on both sides by Garibaldi and his volunteers, who defeated the *papalini* at Monterotondo; by the French, who returned in 1867, defeated the Garibaldians at Mentana, and persisted in retaining their garrison in Rome, although Garibaldi was strictly guarded at Caprera and the Papal frontier lined with Italian troops. Capital has been made, and Gen. Lebrun attempts to make more, out of the legend that Victor Emanuel pursued a line of foreign policy unknown to and often contrary to that of his ministry. That monarch used to the uttermost the rights bestowed on him by the Constitution, but he never overstepped them. In accordance with Article V. he appointed and dismissed his ministers pretty often—generally wisely. In 1864 he dismissed the Minghetti-Visconti-Venosta ministry after the massacres in the streets of Turin, and appointed Lamarmora, Sella, and Lanza, who all disapproved of the Convention, to execute, much against their will, the terms thereof—*i. e.*, to transfer the capital to Florence and guard the Papal frontier.

After Mentana there was a coolness between the King and the French Emperor, whom, however, the royal family, the court, a portion of the *consorteria*, and certain army generals (Cialdini and Menabrea, for example) looked upon as the only safeguard of monarchical institutions in the new kingdom. When Napoleon III., apprehensive of Prussia's growing importance, first turned his thoughts towards war, he set himself to pave the way for an alliance with Italy and with Austria, especially after he was assured that Bismarck made no secret of his intention of uniting Germany under Prussian leadership, counted confidently on Russia's neutrality, and had the armies of North Germany in a state of readiness for contingencies up to the end of 1871. The *pourparlers* between the King and the Emperor by means of his special and secret agents were not even communicated to his ministers until June, 1869. Hence the assertions of Gen. Lebrun are simply astounding. He affirms that the Emperor, to whom he had objected the absence of allies, answered, "Oh! we may consider the Italian alliance as certain, that of Austria as morally if not actively assured" (p. 59), and on May 19, 1870, the Emperor, after examining the war plan of the Archduke Albert, said that in this plan "the forces of France and Austria alone need not be counted on, but should include those of Italy—not her entire army, but in any case a contingent of 100,000 men, which King Victor Emanuel had promised to send to join the armies of the two great powers if they were allied with a view to

common action in resisting the ambitious projects of Prussia." This statement is not only untrue, but improbable, as Italy had nothing to fear from Prussia's ambition, whereas she had everything to hope from Prussia anent the Roman question. In June, 1869, the King informed his ministers that in a possible war between France and Prussia, he deemed it advantageous for Italy to ally herself with France, then in treaty for an Austrian alliance, and he requested them to draw up propositions. The announcement was received "with painful surprise," but the ministers, in the presence of the Roman question, which threatened to overwhelm them, and well knowing that, if they refused even to negotiate, the King would summon a "war ministry," drew up the following proposition:

"Should Italy consent to enter into a defensive alliance with France and Austria, which might, on occasion, be transformed into an offensive one, will the French Emperor consent to withdraw his troops from Rome, recognize the principle of non-intervention, and give a pledge that the alliance shall not tend to destroy the results of the war of 1866 or the unity of the German nation?"

The answer came promptly from the Marquis de La Valette, who, in the name of the Emperor, declared that the Italian proposals could not be accepted *ni pour la forme, ni pour le fond*, and all negotiations were suspended; Austria also retiring.

The Hohenzollern candidature revived the matter. On July 18, 1870, came a letter from the Emperor to the King, renewing the demand for an alliance. Almost at the same time Count Brassier de Saint Simon, Prussian Minister at Rome, formally demanded, in the name of his Government, information as to the line of conduct that Italy intended to pursue. The King, Menebrea, Gen. Cialdini, and many others were as sure of French victory in the case of war as of their own existence; were eager to share in the glory and the gain; counted on French gratitude in the form of the restitution of Nice, the cession of the Tyrol, the solution of the Roman problem; deprecated the ire of victorious France towards the "ungrateful neutrals" who had forgotten Magenta and Solferino. Sella, on the contrary, believed that France was rushing into a war unprepared and undisciplined. Moreover, he looked upon it as a crime to take sides with either the ally of 1859 or the ally of 1866; Italy's duty was to remain neutral; it was also her necessity, for she had none of the sinews of war, neither funds nor soldiers. He knew, too, better than the King or the generals, what was the feeling in the country. Lanza was of Sella's opinion. Visconti-Venosta, one of the makers of the Convention, still clung to the hope that a return to its strict observance would facilitate matters and pave the way for Italy to help France in her difficulties, should help be needed. On the evening of the King's return, the Cabinet decided to call out two classes of the conscripts subject to military service, thus adding 70,000 soldiers to the army. After the Emperor's letter urging an accord with Austria and speedy action, the Italian Government informed the Austrian that "they were ready to come to an agreement should a fresh situation be created by circumstances beyond their control; but that, while preserving a benevolent attitude towards France, they desired that the conflict might be limited, and could assuredly assume no responsibility in extending it." On which Beust wrote to Metternich:

"The September Convention, it is useless to delude ourselves, is no longer adapted to the situation. We cannot leave the Holy Father to the ineffectual protection of his own troops. The day on which the French quit Rome, the Italians must be allowed to enter the Papal States in their own right, with the consent of Austria and of France. We shall never have the Italians with us heart and soul until we have extracted the Roman thorn from their side."

Thereupon the Duke de Gramont informed the Italian ministry that a return to the September Convention was the only thing possible. The ministry replied that they were willing, if need be, to return to the terms of the Convention, which was no concession to Italy, and that if they were bound to the execution of the treaty (*i. e.*, to guard the Papal frontier), they would not at the same time contemplate the possibility of taking part in any war. For this acceptance of a return to the terms of the abhorrent treaty the ministry was vehemently blamed, but the King's ministers had their own reasons for securing at any cost the departure of French troops from Rome. They, or at least the majority, did not believe in an imperial victory, foresaw that in case of defeat France would proclaim a republic, and that a republican garrison in Rome might very possibly become the centre of a revolutionary movement in Italy.

Everything tended to confirm Italy in her neutral position. Bismarck, however, did not yet feel secure on this head, and summoned Count Brassier de Saint-Simon to Berlin with instructions to bring an accurate account of the situation. Sella bade him assure the Prince that "he should support neutrality to the uttermost and resign rather than consent to a war against Germany." On July 25, after a debate on Italy's foreign policy, in which strict neutrality was affirmed, Sella demanded a vote of confidence, which was accorded by a majority of 63 out of 282 present. This debate was highly displeasing to the French Ambassador at Florence, and he complained to the King, who answered "that if the Emperor would consent, in case of danger to the Pope from invasion or other causes, to his troops performing the offices now performed by French soldiers, occupying certain strategic points, so as to insure the safety of the Holy Father, all the rest would be easily arranged." And on the same day the King wrote to the Emperor in the same strain. But the Emperor remained obdurate, holding out for the September Convention pure and simple. Even this aroused the suspicions of the Austrian, Prussian, and even the English Governments. If France consented to withdraw her troops from Rome, there must be a secret alliance between France and Italy,

After the skirmish at Saarbrück, which was vaunted as a brilliant victory, the friends of France in the Cabinet proposed an armed intervention. Sella formally announced his resignation, and the affair was not pressed, but he quitted Florence on the morrow to leave his colleagues free to settle matters with the King. General Türr, one of the intermediaries between Florence and the Tuileries, explained to the Duke de Gramont that they could not hope for help from Italy by returning to the bare Convention, which, for her, was only a complication. To which Gramont answered haughtily, "It is impossible for us to do the smallest thing for Rome. If Italy won't march, let her stand still." Then followed *pourparlers* for a simple alliance between France and Austria, the latter offering to mediate with France regarding the Roman question. This Italy declined, convinced that, after the formal declarations of the Emperor and the French Government, no mediation could avail. The news of the battle of Wörth put an end to these negotiations, and the Austrian envoy quitted Florence. Later, Count Latour d'Auvergne was sent to Vienna to treat for an Austrian alliance only, and the Italian ambassador at Paris was given the cold shoulder by Gramont and even by the Emperor; the Empress, who was the inspirer of French policy, declaring that "France should not be indebted to Italy for anything whatsoever." The King's confidential agent, Vimercati, tried to induce the Emperor to persuade the Pope to accept a *modus vivendi* with Italy, in which case it was proposed that Italy and Austria should demand from Prussia a pledge to respect the *status quo* of the treaty of Prague. No effective coöperation was to be given unless the French should have penetrated into southern Germany, in which case the Italian troops, thrown across the Tyrol, would join them near Munich and their united forces would be sustained by Austria. Austria approved because it seemed more like an armed mediation than an aggression. Vimercati left Florence the 29th of July. Arrived on the 1st of August at Paris, he found the Emperor at Metz. Napoleon refused to accept the article pledging him to induce the Pope to accept a *modus vivendi*.

Still the war party hoped and struggled; if only the King could be induced to dismiss the peace-at-any-price ministry, all might yet go well. In the Senate, Scialoja made a hostile interpellation, while Cialdini's speech would in any country, and in Italy at any other time, have led to his arrest. He expressed his astonishment that a ministry dared to remain in power after the "negligence and miserliness that had disarmed the country in these supreme moments for its welfare. I hope," he continued, "that the Minister of War does not live on illusions, that he is convinced that he can no longer remain in the position he now occupies, that he can no longer direct the war department and the army, seeing that he is not sustained by the blessings, the affection, the confidence of that army."

"The discourse you have listened to," replied Sella, "not only bears the imprint of incredible violence against our actions and our persons, but contains, also, a menace. Who has given Gen. Cialdini, an army general, the right to abuse his high position and speak in the name of the army, and to tell us that the Minister of War can no longer retain his portfolio because he does not enjoy the confidence of the army? Do these words of the honorable Cialdini contain the threat of a *pronunciamiento?*"

The whole Senate applauded, but the King called Sella severely to account.

After the battle of Wörth, Napoleon addressed a "dignified and touching letter to the King," appealing to his chivalrous sentiments to help him in his sore distress. Victor Emanuel, much anguished, sent Lanza and Visconti-Venosta to Lamarmora, who had held aloof from King and Government ever since the war of 1866, to implore him to find some way of assisting their former ally. Lamarmora "wept bitterly," said Sella in his funeral eulogy of the General (1880), declaring that "if the Government should decide on sending a corps over the frontier, he should claim the honor of commanding a *company*, but that his opinion as a general and a statesman was that Italy was not in a condition to do the least thing for France."

Such, briefly, are the facts of the negotiations between Italy and the French Empire in

1870. The French have ever since that date accused the Italians of base ingratitude, forgetting the cession of Nice and Savoy in return for the victories of Magenta and Solferino; it remained for Gen. Lebrun to accuse Italy of "bad faith" and "broken pledges," without adducing a single document or tittle of evidence.

LEA'S AURICULAR CONFESSION.

A History of Auricular Confession and Indulgences in the Latin Church. By Henry Charles Lea, LL.D. Vols. I. and II. Philadelphia: Lea Brothers. 1896.

THESE first two volumes of Dr. Lea's latest work form together a first part, and treat in continuous chapters the history of Confession and Absolution. The subject of Indulgences is reserved for a third volume, which may be expected at no very distant day. Once more Dr. Lea offers to the world a new chapter in the great indictment against the Roman Catholic system which has been the work of his long and laborious life. No scholar in America, and perhaps none in the world, has a firmer and more comprehensive grasp on the vast literature of the Church in all its forms, and none has handled the immense problems of theological controversy with clearer purpose and more moderate spirit. All of Dr. Lea's writing may fitly be described as controversial, but it is not the controversy which wastes itself in a petty give-and-take of charges and countercharges. He is sparing of invective, cautious in his use of language, and willing to show his admiration for the power displayed by the system he opposes. His method of controversy is to gather up into one elaborate presentation all there is to be found in sources which his opponents would admit as authoritative. In the present volumes, for instance, he has made no use whatever of Protestant literature. All his citations are from the writings of Catholic authorities, and chiefly from such as have been honored and cited by those of their own confession as standards of faith and action.

There is something so convincing in the mere declaration of this method that one is tempted to accept its results as final without further criticism. Yet it is a method that can easily be overdone, and in not a few modern instances has been so overdone. For example, the modern assault upon the Reformation rests very largely upon the utterances of Protestants, carefully selected and so arranged as to leave on the reader's mind an impression of almost complete condemnation. The truth is, that no great human institution or movement of the human mind can ever command the undivided allegiance of all those who are ready to fight under its banner. There will, happily, always be dissensions in the party ranks, but that does not prevent the party from going on to do its work in the line of human progress. Thus the Catholic criticism of Catholic measures and ideas must mean a very different thing when taken up by a Protestant mind, and *vice versa*. The indispensable condition for all true criticism is sympathy with the thing criticised, and the power of distinguishing between essentials and those details which often obscure essentials.

Dr. Lea has done his work thoroughly. His presentation is enormously learned, and his authorities are unexceptionable. The impression he makes is, one feels sure, the one he intended to make. Is it a true one, in the sense that truth implies completeness? Has the author so penetrated the spirit of the great Roman institution as to give due credit for the intention which underlay the vast fabric of scholastic and casuistic reasoning? This is the point precisely where one feels a doubt. The Church did not run deliberately into the confusions of thought and practice which are so easily criticised; it drifted into them. Assuming always as a starting-point the necessity of some external process by which the sinful nature of man could manifest its reconciliation with the kind of a God in whom all the world believed, the Church went on trying to adapt its system of reconciliation to the changing conditions of human society—a blundering, a blind, and often a wicked experimenting, but on the whole sincere. The evil of it all was in the assumption on which it rested; but could society, during that long period of its schooling for something better, have lived at all on any other assumption? Incidentally Dr. Lea furnishes from time to time the answer to this question. Down at least to the thirteenth century European society was essentially barbaric, passing slowly and painfully through the elementary stages of national growth. What there was of culture—which means self-restraint—was in the Church and in its influence upon common life. Dr. Lea shows us very convincingly how the system of confession and absolution became the great agency for retaining that influence, but he leaves us in doubt whether he sees quite clearly that the influence of the Church was essential to the maintaining of any effective moral standard at all. Then came the great awakening of the European mind—national feeling, the Roman civil law, cities and their commerce, wealth, learning for learning's sake; and by that time the power of the Church was so widely felt and so firmly fixed that no one knew how to escape it. The Church itself was swept along by the rising tide, and must hold its own by adapting itself. Not only must it stand as the mediator between man and God, but it must perfect its system of mediation to meet all emergencies. In an age acutely intellectual, it must base its action upon some system which would appeal to the mind of the day.

Dr. Lea's picture of the great confessional system thus reaches its natural climax in the chapter on probabilism and casuistry. The vast and awful responsibility of the confessor could be met only by some process whereby a law claimed as absolute and inevitable should be made adjustable to the weakness of humanity. The infinite complexity of human relations demanded a moral law of corresponding flexibility. The Church was not permitted to deal with mere distinctions of the absolutely right and the absolutely wrong. It was called upon to give specific answers in individual cases, and that not occasionally but constantly. Its great problem was (and this is clearly shown by Dr. Lea) how far the opinion of the average sinner and the average confessor might enter into the decision of the specific case, or, in other language, how far the individual conscience was to be trusted as a guide to action. Put in this way, the doctrine of "probabilism" has a very harmless sound indeed. To say that a man ought to obey his conscience can hardly shock any one at this day. The evil was, that a human authority should believe itself capable of putting that principle into a form to meet all cases, that human frailty and human doubt should be so elaborately analyzed and so recklessly put forward that men were in danger of forgetting that there were any principles of action at all which could not be juggled with.

The problem of Jesuit ethics is that of all ethics: to make individual action square with eternal principles. We do not for a moment question that Dr. Lea recognizes this view of the case. We felt only, in reading his presentation, that it was not fully or quite fairly brought out. The aim of casuistry was primarily to satisfy the individual conscience. That is a worthy aim, but the method is liable to terrible abuse. The conscience may be trained to almost any subtilty, especially under the force of selfish desire. When we today say, "Follow conscience," we assume the education of the conscience by every available means. During the growth of the Roman ethics, the same phrase implies an education solely through the Church. But if all our agencies of civilization can do no more than they have done to make the individual conscience work right under pressure, how plainly inadequate was this organization of priests to accomplish their purpose, and how natural it was that the keenest among them should have strained every nerve to invent excuses for failure and devise substitutes for the infallible accuracy they claimed in vain.

One gets from Dr. Lea's presentation a sufficiently vivid idea of all the meaner motives of the Roman ethical struggle, but hardly an adequate sense of the terrible complications into which the Church had let itself drift. To get this, one has to read between lines. It is there if one can find it. So read, these volumes must do a splendid service. They will help to clear up the mind of many a doubter as to the real meaning and danger of the whole theory of a fixed authority in faith and life upon which the Roman system is built. They ought to rouse many a one who lazily fancies Roman Catholicism to be merely a religious sect like a dozen others, and imagines it can so be overlooked or sniffed away. The concluding words of the preface are full of prophetic import, reminding us as they do that Romanism, against its will, has been forced into a position of advantage which needs only to be recognized to become effective.

Kokoro: Hints and Echoes of Japanese Inner Life. By Lafcadio Hearn. Boston: Houghton, Mifflin & Co. 1896. Pp. 388.

AGAIN Mr. Hearn enriches philosophy and ethnology, as well as literature, with a volume of his observations upon Japanese life, about one-half of the papers being *genre* sketches and folklore traditions retouched, and the rest being comparative studies of various fundamental traits of Japanese and European philosophy. Needless to say, Mr. Hearn still maintains his place as the great, perhaps the only competent, sympathetic and large-sighted interpreter of the Japanese inner life. It is not merely that his acute subjective analysis outlaws for good those crude enumerations, in treatise and essay, of forms and observances which have hitherto misled us into supposing that we knew something of Japanese religion—as if one should judge Christianity by prayer-book and pew, by stole and chalice. Nor is it merely that the higher side of Japanese moral and religious life is here emphasized, and that we now realize how petty and misguided are the well-meant efforts of foreign missionary enterprise to change that which was not in nature meant to be changed—as if a champion of the noisy, ponderous steam printing-press

should pity and strive to proselytize the patient line engraver.

There is still another value in Mr. Hearn's work: it introduces us to the broad and interesting field of ethno-psychological analysis and speculation, which is and always must be rarely worked, because it requires in the observer a combination of opportunities and capacity which can seldom occur. Take, for example, the Japanese principle of courtesy or the Japanese principle of compromise, so characteristic of the people. These, as different from Occidental principles in the same situations, are to be explained; and, with a hundred other particulars, they form a complex which cannot be explained without a resort to ultimate physiological and psychological facts, by aid of which a point of view is attained and a differentiation is accomplished between Japanese and Occidental conduct or belief under the same circumstances. Mr. Percival Lowell, in his 'Soul of the Far East,' was perhaps the first to attempt the problem in its broadest form—an attempt worthy of praise, but on the whole unsuccessful. Then a professor of psychology, after a paltry three months' sojourn in the country, made what we must consider a singularly presumptuous attempt at a similar analysis, forgetting that his equipment was lacking in the one essential thing, personal observation of data and familiarity with Japanese literature and history. But now Mr. Hearn has made himself the one and great interpreter, and has already solved many of the most important parts of the problem, mainly the ethical and the religious elements; others —such as the commercial and the legal instincts—still awaiting their interpreter. What is notable is that the Japanese, among Oriental peoples, are specially fortunate in this. As between the Germanic and the Latin peoples, we have been vouchsafed a few masterly solutions, more or less comprehensive—Emerson for the English, Brownell and Hamerton for the French, Whitman for the Germans, Bryce for ourselves. For the Slavs, and even for the Arabs, something has been done to give us a vantage point whence we may comprehend. On the other hand, for the people of India, Rudyard Kipling, missing great opportunities, has done little or nothing. In China, there are several presumably competent persons, and yet each new volume falls short of our hopes. What we ask for, in this age, is no longer a traveller's diary, nor a correspondent's gossip, nor an opponent's diatribe, about the Turks, the Hindus, the Chinese, the Japanese; but a subjective explanation of why things are as they are, a category for comprehending, an ultimate synthesis which will explain at once both the life of those peoples and its differences from our own. It is in this aspect, then, that Mr. Hearn's achievement seems greatest.

Percy Bysshe Shelley: Poet and Pioneer. A Biographical Study. By Henry S. Salt. London: William Reeves; New York: Charles Scribner's Sons. 1896.

Mr. Salt announces in the preface that his purpose is "to *interpret* Shelley, not to criticise or eulogize him." Just at the close he again disclaims "any idea of suggesting that Shelley was a faultless being." But in the body of the book the mortal clods are forgotten. Mr. Salt seldom allows his saint and hero to lay aside the nimbus, and then only for the sake of an artistic contrast. This enthusiasm is due to other causes than mere literary and personal sympathy. Mr. Salt's interest is not so much in the bard as in the revolutionist. Mr. J. Cordy Jeaffreson once made a book called 'The Real Shelley,' and Mr. Salt might better have termed his essay 'The Socialist Shelley.' "By the full-fledged social democracy on whose threshold we now stand, he will at length be seen in his true human character as the inspired prophet of a larger and saner morality, which will bring with it the realization of the equality and freedom to which his whole life was so faithfully and ungrudgingly devoted." Mr. Salt is a particularly full-fledged social democrat, with a taste for rhetoric and a lively aversion to the married state. His contempt for those who see in marriage more than a "stereotyped and loveless institution" is unveiled. Are we mediæval or is there something droll about the following sentence? "The failure of marriage has become so notorious as to be a commonplace of modern novel-writers." Mr. Salt outstrips Prof. Dowden in defending Shelley's domestic relations. He has only one censure to offer: Shelley's marriage with Harriet was the mistake of his career because he compromised his opinions by marrying at all. And when, after chastising Walter Bagehot, Leslie Stephen, and the "nincompoop" of Matthew Arnold, Mr. Salt proceeds to indict Addington Symonds for being "misled by the same social prejudice," we feel that we are posting into the twentieth century at break-neck speed.

Arnold is Mr. Salt's pet aversion, especially his phrase about "the beautiful and ineffectual angel." In retaliation, Mr. Salt "gives it" to Matthew throughout nine special pages, concluding with a sledge-hammer blow in rhyme which is alone worth the price of the book. A score of other people, ancient and modern, come in for severe slating. What a pity that the Socialists, with their views about the perfectibility of mankind, should have to pour torrents of abuse upon their fellow-men! "Brutal Tory" and "invertebrate Liberal" must comprehend a good many humans, yet the race is so pure and lofty that it can be trusted to follow the guiding-star of free love.

Despite the second title, Mr. Salt gives us less biography than disquisition. A great deal of the author's comment accompanies a brief account of the poet's life. Shelley's detractors are assailed in pretty much the same strain that Shelley himself uses in "Adonais" towards the Quarterly Reviewer: "Live thou whose infamy is not thy fame." Mr. Salt, the most dogmatic of writers, objects to the dogmatism of those who deny Shelley the possession of great intellectual powers. He excludes discrimination. One must not criticise, but bow at the shrine. Hepworth Dixon writes similarly about Lord Bacon. The least hint of a disposition to patronize Shelley is a red rag to Mr. Salt. If Shelley learned of Rousseau, Paine, and Godwin, he transmuted their ideas and is an independent pioneer of modern socialism. When one has always supposed that he was more or less a product of the French Revolution, it is hard to be told abruptly that he was a political creator. On the other hand, gibes at "our national deity, 'Mrs. Grundy,'" are perfectly familiar, and Mr. Salt has no monopoly of them. We have learned to take them for just what they are worth. We desist from touching in reply upon fixed moral ideas, for fear our remarks might be termed the futile "complaint of a capitalist press." Mr. Salt has much to say about Shelley's humanitarianism, and here we are in accord with him, though his tone is too declamatory. But why should the Socialists assume a monopoly of human kindness? Socialism stands less for universal benevolence than for a particular scheme to extend human happiness. Because one differs from the details of the scheme, he is not necessarily opposed to its aim.

Mr. Salt starts many questions of universal moment, and manages to connect Shelley with them all. We wish we could praise his panegyric more highly, for it has the merit of true zeal. We also regret that he has forced us to assume a tone of disparagement towards one who was a paragon of poetical genius and personal unselfishness. But that is the fault of his treatment. Mr. Salt's Shelley will never command the unqualified admiration of the world until our present moral and social ideals have emerged from Medea's cauldron.

The Ecclesiastical Architecture of Scotland, from the Earliest Christian Times to the Seventeenth Century. By David Macgibbon and Thomas Ross. Vol. I. Edinburgh: David Douglas. 1896. Pp. xiii, 483.

Between the years 1887 and 1892, the authors of this book published their 'Castellated and Domesticated Architecture of Scotland,' in five volumes. No work more satisfactory than that is contained in the library of the student of architecture. Scottish domestic building is not exactly in the order of the great styles which have developed themselves, one out of another, in Europe, and whose sequence makes up the main current of what we study as architectural history. It is rather an eddy—a backwater which the great stream ignores; but every succeeding Scottish style is itself derived from the more central styles of France and England, the number of good specimens is very great, and the student of the principles of picturesque design is especially fortunate if he is brought into contact with these simple old Scottish manor-houses and town houses. There were nearly 1,700 pictures in that former work—spirited drawings of very telling character, carried no farther than necessary for the reader's perfect understanding of the building or the detail under consideration.

The present work promises to do as much for Scottish churches. The volume before us contains about 400 drawings devoted to the main subject. They carry with them the strongest internal evidences of accuracy. No sham picturesqueness, like that of most of the architectural drawings in our illustrated magazines—a picturesqueness made up largely of broken lines and little touches put in for effect—is allowed to interfere with the simple statement of the facts. The drawings are not as beautiful as those of Viollet-le-Duc, nor do any of them deal with such complicated structures as some of his; but there is little doubt that they are more uniformly accurate, even if the great Frenchman's admittedly conjectural work is left out of consideration. The text of the present volume, as far as its leading topic is concerned, deals with Celtic (monastic and ecclesiastical) structures and with the transition from Celtic to Norman; then with Norman architecture and with the transition from Norman to Gothic. There is an index, which seems to be brief, occupying only four pages.

We have left until the last the introduction, which gives, in sixty pages, a general account of the relations of Scottish architecture to that of the rest of Europe, and seeks to define and explain the great styles, Romanesque and Pointed, by means of a comparison of French and English work. In this introduction the decorative crosses, slabs, and carved work of unknown date, and the equally unplaced round towers of Scotland and Ireland, are touched upon, and the unquestioned Irish ori-

gin of the earliest Scottish architecture is well explained. On pages 12 and 13 the slow change of ecclesiastical buildings from purely Celtic to semi-Roman types is clearly set forth. The larger works on Irish architecture and those on Scottish Celtic archæology are to a certain extent condensed in these pages, with reference to them. On page 32 begins an account of the development of the greater architecture of Europe through Romanesque to Gothic and from early Gothic to late. This is very well managed. The critical remarks on the causes and true characteristics are extremely just, and no better brief history of the subject exists.

On page 65 the Celtic monastic and ecclesiastical structures in Scotland are taken up in reliance upon the work of the late T. S. Muir, to whom our authors defer as to the most enthusiastic of antiquaries, and one who was fortunate in the early epoch of his investigations, when these structures still remained in tolerable condition. Then follows, p. 101, a description of the churches in Orkney and Shetland, with one or two in Scotland proper, all founded upon the investigations of Sir Henry Dryden, made about forty years ago. The drawings and descriptions prepared by this author from personal observation of buildings now much less perfect are here published for the first time.

Only half the volume before us is left for the first chapters of the main work; and it may be well to defer remark upon this portion till the appearance of the second volume.

The Making of Pennsylvania. By Sydney George Fisher. Philadelphia: J. B. Lippincott Co. 1896. Pp. viii, 364.

In its mixture of nationalities, languages, and religions Pennsylvania was from the first quite unlike most of the other American colonies. Dutch, Swedes, English, Scotch-Irish, Germans, and Welsh contributed to the formation of its heterogeneous population, while Quakers, Lutherans, Presbyterians, Episcopalians, Mennonites, Tunkers, Moravians, and others found within its borders a welcome and a home. Mr. Fisher has undertaken, without writing a history of Pennsylvania, to treat each of these elements in detail, tracing their history, noting their peculiarities of custom and creed, and pointing out their influence upon the social and political characteristics of the State. Though written for the "general reader," and in a style which at times descends to triviality, the book is not without value for students of our colonial history, and, in its earlier pages especially, attains a genial blending of historical and antiquarian learning. Mr. Fisher enters at considerable length into discussion of the tenets and practices of the numerous sects represented in the Pennsylvania colony, and although in his preface he seems to anticipate that his treatment of religious matters will give offence, we fail to find in the work itself the justification for his fears. Space forbids extended comment, but we fancy that good churchmen will be a little surprised that the author finds an "easy explanation" of the facility with which many Quakers became Episcopalians, after the Keith controversy, in the fact that "the Church of England has never been a very dogmatic body, has never been much devoted to systems or theologies, and has always given ample room for the development of individual opinion" (p. 191).

Mr. Fisher is firmly convinced that Pennsylvania ought to be in all respects the foremost State in the Union, and he frequently turns aside from the main course of his narrative to moralize on this attractive theme. He does not hesitate to score the Germans for their obstinate adherence to their own language and customs, their disposition to live by themselves, and their opposition to public education. The readable chapter on "Early Development of Science and Arts" contains little that is new; but, unless Mr. Fisher has fixed some chronological limits which he does not state, it can hardly be admitted that Franklin "was the first man who wrote in English on the modern science of political economy," and that "he suggested some of the principles which are now elementary in it" (p. 217). We will not dispute the further assertion that "it was a chance statement of his [Franklin's] that aroused Malthus to develop his peculiar theory of population," but it would have been worth substantiating.

The long chapter on "The Connecticut Invasion," dealing with the struggle for the possession of the Wyoming region, and the account of the tedious boundary controversy with Maryland, are written in a spirit of narrow and almost bitter partisanship, in striking contrast to the temper of the earlier chapters. Mr. Fisher is sure that the claim of Connecticut ought not to have been pressed; as for the successive Lords Baltimore, they were either knaves or fools. It hardly need be said that this portion of the book must be read with caution.

We note two slight misprints: *Ann* Hutchinson (p. 213), and the distortion (p. 133), by the omission of a comma, of the title of Rosengarten's "Pennsylvania Dutch," in volume ix. of the *Nation*.

Calendar of State Papers. Colonial Series: America and West Indies, 1675-1676; also, Addenda, 1574-1674, preserved in the Public Record Office. Edited by W. Noel Sainsbury. London. 1893. 8vo, pp. lxi, 595.

This volume (constituting the seventh of the series, and the fourth dealing with what is here broadly spoken of as the "West Indies"), though dated 1893, has only recently been issued. Like the preceding volumes, it is a key to a vast series of papers in the English State Paper Office, many of which are abstracted at such length as to be little less than verbatim copies. Indeed, the tendency with each volume towards a fuller and more verbal transcription is distinctly noticeable, and in line with this is the return in the present volume to earlier dates, not merely that newly discovered documents may be embodied, but as well to include such documents as were formerly omitted because they were in print in Hakluyt, and are now inserted at the suggestion of Lord Derby that this "series of documents ought to be complete in itself." Of these documents Mr. Sainsbury had before his death prepared an admirable résumé, which, like those in the earlier volumes, is a testimonial to his scholarly, as the texts are to his editorial, ability.

In the earlier papers is a considerable series relating to the colonizing attempts of Sir Humphrey Gilbert, and he himself tells of his "spending of a thousand marks land a year" to win only "the scorn of all the world." Document No. 47 records the earliest (1697) of the flights to America for conscience' sake, being a petition of "Her Majesty's faithful subjects falsely called Brownists," . . . "greatly distressed thro' imprisonment and great troubles sustained only for matters of conscience," praying leave to emigrate to "a far country which lieth to the west in Canada"; and how akin the spirit of these emigrants was to the Puritan is revealed by their wish not merely to "worship God as in conscience persuaded by his word, but also do Her Majesty great good service by annoying that bloody and persecuting Spaniard about the Bay of Mexico." This paper is followed by a series relating to the actual settlement of Virginia, one of which tells of the seizure of a French ship attempting to plant a colony, with the cruel treatment of Jesuits found on board. An obverse to this is an amusing narrative of John Pory, just chosen "Secretary in Virginia," who, on the question of maintenance, finds the Council "as dry as Pumystones, which is the cause that I mean not to adventure my carcase in so dangerous a business for nothing." The new products of the West are touched upon in No. 104, relating to "Virginia wheat, called Maize, much commended for an excellent strong meat and hearty for men at sea and more wholesome than beef," and No. 108 is King James's Proclamation against the culture of tobacco in England, reciting:

"It is not unknown what dislike we have ever had of the use of tobacco, as tending to a general and new corruption both of mens bodies and manners; nevertheless it is of the two more tolerable that the same should be imported amongst many other vanities and superfluities which come from beyond seas than permitted to be planted here within this realm, to abuse and misemploy the soil of this fruitful kingdom."

Several papers deal with the export of criminals to Virginia, and others with the "Supplication of certain Walloons and French" who wish to settle there. As early as 1621, exertions were making for "erecting a school in Virginia." Penn's expedition to Jamaica is fully set forth in many documents, as also the wholesale removal of the English from Surinam to that island, consequent on the cession of the former to the Dutch—the beginning of the Venezuelan-Guiana controversy. No. 377 (1669) is a prospectus of the "New Plantation of Cape Florida, Carolina," promising the settlers, among other privileges, "full and free liberty of conscience." In connection with an argument against the Culpeper grant (1674), the danger of lessening the King's authority in the colonies is dwelt upon, "for the New England disease is very catching"; the independent conduct, the smuggling, and the religious intolerance of that section being set forth in numerous other papers, one of which records that among the "fiercest [ministers] is one Mr. Thacher, the only man in the country who keeps a coach." These charges lead up to the Randolph mission, and three lengthy reports of his are printed. The Royal African Company is noticed in connection with the "cries" of the colonies for slaves. In 1675 it is shown to have imported 7,025 negroes, and in six months of 1676 a sale of 1,588 is recorded in Barbados alone, yet so little was the demand satisfied that illicit voyages were constantly made to obtain further supplies. An act of Barbados, passed in 1676, forbids "the people called Quakers from bringing Negroes to their meeting." Amusing glimpses are given of Henry Morgan, doughtiest of buccaneers, sitting as a judge of the court of admiralty in Jamaica, and of Nathaniel Bacon, uttering "dreadful new coined oaths," "as if he thought God was delighted with his ingenuity in that kind." Concerning this latter, the documents are endless; perhaps the most worthy of note is his proclamation to Col. John Washington "and the rest of the commissioners for Westmoreland County," since it fills the blank in the commissioners for that county as printed by Hening (ii., 19).

As in the former volumes, the proof-reading is adequate, and the index satisfactorily full.

The Life and Letters of George John Romanes, M.A., LL.D., F.R.S. Written and edited by his wife. Longmans, Green & Co. 1896.

As if oppressed with the scantiness of her material, Mrs. Romanes has printed her memoir in large type very expansively, making a big and coarse octavo where a smaller book would have been much more attractive to the eye and hand. She has, however, done her editorial work in an intelligent and instructive manner, except that, where many of her readers will wish that she had put forth all her strength, she has taken quite the opposite course. We allude to the theological somerset which Romanes described in the latter part of his life. This bulky volume adds very little, if anything, to the 'Thoughts on Religion' published soon after Romanes's death. Here as there we are left to the infecting and discouraging suspicion that the change in Romanes's religious opinions was due to morbid intellectual conditions, coinciding with his broken bodily health. Paralysis is not likely to make for clear thinking, and the conclusions of a thinker who completely reverses his position in some sudden fashion are dubious at either pole. Certainly those who were much impressed by Romanes's 'Candid Examination of Theism' are not likely to be captivated by his later speculations. He cites the case of Clifford's sudden change from orthodoxy to scepticism as showing that reason has very little to do with religious opinion. The fable is equally for him. Indeed, he is frank enough to confess it He tells us that the hardest sacrifice which Christianity imposes on an intelligent man is "that of his own intellect," and adds, "At least, I am certain that this is so in my own case." But how can we be expected to care very much for the protracted reasoning of a man who has avowedly sacrificed his intellect? That the sacrifice was not wholly imaginary we have the arguments by which it is justified to show, and those also for an orthodoxy impossible even for the clericalism of Oxford at the present time. Theologians have often been sharply reprimanded for not sticking to their last, but few of them have sinned more grievously than Romanes did in this particular. Such knowledge as he had of Biblical criticism it would seem he must have got up in a few hours, and yet he speaks as confidently as if he had demonstrated the possibility of trinity in unity by uniting Kuenen and Reuss and Wellhausen in himself.

It would not be strange if the quality of Romanes's theological lucubrations were to breed some slight suspicion of his scientific work. His case is very different from Faraday's, who kept all his thinking for science and did not think at all about his Sandemanian theology. The process in Romanes's theologizing is utterly unscientific. Many will regret that Mrs. Romanes did not avail herself of the assistance of some competent scientist in those parts of her book which deal with her husband's scientific studies and achievements. The lack is felt most keenly when she is dealing with his doctrine of "physiological selection," the most important contribution which he made, if it were valid, to Darwin's doctrine of natural selection—rather, the most important addition. Where Mrs. Romanes is entirely satisfactory is in her account of her husband's personal life. Here everything is beautiful and attractive. We have the picture of a man most affectionate and kind, a most loyal nature, strongly emotional, eager for work and love. Those who have made haste to infer from Darwin's case the atrophy of poetry and imagination and religion in the scientific man as such, have in the case of Romanes food for reflection, as, on the other side, in Dean Stanley's insensibility to landscape and Freeman's indifference to Shakspere. The relations of Darwin and Romanes were very intimate, and equally creditable to the older and the younger man. The biography reaches its highest points of interest in the many letters which they interchanged. The most beautiful letter in the book is that written by Romanes to Francis Darwin after the death of his father.

Madame Roland: A Biographical Study. By Ida M. Tarbell. Charles Scribner's Sons. 12mo, pp. 328.

THE authoress of this volume has worked among the manuscripts of Madame Roland in the Bibliothèque Nationale, and has drawn from them some details that have not previously been printed. Other material—"family legends"—she says she has obtained from the descendants of Madame Roland, but she does not specify what it is, and it can only be unimportant in character, as nothing in the volume strikes a reader familiar with Madame Roland's life as new either in substance or in presentation, save two chapters derived from the Bibliothèque Nationale manuscripts. One of these chapters is on Madame Roland's feelings towards her husband, and makes evident that she was more warmly attached to him, both before and after their marriage, than her autobiography would lead us to believe. It is a well-known fact, of which this is an illustration, that no human being remembers his own past truly, and that the more intimate portions of our past experience are the most falsified by the changed perspective of added years. There are no autobiographies—not the sincerest—that would be found to reflect accurately the emotions expressed in the letters or conversations of past days. This instance in Madame Roland is precisely similar to the instance Sainte-Beuve pointed out fifty years ago regarding her relations to La Blancherie, and it does no more than confirm our previous knowledge of the ardor of her nature, which from time to time demanded fresh material to expend itself upon.

The other "new" chapter is somewhat more interesting. It describes a visit of Madame Roland to Paris in 1784, while living at Amiens. She went as her husband's envoy, hoping to obtain from the Court some reward—Miss Tarbell says, letters of nobility—for his long services to the country. It is a great pity that, instead of describing this portion of the manuscripts, Miss Tarbell has not given much fuller extracts from them, and that she has not given the extracts in the original. A volume of Madame Roland's unedited letters, with notes, would be of value; this volume has but little. The inconceivably confused bibliography appended and the unintelligent index indicate a want of familiarity with scholarly work which the character of the style confirms.

Animals' Rights, considered in relation to Social Progress. With a Bibliographical Appendix. By Henry S. Salt. Also, An Essay on Vivisection in America. By Albert Leffingwell, M.D. New York: Macmillan.

THAT animals' rights include the right to live and to enjoy life without suffering pain and death at the hands of man, is the fundamental idea in this work. The author advocates the application of the Golden Rule in man's treatment of the lower animals. He makes a vigorous, temperate, readable, and in the main very practical discussion of the subject. He recognizes conditions as they exist, and, while fully believing in a complete and radical change, placing man's injury to himself by his cruelty and inhumanity in strong relief, he is very judicious in his recommendations. As education appeals with effect only to such as are predisposed to its reception, he concedes that it, as well as legislation, must in a measure be secondary to the awakening of the humane instincts. He writes for those who realize that decrease of cruelty and increase of humanity measure advances in civilization, "that man, to be truly man, must cease to abnegate his common fellowship with all living nature, and that the coming realization of human rights will inevitably bring after it the tardier but not less certain realization of the rights of the lower races." Before accepting as final his conclusion that mankind should entirely adopt vegetable food, many of his more conservative readers will inquire whether experiments have sufficiently demonstrated that our race can retain its rank and progress as well without meat; whether, in fact, without access to the "fleshpots" it would not have remained in the groves with the orangs and gorillas.

Dr. Leffingwell's essay on vivisection is of prime interest to American educators, among whom, no doubt, there are few who will not at least agree that much of the imitative vivisection practised in schools is deplorable in its effect both on victim and on audience.

The Nation.

NEW YORK, THURSDAY, JULY 16, 1896.

The Week.

THE one comic touch in the Chicago platform is its denunciation of the Republicans for their "threat to business." This, coming from men who propose not only to threaten, but to throttle, business, to make property and life itself unsafe, shows that they have lost all sense of humor as well as of honor. No such collection of inflammatory and reckless men ever put themselves on exhibition in a national convention. Beside them the Populists are lamb-like, and the Socialists sucking doves. The country has watched their mad proceedings with disgust and shuddering, only impatient for the coming of November to stamp out them and their incendiary doctrines. Yet these objects of alarm have the impudence to accuse somebody else of threatening business!

The daily press teems with evidences of the Democratic revolt which the Populistic, anarchistic Chicago platform has already caused. It may be predicted from them with safety that the Eastern section of the Democratic party will refuse, practically in a body, to support the Chicago ticket. Not a Democratic newspaper in this city will support it, and very few in any other city of the State. This means such an overwhelming vote for McKinley in this State as to enable him to carry New York city. In other Eastern States the prospect is the same, and the indications are that no Northern Democratic newspaper of character or influence will support the ticket, while even in the South several of the party's most powerful organs have repudiated it. This will be an extraordinary situation, but the platform and the utterances of the favorite orators of the convention have made it inevitable. It is not a question of the wisdom of putting McKinley in, but of the overpowering necessity of keeping the Tillmans, Blands, Bryans, Altgelds, and the indescribables who believe them to be statesmen, out.

A more extraordinary overturn in political journalism has never been seen than that which has occurred in Michigan during the past six weeks. The Detroit *Tribune* has long been the chief Republican newspaper in the State; the Detroit *Free Press*, the leading Democratic journal. The Republican national convention had no sooner adopted a gold-standard platform than the *Tribune* denounced it as "damnably unpatriotic and un-Republican." On the other hand, when the Democratic convention declared for the free coinage of silver, the *Free Press* denounced the monetary utterance as "un-Democratic and fraught with serious menace to the country and its prosperity." The *Tribune* urges Republicans to see that free-coinage men are nominated and elected to Congress; the *Free Press* insists that the duty of every right-minded Democrat is to work for a House of Representatives which will oppose any further silver legislation. In short, the two newspapers have completely changed sides. Cases have been known before where important journals bolted their party, but we can recall no instance in which the two chief party organs in a State have bolted simultaneously.

Several of the revolting Democratic journals raise the question of another Democratic national ticket. The movement for such a ticket is likely to be especially strong in this State, for a Governor is to be chosen here this fall, and the next Legislature is to elect a United States Senator. If there be no Democratic Presidential ticket save that of the free-coinage destructionists, the Democrats of the State will have great difficulty in holding their votes for their candidates for Governor, Congressmen, and members of the Legislature. Thousands of Democrats will vote for McKinley, and in doing so will vote for the Republican State ticket also, simply because it will be more convenient to do so. In every Eastern State the Democratic Congressional candidates will be greatly handicapped if there be no honest-money Democratic Presidential ticket in the field. If there be no rallying-point for the sound-money men of the party, they will either not vote at all or vote the entire Republican ticket, out of sheer disgust with their own party and disinclination to make any discrimination in the expression of their disapproval.

An important point to consider in deciding upon the wisdom of a sound-money Democratic electoral ticket is the arrangement of the ballots under the Australian system. In a large majority of the States the tickets are arranged in party columns on the ballots, each having the names of the Presidential electors at the top. In New York State the names of the candidates for President and Vice-President follow immediately below the party emblem and name, and after them come the names of the electors. If there be no sound-money Democratic electors, what electors are to be placed in the Democratic party column? The Democratic State convention, when it assembles to nominate a candidate for Governor, must face the question of an electoral ticket. It can either approve the Republican McKinley electors, or nominate a set of McKinley electors of its own, or a set of Bryan electors, or fail to nominate any whatever. If it fails to nominate any, then its party column on the ballot will be blank in its upper half, and Democratic voters will be asked to vote a State ticket only, choosing their electoral ticket from the column of some other party. If the convention proposes to endorse the Republican electoral ticket, it will undoubtedly offend the "regular" susceptibilities of Tammany and other machine Democrats, and run the risk of precipitating the nomination of Bryan electors. If it nominates separate McKinley electors of its own—that is, decides to put a third Presidential ticket in the field—it will provide for the filling out of its party column with Democratic names, and a full Democratic ticket will be presented for the approval of all Democratic voters. The Southern and Western States will, without exception, approve the Chicago ticket, and the Bryan electors will appear on all the regular Democratic tickets. In the Eastern and Middle States, which, like New York, Pennsylvania, and New Jersey, have party-column ballots, the regular Democratic organizations must decide whether they will put the Bryan electors into the party column, and thus become members of the repudiation party, or whether they will refuse to do so, and either put up a separate ticket or leave the electoral space bare. There is no escape from this dilemma.

A veteran of the party sends us the following reasons for the third-ticket policy:

I. Any attempt to transfer the bulk of a political party at once to its ancient and inveterate foes invariably fails.

II. A sound-money Democrat, supporting a gold Democrat, can get the ear of the Democracy with far less trouble than a Republican can.

III. A divided Democracy with two Democratic candidates in the field means a large Democratic vote for McKinley, and a vast number of Democrats who will not vote at all.

IV. A great number of free-trade Democrats will vote for an independent Democrat, who, if there be none such in the field, will vote for Bryan.

V. The nomination of an independent Democrat means saving the House of Representatives, and also the future of the Democratic party.

Another reason of much importance is that the speaking talent among the sound-money Democrats ought not to be lost in the campaign if it can be utilized. These speakers are generally well equipped. By battling inside their own party, they have mastered the subject and have gained the ear of the very men who ought

to be reached. Carlisle, Patterson, Hoke Smith, Vilas, Fairchild, Bynum, are names that will readily occur, but the country is full of them. These men are not likely to take the stump for McKinley, although they may cast a silent vote for him.

The Chicago convention emphasized more strongly perhaps than any previous assemblage of the kind has done the folly of holding these gatherings in buildings of such enormous size. It is estimated that the attendance at most of the sessions was between 15,000 and 20,000. When we consider that the full convention, counting both delegates and alternates, does not exceed 2,000 persons, the absurdity of having it sit surrounded by a shouting, shrieking mob ten times its size is apparent. Pandemonium reigned in the Coliseum on Thursday night, when the convention was at the mercy of the 20,000 occupants of the surrounding galleries and floor spaces, who turned the proceedings into a prolonged riot of shouts, cheers, cat-calls, and general uproar, making anything like deliberation impossible, and practically taking control of the proceedings from the delegates. The crowd seems to have been in thorough sympathy with the free-silver majority, and most of its members were doubtless admitted with the understanding that they should add to the free-silver fury and thus give the impression that it was the cause of the people. The first convention to be held in a monster building was that which nominated Lincoln in 1860. Since then the size of the buildings has been increasing pretty steadily, and as a consequence the deliberative character of the conventions has steadily decreased until the present point has been reached. We ought to return to the old order of things, not excluding spectators, but subordinating them to the convention and keeping them within the bounds of decorum.

Mr. Bryan's oratorical powers are not marked by great versatility. It has been shown already that his speech which carried the Chicago convention off its feet and made him the nominee for President was mainly one which he had delivered a week earlier in a joint debate. He declaimed it to the convention as a spontaneous burst of pure eloquence, but the body of it and the closing passage, with its "crown of thorns" and "cross of gold," had been delivered only a few days before to another audience. Now it appears that even this first audience had it at second hand, for he closed a speech delivered before a committee of Congress on December 24, 1894, in opposition to a bill exempting the notes of State banks from taxation, as follows: "I for one will not yield to the demand. I will not help to crucify mankind upon a cross of gold. I will not aid them to press down upon the bleeding brow of labor the crown of thorns." Possibly this was not its first appearance. Whenever the "Boy Orator of the Platte" gets under the spell of his own eloquence, the crown of thorns and cross of gold roll irresistibly from his tongue. For an orator in his line of business the two figures are perfect. Nobody can tell what he means by them, but they are sonorous in delivery, and have a Biblical flavor which gives them the aspect of true prophecy. When shouted forth by a man with waving hair and upturned eyes, they strike everybody who is dissatisfied with the way the world is moving as the very soul of eloquence.

When Mr. Hobart was in Canton, a fortnight ago, he apologized to the people for not possessing "the grace of diction" that marks all the public utterances of McKinley. His speech to the notification committee, however, on Tuesday week shows that if he has not grace he has grit. It was the boldest, squarest, and most explicit endorsement of the gold standard; the frankest admission that the money question is to be the one issue of the campaign—that no compromise on this question is tolerable or possible, but that it must be fought out and settled now. If Mr. Hobart was practically unknown to the country before, he is known now. Where he stands and what he believes and what he will do if ever called upon to act, no one has any longer the least excuse for doubting. "Gold is the one standard of value among all enlightened commercial nations." "An honest dollar worth 100 cents everywhere cannot be coined out of 53 cents' worth of silver plus a legislative fiat." Mr. Hobart's remarks about the tariff were so subordinate and perfunctory that they might easily be passed by. It is perhaps worth while, however, to point out the way in which he shifts his ground when he passes from money to the tariff. "Great and self-reliant as our country is," he says in the currency part of his speech, "it is great not alone within its own borders and upon its own resources, but because it also reaches out to the ends of the earth in all the manifold departments of business, exchange, and commerce." It is a good deal of a jump from that to railing at a fiscal policy which "opens our markets to commodities from abroad," etc. But then, Mr. Hobart had to say something of the kind to show that his heart was still true to the dead.

McKinley's speech on Saturday showed a correct appreciation of the situation made by the action of the Chicago convention. The pending question is, as he said, the proposition there advanced for "the repudiation of our obligations and the debasement of our currency." High tariffs or low are of no consequence in comparison with this issue, and will get no attention from the people. The Republican candidate does well, therefore, to drop the tariff question from the first place which he has previously given it, and invite support as the representative of financial honor. He strikes at last the true keynote of the campaign.

The English Bimetallic League has often displayed great ability in extracting sunshine out of cucumbers, but its efforts on Monday to read into the Chicago platform a consuming love for "international bimetallism" surpass its best previous record. International bimetallism was jeered at and denounced at Chicago with only less violence than the gold standard. Bryan himself had only scorn for it. It was, in his mind, and in the opinion of his eager fellow-repudiators, only a low-down trick which had been played on them successfully once or twice, but by which they would never be taken in again. An international bimetallist was, in fact, in rather worse repute than a gold-bug, for he was thought to be either a namby-pamby, kid-gloved sort of amiable philosopher with whom no straight-thinking repudiator could have any patience, or else a hypocrite and a trickster. President Walker had the disagreeable task of telling his English bimetallic friends that they were all off the scent in this Chicago business; that it was a huge blunder, "deeply to be regretted," and that this passionate and unthinking action of the mob would only strengthen the gold standard.

The London *Times* is thrown into one of its attacks of melancholy over American institutions by the anarchist talk at Chicago about the "West and South against the East," and it sees "signs of estrangement" which "threaten the stability of American institutions with novel dangers." If our English friends will keep their eyes on American political history, they will learn that the American people, when they express themselves at the polls after the case is argued, make short work of such politics as has been voiced at Chicago. The hard times following the panic of 1873 produced a Greenback party in 1876 which found so eminently respectable a candidate for President as the philanthropist Peter Cooper. He polled, however, only 81,737 votes out of a total of 8,411,136. All the gall and bitterness excited by Mr. Cleveland's political honesty found expression in the nomination of Gen. Butler in 1884. He received, however, only 175,370 votes in a total of 10,067,610. The fight against the silver heresy this year will be a bigger fight than was the fight against Greenbackism, but our English friends may rest assured that Republican institutions will come out of it with honor.

It must be plain to every one, even from the speeches and documents produced

thus early in the political campaign, that the free-coinage cause, so far as it appeals to thinking men, rests wholly on the question of money supply. "There is not enough gold in the world to do the work of trade," is the commonest of all objections to the present standard, but this is usually expanded into the assertion that the world's currency is contracting. We took occasion recently to meet this entirely false assertion by a series of categorical questions and answers. Since then a further and overwhelming answer to the contention of contracting currency has appeared in the Mint Director's estimate for 1896. It should first be said, for the benefit of people unfamiliar with the character of our mint department, that it stands to-day probably the highest authority in the world on gold production. Its advance estimates during the last few years have been confirmed with extraordinary closeness, and it has not once, in its last half-dozen annual estimates, placed the year's anticipated yield too high. The latest advices give Mr. Preston's estimate of gold production for the present calendar year. It fixes the remarkable total of $220,000,000. To appreciate what this means, and what light it sheds on the alleged contraction of the money supply, comparison with previous years is necessary:

WORLD'S GOLD PRODUCTION.

1896.....	*$220 000,000	1891.....	$130,650,000
1895.....	203,000,000	1890.....	118,848,700
1894.....	180,626,100	1885.....	108,435,600
1893.....	157,237,600	1880.....	106,436,800
1892.....	146,815,100	1875.....	97,500,000

*Estimated.

This table covers the period since contraction in the money supply, according to the free-coinage school, began. It may be added that the highest annual average of gold production ever reached before the present decade was $134,083,000, and that the current annual production of gold alone is nearly $15,000,000 in excess of the world's combined production of both gold and silver as lately as 1884.

It is sometimes said that the "use of gold in the arts" prevents the employment of the newly mined product as money. The industrial use of gold has in recent years been a subject of close investigation, the conclusion reached by general agreement among experts being that $50,000,000 is a safe outside estimate of the annual consumption for such purposes in the world. It may readily be figured out that this would still leave, under the estimate of production for 1896, no less than $170,000,000 worth of new gold annually for coinage purposes. How large a percentage this is to existing money supplies is of course a very difficult question to determine. In 1885, however, Dr. Adolph Soetbeer undertook the task. His figures have an interest as being the nearest approximation which we are likely to obtain to the exact truth of the matter. He reckoned the total metallic money supply in all civilized states that year at 21,207,000,000 marks, or, roughly, $5,301,750,000. These figures had of course no reference to bank or Government paper issues, but they included legal-tender silver. On such a total, the current annual gold production, after allowing for the industrial use of gold, represents an annual increase, in the world's metallic money supply, of more than 3 per cent. Neither the population, nor the foreign trade, nor the domestic operations as represented by clearing-house exchanges, show in any state an increase even approximating this.

England's revenue returns for the first quarter of her financial year show no sign of bringing her to her knees in terror at the dire effects of the gold standard. As compared with the corresponding period of 1895, there is a total increase in revenue of $8,000,000. The excise alone yields $5,000,000 of this, and high returns from excise are always a sure indication of generally diffused prosperity. An increase of $700,000 in the revenue derived from stamps shows general commercial activity, while the swelling of the post-office receipts by $450,000 and the telegraph revenue by $75,000 points the same way. All told, English recovery from the world-wide depression of two years ago is marked. Business is better all round, and the investment markets are buoyant. Why have we not, as almost invariably in other years, felt the stimulus and shared in the better times? Why, except that our standard of value has been shaking in the wind, our currency vicious, our Congress and parties a prey to demagogues? No standard of value can guarantee prosperity without honest and intelligent business methods, but the wisest and best methods are powerless if the standard is uncertain. That is the hard lesson which American business men have been taught by their own crippled trade and lessened profits, and the spectacle of English revival and confidence, beside our continued depression, is all that is needed to confirm the teaching.

The International Socialist Workers' and Trade-Union Congress is to convene, with all the linked sweetness long drawn out of its name, in London on July 27. From the programme put out by the organizing committee, it is evident that there is much work and trouble ahead. One great question will be whether the word Anarchist shall not be added to the title. At the Zurich congress, the Anarchists were expelled, though it took two days to do it, but they are coming to London just the same, and the Dutch Socialists, together with the Independent Tailors and Machinists' Union, are in favor of admitting them. The General Union of Dutch Carpenters would like the congress to confine itself to the discussion of economic questions only, and the Spanish delegates, as if getting wind of this, and dreading the possibilities wrapped up in it, are in favor of suppressing all oral discussion, economic or otherwise, and having everything submitted in writing. The Dutch Socialists want the congress to define "political action," but the French Central Revolutionary Committee, without caring about definitions, are in favor of "the conquest of political power by the proletariat." The Independent Labor party will ask the congress to "declare emphatically against the useless and dangerous illusion known as the general strike"; but the Dutch Socialists call upon workers to follow a declaration of war by any government by this same general strike. Female suffrage, a universal language, and a socialization of the means of production, distribution, and exchange, are among the minor topics to engage the attention of the congress, which evidently believes that knowledge is its forte and omniscience its foible.

A result, long awaited, of the unification of the German Empire is the adoption by the Reichstag of the new civil code. Even before the unification of the Empire the need was felt of putting an end to the conflicts and vexations which arose out of radically different codes and statutes in adjoining States. In Prussia, where the provincial law of 1794 obtains, it is stated that there are more than twenty local codes which in some cases take precedence of the Prussian system. The Roman law, modified by use and wont, applies in the largest legal area. Particularly variant and perplexing are the laws relating to marriage and divorce, and to the inheritance of property. One authority refers to a town in Bavaria where, if three persons die in different rooms of the same house, their estates may have to be administered according to three different systems. All this legal chaos is swept away by the new code, which represents the labors of various commissions for fully twenty-six years. The final form was given by practical lawyers and judges from all parts of Germany, whose work was approved, with only slight modifications, by the German Parliament. Speaking generally, the new code is said to represent the triumph of German over Roman law, and to introduce a larger application of the principles of equity than has been known in any German code. Compulsory civil marriage is one of its leading features, and that this should have been accepted even by the Catholic members of the Reichstag shows how firm a hold the institution has already acquired in Germany. On the other hand, divorce is made much more difficult to obtain than under the prevailing practice. The new code is to go into effect with the beginning of the twentieth century.

THE CHICAGO NOMINEE.

THE body of repudiators that has been holding a convention at Chicago during the past week and calling itself the Democratic party, has nominated William J. Bryan of Nebraska for President. The result is somewhat surprising, since Mr. Bryan is a new and untried man, only thirty-six years of age. Only a small fraction of the people of the United States have ever heard of him. All of our Presidents heretofore have been men of experience, sufficiently tested in public life to enable people to form some idea of their capacity and moral fibre. This is not the case with Mr. Bryan. Yet his nomination was not accidental. It was due to the speech which he made on Thursday and to his previous record as a Populist-Democrat in Nebraska. He was found to be precisely of the stamp of Tillman and Altgeld, and of a more attractive personality than either of them. Of all the men voted for in the convention he comes nearest to satisfying the Populists. So say Senator Peffer and ex-Gov. Lewelling of Kansas. It is safe to assume that the Populist convention at St. Louis on the 22d inst. will endorse Bryan, although they might not have endorsed Bland, or Boies, or Blackburn. He will be somewhat less satisfactory to the silver Republicans of the mining States, because they have no intention of joining the greenbackers, yet they will probably cast their votes for him.

Mr. Bryan was not a delegate to the convention. He came there leading a contesting delegation. The regular delegates were unseated by the silverite majority and their places were given to Bryan and his crowd. The cheers that greeted him were the measure of his wind power, which is immense. The measure of his specific gravity is to be found in his political career at home. He was carried into Congress on the Democratic tidal wave of 1890, was reëlected in 1892, and took a position on the silver question so extreme that he split the Democratic party in his State and lost his seat in Congress. In 1895 the two wings of the party in Nebraska ran separate tickets for Judge of the Supreme Court, and the anti-silver faction polled 8,000 more votes than the Bryan faction. The regular organization of the party remained in their hands, and it was this organization that was cast out by the silverite majority at Chicago in favor of the bolters. His speech to the convention was an appeal to one of the worst instincts of the human heart—that of getting possession of other people's property without the owners' consent. That is what is meant by free coinage at 16 to 1. All business and all obligations rest to-day, have rested for nearly a quarter of a century, on the gold dollar as the unit of value. It is proposed now to substitute a silver dollar for it worth about half as much, and to make this depreciated coin applicable to all existing bargains and contracts. This is not all. It has been alleged over and over again that the programme of the silver propagandists was much more extensive than free silver; that it looked forward to free greenbacks, which are far more attractive to the repudiating tribe. Mr. Bryan gave warning of what is to follow when he said: "The right to coin money and *issue* money is a function of the Government. It is a part of sovereignty, and can no more be delegated with safety to individuals than we could afford to delegate to private individuals the power to make penal statutes or to levy taxes." If the business community supposed that there were any real danger of this dishonest policy being put into practical operation, there would be a panic and crash the like of which has never been seen in this or any other country. The fact that business remains in a state of quiescence is the best evidence that the proceedings of the roaring mob at Chicago are not taken seriously by the American people.

The nomination of Bryan for President of the United States and the adoption of a platform of repudiation make a pitiful climax for the Democratic party — the party of Jackson, Benton, Seymour, Tilden, Cleveland—the party whose boast has been that it always stood for sound money and never put a depreciated dollar into the hand of labor. The decadence of the party in the past few years, since the Tillmans, Altgelds, Bryans, and Blackburns came to the front and took the leadership, has been melancholy in the extreme. There are signs in plenty that nearly all the men who give character to the party to-day, successors of the great men whose names honor their country's history, will repudiate this ticket and this platform as they would the pest. From all parts of the East and from many in the West and South we hear, not protest merely, but the indignant declaration of Democratic leaders and business men that they will vote the Republican ticket. They consider their honor and their means of livelihood alike involved in this battle. They find something of higher and more immediate concern to their families and to the State than party ties or tariff schedules. They will vote not so much for McKinley and Hobart as against Bryan and repudiation, but their votes will count and their influence will tell from hour to hour and from day to day till the election.

Whether the dissenting Democrats will or ought to nominate a ticket of their own is a question for themselves to decide. Of course the main thing is to beat the ticket of the Repudiators. Everything else is insignificant in comparison, yet opinions may differ as to the best way of accomplishing this result. Our opinion is that the sound-money Democrats, by which term we mean those of intelligence and substance in all parts of the country (in South Carolina and Texas as well as in New York and Massachusetts), will vote for McKinley and Hobart whether there is a sound-money Democratic ticket in the field or not. But the question is not free from difficulty.

THE CHICAGO PLATFORM.

OUR anticipations of the kind of platform that the convention would adopt at Chicago were very low, but the actual product is worse than we had expected. In point of morals it is baser than anything ever avowed heretofore by a political party in this country outside of the slavery question. The free coinage of silver at the ratio of 16 to 1 is endorsed, and the platform declares that the dollars so coined shall be legal tender for debts previously contracted on the basis of the gold standard. This is equivalent to the repudiation of nearly one-half of all debts which are made payable in dollars without the mention of the specific kind of dollars. All debts incurred since 1873, when the gold dollar was made the unit of value, have been contracted in the single gold standard. That is exactly what was meant by the demonetization of silver. It meant that every contract made and every debt incurred should be legally payable in a particular kind of dollars consisting of 25 8-10 grains of gold, nine-tenths fine. We will omit for a moment the question whether Congress ought to have passed such a law. It will not be disputed that Congress had the constitutional power to pass it. It will not be denied that it was the law of the land immediately after it was signed by the President. It will not be denied that it has been the law every day and hour since that time. Consequently, every obligation to pay money made since 1873 has been an obligation to pay dollars each worth 100 cents in gold.

Now the Democratic party proposes that every one of these obligations (those made yesterday as well as those made twenty-three years ago) may be paid in dollars worth 53 cents each in gold. This is repudiation of the other 47 cents. The resolution then says: "We favor such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract." This aims to prevent the making of contracts payable in gold—a right which the Supreme Court has upheld in frequent decisions. The right to make a contract for gold is as clear and undoubted as the right to make a contract for cloth, for building materials, or for labor. To deprive people of that right would be practically depriving them of the power to borrow at all, since in many cases the lender will not part with his money on any other terms. If capitalists at home and abroad supposed that this plank of the platform would be ratified at the coming election, they would call in every loan that is now due and refuse to make new ones on any terms.

With a view to hiding the taint of re-

pudiation and the assault made upon the right of private contract, the platform-makers endeavor to make it appear that the silver is money by virtue of the Constitution, one of the preliminary planks being in these words:

"Recognizing that the money question is paramount to all others at this time, we invite attention to the fact that the federal Constitution names silver and gold together as the money metals of the United States, and that the first coinage law passed by Congress under the Constitution made the silver dollar the unit of value, and admitted gold to free coinage at a ratio measured by the silver-dollar unit."

The only foundation for this is in article i., section 10, which says:

"No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; *make anything but gold and silver coin a tender in payment of debts;* pass any bill of attainder, ex-post facto law, or law impairing the obligation of contracts, or grant any title of nobility."

Neither the word gold nor the word silver occurs in the Constitution in any other place. What does it say here? Simply that no State shall make anything else than those metals legal tender. At the time when the Constitution was adopted, several States had made their own bills of credit legal tender. Such paper was in actual circulation. It had a definite time to run, and the Constitution provided that when the time expired no more should be issued, and that nothing should be made legal tender by them but gold and silver coin. This was a clause dealing with the States only. It had no reference to the powers or duties of the federal Government. It did not confer any powers. It merely prohibited the exercise of powers. To say that we must have both gold and silver as money because the States are prohibited from making anything else legal tender, is as absurd as to say that we must have letters of marque and reprisal, bills of attainder, and ex-post-facto laws because the States are prohibited from having these also. Even if the Constitution had said that we must have both gold and silver as money, nobody pretends that it said or implied that we should have a coinage ratio different from the market ratio, which would result in giving us only one.

The second clause in the paragraph quoted from the platform, which affirms that silver was made the unit of our coinage in the first coinage law under the Constitution, is false. This is one of the exposed lies of 'Coin's Financial School.' It finds an appropriate place in a platform which advocates repudiation of both public and private debts. A unit means one thing, not two things. The first coinage law provided for two kinds of legal-tender money, which would have been impossible if one of them had been declared the unit. Even if it had made the silver dollar the unit, that fact would not have impaired the right of subsequent Congresses to change it.

Other parts of the platform are equally mendacious. The clause in reference to banks says that "Congress alone has the power to coin and issue money, and President Jackson declared that this power could not be delegated to corporations or individuals." President Jackson never said anything of the kind, never thought or imagined anything of the kind. His contention was exactly the opposite. He maintained that *Congress* had no power to charter a bank. He never denied that the States had that power. The power to issue circulating notes was the very thing that was understood and implied by "banking powers" in his time, and he never questioned it. When he drew the Government deposits out of the Bank of the United States, which had been chartered by Congress, he caused them to be put in State banks, which were then issuing circulating notes. All the implications that are to be drawn from Jackson's acts are exactly the reverse of what are ascribed to him in the platform. What, we beg to ask, has become of the plank in the party platform of 1892 which calls for the repeal of the federal tax on State banknotes? Where does Jackson stand on that question?

These are trivialities, however, in comparison with the bold and wicked scheme of repudiation which is presented without a blush in the platform. Upon this question the campaign must be fought. If the party of repudiators cannot be put down, the republic cannot be preserved and is not worth preserving.

"*A SECTIONAL ISSUE.*"

SENATOR TILLMAN of South Carolina, in his diatribe on Thursday, declared that "the financial question is a sectional issue," and when the declaration evoked vigorous hisses, he reasserted his position as follows:

"The truth is mighty and will prevail. Facts can neither be sneered out of existence nor obliterated by hisses. I say that the question is sectional, in so far as it is sectional, as between the Eastern bosses, and not between the people of the East, and the West and the South. We of the South have burned our bridges as far as the Northeastern Democracy is concerned, as now organized. We have turned our faces to the West, asking our brethren of those States to unite with us in restoring the government, the liberty of our fathers, which our fathers left us."

Senator Jones of Arkansas contradicted Tillman's declaration that the silver question is sectional, and cited one free-coinage delegate from Maine and another from Massachusetts as evidence that the cause is a national one. Nevertheless, it is true, as the South Carolina demagogue said, that the Democratic party has made itself a sectional organization in this campaign by the platform which it adopted in national convention on Thursday. The free-coinage issue deprives it at the very start of all chance of carrying any State in the northeastern part of the country.

The Democracy since the war has carried the country in two Presidential elections when its candidate was installed in office, while in a third its nominee would have been inaugurated if the vote of Louisiana in 1876 had been counted by the Electoral Commission as it was cast. In each of these three elections the party carried the three Eastern States of New York, Connecticut, and New Jersey. In each case except 1892 the candidate would have been hopelessly beaten without these three States. The loss of New York defeated Cleveland in 1888, even though New Jersey and Connecticut were saved. The issue which the Tillmans have imposed upon Democracy deprives the party of the great State without which it has never carried the country since 1856, except when the "tidal wave" of 1892 swept Republican barriers before it in Western States that had previously gone against the Democrats ever since the ante-bellum period. It also loses the Chicago candidate New Jersey and Connecticut as surely as New York.

There are now 447 electoral votes, and 224 are required to make a majority. New York has 36, New Jersey 10, and Connecticut 6. Thus 52, or nearly one-fourth of a majority, are in three States that went Democratic in 1876, 1884, 1888 (except New York), and 1892. The new sectional issue throws away, and its champions declare that they rejoice to throw away, the whole Northeast. How do they expect to make up for this loss? By a union of "the South" and "the West," they say. The expression "the South" has come to mean the sixteen States in which slavery formerly existed, and which have gone solidly Democratic in every Presidential election for twenty years. But these sixteen States can no longer be counted upon as solid. Delaware (with 3 electoral votes) and Maryland (8) will stand with New Jersey, New York, and the rest of the East, with which their interests are most closely allied. West Virginia (with 6 electoral votes) has been growing towards Republicanism for many years; it gave Cleveland but 506 plurality in 1888, and only 4,183 in 1892; it elected four Republican Congressmen, and a Legislature more than two-thirds Republican, in 1894; its Republicans are confident of success this year, and have good reason for their faith. Kentucky (with 13 electoral votes) went Republican by nearly 9,000 on the silver issue, with the largest vote ever cast, last year, and sound-money Democratic newspapers predict a worse defeat for the party on the Chicago platform this year. Missouri (with 17 electoral votes) went Republican in 1894, and must be ranked as doubtful in 1896.

Tillman talks of a union between "the South" and "the West" on the silver issue. The only possibility of such a union, so far as the latter section is concerned, is when "the West" is restricted to a few States far beyond the Mississippi. Ohio (with 23 electoral votes), Indiana (15), Illinois (24), and Michigan (14)

are no longer really Western States, but central; the same is true of Wisconsin (12), Minnesota (9), and Iowa (13). The only one of these seven States that the Democratic party ever carried between 1856 and 1892 is Indiana; in 1892 Cleveland was supported by Illinois and Wisconsin. Even with the free-coinage craze raging about them this year, Michigan, Wisconsin, and Minnesota sent sound-money delegations to the Chicago convention. Nobody familiar with their political history can imagine for a moment that the candidate who stands on the platform adopted last week can carry a single one of these seven central States except Indiana, and the Republicans of Indiana welcome a contest on the free-coinage issue.

What remains of Tillman's "West"? Only Kansas (with 10 electoral votes), Nebraska (8), North Dakota (3), South Dakota (4), Montana (3), Wyoming (3), Colorado (4), Utah (3), Nevada (3), Idaho (3), Washington (4), Oregon (4), and California (9). The whole thirteen have only 61 electoral votes, if they were unanimous for the Chicago nominee. In Nebraska the sound-money Democrats ran their own ticket last year, and polled nearly twice as many votes as the soft-money crowd; and they will keep up the fight this year. The Republicans carried North Dakota with a sweep in 1894, and in South Dakota they cast 5,000 more votes for their ticket than the Democrats and Populists together; while in Wyoming their total exceeded by 1,000 the combined opposition. Kansas went for Weaver in 1892, the Democrats supporting the Populist electors, but in 1894 the Republicans polled 3,500 more votes for Governor than the Democrats and Populists together.

We do not need to carry the analysis further to show that the new sectionalism involves the certain defeat of the party which precipitates it. It presents the Republicans at the start with 52 electoral votes which were Democratic in 1876, 1884, and 1892, and, except for New York, in 1888; it breaks the "solid South" by threatening the loss of the 30 of its 159 electoral votes cast by Delaware, Maryland, West Virginia, and Kentucky; it throws away the Central States, leaving Indiana as the only one in that part of the country that can be considered as in any sense debatable; and it pares down the West to a baker's dozen of thinly settled States which have only 61 votes in all, and which cannot be carried in a block. As a political move this free-coinage campaign is therefore stark madness.

A FREE COINAGE CATECHISM.

Q. WHAT is money? A. Any common medium of exchange which is accepted as payment in itself.

Q. What is representative money? A. Any common medium of exchange which promises to pay money.

Q. What is meant by primary money? A. This is a new phrase introduced to confuse people by suggesting that there is also secondary money.

Q. What is money of final redemption? A. This is another late addition to the American language implying that there are several different kinds of money. There is only one kind of money in this country. There are several different kinds of representative money.

Q. Give examples of each. A. Gold coin is money. Everything else that circulates, whether of metal or of paper, is representative money.

Q. Is silver coin representative money? A. It is.

Q. In what way does the Government promise to redeem its silver coins? A. By the act of Congress of June 9, 1879, it promises to redeem all coins smaller than one dollar when presented in sums not less than $20. By the act of February 28, 1878, the Government promises to receive silver dollars at par in all payments to itself. By the act of July 14, 1890, it declares it to be the policy of the Government to keep the two metals at a parity with each other. By two different acts the Secretary of the Treasury is authorized to purchase coin and to issue the obligations of the United States therefor.

Q. What is the indispensable quality and first requisite of money? A. That it should be universally acceptable.

Q. Is there any kind of money universally acceptable but gold? A. There is not.

Q. Would not silver be equally acceptable if it were equally legal tender? A. Silver dollars are legal tender. Give any man the option of taking one hundred of these pieces or ten gold pieces of $10 each and he will choose the latter. Therefore they are not equally acceptable.

Q. Is the difference in weight the only reason why gold is more acceptable than silver? A. That is not the only reason now, but it was the main if not the only reason when civilized nations made their choice between the two.

Q. What reasons exist now that did not exist then? A. A variation of 50 per cent. has taken place in the value of the two metals. In addition to being sixteen times as heavy, silver has lost one-half of its value during the interval.

Q. Are there any other reasons why silver is not equally acceptable with gold? A. Yes; although a limited amount of silver (and also of nickel and copper) is used as a medium of exchange, it is now a commodity in the markets of the world subject to the same fluctuations as other commodities. People do not like to use a fluctuating commodity as money, and will not if they can get anything better.

Q. Have you mentioned all the reasons why gold is acceptable as money and silver is not? A. The most decisive reason is that the civilized world has adjusted itself to the gold standard during a long period of time. All business is bottomed on it. It is an accomplished fact coextensive with the commercial world. To change to another standard would be literally turning the commercial world upside down.

Q. Can such a change be produced? A. It is absolutely impossible. In a conceivable case one country may turn itself upside down, but that feat would not make gold less acceptable or silver more so, even in that country. Acceptableness is a state of the human mind which laws cannot change.

Q. Is the preference for gold universal? A. It is universal among civilized men. Even the silver advocates in the United States prefer gold in their business affairs—that is, everywhere except on the stump. Senator Stewart of Nevada makes his mortgages payable in gold. When he was reproved for this bad example, he said that he merely followed the universal custom on the Pacific Coast, where he lives. So we have his authority for the statement that in the section of the Union where the demand for silver is most vociferous, everybody prefers gold in his private business.

Q. Can you give any other examples? A. The Territory of Arizona brought a bill before Congress two or three years ago, asking authority to issue bonds payable specifically in gold, on the ground that the money would be borrowed at a considerably lower rate of interest than if they were payable in dollars without specifying the kind of dollars. The State of Utah is negotiating a specific gold loan now for the same reason. Yet both Arizona and Utah are politically for silver.

Q. What do these acts signify? A. Two things: First, that gold is preferable to silver in the general estimation of mankind; second, that payment in gold is an advantage to borrowers.

SOUTH AFRICAN DEVELOPMENTS.

THE irritation caused at first in England by the request, almost amounting to a demand, of the Transvaal Government that steps be taken to try Cecil Rhodes for complicity in the Jameson raid, seems now to have passed away. The ministry are slowly feeling their way towards measures intended to satisfy the Boers that English justice is something more than a name. Mr. Rhodes's resignation from the Chartered Company has at last been accepted, doubtless under the advice or pressure of Secretary Chamberlain. It is now intimated that a royal commission will soon be appointed to investigate the whole question. The reason formerly given for delayed official action—namely, that the Government must await the result of Jameson's trial—has now lost most of its force. Jameson has had only a preliminary hearing, but the evidence of his guilt brought out at that was so over

whelming that it is absurd for Mr. Chamberlain to say any longer that he must wait to see what the courts will decide. The time is now ripe for a comprehensive and conciliatory inquiry into the whole affair, and the indications are that it will speedily be begun.

A good precedent (and a great advantage) for the English Government lies in their own action in 1881 in then restoring the independence of the Transvaal. That was an act of conspicuous justice and magnanimity, for which Mr. Gladstone was at the time, and has been since, roundly abused by the Tories and Jingoes, but the memory of which will stand the English negotiators in good stead in the present situation. In a speech some days ago at the South African dinner in London, Mr. Chamberlain read from an autograph letter, before unpublished, of the late Sir John Brand, written in 1881. Sir John was one of the ablest statesmen that South Africa ever knew, and, speaking of the restoration of independence to the Transvaal, he said that it was "a noble act which only a great and powerful nation could have performed." He added that it would surely have its reward, as it would secure for England the affection of the whole of South Africa. Something of this must have been in the mind of President Krüger when he lately declared that "mutual trust must be the basis of our political principles, and that trust the Republic on its side will never put to shame."

It cannot be denied that the first and inevitable effect of the events of last December was to arouse intense suspicion of English policy. The Transvaal and the Orange Free State were at once drawn together as if for common defence. They increased their armament. They redoubled their watchfulness on the frontier. Native and anti-English sentiment rose to a great height, and the election as President in the Free State of a man of strong Dutch-Afrikander feelings was a direct consequence. Even in Cape Colony much jealousy of English interference in South Africa was displayed, and the Afrikanders in the Cape Parliament had many bitter things to say of English greed and broken promises. In short, English prestige seemed seriously checked, and the project of South African federation hopelessly put back.

But time and discussion and a spirit of concession on both sides have much eased the situation. In the Transvaal a serious effort has been made to redress the just grievances of the Uitlanders in respect of educational opportunities, citizenship, the suffrage, and taxation. At the same time a clearer idea has been given of the exaggerated nature of some of the demands of the Johannesburgers. Like the Americans in Hawaii, they were too much disposed to insist upon the privileges without the responsibilities of citizenship; they wanted to vote without renouncing their allegiance to foreign powers, or being compelled to bear arms in defence of the Republic; they wanted to be citizens in respect of local immunities and favors, while at the same time aliens in respect of the right to demand the protection of a foreign flag. On the other hand, a much quieter tone marks the late discussions in the Cape Parliament and at Westminster. Mr. Schreiner is not alone, at the Cape or in London, in affirming: "It is conspicuously the part of any man who loves his country to feel that the methods to be employed must be those of the most soothing argument, and impressed with the one watchword for South Africa—patience." The English Government has now before it a great opportunity for constructive statesmanship in healing by wise and conciliatory measures the soreness caused by the rash folly of Rhodes and Jameson. It will be interesting to see if it rises to it.

For American readers the series of articles on South Africa by Mr. Bryce in the *Century* Magazine have been most timely and instructive. With dispassionate and philosophic mind and ample knowledge, he traces the racial and industrial and political development of South Africa, and puts in clearest light the essential elements of the problem confronting peoples and governments. Most valuable of all, perhaps, is his last instalment, treating of social conditions, particularly of the negro question, in South Africa. His intimate acquaintance with our own similar difficulties enables him to put the case before the American public with singular aptness and force. South Africa has been an unknown land to most Americans, and it will be hard for them to realize that governmental and social questions such as have long vexed us are acute also in those rapidly risen commonwealths in the south of the dark continent. For compact and impartial information, and for helpful discussion of the whole matter, they cannot do better than to turn to Mr. Bryce's articles.

MARSHAL CASTELLANE.

PARIS, July 2, 1896.

FOUR octavo volumes, even in our time of detailed memoirs—it seems as if the family of Marshal Castellane might have been content with a less ponderous homage to the member of their house who attained the highest dignity in the French Army. Shall I say that I have had the courage to read these four volumes? The enterprise, I confess, seemed hard at first, and I did not expect to be well rewarded; but by degrees I became accustomed to the manner of Marshal Castellane, and I took some pleasure in his defects as well as in his qualities. He was essentially what is called a martinet, a fanatical worshipper of discipline, a strict observer of all the army regulations, even the oldest and most obsolete. People, it seems, who knew, would recognize at once the regiments which had been formed under his own direction; and, after all, so long as there are standing armies, such men as he was will be necessary. He had the strictest sense of duty; the army was to him the alpha and omega of life, of patriotism, of honor, of ambition. Born before the Revolution, he never adopted the ideas of the old régime; he was neither a monarchist nor an imperialist. To him the army was France, its greatness the greatness of the country, whatever the government might be.

He was born on March 21, 1788, in Paris; his mother was a Rohan-Chabot, his father Boniface, Marquis of Castellane. At the age of sixteen, on December 2, 1804, the day of the coronation of the Emperor Napoleon, he was incorporated as a private in the Fifth Regiment of Light Infantry. "My taste for the profession of arms," he says, "never ceased from that time." He became rapidly a corporal, a sergeant, and received a brevet of sublieutenant in the Twenty-fourth Dragoons. Castellane had to join his regiment in Modena; from that place we follow him to Milan, to Pau, where he joined the corps of General Junot. He enters Spain on the staff of General Mouton, occupying Madrid, and taking part in the principal events which occurred when Joseph became King of Spain.

Castellane's father was Prefect of the Basses-Pyrénées at the time of the reunion of a Junta at Bayonne for the framing of a constitution. "He had the privilege of saying whatever he would to Napoleon, who liked to talk with him and even sometimes to chaff with him. One day he said: 'Castellane, you are a pasha here; the prefects, a hundred leagues distant from Paris, have more power than I have.' 'Yes, Sire, the prefects see that the taxes are paid, they give you men for making war. They are the caterers of your glory; they prepare the dishes, your generals eat them.' My father often told me that people could say anything to the Emperor, especially in tête-à-tête. He would listen and allow people to talk, which is not the case with all sovereigns."

Young Castellane showed so much bravery in various affairs that, at the review of his division at Burgos, General Mouton asked of the Emperor the rank of captain for him. "His Majesty refused, finding me too young. The General then asked for the cross of the Legion of Honor for me, adding, 'He is the son of the Prefect of the Basses-Pyrénées.' 'You spoil my young men, Monsieur Mouton,' said the Emperor. The General was obstinate, and became red with rage. His Majesty ended by saying: 'Well, after the first engagement.' I was twenty years old, but looked much younger. If the Emperor had not held the review in person, the proposition in my favor would have been accepted with the rest. I received the cross later, but it was really on that occasion that I can say that I deserved it best."

Castellane was often near the Emperor during this Spanish campaign; he accompanied him on horseback to Guadarrama, and tells how Napoleon would cross the mountains in the snow and over the icy road, how he fell with his horse without hurting himself, how Napoleon liked to gallop with the vanguard, and often far away from the vanguard. One day, when Napoleon was trying to find the English Army, he went so far away with a single squadron that Marshal Ney said to him: "I thank your Majesty for having been willing to do the business of my vanguard." On another occasion Castellane accompanied him, with only twenty-five soldiers. "People were surprised, in a country like this, to see his Majesty with such a weak escort. A book fell out of his pocket. I picked it up and read its title before giving it to the officer on duty; it was entitled 'Entre Chien et Loup.' His

Majesty read a good many novels; they sent to him from Paris everything that was new in this line." Such passages are interesting, as they make us acquainted with the Emperor's habits. Napoleon was a man of imagination as well as a man of action. He had to feed his imagination at all times, even in his dangerous and fatiguing campaign in Spain.

Castellane joined the Emperor at Abensberg, in the midst of a battle, at the beginning of the Austrian campaign of 1809. His style cannot be held up as a model for military writers. "On the 22d we gained the battle of Eckmühl." This has the merit of being very laconic, but the writer becomes sometimes very prolix when he comes to speak of himself and his own experience. I confess that I have been interested by this personal account of the greatest events in history; it is war painted in its reality. It seems as if you were making a campaign by proxy, while feeling none of the hardships of it. Castellane's lot was not of the hardest, as he was on the staff. After the battle of Wagram he received the red ribbon which he had coveted so eagerly since Burgos. When he was allowed to thank the Emperor, Napoleon answered his thanks in these words: "Brave young man, wait an instant," and he handed him an order written in his own hand. I translate it, to give an idea of the conciseness of Napoleon:

"Aide-de camp Castellan [*sic*] will go to Linz, where he will give the accompanying letter to the Duke of Dantzig; from there he will go to Bayreuth, to take a letter to the Duke of Abrantès. At Bayreuth he will note the name of the troops which compose the corps of the Austrian general Kienmayer, and the positions they occupy. He will bring me back also the situation of the corps of the Duc d'Abrantès—infantry, cavalry, artillery. On his return, he will visit the fortifications of Passau Linz and Malk. He will take on his way the dispatches of General Bourcier.—Signed, NAPOLEON."

On the occasion of the 15th of August, the day chosen by Napoleon for his feast-day, Castellane was named Chevalier de l'Empire, with an allowance of 2 000 francs. This allowance, first established at Bayreuth, was afterwards successively transferred to Hamburg, Piedmont, Rome; and at the Restoration transformed into a public pension of 500 francs. On the same day, Masséna was made Prince of Essling, Davout Prince of Eckmühl, Berthier Prince of Wagram, each with a yearly allowance of 600,000 francs. A number of officers received pensions, titles, and majorats.

During the intervals of the campaign, Castellane lived in Paris, and he gives some curious details about the court and the society of the time. He used to go almost every day to the house of the Duchess of Bassano.

"I met there," he says, "the beautiful Mrs. Gazzani. The Emperor had discovered at Genoa this Mrs. Gazzani, remarkable for her loveliness and not less for her goodness. His Majesty made her come to Paris, appointed her reader to the Empress, and gave a receiver-generalship to her husband. She was for a time in the highest favor. The Emperor quickly lost his liking for her. At the time of his repudiation of the Empress Josephine, he refused to attach her to the Empress Marie Louise. . . . I was never in love with her, but remained devoted to her till the time of her death. I made the acquaintance at her house of the Prince of Saxe-Coburg, who was then a companion in our amusements, and little thought that he would one day be the husband of the Princess Charlotte of England."

The Empress Josephine had with her two relations of Castellane's, viz., Miss Virginia and Miss Louise de Castellane, one of whom married later Count Fritz de Pourtalès, an equerry of the Empress. This circumstance partly explains how Castellane always remained on the staff during his campaigns.

Here and there, among many indifferent details, we find an interesting story:

"Dupont de Nemours told me how Barrère saved the life of the sculptor Houdon during the Terror. David had had Houdon arrested, and wished to have him guillotined, as he had declared war against all the artists, his colleagues. Mrs. Houdon came to solicit Barrère and urge him to save her husband. Barrère said to her: 'I see no way; but tell me, for which of his works has he been imprisoned?' 'For a statue of Saint Scolastica,' said Mrs. Houdon. 'What does she look like?' 'A fine woman, with a scrap of paper in her hand.' At the very moment when Mrs. Houdon was finishing her phrase, entered Collot-d'Herbois. Barrère said to him: 'Houdon has made a statue of Philosophy meditating on the Revolution; you must have it bought by the Assembly and placed in the room in front of the Assembly room, and declare that Houdon has deserved well of the country.' This was done and Houdon was saved."

In 1812 Castellane left Paris for the campaign in Russia. He tells us all about Napoleon's stay in Dresden and the famous "parterre de rois." He was only twenty-four years old, and took life gaily. He served near the Emperor in Poland, and everything seemed rose-colored to him when Napoleon greeted him: "Good-morning, Castellane, how do you do?" His journal of the campaign in Russia is interesting for its simplicity and the exactness and minuteness of its details. The notes on this campaign were written from day to day in a small note-book, which Castellane was fortunate enough to save in the retreat from Moscow; they are sometimes terribly eloquent in their simplicity. One day, he writes, during the retreat, "Horrible day; 27 degrees. An immense number of soldiers remained dead on the road. We saw many corpses of the Neapolitan division. The soldiers fall; a little blood comes to their lips, and all is over. When they see this sign of an approaching death, their comrades often give them a push, throw them on the ground, and take their clothes before they are quite dead." Castellane says that he saw no sign of irritation in the army when the Emperor left it to return by post to Paris. It has sometimes been alleged that his departure caused much exasperation among the troops.

"I saw nothing of the sort," says Castellane, "Our position was horrible; the army suffered most cruelly; our only hope was in the Emperor. Notwithstanding our disasters, our confidence in him was intact. We feared only that he might be made a prisoner on the road. Our warmest wish was to learn that he had arrived safe in France, knowing well that his return alone could stop a revolt of Germany, and that his presence was necessary for the reorganization of an army which should be in condition to come to our rescue and to save the remains of ours."

Castellane tells us that he lost seventeen horses in the Russian campaign; this number will give an idea of the hardship to which he was subjected, and we must remember that he was on the staff of the Emperor. He confesses that he always had something to eat, but that he did not eat with appetite. All his furs were lost or stolen, and he had nothing to protect himself with at the end of the campaign but a little lady's mantle which he had found. He covered with it one of his hands which had been frozen, and which he nearly lost. "In the midst of my sufferings," he records, "I could not help saying: We have the spectacle of great horrors; such things will never be seen again." He has at times very unexpected remarks, such as these written on his return to Paris:

"I have seen Ferreri with his wooden leg. Last winter he was courting Mrs. L. The Prince of Neuchâtel, to save the honor of General L., sent him to the Seventh Hussars, where he left his leg. M. de Septeuil, another aide-de-camp of the Prince of Neuchâtel, sent two years ago to Spain because he would not pay court to Princess Pauline and remained faithful to his mistress, Mrs. de B., lost a leg. M. de Carronville, sent to the Seventh Chasseurs on account of his liaison with Princess Pauline, has been killed. Truly the love-affairs of the aides de-camp of the Prince of Neuchâtel end very badly.

Correspondence.

THE CRIME AND THE PANIC OF 1873.

TO THE EDITOR OF THE NATION:

SIR: There are certain features of the literature of the present monetary battle that will tend to preserve it, in part at least, to generations that will long have forgotten the subject-matter of the controversy in which it served. Future writers upon logic will, I believe, discern in the pamphlets and editorials of the day a most bountiful storehouse of precedents wherewith to illustrate the fallacies incident to reasoning. What strata and trilobites are to the geologist, what the pyramids and papyri are to the historian, the utterances of the silver advocates will be to those who, in times to come, shall, for the warning of their cotemporaries, record and classify and analyze the errors of induction into which their ancestors have fallen.

But it is not my present purpose to give comfort to those who are full of despair at the vagaries of their countrymen, by showing that what appears to them to be entirely useless and silly, will come to be a blessing for which posterity will be grateful. I merely desire to record, that it may be preserved from oblivion, something which is being passed from mouth to mouth here in Montana to show the reckless disregard of consequences which the gold-bugs were guilty of when they obtained the demonetization of silver. The "crime of 1873" is charged with being the cause of the panic of that year. This view of the matter is naturally extremely popular here, where everybody is a "friend of silver." Creatures who, in order to attain their fell purpose of contraction of the currency, would not hesitate to deliver their country over to financial and industrial destruction, must be heartless and cruel beyond comprehension; and it is always comforting to feel that one's adversaries are bad and selfish, because it makes one doubly enthusiastic to be convinced that one's own side is the side of virtue and light. Far from me be it to pose as apologist of the "crime of '73." I cannot refrain, however, from calling attention to one reason why the panic must not be laid to the "crime"; and I do this, not as a carping and unfriendly critic, but in the sincere hope that the discrepancy may be explained.

I take it that it will not be disputed that, in the class of cases to which the circumstance under consideration belongs, it is an absolute necessity that phenomenon A, which is to be established as the cause of phenomenon B, must precede phenomenon B in time. Now, it

is unfortunate that the panic did not come after its alleged cause, but preceded it several years; for, while it is true that the "crime" was committed in the early spring and the panic did not begin until late in summer, yet, as a panic is a condition of acute general distrust occasioned by a fear of impending disaster—as an event which is said to have produced alarm, must not only have occurred, but must also have been widely known—and as we have it upon the unimpeachable authority of Coin's handbook and similar learned works that the "crime" was not revealed and did not become generally known until several years after its perpetration, it certainly could not have frightened anybody. It is quite impossible to believe that an act of Congress, no matter how treasonable and hideous, could have produced financial frenzy among business men in '73 when they were not informed of its existence until '76 or '77.

MALCOLM MACLEOD.

BUTTE, MONTANA, July 3, 1896.

OUR SCHOOLS AND OUR CHAUVINISM.

TO THE EDITOR OF THE NATION:

SIR: If Mr. Plimsoll, the Englishman who has been investigating English school histories for unkind allusions to America, and who proposes to do the same by American school histories regarding views on England, could hear a few recitations in American public schools, his investigations would doubtless be of more profit. The average school history in use in American schools is not distinctly hostile to England, but an utterly unreasonable amount of space is devoted to war and to military campaigns. History is taught in the grammar grades, and generally by women of limited intellectual attainments. Military operations are generally pretty thoroughly gone over. A friend of mine, inquiring for work in history in a "crack" Chicago school, was regaled with the spectacle of a girl of thirteen years who went to the board and drew an elaborate plan of the fortifications of Vicksburg, and rattled off a lot of statistics and dates of men killed and wounded. Inquiry of the class as to financial, economic, and social events elicited no response; the teacher, a woman, gazed at the questioner with a puzzled and pained expression. It really wasn't fair to ask about tariffs, suffrage, inventions, foreign relations, and currency. It is doubtful if one teacher in ten admits to her class—if indeed she knows it herself—that many reputable Americans regard our war with Mexico as a national disgrace.

Few pupils leave the grammar school with the idea that there are any flaws in our machinery of government—even in our cities—or that our elected masters are ever anything but wise, uncorrupt, and far-sighted. Everything in America is perfect, and as a nation we have always been exactly right. This may help to account for the almost incredible conceit and blindness of the masses of America. Our conceit we dignify with the name of Patriotism (spelled with a large P), and our own blindness we cannot of course see. However, we bark our shins ever and anon on a few economic and financial stumps, and some of us wonder what's wrong. But political economy and finance are not taught in our public schools—that is, in the grammar schools—and the average voter never goes further than the grammar school.

Our little *pasear* into Mexico seems to have left no hostile feeling in us against the Mexicans, while our war and threatened war with France seem to have been forgotten. Tripoli is too weak and too distant to be hated; but with England the case is different. To the average school-teacher there is much in history that is intangible, much that requires pains and study to teach, but in war she finds firm ground. The child can be given a definite task; dates to commit, maps to draw, names to memorize, and pictures to look at. Of our foreign wars, those with England have been the easiest to teach, and have been consequently most thoroughly taught. Without any express instruction on that point, a child would imbibe hatred towards the country with which his ancestors had quarrels. Still, it seems queer that there should be such a lack of hostility towards France with us. Perhaps it is the strangeness of the language; perhaps it is an exaggerated sense of the importance of the services of Lafayette.

Now, I apprehend that in addition to the dislike imbibed in school towards England, the American voter dislikes that country from sympathy with the Irish and from the harpings of the protectionist press of America. The average unthinking man of the middle classes in this country is a Republican, and of a mental calibre to be influenced by the quadrennial mendacious suggestions of papers like the New York *Tribune* and its namesake in Chicago. In the lower classes, barring the Irish of all classes, there is little, if any, hostility towards England; in the upper classes, there is hardly any. It is confined chiefly to the middle, trading, commercial, small professional classes who read one rancid Republican paper, with occasional Sunday afternoon excursions in "literature" as far as *Munsey's* or *McClure's Magazine*—or the *Ladies' Home Journal*—or the *Review of Reviews*—or the *Chautauquan*. Mr. Plimsoll, I fancy, would find that the hostility to his country in America is confined to the half-educated whose ideals (and pronunciation) are those of the eighteenth century, and who, barring the Irish, are largely influenced by our shameless public press. M.

July 4, 1896.

THE BYRON SCANDAL.

TO THE EDITOR OF THE NATION:

SIR: In your issue of July 9 there appears a review of the life of Mrs. Stowe. Commenting on the Byron matter the writer says: "That Mrs. Stowe fully believed her own theory of Lord Byron is unquestionable; but the motive of the exposure still remains unexplained." Mrs. Stowe's explanation of her motive was as follows: "A shameless attack on my friend's memory had appeared in the *Blackwood* of 1869, branding Lady Byron as the vilest of criminals, and recommending the Guiccioli book to a Christian public as interesting from the very fact that it was the avowed production of Lord Byron's mistress. . . . When time passed on and no voice was raised, I spoke."

That an excitable, emotional, and utterly unworldly person should have done what Mrs. Stowe did under the circumstances, can be a matter of surprise only to those who are so radically different from her in character as to be incapable of forming any adequate conception either of her motives or the deeds which flowed from them.

C. E. STOWE.

SIMSBURY, July 10, 1896.

Notes.

A TRANSLATION, by Mary J. Safford, of the poems of Johanna Ambrosius, the German peasant poetess, will be brought out by Roberts Brothers.

Macmillan & Co. have in hand 'The Geographical History of Mammals' in the Cambridge Geographical Series.

Dodd, Mead & Co. expect to have ready for subscribers 'American Book-Prices Current,' covering the auction sales at New York, Boston, and Philadelphia from September 1, 1895, to September 1, 1896, by the last of September. There will be a departure for the better from the English model followed last year.

T. Fisher Unwin, London, announces 'Monomotapa (Rhodesia),' by the Hon. A. Wilmot, researches respecting the Ophir of King Solomon; 'Tales of the Transvaal,' by Liscombe Searelle; and 'History and Criticism,' essays on the French Revolution and on "Faust," by H. Schütz Wilson.

A 'Geschichte der Isländischen Dichtung der Neuzeit,' by Dr. Karl Küchler, is announced by Hacke of Leipzig. The introduction, which has just appeared, gives a general survey of Icelandic literature from the middle of the twelfth to the beginning of the nineteenth century. The first number of the body of the book will treat of modern Icelandic novels.

'The Histoire Générale, du iv^e^ siècle à nos jours,' edited by MM. Lavisse and Rambaud (Paris: Armand Colin & Cie.), continues to appear regularly, and always with the excellent attributes that have marked it in the past, and are to be expected from these editors. It gives sound history, not without vivacity, and with a good apparatus of references to sources and other works. The typography makes it one of the easiest large works to consult. The three volumes now before us deal with the following epochs: The Religious Wars (1559-1648); Louis XIV. (1643-1715); The Eighteenth Century (1715-1789). M. Foucin writes the political history of France for the last period, and M. Lavasseur describes the economic condition of France between 1720 and 1788. The history of the United States is done by M. Moireau. The opportunity tempted us to ascertain the division of space in these three volumes, covering 230 years and containing 2,962 pages. We find that, out of this number, 512 pages are devoted to ecclesiastical history and the condition of religion; 541 pages are devoted to the history of France; 504 to Europe east of the Adriatic and Baltic; 375 to general European affairs, while 230 pages are given to Great Britain, 207 to Germany, 166 to Asia, and 120 to America.

A book of literary appreciations by Gaston Paris, 'Penseurs et Poètes' (Paris: Calmann Lévy), will be apt to surprise those who think of him as a philologist exclusively, and one of those philologists who, if they do not actually deny the existence of literature, at least condemn it. But M. Paris is far from belonging to that class, and the most cursory perusal of his admirable books on mediæval literature suffices to reveal his keen perception and enjoyment of literary beauties. The two longest articles are on Mistral and Sully-Prudhomme, and both are well worth reading. An excellent notice of James Darmesteter, a few souvenirs of Bida, and the funeral oration on Renan, form the remaining parts of the book, an account of Albert Sorel's reception at the French Academy closing the volume.

The two most interesting studies in Gustave Larroumet's fourth series of 'Études de Littérature et d'Art' (Paris: Hachette) are those entitled "Le Monde et les Romanciers," and "L'Art Réaliste et la Critique." Others, on Edmond de Goncourt, Alphonse Daudet, and Pierre Loti, contain nothing very new or striking.

Paul Arène's 'Contes Choisis' (Paris: Charpentier & Fasquelle) is a collection of short tales which may be characterized as "a mixed lot." There are some admirable stories, some very strong ones, some exceedingly amusing, and too many commonplace ones. Taken altogether, there is in them plenty of genuine literary and artistic merit, no lack of dry humor or sparkling wit, and occasional pathos which stops short of sentimentality. "Les Haricots de Pitalugue," "Le Marchand de Marrons," "Mon Ami Naz," "Les Chats," and "La Clef de l'Oncle" deserve special mention.

Mme. Hector Malot's novel 'La Beauté' (Paris: Flammarion) is, in some respects, a curious production. The sculptor who has, deep down within him, some real genius, and is starving because he has neither found himself out nor sold any of his work, is of course a conceivable character; but the way in which his genius suddenly reveals itself, to suddenly vanish and as suddenly reappear in a new direction, is decidedly odd. Mme. Malot seems to have had another purpose besides the telling of her story, but if so she has failed to make it clear, and the book must pass for what it is—a fairly entertaining mediocre novel.

Paul Margueritte's "L'Eau qui dort" (Paris: Colin & Cie.) is scarcely worthy of publication. It is nothing more than a collection of rough sketches, *croquis*, notes, and observations; material for tales, but not possessing sufficient interest to warrant its production in permanent form.

Bibliographers and bibliophiles will be interested in a neat volume entitled 'Die Bücherliebhaberei am Ende des 19. Jahrhunderts,' by Otto Mühlbrecht (Berlin: Puttkammer & Mühlbrecht). After some general remarks on bibliophilism, the author gives brief sketches of Gutenberg, Fust, Aldus Manutius, Caxton, Anton Koburger, Elzevir, and other famous printers to the end of the last century, followed by chapters on special bibliophilism, bibliomania, bibliophilism in England (based upon W. Roberts's 'The Book-Hunter in London' and 'Rare Books and their Prices'), bibliophilism in France (based upon G. Brunet's 'Du Prix des Livres Rares'), and bibliophilism in Holland. The bibliography contains titles of works on the invention of printing, books for and against Gutenberg as the inventor of the art, incunabula, curiosities and rarities, prohibited books, pseudonyms and anonyms, private prints, book-marks, ex-libris, and bindings. There are lists of printers before 1500 and of imprints or places of printing from 1457 to 1830, and a good index.

Part 2 of volume i. of the Massachusetts Census for 1895 has just been issued under the direction of the Chief of the Bureau of Statistics of Labor, Horace G. Wadlin. It shows a total population of 2,500,183, or an increase of 261,240 over the Federal Census of 1890. This is most clearly and intelligently displayed in detail, and in comparison with all previous censuses, Provincial, Federal, and State from 1765 down. An account is given of the founding, incorporation, partition, or annexation of each town and city so far as the records permit.

We have received the first number of a "Cumulative Index to a Selected List of Periodicals," dated June, 1896, that issues from the Cleveland (O.) Public Library as its individual enterprise. If supported, it will appear monthly, and the novelty of the scheme lies in the fact that each number, after the first, will embrace all the preceding numbers of the year; the last number thus superseding the rest, and becoming an annual volume. This is made feasible by the use of the linotype process. The subscription price will be determined by the support received, and probably at best will be not less than five dollars (reckoning 400 subscribers). The new Index, of course, competes with Poole's, and one would be sorry to see the latter imperilled. It differs in cataloguing, not only subjects, but authors. The form is quarto.

Whittier's descent from Christopher Hussey of Hampton is circumstantially denied by the Rev. Alonzo H. Quint in the July number of the *New England Historical and Genealogical Register*. The true ancestor was Robert Hussey of Dover, between whom and Christopher no relationship has as yet been demonstrated. Mr. Henry F. Waters's "Genealogical Gleanings in England" deal chiefly with the Sherman connection, and no better example could be given of this searcher's mode of throwing a flood of light upon family kinships. Announcement is made that the arrangement under which Mr. Waters has hitherto prosecuted his researches terminates this year unless funds are forthcoming to sustain him, as is greatly to be desired, for a successor is hardly likely ever to be found possessing his rare qualifications. Subscriptions in any amount may be sent to Mr. John Ward Dean, editor of the *Register*, 18 Somerset St., Boston.

History more than art is the theme of Dr. Garnett's monograph on "Richmond" (Richmond of the Thames and not of the James) in the June *Portfolio* (Macmillan). This favorite suburb of London furnishes ample material for agreeable discourse such as Dr. Garnett habitually indulges in, supplementing it here with a profusion of illustrations from old prints and recent sketches, with here and there an etching.

With the current issue, the *Savoy* (London: Leonard Smithers) turns monthly from quarterly, and will now lend itself to serial stories, beginning with one by Mr. George Moore. Mr. Aubrey Beardsley will continue to determine the character of the original illustrations. Noteworthy in the table of contents are Havelock Ellis's second article on Nietzsche (there will be a third), and W. B. Yeats's first of three articles on "William Blake and his Illustrations to the Divine Comedy." Four facsimiles of these strange inventions accompany the article, and one may now compare with Ary Scheffer's and Doré's Francesca da Rimini Blake's feverish vision, whose weakest portion is precisely that which gives pretext and a name to the whole design. As the older illustrators used to show Leander, for instance, swimming the Hellespont and also cast ashore in the same picture, so Blake presents, in a kind of sun, the lovers kissing, that day they read no more, beside their expiatory endless flitting through the shades.

The seventh session of the International Geological Congress will be held at St. Petersburg about the end of August, 1897, early notice of it being now given in the hope of inducing geologists in all parts of the world to arrange their plans so as to embrace its great advantages. Extended excursions are announced, the most important being to the Ural Mountains before, and to the Caucasus after, the meeting at St. Petersburg; the Emperor of Russia having, on the favorable report of the Minister of Public Ways, granted to all geologists duly enrolled for the meeting free first-class railway tickets, good during their sojourn in Russia. In view of so munificent a hospitality, our geologists can hardly afford to stay at home next summer.

The Third International Psychological Congress will be held at Munich, Bavaria, from the 4th to the 7th of August in the halls of the University. The first of these congresses met in Paris during the International Exposition of 1889, under the direction of Prof. Charles Richet, and was devoted to "physiological psychology," and especially to the investigation of the phenomena of hypnotism. The second, known as "The Congress for Experimental Psychology," was held at London in 1892, and, after listening to and discussing forty addresses and papers, adjourned for four years and selected Munich as the next place of meeting. The committee of organization appointed at that time has greatly enlarged the scope of the congress, which will comprise five independent sections: (1.) The physical basis of psychical phenomena, the anatomy of the brain and the province of psychophysics in general (thirty-four papers). (2.) Phenomena of consciousness in the strict sense of the term, psychology of the normal individual, including laws of association, activity of the imagination, doctrines of the emotions and of the will, the evolution of the personality, facts of ethics, etc. (thirty-seven papers). (3) Psychopathology, genius and insanity, illusions of the senses, fixed ideas, suggestion, psychology and criminology (twenty-seven papers). (4.) Psychology of sleep, dreaming, hypnotism in its application to the healing art, telepathy, mind-reading, etc. (thirty-two papers). (5.) Comparative psychology, mental capacities, and moral conceptions of the lower races of mankind, graphology, the relation of psychology to pedagogy, the instruction of backward children through suggestion, and kindred topics (twenty-four papers). Americans, English, Frenchmen, Germans, and Italians will address the congress each in his own language; Russians will use French. One of the papers read will be by the wife of Prof. Sidgwick of Cambridge, England. The price of membership is fifteen marks, and men and women are admitted on an equal footing in every respect. In the Physical Institute of the University there will be at the same time an exhibition of psychophysical apparatus.

—The first part of the 'English Dialect Dictionary,' edited by Dr. Joseph Wright, printed at the Clarendon Press, and published in London by Henry Frowde, in New York by Messrs. Putnam, extends from A to Ballot, and ends with p. 144. This gives a fair measure of the ultimate bulk of the work, and shows that its completion will be reasonably prompt. The same tract requires 1,014 pages of a larger quarto in the 'New English Dictionary.' The typography of the Dialect Dictionary is in a high degree beautiful and agreeable to the eye, in two broad columns, with full-face titles, and a generous sprinkling of large letter. The pronunciation is indicated by a special, not difficult, phonetic alphabet. Etymologies come last in order, in company with illustrative quotations from standard authors or from early dictionaries—Chaucer, Gower, Spenser, Shakspere, Jonson, Milton,

Bunyan, Butler, Pepys, Addison, down to Tennyson in his dialect verse, Crockett, and Ian Maclaren. Cross-references help us through the maze of variant spellings. The quotations are very liberal in amount, and are drawn from the great store of published glossaries produced by the English Dialect Society, as well as from some in manuscript and the readings of numerous volunteers. The localities of each locution are systematically indicated. Dr. Wright reserves his introduction proper for the close of the work, but stakes out the scope as embracing "the complete vocabulary of all English dialect words which are still in use or are known to have been in use at any time during the last two hundred years in England, Ireland, Scotland, and Wales. It will also include American and Colonial dialect words which are still in use in Great Britain and Ireland, or which are to be found in early printed dialect books and glossaries." This demarcation should stimulate American curiosity regarding the Dictionary, seeing that dialectic words and meanings may well survive among us which have become obsolete in the mother country. We can do little more than thus describe an enterprise which has our hearty good wishes, and which is less a novel revelation (though it is that, too) than a skilful arrangement in one alphabet of the lore amassed for a quarter of a century. It is one more feather in the cap of English philology directed upon the English language.

—We are glad to note the official contradiction of a rumor that the Oxford University Press would not push to completion the Oxford Dictionary upon the same lines as heretofore. That were a calamity the thought of which can hardly be entertained. The work as conceived and thus far carried on nearly to the letter G is a monument of which no other language can boast or is likely soon to boast —both of erudition and of disinterested co-operation; a foundation on which all our future English etymologizing must rest, and which is worthy of a large pecuniary sacrifice. On the heels of this contradiction it is particularly gratifying to record the fact that the University of Freiburg, which at present numbers among its professors Dr. F. Kluge, author of the Etymological Dictionary of the German Language, and several other distinguished philologists, has just been giving public expression to the high appreciation in which the 'New English Dictionary' is held by German scholars. In conferring the degree of Doctor of Philosophy, *honoris causa*, upon Dr. Murray, they use the following language, which American scholars with one accord will echo:

"In offering you this degree, our Faculty has been as much determined by the grandeur of your lexicographical performance as by the wish that German science should, in academical form, bear public testimony to its admiration for your life-work. The unrivalled and unique organization, the profound grasp of the individual problems of word history, and the comprehensive mastery of the history of the English language, as a great whole, will be, in the future, a model to us Germans, if we one day, after the completion of Grimm's 'Wörterbuch,' turn our eyes to the plan of a 'New German Dictionary.' The Faculty cherishes the wish that it may be granted to you to conduct your great undertaking to a happy conclusion, that the grand programme which you have elaborated and carried through in the early letters will be continued on the same admirable scale in succeeding parts. If the concurrent voice of German science gives you an assurance that you have hitherto realized your programme with a completeness beyond all anticipation, we would fain address to you a hearty godspeed for the continuation of your labors. We know what exertions, physical and mental, you devote to the *magnum opus*, and we earnestly wish that courage, and strength, and cheerfulness may remain with you undiminished for the work that still lies before you."

—Dr. C. W. Larison's 'Reminissensez ov Scul Lif' (Ringoes, N. J.: Fonic Publishing House), though tediously minute and spun out, are graphic and impressive. They are mainly devoted to the District School, of which they give a vivid picture, portraying every teacher and almost every fellow-pupil of the author. The historical value of this representation of a crude and barbarous relation between teacher and taught—the pranks, the floggings, and the barrings-out—is by no means inconsiderable. The author was never instructed by women, and makes no reflections on the cause of the great amelioration in the manners of the district school since the employment of women has grown to be all but universal. Another chapter, scarcely less suggestive and even more grewsome, is that on manners at one of Philadelphia's leading medical schools on the eve of the civil war, before the formal secession of the Southern students. Dr. Larison's exceptional difficulty in learning to spell, which early made him a radical phonetic reformer, has resulted in his clothing his narrative in a special phonetic type, which offers a decided impediment to those who read with their eyes and not with their ears. He has needlessly enhanced this difficulty by enforcing another hobby, viz., the conversion of strong verbs into weak, writing *nod* for knew and known, *sited* for sat, etc.; and by introducing an epicene pronoun *thone* for his or her, and even for they, those, and "one." In all this he illustrates his own observation, that boys initiated by hazing at school were prompt to torment "every verdant new-comer."

—There have been few more important exhibitions in Paris recently than the Exposition du Livre, held some eighteen months since in the Palais de l'Industrie. It had, however, a retrospective rather than a contemporary interest. Now, serving as a sequel to it, an international exhibition of the modern book has been opened at the Salon de l'Art Nouveau. This private gallery, decorated within by M. Besnard, without by Mr. Brangwyn, has become known chiefly as the headquarters of all that is—in latter-day cant —most advanced and revolutionary in modern art, domestic or foreign. As a showroom it has attempted to do much the same thing that the German *Pan* would accomplish as an illustrated periodical. But in the new exhibition a more liberal standard has been set, though in one or two sections, especially in the array of foreign books, there is no mistaking the ruling prejudices and tendencies of its Directors. The collection is arranged in several separate departments. There is a fine series of manuscript and printed books, illustrated with original drawings, though only French collectors have been borrowed from. Then there are books entirely engraved on wood, Pissarro's 'Queen of the Fishes,' for instance; or else with text and drawings alike lithographed or etched. Then follow books produced in the ordinary way, classified according to the method of illustration used, whether wood-engraving or lithography, whether etching or process; and in this division is found, among English specimens, a preponderance of the work of men who pose as decadents, or mystics, or symbolists. United States publishers make so poor a showing that the American section really is not worth notice; it could not well be more unrepresentative. For many people nothing in the gallery will have greater fascination than the authors' manuscripts, including as they do the work of Balzac and Baudelaire, of Gautier and Dumas *père*, of Hugo and Renan, and, indeed, of such a multitude of distinguished men that to mention them all would be to write another catalogue. None of the materials used in the manufacture of books has been omitted: paper, ink, type, all have received due attention. Nor have book-bindings and original designs for covers been neglected, even if here, more perhaps than in other sections, French designers alone have had justice done to them. The truth is, it would have been wiser not to give the collection the ambitious title of international. Book-plates are shown, of course, but fortunately not in such immoderate numbers as to satisfy the irrepressible collector. And, not least important, there is a well-made catalogue, printed on good paper, and decorated by Vallotton with designs, more pleasing in themselves than appropriate to its pages; but it abounds with inexcusable misprints.

—The first International Congress of Publishers met in Paris on June 16, under the patronage of MM. Hanotaux, Minister of Foreign Affairs, and Rambaud, Minister of Public Instruction, and under the presidency of M. Henry Boucher. About two hundred persons, representing the chief publishing-houses of Europe, were present. During the sessions of the Congress, M. Georges Masson, the newly elected president, occupied the chair. Much of the work of the Congress was done in committee, and the debates in the public sessions were smooth, for the most part, and perhaps a little dull. Nothing, in fact, was reported which could be called contentious. The first question concerned what is called the *dépôt légal*—that is, the deposit of two copies of each book that is published in the national collection. This was made obligatory in France as long ago as the time of Francis I., and is required in other countries, though not universally. It was decided by the Congress that this deposit ought to be made by the publisher, or, failing him, by the author, and not by the printer, as is now customary. Another important question concerned the publication of extracts from a book, whether for mere temporary use in newspapers or magazines, or in the more permanent form of a volume of selections. The reproduction of a literary work by means of public lectures was also considered at the same time. It was held that, in principle, every reproduction ought to depend on the authorization of the owner of the copyright. Still, from an international point of view, brief extracts in books for school use might be reciprocally permitted, as well as passages quoted for criticism, or in literary theses. The reproduction of any book by means of public lectures without the consent of its owner was condemned. The Congress also passed resolutions urging adhesions to the convention of Berne, and demanding that in catalogues there should be added to the description of *formats* now in use a statement of the dimensions of each book in centimetres. The protection of photographs was also discussed, but was passed over without action. A report from M. Ferdinand Brunetière on the reproduction of newspaper articles was also passed over, owing to the absence of its writer. Towards the end of the Congress its calm was broken by a proposition

made from the floor by a publisher whose name is not given in any of the half-dozen newspaper reports that we have seen. He raised brusquely the scandalous question of "editions." Both the public and the authors, he said, were cheated by a use of that word which is far too common. To divide a thousand copies of a book into five editions, or to use the word "thousand" on a title-page to designate an actual five hundred, was a cheat that justly called for the intervention of the State. This outspoken declaration threw a coolness over the meeting. The question was handled very gingerly by the Congress, which voted finally to take no action whatever in the matter, "comme ne présentant pas d'intérêt international." The Congress ended on the 19th with the usual banquet and speeches.

STEVENSON'S VAILIMA LETTERS.

Vailima Letters: Being Correspondence addressed by Robert Louis Stevenson to Sidney Colvin. In two volumes. Chicago: Stone & Kimball.

THE personal affection with which Stevenson inspired so many of his contemporaries was due as much, perhaps, to his amiable egotism as to the fascination of his finished work. For this wide congregation of readers, Stevenson's letters, of which these from Samoa are a first instalment, will have something of the charm of a new romance. They unite the exotic interest of a book of travels with the record of a literary life, and in both these phases present the self-painted portrait of a man of genius, who for a brief space exercised a larger personal sway than any other literary worker of his generation. In this frank and genial presence the critical attitude may be relaxed. By reason of our closeness of range we are precluded from assigning to a writer of our own language and time his abiding place in literature, but of the man's personality no future age can be so competent a judge as our own. Stevenson's works belong to the future; Stevenson himself was ours.

The Vailima Letters extend from November, 1890, to October, 1894. They were written to Mr. Sidney Colvin in pursuance of a plan, not always punctually adhered to, of furnishing Stevenson's friends in England with a monthly account of his Samoan life. They occupy a place apart. Stevenson had never before maintained a regular correspondence; he was subject, like Scott and most men of his genus, to attacks of epistolary paralysis. Already in the first monthly budget, however, he has a glimpse of the trick: "I begin to see," he says, "the whole scheme of letter-writing: you sit down every day and pour out an equable stream of twaddle." The letters were begun without a thought of publicity. It is not until June, 1892, that it occurs to him: "This diary of mine to you would make good pickings after I am dead, and a man could make some kind of a book out of it without much trouble." Upon this hint Mr. Colvin has acted—wisely, however, allowing the book to make itself; nor is there, from this point on, any alteration in the easy undress of Stevenson's manner to indicate that he had the wider audience in view.

To all who have felt personally drawn to Stevenson, the chief charm of his letters will be, of course, the underlying one: the winning character they unconsciously reveal of the writer—the indefatigable energy of the invalid, his wide sympathies constantly enlisted in behalf of others, the persistent cheerfulness of the homesick exile, and the resolute will to maintain, in spite of the unsound body, a sound and active mind. His industry was remarkable. "The ancient earth summoned him to a daily birth." He fought his way through tropical forests and endured the arduous outdoor labors of a planter, in an athletic effort to wrest health from an unwilling destiny. At home, page after page passed painfully from his correcting pen to the distant printer. And his lively sympathy with the "distracted archipelago of children" in whose midst he lived, led him to take an active part in the complicated island politics, until Tusitala had become an important factor, to be reckoned with at every political crisis. This was the range of his activity—broken often by illness—which these letters cover. "It is a hard and interesting and beautiful life," he writes; and over his narrative of its difficulties, its interests, and its beauties he has spread that charm which is peculiarly his own.

To a certain class of readers, which, Mr. Lang believes, will constitute the majority, the ample record of Stevenson's literary work will be the most valuable portion of these volumes. References to these labors are full and frequent. He drove four-in-hand, a practice which has left us to regret so many fragments among his literary remains. Many an instructive paragraph bears witness to the scrupulous care with which he made what Kipling calls "the most delicate inlay work in black and white." Although he sometimes devoted six and even eight hours a day to composition, his books grew slowly. "I break down at every paragraph," he writes of 'The Ebb Tide,' which of all his works cost him the most labor, "and lie here and sweat till I can get one sentence wrung out after another." We can understand, after that, the heartfelt "Deo gratias" with which the manuscript of that tale is signed. Financial needs added their irksome pressure. "If literature were only a pastime!" he exclaimed; and again, in a fit of more general disgust, he cried: "The devil fly away with literature for the basest sport in creation." But there is also ample evidence of the high reverence he felt for the more essential qualities of his art, around which he had thrown the well-fitting garment of his style. Appreciative criticisms of the work of his fellow-craftsmen abound, and, in judging of his own creations, he is singularly free from the fatuity which usually attends the self-estimates of authors. 'The Beach of Falesá' he regards as in some ways his best work, and "ill to equal." "I'm not shining by modesty, but I do just love the color and movement of that piece," and in this judgment the public has followed him. It is the perfection of story-telling. Of 'The Master of Ballantrae' he writes: "That lacked all pleasurableness, and hence was imperfect in essence"—the defect which all thoughtful readers have felt; for, strong as the story is, it contains not one sympathetic character. 'David Balfour' is a "pretty piece of workmanship"; "I am far from displeased with the tailie." And it is a satisfaction to find him denouncing his unpardonable 'Body-Snatcher' as "beastly."

Stevenson enjoyed a full measure of popularity during his lifetime, but it is pathetic to observe towards the end his haunting fear lest that popularity be on the wane. "If only the public will continue to support me!" is his cry in 1892. "I lost my chance not dying; there seems blooming little fear of it now." In his last sad letter, he states his position gloomily: "I am a fictitious article and have long known it. I am read by journalists, by my fellow-novelists, and by boys; with these, *incipit et explicit* my vogue." The vigor of 'Weir of Hermiston' shows how groundless were these fears, but Stevenson in his last years had joined the old philosophers in proclaiming the futility of struggling for a recompense: "The world must return some day to the word duty, and be done with the word reward. There are no rewards, and plenty duties. And the sooner a man sees that and acts upon it like a gentleman or a fine old barbarian, the better for himself." "And yet," he writes two years later, "and yet—one would like to leave an image for a few years upon men's minds—for fun."

These letters are not "composed," but Stevenson's literary art is spontaneously apparent in the passages which describe natural phenomena in the tropics. He went "crazy over out-door life," and labored until he was "in such a state that Carolina Wilhelmina Skeggs could scarce have found a name for it." The weird power of the tropical forest appealed to him:

> "My long, silent contests in the forest have had a strange effect on me. The unconcealed vitality of these vegetables, their exuberant number and strength, the attempts—I can use no other word—of lianas to enwrap and capture the intruder, the awful silence, the knowledge that all my efforts are only like the performance of an actor, the thing of a moment, and the wood will silently and swiftly heal them up with fresh effervescence; . . . the whole silent battle, murder, and slow death of the contending forest weigh upon the imagination."

At another time he catches a glimpse of the weirdness which for the Samoan filled all nature with poetry and awe: "In the forest, the dead wood is phosphorescent; some nights the whole ground is strewn with it, so that it seems like a grating over a pale hell." It is "rather bogey even." Occasionally is revealed the hand that wrote the 'Travels with a Donkey,' as when he is telling of his struggles with the sensitive plant: "Rome had virtue and knowledge; Rome perished. The sensitive plant has indigestible seeds—so they say—and it will flourish forever. I give my advice thus to a young plant—have a strong root, a weak stem, and an indigestible seed; so you will outlast the eternal city, and your progeny will clothe mountains, and the irascible planter will blaspheme in vain."

Into the details of island politics it is unnecessary to enter here. Stevenson's ringing letters to the *Times*, and the direct influence he exerted, are a well-known chapter in the history of the Samoan troubles. The work was not a meddler's pleasure, but a hard and irksome duty which his generous nature imposed upon him. "Politics is a vile and bungling business," he writes; "I used to think meanly of the plumber, but how he shines beside the politician!" We confess that to us these accounts, by a keen and sympathetic observer, of foreign intrigue and native war are intensely interesting reading. If Mr. Colvin grew tired of the "blacks and chocolates," it is evident from his footnote and epilogue that he regretted having said so. Stevenson took the rebuff to heart. "Please remember that my life passes among 'my blacks and chocolates.' If I were to do as you propose in a bit of a tiff, it would cut me off entirely from my life. . . . I think you are truly a little too cockney with me." Mr. Colvin's literary criticisms, too, however salutary, seem to have been scarcely soothing. But the interests of the islanders were vital to Steven-

son. His duty to them was the duty that lay nearest to him, and in this conscientious spirit his 'Footnote to History' was conceived. In his eagerness that its publication should be timely, he even did violence to his nature and forebore to polish. The "Road of Loving Hearts" is a testimonial of the love the natives bore him, the more impressive since it came from men averse to manual labor and still unconvinced of the utility of roads. The descriptions of Samoan manners, their feasts, their sports, the solemn preparation of kava, are the best we have. The passage deserves quotation in which the European draws a contrast between himself and the Samoan whom he is instructing:

"The Polynesian loves gaiety—I feed him with decimals, the mariner's compass, derivations, grammar, and the like; delecting myself, after the manner of my race, *moult tristement*. I suck my paws; I live for my dexterities and by my accomplishments; even my clumsinesses are my joy—my woodcuts, my stumbling on the pipe, this surveying even—and even weeding sensitive; anything to do with the mind, with the eye, with the hand—with a part of *me;* diversion flows in these ways for the dreary man. But gaiety is what these children want; to sit in a crowd, tell stories and pass jests, to hear one another laugh and scamper with the girls. It's good fun, too, I believe, but not for R. L. S. *ætat.* 40. Which I am now past forty, Custodian, and not one penny the worse that I can see; as amusable as ever. . . . Only, if ever I was gay, which I misremember, I am gay no more. And here is poor Henry passing his evenings on my intellectual husks, which the professors masticated."

But Stevenson had his moments of outward gaiety at least, and these volumes record his revels, now as the merry host, now doing "the affable celebrity life-size" in Apia, now as the chief guest at the feasts of the native king. Cheerfulness was his rôle. "I believe in the ultimate decency of things," he wrote; "ay, and if I woke in hell, should still believe it!" And yet, though without bitterness, his life was essentially a sad one. "I was only happy once; that was at Hyères; it came to an end from a variety of reasons, decline of health, change of place, increase of money, age with his stealing steps; since then, as before then, I know not what it means. But I know pleasure still; pleasure with a thousand faces, and none perfect, a thousand tongues all broken, a thousand hands, and all of them with scratching nails." To a man of his ardent and athletic temperament, the restraints which his frailty of body imposed upon him were humiliating. And then, through all the years of his wanderings in the South Seas, ran the sorrow of the exile, haunted by "old memories of the wet moorland." When he read in the 'Stickit Minister' the dedication to himself, 'Where about the graves of the martyrs the whaups are crying, *his* heart remembers now,' "Ah, by God, it does!" he wrote. "Singular that I should fulfil the Scot's destiny throughout, and live a voluntary exile, and have my head filled with the blessed, beastly place all the time!" He wished that he might be buried among the hills under the heather, but he knew that Vaea Mountain was to be his tomb, and that was beautiful, too. He died as he had hoped to die, and not in the Land of Counterpane.

The beauty of these letters lies, as we have said, in the character of the noble fellow—Stevenson would have liked the word—that speaks from their pages. There is no harsh judgment, no false or bitter note. The cheerful benevolence of the man kept his sweet qualities on top. But he was unwilling to pose as anything like a saint, and is reported to have said so with somewhat profane emphasis; as a man among men, he wished to have it known that he was subject to the frailties of his fellows. "Vital—that's what I am at first—wholly vital, with a buoyancy of life"; and although he spoke these words of his writings, they apply to himself as well. Herein we have the clue to that personal affection which he inspired and which these letters can only serve to deepen.

THE MAID OF ORLEANS.

Joan of Arc. By Francis C. Lowell. Boston: Houghton, Mifflin & Co. 1896.

Jeanne d'Arc: Her Life and Death. By Mrs. Oliphant. G. P. Putnam's Sons. 1896.

Personal Recollections of Joan of Arc. By the Sieur Louis de Conte, Her Page and Secretary (Mark Twain). Harper & Bros. 1896.

One finds it hard to avoid the use of swelling words when he writes about the Maid of Orleans. Even if we believed with Cauchon and the court at Rouen that she was a witch, we could not class her with the commonplace witches of Suffolk and Salem. If we discard the witch theory, nothing is left but to honor the heroine and martyr. Revering her thus, one ventures to say that the perennial interest in her career and character is a credit to human nature. Her patriotism has been most praised, but enthusiasm, unselfishness, and devotion are her elementary and permanent qualities. Just now the sentiment of nationality holds the field. In some later age another political ideal may fill the same place. Enthusiasm, unselfishness, and devotion can never be out of date.

The simultaneous appearance of three English books on Joan of Arc shows that the race she turned back from the Loire is willing to contribute to the growth of her fame. Perhaps Mrs. Oliphant should be exempted from ancestral complicity in the Hundred Years' War. As a Scot she formally wipes her hands of it and of Joan's execution. "Scotland is entirely guiltless of this crime. The Scots were fighting on the side of France through all these wars, a little, perhaps, for love of France, but much more out of hostility to the English." The two American authors lack Mrs. Oliphant's loophole, and must acknowledge the sins of their ancestors. They do their best, however, to make the *amende honorable.* Fervid admiration shines through the sound and exhaustive narrative of Mr. Lowell. Mark Twain equals Michelet in the sincerity and volume of his praise. We feel sure that if they, with Mrs. Oliphant, were established a court to decide upon Joan's right to canonization, she would soon be exalted from her present low state of "Venerable" to full and unquestioned saintship.

The nature of each of these three volumes can best be indicated by a cross-reference to the nature of the other two. Mr. Lowell writes a learned and compact biography. Mark Twain writes a romantic character-sketch. Mrs. Oliphant, with only moderate success, strives to combine the merits of both biography and romance; strives to combine fact with picturesqueness, history with rhetoric. None of them makes a stumbling-block of the psychological problem presented by Joan's obedience to her Voices. They trace her, step by step, from Domremy to the stake in the light of her deeds, rather than in the light of her mysterious connection with the spiritual world. Mr. Lowell is particularly clear in his attitude towards the extra-human promptings by which she was stirred. He accepts her own statements at the trial concerning them.

"Joan had subjective sensations of light and sound . . . without external cause sufficient to produce like sensations in others. Precisely what these sensations were, we do not know. The sensations of sounds sometimes, at least, were those of particular words; the sensations of sight were less definite, but apparently they were sometimes visions of definite forms in human similitude. The sensations of sound were usually accompanied by a somewhat indefinite sensation of light. Apart from these abnormal sensations, Joan seems to have been a girl perfectly healthy and well developed, both physically and mentally. . . . It seems to follow, then, that our opinion concerning Joan's insanity or inspiration is likely to depend not much on our beliefs concerning Joan, but principally upon our beliefs concerning insanity and inspiration."

This is a clear attitude for a historian to adopt towards a psychological problem, but it is too short a cut to be wholly satisfactory. Our writers alike neglect to consider the influence of folk-lore on the girl's mind. The prophecy of Merlin in its Champagnard form foretold the salvation of France by a virgin after its betrayal by a woman. Isabella, the Dauphin's mother, might well, in 1423, have seemed to be the traitor. The local version of the prophecy made the virgin come out of the forest of Domremy—a pretty direct prompting to sensitively patriotic minds in that region. We do not pretend that folk-lore offers a complete solution of the difficulty, but it deserves to be noticed before the riddle is handed over in its nakedness to pathologists and metaphysicians. Comparing our three authors in the important matter of knowledge, it may be said that Mr. Lowell alone has mastered the sources and literature of the subject. Erudition is hardly to be expected in Mark Twain's romantic portrayal of one whose charm is independent of minute lore. But Mrs. Oliphant, even while writing for a hero-worship series, might have fortified herself with more material without detriment to the strictly heroic aspects of her theme. Let us now proceed to a separate examination of the volumes.

In the case of Joan, *Aberglaube* began early. Mr. Lowell's design is to exclude the legendary element by stating just what is known of her actual life and achievements. He treats her contemporaries in the same way. For instance, he rejects the romantic story, so long accepted by English historians, of the influence of Agnes Sorel upon Charles VII. in the years 1442–43. There is hardly a shadow of doubt that Charles was weak beyond redemption. On the other hand, Cauchon receives partial rehabilitation. For the world he has long been "that bastard of Satan, Pierre Cauchon, Bishop of Beauvais." Mr. Lowell does not praise him but gives him his due. "It needs no argument to prove that his belief in her possession by the Devil was sincere; and his tireless energy and eminent respectability made him a most suitable agent to treat for her surrender to the English." Joan herself stands the test of Mr. Lowell's winnowing process better than any of her enemies or of her friends. Her personality is so strong and pure and simple that the fiercest light of comparative criticism fails to disclose a serious blot. We now see a different character from Voltaire's "La Pucelle," the distorted victim of the most disgraceful poem

ever written by a man of European influence. Quicherat's Joan of Arc—for of course Mr. Lowell, with all others, must follow Quicherat—is unsmirched. She is a militant girl-prophetess, merciful, guileless, and with but one aim. Her mission accomplished, she would fain go home to her mother. Believing in herself, she wins the trust of a people cowed by fourteen years of defeat and treachery. She succeeds in everything for a time; then for a time fails in almost everything. Only sixteen months after her appearance to Robert de Baudricourt at Vaucouleurs, she is taken prisoner at Compiègne. In confinement and under trial she shows a steady confidence in her inspiration, and dies at the stake with *Jesus* on her lips. Such is the nature of a life that closed before its twentieth year. The evidence is full and certain and points to one conclusion. The Maid of Orleans is raised above cavil or innuendo. She is the supreme triumph of the French peasantry. The payment of the five milliards was much, but it was less than the production of such a paragon.

Joan's active life falls into three periods. The first extends from the beginning of her mission to the coronation at Rheims; the second comprises her operations in northern France; the third covers the year between her capture at Compiègne and her execution at Rouen. The first period is her time of triumph, the second her time of misfortune, the third her time of trial. Mr. Lowell, though he does not make this formal distinction, seems to bear it in mind. The first and third periods are treated at considerably greater length than the second. The relief of Orleans, the campaign of the Loire, the capture of Troyes, and the coronation are the coruscating incidents of Joan's first period. They are the justification of her mission and the cause of modern French allegiance to her memory. Mr. Lowell describes carefully the stages of her progress towards the command of the Dauphin's army—the conviction carried by her sincerity, the first interview at Chinon, the examination at Poitiers. The strong impression left by a scrutiny of these events is that the great used her to impress the masses. On the march to Orleans she was deceived by the false topographical information of her own staff, who distrusted her plan of attacking the enemy at sight. The people of Orleans believed where the politicians and generals doubted or wavered. The moment she came within their walls the citizens felt that they were delivered, or, as the Journal of the Siege puts it, "already unsieged." "Now all felt greatly comforted, and, as it were, already unsieged, through the divine virtue of which they had heard in this simple maid; whom they regarded right lovingly, both men and women and likewise the little children." By the inspiration of confidence like this the victories of the first period were won.

During the second period the Maid was baffled and thwarted by the intrigues of French and Burgundian politicians, and her prestige suffered decline. When she offered up her arms in the Church of St. Denis, her work was done. The retreat from before Paris was her final disappointment. "Before that time she had met with many obstacles, but had overcome them; thereafter her efforts generally failed." Even her immediate contemporaries could see the difference. "Thus," says Cagny, "was broken the will of the Maid and of the King's army." Mr. Lowell gives a good account of Joan's captivity and the negotiations for her purchase. We are disposed to palliate her attempt at suicide in Beaurevoir Castle on the ground of her defenceless position. The circumstances of her jump from the tower were not precisely those of Rebecca's threat to Bois Guilbert, but they might have become so at any moment. Kipling's advice to the young British soldier will plead for the distracted Maid:

> "When you're wounded and left on Afghanistan's plains,
> And the women come out to cut up what remains,
> Jest roll to your rifle and blow out your brains
> An' go to your Gawd like a soldier."

Joan's plight seemed to her equally desperate. We also lay little stress on her recantation. Mr. Lowell is most intelligible here. The Maid was illiterate. It was represented to her that if she changed her dress and submitted to the Church's authority her life would be spared. She must have been ignorant of what she was signing. The skill she displayed in her oral defence was inapplicable to a written document. In the sense that she denied her Voices and abandoned her self-respect under pressure of fear, she made no recantation.

We offer but two criticisms of Mr. Lowell's work which can be construed as adverse. Though clear, the merits of his style hardly come up to the merits of his research and reflection. In the second place, we think that he should have insisted more fully on the failure of the French to lift a finger in Joan's behalf during her captivity. He, of course, calls attention to their remissness, but a fuller analysis of motive should accompany the statement of such scandalous ingratitude. After her failures, did her own people regard her as a witch? Or had she become inconvenient? Or was neglect to act due to mere supineness? It seems to us that a complete life of Joan ought to discuss at length the matter of her desertion.

Mrs. Oliphant's 'Jeanne d'Arc' is somewhat unfortunate in the moment of its appearance. Had it been published either earlier or later it might have escaped comparison with Mr. Lowell's careful study. The mere fact of juxtaposition renders comparison inevitable, and the result is wholly in Mr. Lowell's favor. Mrs. Oliphant is an experienced and skilful bookmaker, but her facility of style has led in this instance to an imperfect study of the period and person treated. Bits of rhetorical writing (*e. g.*, pp. 12-19, 140-143) fail to compensate for lack of thorough research. The author's personality is obtruded between the subject and the reader. There are few traces of the sifting process; and though graphic passages sometimes occur, the general effect is one of haste and crudeness. We could easily make a long list of Mrs. Oliphant's shortcomings, but their general nature will be seen from half-a-dozen instances.

We are told that France in the fifteenth century had ceased to be the centralized kingdom it once was. "A strong and splendid kingdom to which, in early ages, one great man had given the force and supremacy of a united nation, had fallen into disintegration," etc. Does Mrs. Oliphant refer here to Charlemagne, and was Charlemagne a Frenchman? Chapter II. opens: "In the year 1424, the year in which, after the battle of Agincourt, France was delivered over to Henry V., an extraordinary event occurred in the life of this little French peasant." How could one who knew anything about the period be betrayed into such chronology? Henry V. was already in his grave in 1424. Again, in translating the letter addressed by Joan to the English just prior to the relief of Orleans, Mrs. Oliphant renders William de la Pole, Earl of Suffolk, William de la Poule, Count of Sulford. She styles Normandy "the most securely English of all French provinces," whereas the district of Bordeaux was more English than England. She amusingly misstates the amount of Joan's purchase money, putting it at 6,000 instead of at 10,000 livres. Six thousand was the first offer, but it was refused. The division of the purchase money is also a source of error. It went to John of Luxemburg and to Lionel of Wandonne. None of it reached Joan's original captor, the Picard archer.

Mrs. Oliphant is frank enough to admit the derived character of her book. Her recognitions to Mr. Andrew Lang are frequent, and her debt to Michelet is probably of equal magnitude. Once when she has to choose between them she follows Michelet. "Shortly after her return to Vaucouleurs (I again follow Michelet, who ought to be well informed) a messenger from Chinon arrived to take her to the King." And at the foot of the page: "Mr. Andrew Lang will not hear of this. He thinks," etc. Accuracy in noting down the results of the best recent historians is all we expect from the writer of an introductory sketch. Where accuracy is lacking we begin to feel the hollowness of the second-hand production. Mrs. Oliphant does not atone, by the liberal smattering of French phrases over a page, for the want of care which mars her narrative.

Mark Twain, in his 'Personal Recollections of Joan of Arc,' essays what we may call the prose epic rather than the historical novel. The historical novel has plot and intrigue. When it has a great historical figure for its centrepiece, either he is made a *deus ex machina*, or else he consorts familiarly with minor personages to the detriment of his historical dignity. Mark Twain has released Joan of Arc from the disadvantages of both these rôles by hitting upon the biographical form, and excluding all action which does not relate to the heroine's life. The story is put into the mouth of an actual fifteenth-century knight, the Sieur de Conte, Joan's page. It was he who, at the Rehabilitation trial, told the story of Joan's kindness to the English soldier on the battlefield of Patay. Mark Twain makes him her companion from childhood to the end. He was by her side in the wars, and when she was taken to Rouen for trial, he entered the city in disguise and became a secretary in the court. The fiction is ingenious, and Dumas's talent might have made it the basis of a masterpiece. The trouble with Mark Twain's treatment is that, while purporting to be archaic, it is extremely modern. The fifteenth-century diction is but indifferently caught, the style is much too vigorous for a man of eighty-two, and the sentiment—even the sentimentality—is far from being mediæval. In these respects let the concluding words of the Sieur de Conte speak for themselves: "Love, Mercy, Charity, Fortitude, War, Peace, Poetry, Music—these may be symbolized as any shall prefer: by figures of either sex and of any age; but a slender girl in her first young bloom, with the martyr's crown upon her head, and in her hands the sword that severed her country's bonds—shall not this, and no other, stand for Patriotism through all the ages until time shall end?"

The substance of the Sieur de Conte's "Recollections" is better than their form. Mark Twain has limitless funds of energy; and energy, even vehemence, is needed in the description of these old skirmishes and battles.

He clearly grasps the quality of *élan* in Joan's nature, subdued though it was by tenderness. Humor is excluded somewhat too rigorously, for a proper admixture of it would enliven the long stretches of De Conte's devotion. Devotion running into idolatry is the burden of his song. "I came to comprehend and recognize her at last for what she was—the most noble life that was ever born into this world save only One." Mark Twain would even have us see in Joan a great general. We need an occasional bretzel of humor to give us thirst for so much sweet sack of praise. Joan's dialogue is good and full of shrewdness. It includes the bulk of the imaginative part—for the general sequence of the story rests on a foundation of fact—and it proves that Mark Twain can write in serious strain and with power. We hope that if he makes another excursion into this field of historical idealism, he will add incident and keep panegyric within artistic bounds. The merit of the present volume is that it seizes the undying charm of Joan's character, and presents her in living flesh and blood to thousands for whom she would otherwise be a mere name.

ISRAEL AMONG THE NATIONS.

Israel among the Nations: A Study of the Jews and Anti-Semitism. By Anatole Leroy-Beaulieu. Translated by Frances Hellman. G. P. Putnam's Sons. 1895.

A MERE presentation of facts is far within the limits of this writer's clear intent. He is trying to make others see and feel as he does concerning a great moral question. But it would be a mistake to suppose, because the book is brilliant and fascinating and everywhere "touched with emotion," that its underlying substance is not of the strongest. No one can have M. Leroy-Beaulieu's gift and passion for epigram without sometimes abusing his skill, but the excesses of this sort do not affect his general soundness and sobriety, and his book should be read carefully and conscientiously by every one who desires to be written as one who loves his fellow-men.

There will not be many readers who will find omitted here any aspects of the Jewish question which they think important, and the majority will find a great many vividly presented of which they have never thought. Mr. Goldwin Smith's vigorous article, "The Jewish Question," in his 'Essays on Questions of the Day,' is very comprehensive; but those who may turn to it for a correction of M. Leroy-Beaulieu's possible humanitarian excess, will find that the French author has touched all Mr. Smith's points, allowing many of his allegations to be just, but seeing things much more in their true relations, covering a far wider ground, and considering carefully important matters to which Mr. Smith has paid no attention, such as the comparative morality of Jews and Christians, the supposed singularity of certain Jewish traits, and especially the responsibility for some of these inhering in the historical fortunes of the Jews among Christian peoples. M. Leroy-Beaulieu is very far from Mr. Smith's persuasion that Christianity has no "particular interest" in Judaism nor "any particular duty concerning it." A very particular interest would seem to be involved in the fact that the God of Christianity was born a Jew and wore the outward semblance of a Jew; and a particular duty in the centuries of Christian hatred and abuse which have done more than his race or his religion to make the Jew whatever he is to day. It is an interesting fact that the teachings of Jesus were, in the opinion of many eminent scholars, much nearer to the Judaism of his time than to our Christian orthodoxy. A minor difference between Mr. Smith and M. Leroy-Beaulieu is that Mr. Smith's Jews are all millionaires, and a great many of M. Leroy-Beaulieu's are miserably poor.

M. Leroy-Beaulieu does not endeavor to ingratiate himself with his American readers in the introduction, which is particularly addressed to them. He anticipates a position taken in one of the later chapters, namely, that what is called the Judaizing of modern society ought to be called its Americanizing. It is the subjection of society to the typical characteristics of democratic industrial society—"the ascendancy of material interests, the greed for money, the frantic race for wealth." These characteristics are now becoming dominant in all parts of the Old World, but they were first revealed in the United States quite unmistakably, and they have been developed there upon the largest scale. In subsequent editions M. Leroy-Beaulieu may feel obliged to revise this passage, in view of the willingness which thousands of Americans have recently shown to exchange the sordid triumphs of industrial prosperity for the bloody laurels of a fratricidal war. His contention is not that anti-Semitism represents no healthy tendencies whatsoever. "It is within its rightful province when it assails the worship of money, the scandalous barter of political influence," etc. But as he assures us that these things are not peculiarly Semitic, it does not appear why opposition to them should be regarded as in any proper sense anti-Semitic. At this point rhetorical artifice seems to have got the better of the simple truth.

The arrangement of the book is symmetrical and progressive, and sets out with certain estimates of the number and distribution of the Jews. Of some eight millions, six or seven are in Europe, four to five in Russia, seventeen hundred thousand in Austria-Hungary, in Germany six hundred thousand; in England one hundred, in France eighty, in Italy fifty, and in North America about five hundred thousand. The Jews were never so widely scattered as at present, the centre of density being in Poland; and the tendency, for a long time from west to east, is now strikingly from east to west. "The old European and especially the young American states run the risk of being swept by a long tidal wave of Jewish emigration."

We pass in the second chapter to a study of "the oldest grievance" against the Jews, "the religious." This is no longer the principal grievance, and, in so far as it is one at all, it is largely of Talmudic origin. M. Leroy-Beaulieu writes of the different strata in the Talmud with a satisfying clearness which, since the brilliant essay of Emanuel Deutsch, has not been often realized. But the Talmud is gradually relaxing its hold upon the Jewish mind. Its reign is perpetuated only by Christian exclusiveness. When, however, M. Leroy-Beaulieu says of its final abdication, "Perhaps not more than one or two centuries will be needful to bring this about," it is evident that he is not unduly optimistic. A dozen or twenty years would be long enough for many prophet souls, "brooding on things to come." The fantastic character of the Jew in folk-lore furnishes some interesting pages, and the fable of ritualistic murder others. What is no fable is the Christian stealing and violent baptism of thousands of Jewish children—a fate their parents dreaded for them more than death.

The discussion turns in the third chapter on the relation of the Jews to modern ideas, and here the contention is that the Jew has been much more of a passive recipient or industrious middleman than an original manufacturer. The Jew is naturally conservative, but the modern spirit has been too powerful even for his hard material. "In this respect, as in almost all others, and in regard to modern as well as mediæval times, the Jew is only the agent of transmission, a broker. The intellectual commodities which he offers and retails to us are generally not of his own making; they do not originate with him; he took them from us, from our workshops and our laboratories." If the writer is wrong in this persuasion his whole book is wrong, for nothing is more central to it than its insistence upon the Jew's lack of originality, combined with a surprising negative plasticity, a marked susceptibility to the impressions of his environment. The race question is next considered, and the treatment sympathizes with the ideas of Renan and Darmesteter as to the unreality of the antithesis of Aryan and Semite. The Aryans are not pure Aryans and the Semites are not pure Semites. They are very far from being so. It is not their race, but Christian law and clergy and government, that have made the Jew what he is—"the result of a penning in, of all that is comprised in the word Ghetto." This conception is developed in a chapter that deserves the carefullest attention, seeing that its corollary is, Let the Jew cease to isolate himself and the Christian cease to isolate him, and he will soon be as much like other people as can be desired. His passion for ritual cleanness has been one of his most isolating traits, but it has not been inconsistent with a reckless disregard of the most ordinary personal cleanliness and indifference to practical hygiene. Of late he has been de-Talmudizing and de-rabbinizing himself at a rate which threatens to leave as little of his religious as of his more questionable peculiarities.

The study of the Jew's physiology and psychology is extremely penetrating, and abounds in interesting facts and inferences. According to our American census, the Jew's "expectation of life" is fifty-seven years, the Christian's only forty-one. Though he has fewer children, he multiplies more rapidly than the Christian, because he loses fewer by death. "His longevity, his resistance to disease, and his immunity from certain disorders, are a legacy from his ancestors, and are due to his laws, his customs, and his sobriety. On the other hand, his feebleness and the defects of his physical constitution are due to our laws, our Ghettos, and our system of confinement." He is remarkably free from tuberculosis and dipsomania, but extremely subject to insanity and all kinds of nervous disorders.

The history of the Jew has determined his psychological as well as his physiological traits. It has made him mentally quick, both in the way of business and of science, for he is descended at once from the bankers and the hucksters and from the rabbis. "The two Darmesteters, for example, the sons of a modest bookbinder, number thirty rabbis among their forefathers." Morally the Jew has fallen away from his own ideals of conscience, and the feudal ideals of honor were never presented to him in a way to make them appeal to him. Centuries of petty trading have blunted his moral sense. Centuries of isolation have made him a parvenu. But it is something to have deserved the praise the village epitaphs so carelessly bestow—to have been a good husband, father, son.

A chapter upon "Jewish Genius," without parading its examples, quietly and almost

casually indicates some of the most conspicuous, and shows how relatively large has been the number of Jews who have distinguished themselves in science, literature, and art. But here again, with whatever inclination to certain special qualities, we find that what is most peculiar is the lack of peculiarity, the flexibility which adapts itself to new conditions, a readiness to understand and assimilate whatever is most striking in the various nationalities in which the race is immersed. Even the irony of the Jew is a contribution of his persecutors and destroyers. It is the natural language of the "despised and rejected of men." The same line of thought is continued in a discussion of "the Jewish Spirit"; and in successive chapters on Jewish particularism, the nationalization of the Jew—that is, his absorption by this or that nation—his cosmopolitanism and fraternization, the argument of the book receives its final illustrations. This argument is such a striking paradox that in advance the majority of readers would reject it as violent and absurd. But when they have read to the end they will be profoundly impressed by its development, if they do not find themselves perfectly convinced. It is that the Jew, instead of being one of the most unassimilable of human beings, is one of the most assimilable. Facts that suggest a different interpretation are not structural. Talmudism and ritualism and Christian exclusion and repression have endowed him with a second nature which is mistaken for his fundamental character. Wherever these bonds are relaxed he is quick to lose himself in the wide stream of modern life. Even that form of patriotism which is called chauvinism is easily within his reach. A return to Palestine is considered with more seriousness than it deserves. Never at a loss for a story to clinch his argument, M. Leroy-Beaulieu has at this point one of his best. A Jew of the Vistula said to him, "If Israel ever again becomes a people [in Palestine] I shall ask for the consulship of Palestine at Warsaw."

Geological Biology: An Introduction to the Geological History of Organisms. By Henry Shaler Williams, Silliman Professor of Geology in Yale College. Henry Holt & Co.

THE history of the shell life of this continent has naturally engaged the attention of some of our ablest scientists, owing to the fact that the fossils are so numerous and close at hand, the geological succession so apparent, and the problems so fascinating. James Hall early gave distinction to invertebrate palæontology, as we term the science, by his comprehensive work. Many others followed, notably Hyatt with his exact and philosophical studies of the ammonoids and nautiloids, Walcott among the oldest Cambrian rocks, Beecher among the brachiopods, and the present author among several groups. The descent theory put new life into the science at a time when it was threatened with systematic dry rot. The ancestral lines began to be investigated with extraordinary success, along with much speculation as to the modes and causes of evolution, chiefly by Hyatt and Dall. Prof. Williams's volume aims to show how much biology (or philosophy of the eternal changes of living things) has come out of all this labor, or what the fossil shells appear, at the present time, to tell us of natural selection and other factors of evolution. Since it has grown out of lectures originally delivered at Cornell, little knowledge is assumed, and the author approaches his main theme gradually through thirteen chapters, treating very clearly, if somewhat too discursively, of geological time, of classification, and of a multitude of matters of literature, zoölogy, and geology, thus preparing the reader for an approach to the more serious discussions in the last eight chapters. The subject has become such a vast one, and includes such a multitude of details and wealth of great principles, that this part of the work is evidently designed to assist the student to keep sight of the forest among the trees.

The noble race of brachiopods—their rise, expansion, and decline—introduces the causes of evolution, and we must read slowly to master Prof. Williams's trend of thought. We soon find that he is not a Darwinian, for he gives natural selection a subordinate function; neither does he share the Lamarckism of his fellow invertebrate specialists, Hyatt and Dall, for there is hardly a word in the book for the inherited mechanical effect of use and effort, but, to our great surprise, in the broadest sense he is an Aristotelian. This position is unmistakably maintained, and it is the more interesting for two reasons—first, because the author is apparently unconscious of his support of the great Greek philosopher; second, because this position resembles very closely that reached independently of late by several workers, especially by Driesch, one of the younger German biologists, from very different data. The fact that one is an agnostic and the other a thorough theist does not separate their teleological conception of living nature.

According to this conception, evolution is an ultimate process, beyond analysis; it is a part of the unfolding of the original energy of life; there is an innate adaptability to new conditions which we cannot explain—all we can explain is the visible modes and processes. With Prof. Williams, the internal adjustment, development, or "intrinsic" evolution is the unfolding of the original life energy (p. 270), independent and advancing at a different rate from the "extrinsic" evolution, which represents the adjustment to external conditions. Every character has these two aspects. The great lines of division between the larger groups of animals and plants have been the expression of this "intrinsic" evolutional force working from within (p. 274), little affected by external conditions and developing far too rapidly to be reasonably explained by the slow operation of natural selection. On the other hand, specific characters evolve slowly by selection and by the inheritance of "extrinsic" adjustments. A species such as *Atrypa reticularis*, which enjoyed a marvellous extension in time and space, exhibited no "extrinsic" evolution, for, while excessively variable in response to environment, not a single variation became fixed by heredity. Mutability and variability are the normal expression of this "intrinsic" force (p. 297). Instead of causing variability, "extrinsic" evolution checks and limits it by selection and ultimately causes permanency (p. 312). This exactly reverses the commonly accepted view (Spencer-Weismann) that all variation arises "extrinsically," or by response to changed environment. According to the author there is abundant evidence that, in its first bloom, a group displays its widest range of specific variation. As soon as it is found breeding perfectly true, we can conceive it to have reached the end of its life period or "intrinsic" resources, and to be destined soon to become extinct. Evolution upon the "intrinsic" side is a definite and continuous law of expansion (p. 355). It is the greater ability to adjust, not the closer adjustment of structure to environment, which constitutes the higher fitness to survive; not because it has less to oppose it, or less to overcome—not because the conditions of life are easier or more congenial to its particular condition—but because it has more of *the essence of evolution in it* (p. 380).

Such an internal evolving principle is closely akin to the internal perfecting principle of Aristotle. As we have seen, the author is by no means alone at this time in reaching a conclusion so opposed to Weismann's notions of the powers of the survival of the fittest, nor can we accuse him of reasoning in a circle from a theistic premise, because a substantially similar conclusion may be and has been reached from agnostic premises. If we meet the author upon his own field of well-arrayed evidence we find it difficult if not impossible to refute him. The chief comment we would make is that of Helmholtz: *ignoramus, non ignorabimus.* The proof of an orderly and purposive succession, which may put Darwin's and other factors out of court and leave us in the dark for a while, is merely the stimulus to the earlier or later discovery of a still unknown factor. Natural cause there must be, and finding it is a mere matter of time and genius.

The minor defects in this work are not numerous, but should be remedied in a later edition. There is a certain amount of unnecessary repetition of statement and theory. The treatment of the vertebrates in the early part of chapter xx. is so brief and inaccurate as not to strengthen the book. These blemishes are of small moment compared with clearness and fulness, the general accuracy and deep insight displayed throughout the entire treatment of the brachiopods and ammonites. The work will prove invaluable to the student in a field where the temptations to exclusively systematic work are very strong. Yale University is fortunate in securing as a successor to James D. Dana an old pupil who shares so much of his master's spirit.

The History of the Paris Commune of 1871. By Thomas March. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1896. Pp. viii, 372.

AMONG the various object lessons in politics which France has given to Europe, the most striking and least understood of recent times has been the movement of the Commune of Paris in 1871. The mere facts of the history of the Government of the Commune are pretty accurately known; there is no lack of documentary material on which to work; many survivors of the rulers and the ruled during the period have recorded their recollections; and historians of the rank and intelligence of Maxime Du Camp and Ernest Daudet have compiled excellent volumes on the subject. But never yet has there arisen a writer to explain the ideas of the Communards, to make manifest the reasons that induced Paris to submit to the government of the Red Republic, or to develop the true political significance of the events which occurred in Paris after the conclusion of the Franco-German war of 1870-1871. The problems which confront the inquirer at every turn in investigating the history of the Commune are of immense importance. Was the movement the outcome of the socialism preached by the International? Was it a conscious imitation of the ideas expressed by the Hébertist leaders of the Paris Commune of 1793 and repressed with bloodshed by the Great Committee of Public Safety? Was it a spasm of reaction against the imperial and

centralizing idea which had been fostered by Napoleon III., and seemed likely to be adopted by the Republic which had risen upon the ruins of the Second Empire? Was it a natural expression of the wrath of the national capital at the fearful disasters which had befallen France at the hands of the invading Germans? Or was it the result of fortuitous circumstances which allowed a band of theorists, young and old, to possess themselves of civic power in the moment of a nation's and a city's despair? These are questions which will puzzle thinkers and writers of future generations, just as the problems of the French Revolution of 1789 exercise the intellects of thinkers to-day. The generation which witnessed the events of the Commune has not yet passed away; some of its leaders are at the present time conspicuous figures in French politics; a general amnesty has blotted out the offences of the past, and French politicians of all grades are wary of alluding to the last great struggle between the capital of France and the provinces of France.

But before speculation can be freely indulged in upon the nature of the movement which drenched Paris with blood in 1871, the facts of the period need to be carefully examined and coördinated. The work of the historian must precede the work of the philosopher, or the philosopher will draw his conclusions from false premises. It has already been said that more than one French writer of eminence has dealt with the history of the Commune, but it must be remembered that these Frenchmen are naturally swayed by the passions of their generation, and that they can hardly be expected to deal fairly with the actions of men who destroyed some of the most famous monuments of Paris, who showed no hesitation in shedding blood, and who at the close of a disastrous foreign war plunged France into the greater horrors of civil war. A time will undoubtedly come when the events of the movement of the Commune may be impartially investigated by French historians, but it has not yet arrived. Even Maxime Du Camp shows the influence of political animosity in his excellent history, and still more is this the case, for instance, in the work of Lissagaray. It is possible that a foreign writer might to some extent be expected to anticipate the work of posterity, and, being without national or party prejudice, calmly to examine and narrate this episode of contemporary history in a spirit that should be fair to both sides.

Mr. Thomas March had a great opportunity, for he is the first foreigner, to our knowledge, who has endeavored to write an account of the Commune from the documents. But unfortunately he has not satisfied the expectations which the news of the publication of his book naturally raised. He has neither the temperament nor the training of a historian; he has not learned how to appreciate the value of documents; he shows as much animosity against the leaders of the Commune as any French provincial partisan, and he does not hesitate to accept every statement of their enemies against the character and motives of the men whose deeds he endeavors to narrate. To his credit it may be said that he has tried to build upon primary authorities, but he has failed to deal with them in a critical spirit. He shows his animus in his treatment of previous writers upon his subject, notably in his note on Lissagaray's book, which, on p. 171, he declares he "deemed it unnecessary to finish reading." These strictures are not meant to imply that Mr. March's book is entirely worthless—on the contrary, it is, with all its faults, a useful compilation. Its style, however, is detestable. The influence of Carlyle's 'French Revolution' is over it whenever the author attempts, as he too often does, to moralize. The historical present is constantly abused, and slangy phrases are not infrequent. Here is a typical passage, taken at random, which may be held to justify our censure: "Better a slow advance and sure than a brilliant onset and run even a slight risk of disaster. We will not take this Communal bull by the horns—we will attack him first in the flanks and wound him there, then his head will be less dangerous and easier vanquished" (p. 257).

Ice-Work, Past and Present. By T. G. Bonney. [International Scientific Series.] Appletons. 1896.

THE appearance of a work under the above title by Professor Bonney of University College, London, naturally calls to mind the recent third edition of Prof. J. Geikie's 'Great Ice Age,' and invites a comparison between the two books. The first is intended for the general reader, the second for the glacial geologist; but while the latter is admirably successful in nearly all respects, the former leaves much to be desired. Geikie's work is thorough, critical, and probably as nearly impartial as a strongly convinced author can make a book; Bonney's work is attractive and interesting, of about the proper weight for the general reader, yet not successful in giving a vivid and accurate picture of the facts of glacial geology as they are known to-day.

The characteristic of the third edition of the 'Great Ice Age' is the greatly increased evidence from various parts of the world indicating a complex subdivision of the glacial period into several glacial epochs, separated by important non-glacial intervals. A general belief in two glacial epochs was warranted when the second edition of the book was written (1877), but now five glacial epochs of greater or less importance and distinctness are recognized for northwestern Europe, and probably three for northeastern America. Of the European epochs, the second appears to have produced the most extensive ice-fields, while the third and fourth piled up the great moraines around the southern side of the Baltic. The considerable duration of milder intervals between epochs of ice advance is indicated not only by fossiliferous deposits, but also by the amount of valley cutting or filling associated with interglacial times. In view of the numerous observations on which these conclusions are based, it may be fairly said that next to the great fact of widespread ice-action in post-tertiary time, the subject that holds the attention of the glacial geologist to-day is the evidence pointing to the complexity of the record of ice action. Yet this feature of the subject is very scantily treated by Bonney, and the little emphasis given to it is one of the unsatisfactory features of the book. No reader of the chapter on Alpine glaciers, past and present, would understand that the till on the top of the Uetliberg and the well-preserved moraine on which part of the city of Zurich is built in the neighboring valley were formed at widely separated times, or that the till on the mountain was but a remnant of a widespread deposit. It is not to be supposed that Bonney is uninformed of the well-proved subdivision of the glacial period advocated by Swiss geologists; so we have to conclude that, in simplifying and popularizing the subject, he has omitted matters without which no just account of the glacial period can to-day be given.

The two authors stand on opposite sides of the controversy regarding the origin of lake basins. This problem has been associated with glaciology for the thirty-odd years since Ramsay attempted to solve it by the erosive action of ice. On this subject, Geikie gives insufficient credit to the studies of many Swiss observers who do not go so far as most British geologists in believing that ice, working in large streams or sheets, can excavate hollows or basins of considerable size, such as that of Lake Geneva. It is disappointing to read in his book: "The notion that the lakes of the Alpine lands owe their origin to flexures crossing the lower ends of the mountain valleys is a mere pious opinion—frequently expressed, but never supported by any proofs that will bear critical examination" (p. 225). On the contrary, the careful work of many observers has given increasing reason for accepting precisely the view that Geikie here treats so unfairly and contemptuously. These studies, recently summarized by Aeppli for the case of Lake Zurich, show that this lake is associated in its origin with a series of peculiar and highly specialized warpings, both in place and time, and take its excavation out of reach of ice action.

Bonney is less attached to the glacial origin of lake basins than most British writers, yet here, as in other chapters of his book, there is a lack of sharp selection of the best material for his arguments, nor is the reader put in possession of the best conclusions on this interesting subject. An altogether undue proportion is given to so subordinate a feature as the parallel roads of Glen Roy in Scotland. The reader is referred for fuller description of the driftless region of Wisconsin to Wright's 'Man in the Glacial Period,' instead of to Chamberlain and Salisbury's essay in the sixth annual report of our Geological Survey. The heavy moraines of North Germany are passed over with few words, from which the reader can gather no adequate idea of their great importance. The looped moraines of our Northern States, which certainly are prominent among the many remarkable products of ice-work, are nowhere duly treated. The space allotted to ice-work in Great Britain and Ireland is almost four times as great as that given to other parts of the world.

The Union of England and Scotland. By James Mackinnon, Ph.D. Longmans, Green & Co. 1896. Pp. 524.

THE slow and silent growth of a cordial feeling between England and Scotland is one of the capital facts of modern history. Because the Life Guards and the Black Watch fight shoulder to shoulder now, we forget Bannockburn and Flodden and Pinkie. The trick once done is simple enough, especially when no showy legerdemain is required. Yet the attainment of full political union between the countries was far from being a matter of course. The Scandinavian and Iberian peninsulas have both failed where Great Britain has been successful. Norway is rebellious, Portugal is independent and poverty-stricken; Scotland, on the other hand, would be described by any one except a Socialist or a temperance reformer as rich and happy. Had the northern and southern parts of the island been in constant feud during the last two centuries the British Empire would not exist. *Conjuncti valeant.* And even in themselves the means by which peace and union were gained are well worth examining. Graciousness of demeanor did not contribute much to the happy result.

The Scotch of the seventeenth and eighteenth centuries had the manners of "Swiss educated in Holland"—to repeat an anti-republican libel—and Englishmen are never notable for tact. Had not the arguments for the establishment of an alliance been overwhelmingly strong, the cause of union must have been lost. The convergence of large interests, first religious, then economic, carried the day in spite of race enmity and individual selfishness.

Mr. Mackinnon writes about the Union of 1707 from the standpoint of a subdued and chastened patriot. "Englishmen ought to know that they cannot obliterate Scotch nationality by perpetually harping on that of England, and by attempting to dazzle Scotch eyes with the glamour of English greatness as such. . . . A people that can claim the national continuity of a long series of great men, whose deeds might make any people proud of its national inheritance, will never consent to part with the symbol of so much that is inspiring and ennobling in its history—a symbol imprinted in the records of a hoary past and inscribed on its national monuments." Patriotism of this sort overlays many passages in the book. When we say that it is chastened we mean that it does not savor of particularism. Beside Mr. Dalziel or Dr. Hunter, Mr. Mackinnon is a mild champion of Scottish claims. We gather from his last chapter, "Nationality and the Union," that he takes a keen interest in modern affairs, and perhaps this extensive study is due to the bearing of the subject on the present relations of England and Scotland. One must take care, however, to distinguish between Mr. Mackinnon and the pamphleteers of the Scotch Home Rule Association. While he tolerates with difficulty the use of "England" in contexts which properly demand Great Britain, he is a fair-minded student of the reigns of William and Mary and Anne.

Mr. Mackinnon devotes only four pages to the relations of the two countries prior to the accession of James VI. to the English throne, and he has little to say about the union of the crowns. With his eye fixed on legislative union he can easily avoid mention of one or two little incidents which the Scotch are willing to forget—for instance, the sale of Charles I. by his northern subjects. He explains lucidly the effect of the Reformation in alienating Scotland from France and ranging her in the same European camp with England, touches upon Cromwell as a prophet of union, and begins to grow to a point with the Revolution. This event, immediately beneficial to England alone, involved the realms in unpleasant complications. Within three years from the landing of William, Glencoe made him, among the Scotch, the most unpopular king of the century. Then followed the Darien expedition and commercial hostility between Edinburgh and London. To offset these causes of friction, the French war and the speedy collapse of Paterson's colony were motives for conciliation. A mixed case becomes kaleidoscopic as Presbyterian and Episcopalian, Jacobite and Orange, Queensberry and Hamilton considerations from time to time thrust themselves to the front. In spite of William's dying injunction to the English peers in favor of a "firm and entire union," the prospect of a satisfactory settlement was almost as remote at the accession of Anne as an Anglo-Hibernian settlement now is.

Our author's solid piece of investigation begins with 1702, and his narrative of plot and counter-plot runs into 376 pages before it reaches the death of Anne. We could not wish it shorter, for it is careful, impartial, and well written. The constitutional aspects of the twelve years are set out prominently, but there is also an abundance of picturesque detail. Simon Fraser, the more versatile Le Caron of his age, vies in prominence with the leading politicians of the House of Assembly, and Col. Hooke runs through a whole chapter. It is not Mr. Mackinnon's fault that he lacks a distinguished statesman for his hero. The movement is weak on the personal side. Queensberry is the prominent figure among the Scotch, but he cannot be described as a political enthusiast of high and disinterested aims. Viewed in comparison with the magnitude of the results, he is distinctly overparted. Nor do we find any politician about the court of Queen Anne who is ready to go through fire and water to unite the kingdoms. The treaty owes much to the lucid mind of Somers, but he was not its originator. What Englishman championed the Union out of love for the Scotch? It was all very well for Bishop Compton to say in his sermon on the Union (May-day, 1707, after the treaty had been signed), "At no time were Scotsmen more acceptable to Englishmen than on this day." A long time elapsed before they were generally acceptable to Englishmen save on grounds of political expediency.

Mr. Mackinnon's account of 1706–7 shows real skill in historical disquisition. After describing the circumstances under which the Act of Security was passed, and illustrating English resentment at the measure, he presents an excellent analysis of the events preceding and attending the Union Commission. The Duke of Hamilton's volte-face of September 1, 1705—even more rapidly executed than Sir Robert Peel's conversion in 1846—paralyzed the Scotch Nationalists, and the appointment of Harley, Somers, Devonshire, and Sunderland to the Commission was an earnest of English readiness to entertain Scotch claims. Even with these preliminary advantages the Unionists had a hard task. "The temper of both nations was bellicose enough. The Commissioners were conscious that unanimity could alone obviate a fierce international struggle." Economically Scotland then stood towards England about as Newfoundland stands towards Canada to-day. Disaster had overtaken her, incorporation with a far richer neighbor was offered, and pride of country raised the same kind of obstacles. Defoe, with true discernment, might prophesy that a wave of prosperity would sweep over Scotland when the barriers were removed. Fletcher of Saltoun replied that union would only make a poor country poorer. While the pamphleteers raged without, the Commissioners, with the wisdom usually displayed by such congresses, arranged terms which secured the main advantages of incorporation without depriving Scotland of her courts or of her established church.

Mr. Mackinnon's concluding chapters on Jacobite activity, the industrial progress of Scotland during the last century, and the nature of modern Scotch nationalism round off his minute description of the legislative union. He marks the congratulatory tone of English travellers in Scotland during the last quarter of the eighteenth century, to show the death of the old jealousy. International intercourse was indeed making strides when a Londoner with the strong anti-Scotch prejudices of Dr. Johnson set about exploring the Hebrides. Industrial progress was slow at the start, but after Culloden the triumphal career of the Scotch at home and abroad begins. During the long period of political lethargy, 1745–1825, Scotland was occupied in becoming rich and learned. Since the first Reform Bill she has steadily sent Liberal delegations to Westminster. Southern England is not more regularly Conservative. As for Scotch activity, perseverance, and success, who can say where or when the colophon will be placed?

We must not attempt to follow Mr. Mackinnon through his wealth of original material. He is firm-grounded in the sources, and errs only in regarding the Union movement too exclusively from the Scottish side. For all that Scotland has done, England is by head and shoulders the predominant partner, and in a book with such a title deserves more attention than she gets.

London City Churches. By A. E. Daniell. With numerous illustrations by Leonard Martin. Charles Scribner's Sons. 1896. Square 8vo, pp. x, 394.

THE old churches of London have excited a great deal of interest of late among English archæologists. The passage of a law, not many years ago, for the union of city benefices has caused the destruction of many of these, including eleven that were built by Sir Christopher Wren. More of them are threatened with destruction for the obvious reason that the land which they occupy would be valuable to commerce, and is a temptation to speculators. An evidence of the renewed interest in the old churches is seen in the numerous articles about them which have appeared in technical periodicals and in several books, of each of which the chief or important part is devoted to a somewhat exaggerated statement of the architectural value of the buildings in question. The present work deals with the churches of the City of London alone, excluding the rest of the metropolitan district, or what might be called Greater London.

The introduction gives most of the needed statistics. It is pointed out that eighty-six parish churches were destroyed, or nearly so, by the fire of 1666; that, of these, thirty-five were never rebuilt, thirty-three of the new buildings serving for two parishes each, and one, Bow Church, for three. Forty-nine churches were rebuilt by Wren; and it may be said here that the fact of this almost exclusive employment of one architect for the rebuilding of London after the fire, and the assumption that St. Paul's Cathedral and the numerous minor buildings designed by that architect were parts of one general scheme for the beautifying of the capital, have created a kind of legend for a very attractive personality. The city churches built by Wren are not comparable for cost and extent with similar and contemporary monuments on the Continent, and it is easy to exaggerate their importance in the way of architectural design.

The introduction goes on to state that twenty-two churches escaped the fire, but that one of these, St. Andrew's Holborn, was ruined in Wren's time and was rebuilt by him, and others were remodelled at later dates, so that eight churches only remain in the city belonging to the time before the conflagration. Even this is a surprise to those who have studied the maps of London, before and after the fire. Such a "barn-door-fowl flight of learning" as that leads the small antiquary to suppose that nothing was left within the line of the old walls. The church of St. Bartholomew the Great is, however, well known for the valuable remains of a very early building which

are to be found there, only recently regained (if they are regained) from the uses of mechanical trade to which the building had been put. St. Andrews's Undershaft is a late perpendicular church of some interest in spite of restoration; and its curious name recalls the great maypole which once stood in Leadenhall Street. St. Giles Cripplegate is another perpendicular church, dating from the sixteenth century, but it was much restored in the seventeenth century. Here is the tomb of Milton, and a cenotaph of Sir Martin Frobisher erected in modern times. St. Catherine Cree was built not long before the great fire, and is one of those very curious structures in which classic and late Gothic details are freely mingled; not, however, in the production of an attempted new architectural style, but in the frank contrasting of one set of details with the other. St. Helen's Bishopsgate is the most interesting of all, architecturally speaking; it is a conventual church of which parts date from the thirteenth century and others from the fourteenth, while details of the interior are undoubtedly the work of Inigo Jones. St. Olave's Hart Street and All Hallows Barking are perpendicular churches well worthy of study, in spite of their frequent restoration. Finally, we remark that St. Ethelburga's, with its narrow alley opening on Bishopsgate Street between two shops, contains some vestiges of good early Gothic work; but the church is very diminutive and almost wholly modernized.

The book under consideration gives a careful and well-considered notice of each of these old churches, of the churches built by Wren, and those of later time, but not recent. It is one of the class which has so few representatives, that of studious and careful books; of books the material for which has been gathered in abundance and well sifted for publication. It seems that all the important discoveries made during recent years, whether about the buildings themselves or in the way of written documents, are presented in these notices. The book is as interesting as any such record can be, and an index of the churches and another of proper names make it available for serious study. The illustrations by Mr. Martin are generally small heads of chapters, very well drawn, and giving views of the churches from well-chosen points. Besides these there are fourteen half-tones which give views on a larger scale, generally of the interiors of the interesting churches under examination. There are half a-dozen additional, undescribed alike by legend on the page and by mention in the table. These the reader is left to puzzle over, the interesting problem being given to him to name each of them from the description contained in the adjacent pages.

Greek Oligarchies: Their Character and Organization. By Leonard Whibley. London: Methuen & Co.; New York: Putnams.

Mr. Andrew Lang has recently censured Oxford and Cambridge for not producing volumes of classical studies and doctors' dissertations like those which every self-respecting American university issues from time to time. But our English cousins achieve much the same end by their own characteristic method of competition for prizes. Mr. Leonard Whibley, already favorably known to students of Greek history for his Prince Consort dissertation on 'Political Parties at Athens during the Peloponnesian War,' now publishes a "Hare Prize" dissertation on 'Greek Oligarchies,' as above. The little book presents a useful collection of the somewhat scattered and fragmentary material, together with a convenient résumé of the speculations and definitions of the ancients and the conjectures of the moderns. The author draws very largely on Gilbert's 'Handbuch,' Mr. Newman's 'Introduction to the Politics of Aristotle,' and Sandys's notes on the recently discovered Aristotelian Constitution of Athens. But he has grouped under appropriate heads a quantity of facts which the student would not easily find elsewhere, and has enlivened his discussion of them by occasional apt quotations from such modern writers on the science of politics as Maine, Bagehot, Sir J. F. Stephen, Austin, Freeman, Fustel de Coulanges, and J. S. Mill.

The earlier chapters, on the origins of popular political terminology and the classifications of forms of government by Plato and Aristotle, on the "Causes of Constitutional Change," and on "The Development of Constitutions," are perhaps more readable than the more solid concluding studies of the varieties of oligarchy and the organization of oligarchical government. No important lesson seems to detach itself from this marshalling of more or less conjectural details; and unless the reader's zeal is sustained by the controversial interest of some private theory, he is tempted to blaspheme against the excessive conscientiousness of modern science, and take refuge in Plato's comfortable saying that if you are curious to look beyond the conspicuous types, you can readily find countless dynasties and purchased principalities and other intermediate and nondescript forms of government, both among Greeks and barbarians.

A few minor points may be noted in conclusion. Mr. Whibley suggests that the terms Eupatridæ, Geomori, and Demiurgi were artificial designations introduced at the time of the συνοικισμός of Attica to denote the classes *de facto* existing in the separate communities and recognized in the new state. For πατρόθεν in Aristotle's Constitution of Athens (21, sec. 4) he would read πάτραθεν. Men continued to be called by their fathers' names after the institution of the demes. Cleisthenes's aim must have been to put the new citizens on an equal footing with the members of the old clans by abolishing the custom of calling a man by the clan or gentile name (πάτραθεν). The point had already been made by Gilbert, who, however, contents himself with taking πατρόθεν in the required sense. It is not quite accurate to say that in 'Laws,' 693 D, Plato ranks monarchy and democracy as mother forms above other constitutions. He merely treats them as the two great historic types from which all others may be derived. In the passage in which he is said to have changed his mind and reversed the relative preference assigned to oligarchy over democracy in the republic, he is careful to qualify his statement by the words "a certain kind of democracy." The vagueness caused by the etymological and ethical associations of the word aristocracy might have been more aptly illustrated by the rhetorical application of the term to the Athenian democracy in the 'Menexenus.' The discussion of Aristotle's ambiguous use of the word "Polity" would have been made clearer by a reference to 'Laws,' 712 E, where Plato, commending the mixed constitutions of Crete and Sparta, declares that they are really "Polities," while the partisan oligarchies and democracies of Greece do not deserve the name. In the quotation from Athenæus, p. 182, n. 3, ἐξάγουσιν is an oversight for ἐξάξουσιν.

The Trent Affair, including a Review of English and American Relations at the Beginning of the Civil War. By Thomas L. Harris. Indianapolis and Kansas City: The Bowen-Merrill Co. 1896.

Mr. Harris's account of the Trent affair, which covers also an account of the facts connected with England's recognition of Confederate belligerency, rehearses an old story without throwing any new light upon it. He has collected a mass of evidence showing that the behavior of the English Government towards us was dictated by an unfriendly spirit; but it is not new evidence. The publishers make the singular statement that the importance of the case of the *Trent* "seems, in large measure, to have escaped the notice of historians," and that "a careful study of the whole matter will be certain to make Americans appreciate more fully than ever that it is their duty to prevent by force of arms, if necessary, any insult or indignity which may be offered to their national honor."

The lesson which most Americans derived from the *Trent* case at the time was that it is a great pity to get up a tremendous excitement over a national act of very questionable legality, exciting passionate resentment abroad, unless the country is fully prepared to back it up with the army and navy, because the only alternative of war is a humiliating retreat. The other question—what was *settled* by the *Trent* case—Mr. Harris leaves as much in the air as most people who take it up. He draws seven different conclusions from it as "warranted"; but the matter had been already put in a nutshell by Mr. R. H. Dana, who, in his edition of Wheaton, laid it down thirty years ago that the point disposed of was that a belligerent cannot take persons out of a neutral vessel at sea, on any pretext. Mr. Seward restored Mason and Slidell on the ground that, if a captor relinquishes his prize without necessity, he cannot take prisoner or cargo out of her as contraband; but what was involved was substantially the right of searching neutral vessels on the high seas, and with the *Trent* case the assertion of this right probably disappeared for ever. When we think of the principle on which the duties of neutrals towards belligerents rest, it is not difficult to see that the claim in any aspect was a preposterous one. What a neutral is bound to do is to refrain from helping a belligerent carry on war; hence arms and munitions of war are contraband and may be seized under proper circumstances, as when captured by a blockading squadron. But that this principle involves the right to stop a neutral vessel on the high seas between two neutral ports (the *Trent* sailed from Havana) and take passengers off because they are messengers from a belligerent to a neutral, is a mediæval notion which in modern times is out of place. If Europe becomes involved again in a great war, we shall yet have reason to be glad that England insisted on Mason and Slidell being given up.

Spring Notes from Tennessee. By Bradford Torrey. Boston: Houghton, Mifflin & Co. 1896. Small 8vo, pp. 223.

Lookout Mountain, Missionary Ridge, Orchard Knob, Chickamauga, and Chattanooga were familiar names thirty-odd years ago. War was then making history at a rapid rate, and important events were numerous in Eastern Tennessee. A year ago Mr. Torrey found interest in these localities much heightened because of reminiscences, but his presence there was only in an indirect way due to the

terrible memories of battle. His mission was bird-hunting; he was there to meet the migrants on their way to the North, to fix a station in their journey, to trace a portion of the story of their lives. That he had a month of successful hunting is evident enough from the list of the birds he "got"—ninety-three species, and all without murdering a single bird. He hunted with ears and eyes and opera-glasses; he heard the song, found and identified the singer, and noted what he learned. As he did not startle the singers, the notes he caught were free, light-hearted notes of joy, and he left the songsters alive to utter thousands more, and to teach their fledglings songs that will cheer the hearts of future generations of birds and of men. No slaughter, no butchery, no dead, no wounded, no starving nestlings moaning out their innocent lives for murdered parents, no cries of pain or terror—such a story of a hunting trip is not often told. Only once have we a glimpse of the savage among his ancestors—when he threw the first stone to aid the minister, a man of God, in a frenzy to crush the head of a poor little harmless snake. The example of this author is a splendid one for young ornithologists:

"Hast thou named all the birds without a gun?"

He has studied the birds to such purpose that he knows them at sight or recognizes them by their voices. He had no need of slaying hundreds to make up his lists.

Though the principal interest pertains to the birds, there is something in the book besides what relates to them. It is worth reading by any one with vitality enough in him to appreciate an enjoyable outing.

JUST PUBLISHED.

International Bimetallism.

By FRANCIS A. WALKER, President Mass. Institute of Technology, author of "Political Economy," "Money," "The Wages Question," "Money, Trade, and Industry," etc. 12mo, $1.25.

The book is the outcome of a course of lectures delivered at Harvard University, and was prepared without reference to the impending political contest in the United States. It, however, will prove instructive, not only upon the question which is destined to underlie that great struggle, but will also be found a valuable work of reference, treating, as it does, of the precious metals from the earliest times down to the present day.

The Nation.

NEW YORK, THURSDAY, JULY 23, 1896.

The Week.

THE general and spontaneous tribute to ex-Gov. William E. Russell, whose sudden death on Thursday reads us, as Burke said, "an awful lesson against being too much troubled about any of the objects of ordinary ambition," has a significance much more than personal. Personal qualities of the most engaging and commanding kind Gov. Russell had in fuller measure than falls to the lot of any but the most favored of men. He drew hearts and enthusiasm to himself as easily and inevitably as the moon draws the tides. There was that in his winning frankness and manly bearing which disarmed opponents no less surely than it bound friends to him by links of steel. To those who knew the charm of his presence, its passing into the shadow will mean first of all a poignant sense of personal loss. But there is more in it than that. Thousands who never looked into his eyes share the feeling of public loss in his disappearance. What has gone from our civic life is not simply a fascinating personality, but a leader of men, a genius for politics in the noblest sense of that word, one to whom the hopes of many had turned for the reclaiming of party and political contests from ignoble men and ignoble methods. The feeling is universal that Massachusetts has lost a son who was one of the strongest forces for good that the commonwealth has known in recent times. His last public service emphasized his sincerity and his consistent loyalty to the highest ideals. The fight that he made for sound money at Chicago commanded the admiration of right-minded men in the Republican party as much as in his own, and everybody in Massachusetts felt proud of him. There can be no doubt that it was this unselfish work which precipitated the end of his life. He taxed his vital energies to the utmost, day and night for a week, in a desperate effort to restrain his party from plunging into the abyss of dishonor, and his soul flamed with righteous indignation as he saw the reckless majority sweeping it to ruin. But he would not have shirked the duty if he had realized the risk, for he had the highest conception of what the public man owes those who have come to trust him.

A few weeks before his death, Gov. Russell went to Monticello, Va., and preached the gospel of sound money in the heart of a State which was given over to the silver delusion. The history of this trip is of peculiar interest now. He received an invitation to deliver an address at Jefferson's old home on Jefferson's birthday. He replied that he doubted if he were the proper orator for the occasion, as he should consider it his duty to discuss the financial question and to express his own views, which would not be congenial to a large proportion of his auditors. The politician in charge of the arrangements wrote back suggesting that he should avoid a controverted question like that of the finances, and devote himself to a general exposition of the principles of Democracy. Gov. Russell immediately telegraphed that he could not come with any such understanding, and that the managers had better look up somebody else. But his robust independence had won their admiration, and he speedily received a dispatch begging him to come, and giving him *carte blanche* as to what he should say. He went, and he talked as plainly to that hostile audience as he would have talked to a body of Massachusetts citizens who fully agreed with him.

The queer people who, as we go to press, are assembling at St. Louis to nominate a Presidential ticket, are as much divided as any of those who preceded them, and it would not be at all surprising if a bolt should take place if Bryan is nominated. The Populists have been at work several years building up a national organization. Indeed, they are a continuation of the old greenback party of the seventies. Free coinage of silver is only one of their aims. Back of that comes fiat paper money, which they are more fond of than they are of silver, because it costs nothing to produce the paper dollar, while it costs 53 cents to produce the silver one. In order to preserve their party organization and to keep the greenback banner waving, the genuine Populists are determined to fight Bryan to the end. They may succeed in preventing the endorsement of the Chicago ticket, but if a majority endorse it, there will probably be a secession of the very stubborn minority. The leaders of the latter faction predict that Bryan will not get over 60 per cent. of the Populist vote in the election, even if nominated by this convention. The other gathering at St. Louis, the so-called silver convention, has no constituency. It is has been brought together merely to act the part of a scarecrow to the Populists.

Whether open endorsement by the Populists will help or hurt Bryan is a question which his shifty intellect must be deeply revolving. On the one hand, votes are votes, whatever their source, and he is probably aware that he will need every one he can in any way pick up. The outspoken declaration against him of leading Democrats all over the country suggests huge losses which it will be necessary to make good if he is to come anywhere near election. But on the other side looms up the possibility that frank adoption of the Chicago platform and nominee by the Populist convention at St. Louis may dislodge new masses of Democratic votes. Many Democrats who have been saying little, but have been keeping up a tremendous thinking, would see in the absorption of the Populists the last proof that the old Democratic party was a thing of the past, and that names and the fetish of "regularity" need no longer restrain them from voting their convictions. Bryan has, in fact, almost as good reason to fear the very support which his candidacy and principles attract, as to dread the revolt which they have provoked. The more warmly uneasy and ignorant agitators endorse him, the more sharply will conservative citizens repudiate him.

Mr. Bryan's speech at Centralia was a more careful effort than any other that he has made since his nomination. The demagogue level was well maintained in it, as it always is in his deliverances. There was the usual tribute to the people as the supreme rulers and final embodiment of all wisdom, and after that he turned his attention to the money question as the dominating issue of the campaign. His treatment of this gives an admirable illustration of his method, which is not lacking in adroitness. Four years ago, he said, the Democratic and Republican parties took almost identical positions on the money question. "The Republican party said the American people are in favor of bimetallism, and the Democratic party were holding to the use of gold and silver as a standard money for the country and to the coinage of both for money. Thus you see that both parties declared in favor of gold and silver as the money of our country." This was only half true. Mr. Bryan omitted to say that both platforms insisted that the two metals should be kept at a parity. He did not say this, because he wished to say next that both parties had made a new departure this year, the Republicans abandoning bimetallism for the single gold standard, and the Democrats abandoning it for the single silver standard. He asserted that the Republicans now favor the gold standard only until they can get a double standard by international agreement, and that in this respect they admit that there is something better than the gold standard. Having reached this point, he is in position to say that the issue is one between a European financial system and an American financial system, or, as he puts it: "The issue is drawn, and we have our choice in this campaign between an American financial system for the American people and an

English financial system for the English aristocracy."

That is the Bryan issue of the campaign which he brings to the front in every speech, and which is usually put in some such order as this: "We are the greatest nation on earth. I am a candidate for the greatest office on earth. You are the people of the greatest nation on earth. Your President is merely your hired man. Your wisdom is inexhaustible and infallible. You alone are capable of deciding all questions, economic, moral, and other, in the best manner. The Republicans say that you cannot solve the financial question without the aid of the rest of the world. I tell you that you are so great that you can ignore the rest of the world. The issue is drawn. Shall we have an American financial system for the American people, or an English financial system for the English aristocracy?" That is to be his speech with variations during the campaign. "Those who believe in running this government on the European plan," he said at Centralia, "should go and legislate with the Republican party." And again: "If the gold standard is a good thing, why should we try to get rid of it? And if the gold standard is a bad thing, why should we wait until some other nations are willing to help us let go?" There is food for thought for the bimetallists in this tricky presentation of the issue, for they have made it possible for Mr. Bryan to give this twist to it.

The historian who shall look carefully into the causes of the strength of the silver movement in the United States in the year 1896 will find that one of its most potent elements was the jealousy and hatred felt by Democratic leaders for President Cleveland. A great many reasons can be supplied for this hostility. It began in his first term, when he refused to consider that one of his chief duties as a Democratic President was to satisfy Democratic hunger for office. It was augmented by the irritation which old political bosses like the mossback Senators felt at seeing a new man in the party compel its obedience to sound doctrine against the opinions expressed by themselves and by many of their constituents, as Mr. Cleveland did in securing a renomination in the face of his denunciation of free silver, and in compelling the repeal of the Sherman act against the personal wishes of so many Senators. It is only natural, in view of all this, to find all the Senators who have sought occasion to oppose the President (as on the tariff question) drifting one by one into the Bryan camp. Gorman logically belongs where he has gone; Faulkner marches with his captain, and Smith of New Jersey practically places his banner on the Bryan wall as he hurries off to Europe. It need surprise no one if other anti-Cleveland Senators very speedily join in the same procession.

The fact that Gov. Altgeld, the chief of the free-silver movement in Illinois, is a gold man in his private business was asserted while the Chicago convention was in session. It was affirmed that although he was for silver in politics, he had taken care to protect himself against the consequences of the silver standard by making his rents payable in gold. It appears that he is the President and largest stockholder of the Unity Building in Chicago, and that all leases contain the "gold clause"—that clause which the Chicago platform proposes to abolish "for the future." The *Herald* has procured a copy of one of those beautiful gold leases and publishes it in facsimile. It reads as follows:

> This is to certify, That the Unity Company, a corporation, etc., of the City of Chicago, County of Cook, and State of Illinois, have demised and leased, and do hereby demise and lease unto W. K. Carlisle and W. J. Strong of the City of Chicago, Rooms Nos. 1,544-48 on the fifteenth story of the Unity Block, situated on Dearborn Street in the City of Chicago, State of Illinois, to be used and occupied by said W. K. Carlisle and W. J. Strong as a law office and for no other purpose, for the term of two years and six months from the first day of November, 1893, to the thirtieth day of April, 1896, at the rent of twenty-five hundred (2,500.00) dollars, *payable in standard gold coin of the United States* in equal instalments of $83 34 monthly in advance, on the first day of each and every month during and for the said term, at the office of said company, in Chicago, or such other place in Chicago as the lessor may direct.
>
> [Here follow the usual provisions and conditions as to heating, lighting, subletting, etc.]
>
> In witness whereof, said corporation has caused its name to be signed, and its corporate seal affixed hereto, this sixteenth day of October, one thousand eight hundred and ninety-three. THE UNITY COMPANY,
> per Elmer Allen Kendall, Sec'y. Seal.

So it appears that, when it comes to business, Altgeld stands on the same gold platform as Stewart of Nevada. They are all alike as to this. They propose that the laboring man's wages and his savings deposits shall be paid to him in silver, but their precious income shall be protected by a stiff gold clause.

There appears to be no doubt that a majority of the members of the Democratic machine organization of this State are in favor of approving the Chicago ticket. They are "regular" above all things else, their whole political training having taught them that the first duty of a true Democrat is to stand by his party through thick and thin. The main question with them is, Was Bryan's nomination regular? That being answered, as it must be, in the affirmative, leaves them no course to follow except to support him. At heart, also, many of them are in favor of silver, and many more of them have no convictions of any kind upon the subject. That they represent accurately the sentiment of their party is not for a moment to be imagined. Why should they represent it any better on this question than they did when they nominated Maynard? They have been so completely out of touch with their party during the past four years that they have twice lost the State by majorities exceeding 100,000. Many of them admit now that there is a revolt against the Chicago ticket sufficiently large at this time to take away from 10 to 25 per cent. of their vote.

Mr. Sheehan, the Buffalo defaulter, announces that he is no longer able to restrain Tammany from coming out for the ticket of repudiation. The district leaders, who have been out among "the people," tell him that it will be dangerous to wait till after the State convention. The people are so determined to endorse Bryan and Sewall that not even a defaulter can restrain them. In other words, the Tammany machine is going to get every "regular" campaign dollar (silver or other) that is to be spent in this city. It is going to be in a position to take charge of the Bryan ratification meeting in Madison Square Garden. Repudiators might get a doubtful welcome in New York city were a defaulter not on hand to introduce them and certify to their character. Of course, any party or policy that is dishonest and disreputable has an overpowering fascination for Tammany. It could not be expected to withstand the peculiar attractions of the Chicago platform and ticket. Add the natural drift of machine politicians, as we have remarked, towards whatever has the brand of "regularity." This is observable all over the country.

The question whether the sound-money Democrats ought to nominate a third ticket is still agitated in many quarters. Ex-Congressman Everett of Massachusetts has written a letter to the Boston *Herald* strongly recommending that policy; so, likewise, has Col. Higginson. Senator Vilas and Gen. Bragg of Wisconsin urge the same course, and on the whole it seems likely that the movement will succeed. So far as New York is concerned, there is no option left to the State Democracy since Tammany has decided to support Bryan. Without a third ticket the sound-money Democrats will cease to have a separate existence at the end of the present campaign. The free-silver element will have control of the organization in every State. At the recent Chicago convention the sound-money element represented more than one-third of the party strength. This third will be simply wiped out if they do not nominate a ticket of their own. Some will join the Republican party, but most of them will drift to the support of Bryan before the end of this campaign, and after the campaign they will be merged in the Populistic mass that now supports Bryan. An idea prevails on the Stock Exchange that a third ticket will divide

the McKinley vote and put his election in jeopardy. This proceeds from the wholly erroneous assumption that the masses of the Democratic party understand the money question and have the same convictions as the bankers and brokers down town, and that these convictions will prompt them to vote for McKinley if there is no third Democratic ticket in the field, thus counting double against Bryan. The truth is that not one in a thousand of them understands the question at all or has any convictions on the subject. They are open to conviction from their own party associates and leaders, but, if left to natural forces and ordinary influences, will gravitate to Bryan as surely as water runs down hill.

The stock market is now in the same condition of chills and fever that it had reached in 1893 when the Treasury gold reserve dropped below $100,000,000, but the reasons for the condition are now somewhat different. Then we had a monthly purchase of 4,500,000 ounces of silver going on, and a corresponding outpour of fiat money. We were within a measurable distance of a suspension of gold payments, which could be prevented by nothing but a repeal of the silver-purchasing act. Now we are threatened with suspension as the deliberate purpose of one of the great political parties of the country, and it is inevitable that the chills and fever should increase or diminish in proportion as the public mind is more or less alarmed by the prospect of that party's success at the polls. The supporters of Bryan and the Populist crowd at St. Louis will deride it as a mere stock panic and call it a Wall Street conspiracy. The fact is, however, that Wall Street is only the pulse of trade and industry throughout the nation. Wall Street is agitated only when it feels electric shocks coming in from other places. You will find no farms, no stores, no factories, not even railways, in Wall Street; but when farms, stores, factories, and railways are troubled, when their business is slackening or is menaced, Wall Street tells the story, because here people who have securities must sell them in order to fortify themselves for bad times. The Bryan ticket is the menace of bad times, and we cannot expect anything but chills and fever while it darkens the horizon.

The *World* published on Thursday some very interesting facts about the results of free silver coinage in Colombia, as set forth by the American Minister to that republic. The experiment which Mr. Bryan and his followers wish to make here of lifting 53 cents' worth of silver by legislative fiat to the value of 100 cents, was made in Colombia a few years ago. The advocates of the experiment were working, as Mr. Bryan says he is, to "restore the parity between money and property." They passed a law making it optional for the Government to meet its obligations in either gold or silver. When the law was passed, gold, which had been at 20 per cent. premium, disappeared at once from the country, and is now at a premium of 190. Wages have advanced about 50 per cent., but provisions have advanced 200 per cent., house rents from 100 to 200 per cent., and clothing has become so dear that only the poorest quality can be bought at all. Mr. Bryan says he is seeking to get for the laboring men of this country a "dollar which is as kind to the man who produces wealth as it is to the man who holds it in investment," and he believes a silver dollar is possessed of those humane and thoughtful attributes; but is there any reason to believe that silver will behave any better when embodied in a cheap American dollar than it has done in a cheap Colombian dollar or a cheap Mexican dollar? It has not in either of these cases been at all "kind" to the producer of wealth or the man who has held it in investment, but has acted like a heartless fiend towards both. It has not, it is true, run away in the cowardly manner of the gold dollar; it has stayed with the people, but the people do not seem to have enjoyed its company.

The Venezuelan case has been "stated" again, with the usual dire results (according to the newspaper headlines) to the English contention. Mr. Storrow, the counsel employed by Venezuela to put her case into legal shape, has certainly earned his fee, however fat it may be. A lawyer who will boldly stand up and tell Lord Salisbury that the Schomburgk line is nothing but "a forgery perpetrated by the English Government twenty years after Schomburgk's death," ought to command his own terms. After this it is not surprising to find that "all Prof. Pollock's arguments of law" are really fatal to his own case. It is a little unfortunate that Mr. Storrow's assertion that Great Britain will not arbitrate as to any territory within the Schomburgk line should have been given out almost at the same time with Salisbury's explicit offer to Mr. Olney to submit large tracts within that line to arbitration; but such minor defects do not count in what is professedly a "ringing" argument, designed not to convince the Britishers, but to put them to open shame. Really, despite all the preliminary rumblings about the tremendous sensation to be exploded in this statement, we find in it little or nothing that is new or important. Mr. Storrow has touched off his "bomb," but we uspect that the Venezuelan Commission and Lord Salisbury and Mr. Olney will go on with their serious work without so much as looking out of the window to see what all the racket is about.

While the English Conservatives are a good deal in the dumps over their poor showing as a party, the Liberals are not altogether happy. The Tory troubles spring from a somewhat unwieldy majority, from their having failed in two capital undertakings of the session—the Education bill and the Irish Land bill—and from uncertainties and rebuffs in foreign affairs. What rends the Liberal bosom is distraction over the question of leadership. The greater the Tory embarrassments and the likelihood that the Liberals will be recalled to power in the course of a few years, the keener the contest for the honor of leading the Liberals when they do come in again. Lord Rosebery is still the titular leader, but his supremacy is sharply questioned. Sir William Harcourt ate humble pie in 1894, but does not propose to do so again. He and Rosebery are at daggers drawn, never allude to each other in public, and plan each to override and humiliate the other. Latterly a third candidate for the leadership has come forward in the person of Mr. John Morley. Mr. Morley's rise as a political leader, especially his development into a remarkably effective speaker on the hustings and in Parliament, has been extraordinarily rapid. Turning at a mature age from letters to politics, he soon conquered the somewhat pedantic tendency of his beginnings, and now rivals Sir William Harcourt himself as a rough-and-ready, hard-hitting debater and stump-speaker, while a master, at times, of a nicety of pungent phrase and epigram to which Sir William cannot pretend. Mr. Morley's recent speech at Manchester was a fine specimen of off-hand oratory designed for popular effect, and it was followed by a powerful speech in Parliament on the payment of the Indian troops at Suakim, which exposed mercilessly the particularly shabby nature of that Government measure, and had the practical effect of cutting down the normal Government majority of 146 to 85.

Some of Mr. Morley's Liberal followers and admirers conceived the idea of offering him a dinner. The affair was in full train, when suddenly Lord Carrington, who was to preside, wrote to the committee that he would have to be excused. Everybody recognized the significance of this; the hand was Carrington's, but the voice was Harcourt's. That baronet includes Mr. Morley in the number of his dearest foes. It is believed, and is doubtless true, that it was owing to Mr. Morley's advice that Rosebery was chosen instead of Harcourt to succeed Mr. Gladstone. Sir William is not the man to forget this, much less to sit quietly by and see the man who prevented him from being Prime Minister of England himself aspire to that post. So he proceeded to bring about so many withdrawals from the Morley dinner that the whole thing had to be given up. Meantime the rank and file of the Liberals are much depressed and discouraged over these squabbles of their leaders and would-be leaders.

THE PLATFORM OF REVOLUTION.

ATTENTION has been so largely directed upon the financial plank of the Chicago platform that its other revolutionary deliverances have been partly overlooked. It is well, however, and it will be necessary many times in the course of the campaign, to set them forth in their true light. The public should be taught that lawless dealing with the currency goes naturally hand in hand with proposals to defy the courts, to break down the rights of private contract, to encourage riot, and to debauch and degrade the public service. All these proposals are in the Chicago platform, and they were put there deliberately. They are clothed in circumspect language, but their intent and effect are unmistakable. The Altgelds and Tillmans who insisted upon the adoption of these revolutionary planks as the price of their support, did not care much for the form so long as they got the substance.

The assault upon the authority and integrity of the courts, particularly of the Supreme Court, is thinly veiled. In condemning that court for its decision in the income-tax case, which it affirms was against both precedent and law, the platform has a phrase about a reversal by "the court as it may hereafter be constituted." This has been explained as only an innocent expression, referring merely to normal changes in the court through death or resignation or superannuation. But the Chicago revolutionists were not holding out vague hopes of that kind. What they undoubtedly meant, and intended their followers to understand, by their language was a threat to pack the Supreme Court, or else reorganize it, so as to secure a reversal of the income-tax decision. We admit that they have a precedent for the former course in the appointments made by President Grant to secure the reversal of the greenback decision. But the evils which have flowed from that event ought to put us on our guard against another experiment of the kind. Moreover, another plank of the Chicago platform, declaring against "life tenure in the public service," of course includes judges, and embodies the threat to break up the whole organization of our federal courts, and to add the election of federal judges to the upheavals of Presidential years.

This blow at the courts shows how true are the instincts of the revolutionaries. They know their most formidable enemies. Judicial decisions have again and again drawn the fangs of confiscatory and revolutionary legislation, and the courts have come more and more to stand as the great bulwarks of property and personal right. It is perfectly natural, then, that men planning confiscation and revolution should strike hard at the chief obstacle in their way. We can conceive of voters prepared honestly to accept or "chance" free silver; but what citizen who ever thinks at all can approve the proposition to break down and pervert the federal courts?

Closely connected with this attack upon judges is the attack upon a great legal and constitutional principle. The platform declares for "such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract." This is a quiet proposal to undo one of the most important parts of the work of the framers of the Constitution. What the revolutionists are aiming at is the prohibition or invalidation of gold contracts. But if they succeed in that, they will break down the inviolability of private contracts all round. No State can pass "such legislation"—it is explicitely forbidden by the Constitution; but Congress undoubtedly may, and that is what the Chicago platform means. The Constitution did not forbid Congress to pass laws impairing the obligation of contracts, mainly because, we suppose, nobody dreamed that Congress would ever do such a thing. The danger was on the side of the States, and precisely in the line of debtors' confiscating legislation such as the Chicago revolutionists have in mind. Against that danger the Constitution erected an insurmountable barrier. As Judge Story says: "The great object of the framers of the Constitution undoubtedly was to secure the inviolability of contracts." Could they have contemplated for a moment that Congress would commit a monstrous injustice which they effectually debarred the States from doing? However that may be, this new revolutionary attack on the right of private contract in kinds of money, carries with it a clear threat to private contracts of all kinds, and proposes to put all property at the mercy of the caprice or passion of legislators.

The chief Altgeld plank is the one denouncing the "interference by federal authorities in local affairs." We cannot follow the twists and windings of this deliverance, but everybody knows what it means. It is a surrender to rioters. It is a promise to them that the strong arm of the central Government shall not again be stretched out against them as it was in 1894 in Illinois. It implies that if such a crisis shall again occur, with an anarchist Governor in control of the local authorities, no step shall be taken to protect, from the fury of the mob, life or property or laborers in their right to work. Such action by the federal authorities the platform is pleased to declare "a violation of the Constitution of the United States," despite the fact that the whole case, in all its bearings, was elaborately argued before the Supreme Court, which decided that there had been no violation of the Constitution whatever. This lends the needed air of burlesque to the preliminary protest of the platform that it is devoted to the "faithful observance of constitutional limitations."

The civil-service plank, besides threatening the stability of the courts, undoubtedly proposes to undo all that has been done in rescuing the public service from the spoils system. Nothing else can be intended by affirming opposition to "life tenure," and favoring "fixed terms of office, and such an administration of the civil-service laws as will afford equal opportunities to all citizens of ascertained fitness." Thus we have a complete and harmonious scheme of revolution, all the way from the destruction of private property up to the debauching of the public service. The platform is truly all of a piece in its innovating planks. Repudiation goes well with attacks on the courts and contracts, advocacy of riots, and the reënthronement of the spoils system. Free silver is alone enough to call for the defeat of the Chicago ticket and platform; with lawlessness, anarchy, and the mob in office added, its defeat becomes the paramount duty of every citizen who wishes life and property still to be secure in this country.

ENGLAND AND THE GOLD STANDARD.

THE opinion undoubtedly prevails, among the more ardent advocates of the silver standard, that Great Britain is somehow greatly interested in having this country, if not all others, adopt and adhere to gold as the measure of values. Perhaps this opinion is not very clearly thought out, and some of those who profess it would say that it is the British Government that feels this interest, while others would attribute it only to a combination of great bankers. All would of course acquit the common people of England of the charge. It may seem incredible to those outside of the exciting influence of the silver propaganda that any one should really think that a number of wealthy bankers had entered into a conspiracy to lend money with the purpose of forcing general prices down so that their debtors might be ruined and unable to pay them back. This belief, however, is openly professed by many, and sincerely held by not a few.

It is undoubtedly true that Englishmen who have lent money in this country, expecting to be repaid in money of the same value, object to the adoption of the silver standard. But the number of our own citizens who have so lent money is immeasurably greater than the number of Englishmen, and the sums that they have lent are incomparably larger. Were it not for the existence of this class, the Englishmen would not have lent much of their money here in the first place, and, as compared with the influence of this class, the influence of Englishmen on our policy is inappreciable. Doubtless English investors would have the laws in this country protect their investments, but they elect no representatives to Congress, and if it be seriously believed that Congressmen have been bribed to maintain the gold standard, it is obviously proba-

ble that by far the greater part of the money employed must have been furnished by those most interested, the American investors.

Looking to the future, the advocates of the silver standard are committed to the view that Englishmen will henceforth not lend their money in this country. On the supposition that they lend by the gold standard, and wish to be repaid by the same standard, it may be granted that Englishmen who have money to lend would be glad to be assured that if they lent it here they would get it back again. From a material point of view, this country offers incomparable opportunities for the investment of capital. But material conditions are not the only ones that appeal to investors: the honesty of borrowers and the orderly administration of just laws are the first consideration. The policy of our silver advocates is not regarded as honest by English investors, nor do they expect from the silver party a satisfactory administration of justice. We may admit, therefore, that English investors would be glad to see what they regard as integrity manifested by our people; but it is absurd to suppose that any Englishmen are actively engaged in creating a high sense of honor among American voters. They would be glad to have it exist, and they might promote its existence if they could, but they are quite helpless in the matter. They can simply look on and decide that if what they regard as a dishonest policy prevails here they will invest their money elsewhere. They will forego a profit possible under favorable conditions because those conditions do not exist. They may thus be compelled to invest elsewhere, and in that way lose some profit that they might have obtained here under different circumstances. On the other hand, this country will lose the profit that might have been obtained from the use of cheap foreign capital. Opinions may differ as to the amount of this loss, but it is certainly reasonable to suppose that we shall lose as much as the Englishmen. The maintenance of the gold standard is therefore quite as much for the interest of the American borrowers as for that of the English lender. Borrowers here will either have to get along without borrowing, or will have to content themselves with borrowing less money and paying higher rates of interest for it.

What is true of the English investor is true to a less extent of the English merchant. Undoubtedly we shall continue to trade with foreign countries if we adopt the silver standard. English merchants will continue to sell us their wares, and we shall continue to sell them our products. But the business will continue to be done on a gold basis, just as it was under the régime of irredeemable paper. The English merchant will get the pay for his goods in gold, or in such quantity of our silver or paper money as he can sell for a satisfactory equivalent in gold, just as he did during the civil war. He will pay for American products in gold, or in its equivalent in our currency. On the whole, it does not appear that the interests of English traders are very much concerned in the matter. They will practically get their pay in gold just as they have done, and pay for what they buy in gold just as they have done.

If we turn to the interests of the British nation, as represented by the British Government, it does not appear that they will be particularly promoted by our maintaining the gold standard. On the other hand, they would be in some important respects promoted by our adopting the silver standard. By so doing we should put ourselves at some disadvantage in competing for the world's commerce, in which our great rival is England. But, disregarding this, we must remember that the welfare of her Indian empire is a matter of the last importance to England. If we were to adopt the free coinage of silver, it would undoubtedly result in some advance of the price of that metal. The Indian Government would thus be benefited by our policy. They would sell their silver in this market instead of in London, and their profits might be in the first instance enormous. They might conceivably be able to "unload" on us to such an extent as to be able to adopt the gold standard. It may be added, parenthetically, that several other governments have large accumulations of silver which they would gladly dispose of to such an accommodating purchaser.

There is a capital story, which is believed to have a basis of fact, to the effect that a Dublin mob once burned all the notes of a detested English banker that they could get hold of. The amount of such notes in the possession of an Irish mob was not perhaps very large; but if we were to adopt the silver standard, we should be following the Irish precedent on a colossal scale. There is a certain irony in the spectacle of the astute Yankees contemplating such a measure of hostility towards their old enemies, the British, and campaign orators on the sound-money side may do well to make this appeal to the sense of humor which must still exist in the mental constitution of the most ardent believer in silver coinage. No one can say positively that the loss to England from our adoption of the silver standard might not be greater in various ways than her gain would be from the extrication of the Indian empire from its monetary embarrassment. But the latter gain would be a clear and palpable one, and it is far from improbable that the members of "the conspiracy of European kings, led by Great Britain," which Senator Daniel told his hearers about, are secretly chuckling at the prospect of relieving themselves of the incubus of huge masses of useless bullion at the expense of the common people of the United States. We fear that they are not above applying the proverb, "Fools are made for wise men to make profit out of" —a proverb not without ethical standing when the fools are dishonest fools and are trying to cheat the wise men.

THE ARBITRATION CORRESPONDENCE

A CYNICAL old diplomat said lately, apropos of the talk about the Triple Alliance, that an international alliance was like a woman's virtue—the less discussed the better for it. Whether true or not in that application, this cannot be said of projects for international arbitration. They gain by every debate. Being in their essence an appeal to reason and morality, every interchange of opinion, every ray of light struck out in discussion, must show their desirability and contribute to their furtherance. If anybody doubts this, the correspondence between Lord Salisbury and Secretary Olney, just published, should be enough to convince him.

The correspondence is substantially a report of progress. No definite agreement had been reached at the last date given, but the exchange of notes and comparison of views really show a marked gain over the condition of affairs last December. A conciliatory tone and a willingness to make concessions characterize the letters of both Premier and Secretary. Each retreats perceptibly from the extreme position of last July and December. Lord Salisbury thinks much better of arbitration than he did then, is frankly mindful of the pressure of public opinion in Great Britain making that way, and is now ready and even anxious for a general treaty of arbitration between England and the United States, and specifically for a reference of the Venezuela dispute to arbitration. Mr. Olney, on his part, steps gracefully off his high horse of December 17 last. Then he affirmed that there was but one "course to be pursued"—namely, to draw "the true divisional line" ourselves, and "resist, by every means in our power," any attempt of Great Britain to ignore that line. Now he cheerfully admits that "a genuine arbitration, issuing in an award and finally disposing of the controversy, would be entirely consistent with that position [*i. e.*, the war message] and will be cordially welcomed by this Government."

In general, we are bound to say, Mr. Olney appears to great advantage in this correspondence. He keeps his eye more steadily on the point at issue than Lord Salisbury, and argues the question of method and detail with greater keenness. It seems hard for Salisbury to forget the *gaudium certaminis*. Arbitration is a fine subject for prolonged and leisurely discussion. All sorts of abstract and far-away objections occur to him, and these he delights to present and ask how his opponent is going to answer them. He writes about a treaty with the United States, but his eye is all the while wan-

dering to France and Germany and China, and he keeps asking himself how on earth such an arrangement could be made to work with those countries. As Mr. Bryce has pointed out in his English interview on the subject, the remote and speculative difficulties of arbitration have too much weight in Lord Salisbury's mind. Mr. Olney, on the other hand, is direct and practical. What have European alliances and enmities to do, he asks, with a treaty between our two countries? As for possible and distant embarrassments of arbitration, why should practical statesmen go on shying at them when there are unquestioned advantages, immediate and great, to be reaped by coming to speedy agreement?

Not only in this swifter coming to the real point and impatience with mere refinements does Mr. Olney show himself the warmer champion of arbitration, but also, we think it evident, in the discussion of the machinery of arbitration. Salisbury's tentative proposals for a general treaty provide for the appointment of permanent arbitrators, and an umpire to settle points as to which they may be equally divided, and also make a classification of controversies into arbitrable and non-arbitrable. In the former class he puts, it must be confessed, only the minor causes of international friction—complaints against officials; pecuniary claims and indemnities less than $500,000; questions of diplomatic privilege; rights of fishery, access, etc. We think Mr. Olney justified in replying that any of these questions could easily be settled by existing diplomatic methods, and that it is inconceivable that any of them could lead to war. Questions relating to territory, continues Lord Salisbury, sovereignty, jurisdiction, or claims amounting to more than $500,000, may indeed be arbitrated, but either power may, within three months, appeal from an adverse decision to a tribunal composed of six Supreme Court judges, three from either country; and unless they confirm the award by a vote of five to one it shall not stand. Moreover, the right is reserved, by a special article, of refusal by either power to submit to arbitration any difference whatever that, in its judgment, "materially affects its honor or the integrity of its territory." Secretary Olney's criticism of this proposed scheme is cogent and destructive. Who is to say what difference may be judged to affect the "national honor"? Under that clause any and every arbitration could be refused. Then the provision of a tribunal of appeal would both needlessly prolong the process and render its first stages ridiculous. With the award appealable in any event, "the original tribunal might as well be dispensed with, since each party will be sure to make its real contest before the appellate tribunal alone."

Lord Salisbury fears that the nation would not submit to an adverse decision by a single vote, and that necessarily a foreigner's. But Mr. Olney maintains that if an award and settlement are to be reached at all, they must come in some such way, whereas, by the scheme proposed, it would be almost certain that no award at all could stand before the appellate tribunal. One judge out of three might vote against the contention of his own country, but hardly two, as would be necessary. What Secretary Olney argues for is a tribunal that will make decisions, not go through merely "an uncommonly ceremonious and elaborate investigation"; an award that will be final; and a submission of all controversies except such as may, by solemn vote of Parliament or Congress, be declared in advance of a nature not to be arbitrated.

Lord Salisbury's specific propositions for the arbitration of the Venezuela dispute mark a great advance over his position of last November. He suggests a commission of two English and two American subjects, to examine and report on the historical facts; their report, in case of failure of the governments of Great Britain and Venezuela to act upon it, to be referred to a new tribunal of three who shall draw the boundary line, their decision being binding, "provided always," and here comes in the mischievous qualification, that "such line shall not include as territory of Venezuela any territory which was *bona fide* occupied by subjects of Great Britain on the 1st of January, 1887." This is practically to withhold from arbitration a good part of the whole controversy. Mr. Olney objects that the commission of four would be very likely to divide two and two, and so run into a deadlock at the very beginning. He also objects to the reservation of the territory occupied *bona fide*. Who is to determine the *bona fides?* Why not refer that question to the commission along with the other facts? Why not, in short, refer the whole case to arbitration, and effectually protect the settlers by a specific clause? Mr. Olney offers the following, which really seems all that would be required:

> "Provided, however, that, in fixing such line, if territory of one party be found in the occupation of the subjects or citizens of the other party, such weight and effect shall be given to such occupation as reason, justice, the rules of international law, and the equities of the particular case may appear to require."

The last letter published was of date June 22, and we are glad to credit the report that since then negotiations have proceeded much more rapidly, and that the actual formulation of a treaty is now proceeding. With public opinion in both countries ripe and urgent for it, it will be a disgrace to the public men in charge of the affair if they do not improve the situation to make this great and beneficent experiment in the interest of international peace.

THE MACEDONIAN QUESTION.

The Macedonian central committee of Sofia issued early in June a manifesto to the various local committees. It stated that "reform by peaceful means is no longer to be reckoned on, and that the committee will concentrate all their energies to obtain real political autonomy." In other words, the Macedonian patriots proposed to recommence the guerilla warfare of last summer on a more extensive scale, and, in view of the Cretan insurrection, with better prospects of success. An emphatic and significant answer to this document came speedily, not from the Sultan, but from the Emperor Francis Joseph. Through his foreign minister he said that Austria was "firmly determined" to maintain the integrity of the Turkish empire in Europe, and bade the Macedonians be content for the present with the reforms which the Sultan could be prevailed upon to grant. The revolutionists, in obedience to this mandate, have remained quiet up to this time; but the slumbering fire to which Count Goluchowski referred in his speech, is not extinguished, but may at any moment burst into a blaze.

It would almost seem as if an inexorable law governed the dismemberment of the Turkish empire; that there are stages through which each of the subject races must pass before they can be freed from the intolerable yoke. To the long period of passive submission must succeed, first, the uneasiness arising from the desire for liberty—fostered both from within and from without—then weak resistances to tyranny, abortive insurrections, followed by savage repressions, massacres arousing the horror of Christendom, and, finally, deliverance. At least this has been the experience of the freed Balkan States, and Macedonia appears to be passing from the five-century-long stage of apathetic bondage into that of restlessness, insurrection, and its repression. Time alone will show whether the furnace of affliction through which Bulgaria passed and Armenia is now passing, lies between the wretched Macedonians and their deliverance.

Terrible though this situation is, and repulsive to the civilized world, it must be admitted that the action of Austria is reasonable. The solution of the Macedonian question is involved in more and greater difficulties than that of Armenia. The Turkish provinces which include the ancient Macedonia—now, like Armenia, a mere historical expression—are inhabited by a "jumble of fragmentary nationalities," divided by race, language, religion, and political affinities. There are some three millions of Slavs, Greeks, Turks, Rumans, Jews, and gypsies, two-thirds at least being Slavs. It was this fact which led Russia, in the treaty of San Stefano, to include this whole region in the new principality of Bulgaria—an arrangement successfully resisted at Berlin by England in the interests of Turkey.

These Slavs, however, are more hopelessly divided among themselves than are even the Armenians, Kurds, and Turks of

Asia Minor. Some are Bulgarian, some Servian, some Greek, many are renegade Mohammedans; and, to the non-Mohammedans, freedom from the Turk is worthless unless it brings union with Bulgaria, Servia, or Greece. It has been the shortsighted and selfish policy of these three states, intent more upon their own aggrandizement than upon the deliverance of their countrymen, to foster and deepen these divisions. Singularly enough, they have found schools to be the most effective means for propagandism. This is due, no doubt, to the important part in the Bulgarians' struggle for freedom which their desire for education played. This desire, amounting to enthusiasm, was awakened mainly by the labors of the American missionaries, and was not confined to the population living north of the Balkans. Mr. Tozer, travelling in the western highlands of Macedonia in 1861, found in a village a school of 200 Bulgarian children. "Very clean and orderly they looked," he writes, "as they sat at their desks, very much in the style of an English school. The master was a Bulgarian, and the children are taught to read and write both Greek and Bulgarian." This school was only one among a number which had been established in that region. Whether or not the work has been carried on there since then without intermission, we have no means of knowing, but in 1891 the Bulgarian National Assembly voted three million francs for the support of primary schools in Macedonia. At present, under the changed policy of the Bulgarian Government, this work is under the charge of the Exarchate, and it is estimated that from one to two million francs annually are voluntarily contributed by the Bulgarian peasants for the education of the children of their Macedonian brethren.

The Greeks were in the field as early as, if not before, the Bulgarians, and so successful has been their propagandism that there are extensive regions where the inhabitants, Slavs by race, have become completely Hellenized. Servia has been equally active and successful. Even Rumania, with what object in view it is difficult to see, takes a part in the work. The Macedonian Society of Bucharest, it is said, spends yearly some hundreds of thousands of francs in providing the scattered communities of Macedonian Rumans with schools.

Whatever these schools may have been in the past, they are now mere instruments for bringing the inhabitants under the political and religious influence of one of the three states, for Rumania can hardly expect to share in the ultimate division of the Turkish Empire. The Servians, especially, are accused of bribing parents to send their children to schools taught by Servians, but the accusation would probably hold true of all alike. This propagandism has not been confined to the young, but large numbers of publications advocating the historical and other claims of the different States have been distributed among the people. Consequently, under these varied influences the Macedonian Slavs have been brought into a chaotic condition. A Bulgarian community, for instance, is persuaded to declare itself Servian. This means not simply a change of political affinities, but a transfer of ecclesiastical relations—the renunciation of the national Bulgarian church with its ritual in the native tongue, the departure of the Bulgarian pope, and submission to the Patriarch, the use of the Greek language in the church services, and the ministration of a Greek pope. So there may be in the same district four contiguous Slav villages, three being Bulgarian, Servian, and Greek in their politics and religion, the fourth made up of renegade Mohammedans content with the rule of the Turk. He, meanwhile, looks on with indifference, if not with approval, knowing that the deeper the divisions between his subjects, the easier it is to hold them in subjection.

Under these circumstances it is evident that autonomy is impossible, for which of the three factions—in reality there are four, the Bulgarian revolutionists being divided into Nationalists and Russophiles—would yield the supremacy? Austria, too, though the Emperor ostentatiously disclaims any desire for an increase of territory, has long been credited with the design of taking Salonika—a design absolutely irreconcilable with the ambitious claims of Servia. On the departure of the Turk, then, an internecine war seems inevitable, in which the Mohammedan Slavs, judging from last summer's experiences, would be exterminated, unless Austria, in obedience to the mandate of a compassionate Europe, should occupy the Macedonian provinces, and, as in Bosnia-Herzegovina, bring order out of chaos, and give prosperity and happiness to a people still apathetic in their indescribable misery.

Correspondence.

THE COMING COTTON CROP.

To the Editor of The Nation:

Sir: While the remainder of the country is bitterly growling because of hard times, there is at least one section where the people are more prosperous than they have been in a long time. That section is the cotton-growing South. The money-bringing crop there is cotton, and a method of growing it has been generally adopted that enormously decreases the expense, and makes it a profitable crop at almost any price. The principal element in "raising" cotton has been food for both negro and mule. Instead of being purchased from the West, it has been grown at home for little or nothing. This is the main reason for the very low current price of cereals and provisions. Instead of being an enormous customer of the West, the South now buys very meagrely.

The coming cotton crop promises to bring real "boom" times to the South. While a trifle less in acreage than the banner crop of two years ago, it is still very large—not, however, larger than the world can consume of American cotton. The season has been extremely propitious and has advanced the yield in time at least three weeks. If cotton brings only five cents per pound as did the crop of 1894–95 (a price then below the cost of production), the profits will be good; general business will be magnificent. The price cotton will realize, however, promises much larger, as the conditions now are very different from those of two years ago. Settled opinion is, that the size of the present crop and the banner crop will be about the same—in the neighborhood of ten million bales. Then there was a large surplus of cotton on hand at the beginning of the crop year; now there will be none. The trade of the world is much better now than then. English and Continental spinners are doing a large business. This year the planter does not have to pile his cotton all at once to market to liquidate his indebtedness, but can sell it evenly throughout the year as the price suits him—a thing in itself that will help maintain prices. It now looks as if the price would be about six cents, which will bring $300,000,000 for a crop grown with incredible cheapness.

In reading the above, the question that will occur to the Eastern mind is, "Well, then, how is it that the Southern farmer is so rampant for free silver?" The Southern farmer is attending to his crop and worrying himself little about politics. The people who are at present doing most of the howling "for the cause of silver" are like those at the Chicago Convention, viz., country editors, country lawyers, politicians who have a job and politicians who want a job. W. Collier Estes.

Memphis, July 18, 1896.

"OXBOW" AND "BOW."

To the Editor of The Nation:

Sir: The term *oxbow* seems to have acquired in New England these two meanings: (1) the bend or reach of a river, and (2) the land enclosed, or partially enclosed, within such bend. The former meaning was first recognized by an English work—Admiral W. H. Smyth's 'Sailor's Word-Book' (1867)—and has thence found its way into several recent dictionaries, while the second meaning has thus far escaped the attention of lexicographers, and even Prof. J. D. Whitney has failed to include it in the long list of topographical terms considered in his 'Names and Places' (1888).

The oxbows of the Connecticut River are well known, the Great Oxbow at Newburg, Vt., and the Little Oxbow at Haverhill, N. H., having long been famous; and it is in that region that the term appears to have arisen. These oxbows had, before the coming of the whites, been occupied by the Indians; for in Capt. P. Powers's Journal, which, written in 1754, is the earliest account we have of the Coos region, there are allusions to "the great turn of clear interval." The term *oxbow* must soon have come into use, for though Newburg and Haverhill were not settled until the seventh decade of the eighteenth century, it is found as early as 1772.

It will be remembered that Dr. Holmes laid the scene of his New England story, 'The Guardian Angel,' at "Oxbow Village," but it may not be generally known that there has long been in New York State a village of precisely

this name, and that villages similarly designated are now found in Arizona, Illinois, Michigan, Pennsylvania, and West Virginia. This fact indicates that the term is now somewhat widely diffused; but the examples before the writer are almost wholly from New England writings.

The word *bow* has also been employed in American writings as precisely synonymous in meaning with *oxbow*, as defined above; but neither of these meanings has yet been recognized by any dictionary.

"At Haverhill is a farm of about 600 acres of excellent land, about 150 of which are under good improvements—all within two bows of the river [Connecticut], which is a sufficient outside fence; and . . . has on it a large and well finished Barn on one bow, and also a corn barn on the other bow." 1768, E. Cleaveland, in F. Chase's *History of Dartmouth College* (1891), i., 105.

"The Petition of Thomas Johnson of Newburg . . . humbly Sheweth that by Charter, there is but one Ferry, Across Connecticut River in Haverhill in the County of Rockingham, by Charter allowed to be kept, which by said Charter ought to be kept within one mile of the Point of the *little Ox Bow* (so call'd) as said River runs." 1772, *New Hampshire Town Papers* (1883), xii., 177.

"Newburg court-house stands on the high lands back from the river, and commands a fine view of what is called the great *Ox Bow*, which is formed by a curious bend in the river. It is one of the most beautiful and fertile meadows in New England. The circumference of this Bow is about 4½ miles; its greatest depth is seven-eighths of a mile, containing about 450 acres." 1793, J. Morse, *Universal Gazetteer*, i., 326.

"In this town [Newburg] are those extensive intervales known by the name of the great *Ox-Bow*, which form the river assumes in its course at this place." 1797, J. A. Graham, *Present State of Vermont*, 148.

"Antwerp . . . was first settled about 1807 by people from the Eastern States. . . . The post-office in this town is kept at the great-bend of Indian river—and, with Indian allusion, named *Oxbow P. O.*" 1813, H. G. Spafford, *Gazetteer of New York*, 125.

"There are three peninsulas at Lancaster, of the same beautiful form with the Oxbow at Newburg; and several others in Lunenburgh, and Guildhall." 1821, T. Dwight, *Travels*, ii., 141.

"Having reached a curve [in the Aroostook River] called the Oxbow, we found that the Indians had there held an encampment." 1838, C. T. Jackson, *Second Report on the Geology of the Public Lands of Mass. and Maine*, 31.

"Before we reach the mouth, the river [Allagash] makes a large bend or 'ox-bow,' after passing which it expands into a large bay, at its confluence with the Walloostook."—1838, J. T. Hodge, in *do.*, 59.

"The Withers Homestead . . . was built on the east bank of the river, a little above the curve which gave the name to Oxbow Village."—1867, O. W. Holmes, *Guardian Angel* (1891), 21.

"*Cohos* it is said means *crooked*, and was borrowed from the Cohasaukes, a part of the St. Francis tribe, *uck* or *auke* meaning *river or place*, and was applied to the territory of Haverhill, on account of the crooked course of the river and the consequent large bends of the land, the immense bows."—1888, J. Q. Bittinger, *History of Haverhill, N. H.*, 363.

ALBERT MATTHEWS.

BOSTON, July 14, 1896.

Notes.

A SINGULAR value will attach to the large-paper issue of a new Riverside Edition of Mrs. Stowe's Works, in that each set will contain her firm autograph, written but a few months before her death. The edition will consist of sixteen volumes, of which the first will contain a biographical sketch, and all will be edited and (where necessary) annotated.

The first part of a life of Fridtjof Nansen has appeared in Norway, Sweden, and Russia. The authors are W. C. Brögger and Nordahl Rolfsen, and in addition to the biography proper there will be an introductory poem by Björnstjerne Björnsen, and articles by Prof. Retzius, Baron von Toll, and others. Among the illustrations will be several portraits of Nansen never before published.

On the 15th of June, Povl Frederik Barfod, one of the last of the older school of Danish authors, died at Copenhagen. Barfod was born at Lyngby, April 7, 1811. During the years immediately preceding and following the granting of the Constitution of 1848 he took an active part in politics, both as speaker and writer, but in 1869 he retired from public life. His best known work is 'Tales from the History of the Fatherland' (1853). The last years of his life were devoted to the writing of his memoirs, which will shortly be published.

It will be remembered that some months ago M. Hector Malot announced his retirement from the field of authorship. He preferred wisely to lay down his pen before his hand had lost its vigor through age. He had produced, too, so much solid and excellent work that he was probably not mistaken in thinking that it was beyond reasonable hope that he should do anything in the future better than that which he had already done, and that any addition to the mere bulk of his work could bring no addition to his fame. It appears, however, that it was only the pen of the novel-writer that he laid down. We shall have no more stories from M. Hector Malot, but it is announced that he will publish in the course of a few months a brief literary autobiography, under the title of 'Le Roman de Mes Romans,' in which he will tell us how he has made his books and why.

A happy epoch in the Napoleonic revival seems certainly to have been reached when obituary notices of it are announced and its funeral sermon is preparing. Something very like this, we take it, is impending in the new volume of M. Geoffroy de Grandmaison, 'Napoléon et ses récents historiens,' which is said to be a group of studies on the latest publications relative to the First Empire, undertaken from the strictest point of view of a Christian moralist, "éclairé du flambeau de la foi."

Mr. Gladstone's 'Studies Subsidiary to the Works of Bishop Butler' (London: Henry Frowde; New York: Macmillan) comprises little that has not already appeared in various periodicals. That it throws light upon Butler cannot be denied, but we suspect that its chief value for the historian of thought will lie in the light it casts upon Mr. Gladstone, on his theological side. Those who purchased the fine edition of the 'Analogy' and the 'Sermons' of Mr. Gladstone's editing, will naturally desire this companion volume.

It would be easy to dilate upon the posthumous volume of the lectures of Alfred Edward Brehm, 'From North Pole to Equator: Studies of Wild Life and Scenes in Many Lands' (London: Blackie & Son; New York: Charles Scribner's Sons). The translation, by Margaret R. Thomson, will help to give the naturalist traveller something of the reputation among English-speaking peoples which he has long deservedly enjoyed in Germany. The author of 'Thierleben' here relates his authentic observations not only of the brute creation, but of the various semi-civilized or barbarous and savage peoples whom he visited, and his narrative has a charm which is irresistible for young or old. Few works of its kind so attractive and so instructive for youth could be named. Adult readers will be pleased to meet here, on p. 300, with the story of the heroic baboon of which Darwin made a classic use in his 'Descent of Man,' and it is well known how much reliance he placed on Brehm's statements generally. A sketch of the author is prefixed, and there are some desirable notes by J. Arthur Thomson. The book is handsomely printed and bound, with numerous illustrations.

Thomas Sedgwick Steele's 'Voyage to Viking Land' (Boston: Estes & Lauriat) is an itinerary of a voyage along the coast of Norway from Hardanger Fiörd northward to Hammerfest and the region of the midnight sun, returning by way of Aalesund and Bergen. It is profusely illustrated with excellent "process" pictures from photographs taken by the author, mostly from the deck of the steamer en route, and has also a very clear, though small, outline map of Norway. For a traveller going over the same route, as hundreds of tourists do every summer, the book might serve fairly well as a supplement to Murray or Baedeker. It can hardly be called literature, nor does it contribute anything essential to the common stock of knowledge in regard to the region visited. The only new thing we have found in it is the evidence that the dealers in "curios" sell as "souvenirs of the whale," under the name of "whale's eyes," the common parasitic barnacles, *coronula diadema*, which are alleged to be the "bony eye-sockets" of this monster of the sea (p. 88). The excellence and number of the illustrations redeem the book from the vacuity of its text, and may doubtless serve to convey to the uninitiated some idea of the beauties of Norwegian scenery and the characteristics of its towns and people.

The results of Lieutenant Ryder's expedition to the east coast of Greenland in 1891-92 have recently appeared in the valuable series of "Communications about Greenland," published by a Danish commission having charge of the geographical and geological researches in that continent. This latest addition, which forms the seventeenth, eighteenth, and nineteenth parts, contains more than eleven hundred pages, not the least valuable feature being a French résumé.

The visitor to the site of ancient Eleusis encounters a somewhat perplexing chaos of ruins from which his baffled eye turns willingly to the harmonious beauties of Salamis and the sea. The little guide, 'Eleusis: ses mystères, ses ruines et son musée,' which is just issued by the director of the excavations, Demetrios Philios (Athens: Anestis Constantinides), removes these perplexities by a luminous and accurate plan of the sacred enclosure, which shows the latest discoveries, and gives many details not found in Baedeker. The period of each structure is exhibited at a glance by different colors. The sketch of the history of Eleusis and of the mysteries is drawn by an expert from the best authorities, and is told with a neatness and grace which

one does not expect in guide-books. The intelligent tourist will find an admirable cicerone in this brief pamphlet of eighty pages.

A new volume by "Th. Bentzon" (since her visit to this country, three years ago, well known to American readers by her real name, Mme. Blanc) takes its title, 'Une Double Épreuve' (Paris: Calmann Lévy), from the first of four short stories which, together with some reminiscences of a journey up the lower Mississippi, make up the volume. The first two stories deal with the subject of which French novelists seem never to grow tired; in the second, 'Le Taureau,' the brutal traits in the peasant's nature are brought out with an insensibility resembling Maupassant's, though evidently less spontaneous. Each of the four stories contains characters of distinctive interest.

Jacques Naurouze's 'À travers la Tourmente' (Paris: Colin & Cie.) is almost a strong work, but is spoiled by a good deal of needless childishness in incidents, conversations, and style. The fact that it is meant for young people's reading accounts for the author's ever visible desire to be absolutely proper, but does not justify the feebleness of the tale and its want of texture. Except towards the close, where a very interesting young lady is in danger and the author becomes alive to the possibilities of the situation, the book is very namby-pamby, and, though it treats of the Revolution and the Terror, does not hold the attention steadily.

Charles de Rouvre's 'À Deux' (Paris: Colin et Cie.) is a realistic novel which is not obscene, in which there is a positively sympathetic character, and in which even the contemptible hero remains human and intelligible. It is a study of the class of employees in one of the great railroad offices in Paris, and a close, well wrought-out piece of work that grows on the reader. It is sad, of course, but not repulsive in language or episodes; a good, square piece of realistic observation.

In a brochure of 86 pages entitled 'Der Judenstaat: Versuch einer modernen Lösung der Judenfrage' (Vienna: Breitenstein), Dr. Theodor Herzl, a Hebrew jurist, earnestly proposes to check anti-Semitism and to solve the Jewish question by collecting the descendants of the scattered tribes and reconstituting the kingdom of Israel. Territory for the establishment of this government is to be acquired in Palestine or in Argentina by agreeing to regulate the finances of those countries and place them on a permanently sound basis. This work is to be accomplished by a "Jewish Chartered Company," organized under the protection of England, with its headquarters in London. The author thinks that it will be as easy to take along all the achievements of European comfort and culture to Palestine or Argentina (his preference is evidently for the latter) as it is to have "English hotels in Egypt, Viennese cafés in South Africa, and Bavarian beer in Paris." Dr. Herzl enters fully into the details of his Utopian scheme, which the most wealthy and influential Jews of Christendom would hardly endorse. He even describes the national banner of the future state as "white, with seven golden stars signifying hours of labor."

On April 21 the German Imperial Diet passed a resolution requesting the German confederated governments to use every means in their power for the suppression of the barbarous custom of duelling now so alarmingly prevalent in the so-called higher classes, and especially among the officers of the army, and that, too, in direct violation of the laws of the Empire. A queer commentary on this resolution is furnished by a recent incident in the same legislative body. In the course of a debate on June 28, Count Mirbach made derogatory remarks about the absent delegate Bamberger, coupled with allusions to his Jewish descent. The Liberal member, Dr. Barth, replied to this attack upon a colleague behind his back, and characterized such conduct as "not gentlemanlike," whereupon Count Mirbach demanded that this expression be withdrawn or satisfaction be given. Dr. Barth refused to do either. Count Mirbach then mounted the rostrum and denounced Dr. Barth as "no gentleman." This tendency to mingle pistols with politics is the direct result of the encouragement given to duelling by the Emperor's rescript establishing a "court of honor," whose decisions are accepted as superior to statute law.

M. Charles Henry calls attention, in the *Comptes Rendus*, to the fact that the phosphorescent sulphide of zinc, which is now prepared, after his process, on a large scale, ceases to be phosphorescent at a temperature of twenty degrees below zero, but resumes the giving out of its stored-up light when it is again warmed up. He holds out to us, with perfect seriousness, the hope that we shall some time be able to accumulate the light of day in any desirable quantity, and to reproduce it at pleasure at any hour of the night. We may look forward with some hopefulness, therefore, to the time when night shall indeed be robbed of its terrors—at least during the winter months, when the maintaining of low temperatures would be less expensive than in summer. A process that would fill us with a still keener satisfaction at the present moment would be an inverse one, by which the winter cold could be stored up, and set free at pleasure by means of the superabundant light of a summer's day. Whoever should solve this problem would *erst recht*, as the Germans say, be deserving of the thanks of suffering mortals.

The *American Historical Review* (Macmillan) completes its first volume with the current quarterly issue. Mr. Melville M. Bigelow continues his translation of the Bohun wills. Prof. Henry M. Baird recurs to the Huguenot defence of monarchy in a paper concerning Francis Hotman and his 'Franco-Gallia,' of which a synopsis is given. Mr. Charles Francis Adams resumes his military studies of the Revolution in a discussion of the battle of Long Island, which he sets down to Washington's bad generalship as strategy and as action, and to luck in its fortunate issue short of the total capture or destruction of the American army. Prof. Moses Coit Tyler contributes a rapid and effective sketch of President Witherspoon in the Revolution, with some timely excerpts from this statesman's financial deliverances. "No paper of any kind is, properly speaking, money. It ought never to be made a legal tender. It ought not to be forced upon anybody, because it cannot be forced upon everybody." Finally (for the leading articles) Mr. John S. Murdock illumines an obscure corner of the history of Presidential nominating conventions by relating what is known of the conference of Federalists in September, 1812, which put DeWitt Clinton in nomination. The most important inédited original document of this number is the draft of an address of the Continental Congress to the people of the United States, from the pen of James Wilson, reported February 13, 1776, deprecating separation though contemplating it as a possibility. It was (though officially ordered) tabled and never brought up again.

The first number of *Ex Libris* shows that this quarterly is in good hands, and that it may even claim a place among the minor historical magazines. The biographical sketches of General Washington Johnston and of Samuel Chase, accompanying their bookplates and the portrait of the impeached Maryland judge, are notable in themselves. Mr. Henry Blackwell begins a revision of his Check-list of American Bookplates, extending it from 1850 to 1870. The magazine is published by the Ex-Libris Society of Washington, D. C., at 1424 F Street. It is very attractively printed.

The pleasant news comes from India that our countryman Charles Rockwell Lanman, Professor of Sanskrit in Harvard University, has had conferred upon him the distinction of being elected an Honorary Member of the Asiatic Society of Bengal, in Calcutta, in recognition of his distinguished services as a Sanskritist. This mark of recognition is the more to be valued inasmuch as *the* Asiatic Society is the oldest and most famous of all existing Oriental societies, having been founded by Sir William Jones in 1784. The list of honorary membership numbers but thirty names; among them are the names of Max Müller of Oxford and Cowell of Cambridge.

—Heinrich von Treitschke, whose premature death last April removed the youngest of the great men that were associated with the founding of the German Empire, is to receive the honor of a monument at the imperial capital. A call has been issued, asking for subscriptions for this purpose; even the smallest contributions will be welcomed. Appropriately at the head of the list of signers stands Prince Bismarck; among the fifty names or more of Treitschke's friends and associates may be mentioned Dr. Miquel, the Minister of Finance, Profs. Herman Grimm, Adolf Harnack, Schmoller, Vahlen, Wattenbach, Wagner, the present rector of the university, and Ernst von Wildenbruch. These men remember the miseries of particularistic discord when Emperor and Empire were revolutionary conceptions. Remembering this and the fearless, untiring energy of Treitschke then and ever since, they make their appeal to all who have had their faith in national unity strengthened and their nobler impulses quickened by his kindling words. The life-work of this brilliant historian and single-hearted patriot is somewhat remote from the living interests of our own land to-day, but the lofty qualities of mind and heart which enabled him to perform that work have left their impress upon hundreds of young Americans who have listened to his resistless eloquence. Those who gratefully remember him, and doubtless also many of his own countrymen among us, will be glad of this opportunity to do him honor. Subscriptions may be sent to the banking-house of Delbrueck, Leo & Co., Mauerstrasse 61, Berlin W.

—The director of the French School of Archæology at Athens, M. Homolle, has just discovered, lying between the recently excavated ruins of the theatre and a Byzantine supporting-wall, a beautiful bronze statue at first thought to be that of a victor in the Olympian games. Near it were found horses' legs and formless débris, the probable remains of the chariot to which the statue belonged. The cleaning of the base of the monument brought to light an inscription showing that the statue was a votive offering to the divinity,

given by one Polysalos in honor of a victor whose name was indicated only by the ending *-ona*. Its style suggested Hieron of Syracuse, and evidently belonged to the period before Phidias. M. Homolle thinks it probable that Ageladas, the master of Phidias and Polycletes, was the creator of the statue. In a communication to the French Academy he gives a minute description of its present condition. It represents a beardless youth, with straight nose, full half-open and half-smiling lips, and firm chin. The hair is treated boldly, brought down almost to a point on the back of the neck, allowed to fall in fine ringlets on the temples, and suggested by a few delicate lines on the cheeks. A band shaped like a diadem passes over the hair. The neck is round and youthful, and planted firmly upon powerful shoulders. The body is straight and bends slightly backward. A tunic falls in ample folds loosely to the ankles, and is fastened in at the waist with a narrow belt. The arms are held close to the body, the fore-arms bent up to hold the reins. Their fine modelling is not concealed by the short, pleated sleeves of the tunic, which fall only to the elbows. The legs are placed close together, the heels touch. Both hands and feet, without being overdrawn, are strongly and beautifully modelled.

—The statue was cast in four pieces—the two fore-arms; the bust, with both half-sleeves, and the head; the legs and lower part of the trunk beginning at the belt. The artist studied the joining of these pieces with the greatest care, uniting the two chief parts of the cast under the overhanging pleats of the tunic so skilfully that it is almost impossible even for an expert to determine the point where they unite. The arms, also, are joined with equal care where the pleated sleeves stand out a little from them. The crown is now found to be symbolical of a victory won by Hieron in the Pythian (not the Olympian) games, and Hieron is represented wearing the same crown on some old Sicilian coins. This statue throws new light on Greek art, and especially upon early methods of casting bronze. It is the first entire bronze statue excavated in Greece, and the noblest work of art belonging to this period thus far discovered. It measures nearly six feet in height, and, with the exception of the left arm, which is broken, is in an excellent state of preservation. The eyes are especially admired, and give an unusual expression of animation to the face. This statue will remain at Delphi as the nucleus of a museum which the Government intends to establish there, and to make more accessible to the travelling public by improved means of communication.

—Mr. Lawton's 'Art and Humanity in Homer' (Macmillan) is in many respects an alluring little volume, and was intended to invite readers to make themselves more fully acquainted with the 'Iliad' and the 'Odyssey.' It consists of six lectures written for a "University Extension" course, which have appeared in part already in the *Atlantic Monthly*. They are superior specimens of this kind of literature. They are written in an attractive style, and show their author to be a man of refined taste, of general culture, and of sufficient scholarship. They are really, we should think, a serviceable introduction to the beauties of that unknown country which Keats was so charmed to explore under Chapman's guidance. We are surprised to find Mr. Lawton saying, "I firmly believe that the Homeric poems (and many other masterpieces of foreign literature) should be read through and read repeatedly, even by competent linguistic students, *in English translations*." We can see no reason in this unless the translation happens to be a masterpiece in its own language. For readers who are not "competent linguistic students," translations must serve, and Mr. Lawton mingles with his essays some hexameter renderings of his own, urging the theory that the hexameter is the natural unit of measure of Homer's thought. These experiments we do not consider so felicitous as the criticism and the exposition contained in the essays. It is hard—perhaps impossible—to write English hexameters without falling into the prosaic, without dissonances and oddities of expression, without laying stress on pronouns and conjunctions which the English never emphasizes. Such defects of melody and rhythm profoundly misrepresent the sweep and beauty of the original. It is no compensation for this to follow the division and measure of the Homeric line. But Mr. Lawton fails here in good company; and the genuine merits of his essays remain unimpaired.

—Every one who has been to the Champ-de-Mars Salon, within the last few years, cannot have failed to realize the revived interest there is now in wood-engraving, especially in its more original forms. Vallotton, with his delightfully amusing shops and funerals and street scenes, cut on the wood much in the same manner as Dürer's designs were cut by sixteenth-century wood-cutters, probably inaugurated the movement. Lepère did more than any one else to encourage it; and it has increased to such proportions that in Paris alone two papers have just been started as its special organs. *L'Image* is the more sane and genuinely artistic of the two. It was founded, the title-page explains, by the Société Coöpérative des Graveurs sur Bois Français, in order to preserve an art which, because of the mechanical processes, seems in danger of disappearance. Here you have an example of wood-cutting in "La Prière" by Lepère, done with a knife, a fine decorative arrangement of Sisters of Charity, in their winged caps, free from all disfiguring affectations and eccentricities; and here, too, you have the modern engraving, done with a graver, again by Lepère, as well as by Jourdain, Dauvergne, and one or two others: reproductions of drawings in wash, pencil, pen-and-ink—proofs of the resources of the wood in the hands of a skilful engraver. *Le Livre d'Art*, however, finds place only for woodcuts, several of them so incoherent in drawing as to be quite unintelligible, or else so clumsy and pretentious that the chances are they will do much to prejudice people against this primitive method of expression. Indeed, the designs by Jeanniot, an artist who is never altogether uninteresting, no matter in what medium he works, and by Maurice Dumont, alone give artistic interest to the paper. There are few men nowadays who can substitute the knife for the graver without tumbling pell-mell into the pitfall of affected archaism. But we think even their conscious mannerisms more legitimate than the fashion that prevails among a certain group of English artists, who copy the rude line of the wood-cutter in drawings that are to be reproduced by process.

—If there is anything that one might have considered to be safe to preserve its constant form in a world of change, it is the art of walking. But it now appears that human locomotion after the ordinary method is accomplished at great loss on account of the jar communicated to the body by the alternate rise and fall of the centre of gravity. An officer in the French army has trained his soldiers to march after an improved fashion, and so great is the gain that they are able to accomplish fully twice an ordinary day's journey and feel no more than the ordinary amount of fatigue at the end. The new method consists in not fully straightening up the leg at the moment when it is perpendicular to the ground, and in dragging out the leg that remains behind to its full length. This has the effect of making the body proceed more nearly in a straight line parallel with the surface of the earth, instead of undulating up and down; our ordinary procedure is like that of a wheel deprived of its tire and rising on one after another of its spokes, which would plainly be a very wasteful way of putting to use the power of the horse. At the other extreme we have the bicycle, which owes its great velocity to the almost total avoidance of jarring that is secured by the rubber tires. Running is an intermediate form, which, as every one knows, shakes one up far less, in proportion to the force expended, than walking does. The evolutionary reason for this difference is perhaps to be found in the fact that in running the one object to be attained is swiftness, while in walking our early ancestors were unable to bring themselves to the loss of dignity involved in walking with a flexure of the knee.

HADLEY'S ECONOMICS.

Economics: An Account of the Relations between Private Property and Public Welfare. By Arthur Twining Hadley. New York: G. P. Putnam's Sons. 1896.

No higher compliment can be paid this work than to say that it is hard to determine whether the epithet judicial or judicious would more appropriately characterize it. To maintain that its conclusions will command universal, or even general, assent, would be absurd; but it is impossible to deny that the conclusions follow logically from the premises, and that the premises are established after a careful, unprejudiced, and, as a rule, exhaustive examination of the facts of economic history and social life, as well as of the principal theories and arguments derived from these sources. It is true that in so comprehensive a work, which sums up within 500 pages the economic thought of a generation for which economic questions have had unprecedented interest, many subjects must be disposed of in few words. In such cases it may seem to those unfamiliar with economic literature that the conclusions are too dogmatically expressed; but with few exceptions it will be found that the break in the chain of reasoning is only apparent. As a whole, we do not hesitate to affirm that the results reached by Prof. Hadley will commend themselves to candid thinkers as true. They are the conclusions of common sense, fortified by learning and developed by reason. The author's position, as he says, is that of an arbiter, not that of an advocate; and when he has stated both sides of a disputed question, the reader feels that a final adjudication is little more than the formality of entering judgment.

The new problems of modern business life, according to Prof. Hadley, arise most conspicuously in connection with large investments of capital in factories and railroads. The work of the speculator has far more importance than formerly, and combinations of capital and labor are on such a scale as to re-

quire the modification of economic theories based on free competition. It is a mistake, in Prof. Hadley's view, to separate economic theory and economic practice; and on this account, and because of the novelty of modern business problems, he has abandoned "the time-honored division of the science into the departments of production, distribution, exchange, and consumption." Doubtless there are many advantages in this course, but it undeniably gives the book a rambling effect. We begin with an essay on "public and private wealth"; pass on to the discussion of slavery, poverty and poor-relief, the Malthusian theory, and compulsory insurance, all under the head of "Economic Responsibility"; then take up "Competition" and "Speculation," themes which are followed by the "Investment of Capital" and the "Combination of Capital." Then come chapters on Money, Credit, Profits, Wages, Machinery and Labor, Coöperation, Protective Legislation, and finally Government Revenue. It is not easy to discern the principle either of this selection of topics or of this arrangement. The last three chapters, we venture to think, might have been omitted altogether. That on Government Revenue is inadequate, that on Coöperation contains nothing important, and that on Protective Legislation is made up of very familiar matter. The other chapters are all indispensable, but they seem disconnected. They are interesting, and even profound, economic studies; but a collection of economic studies does not of itself constitute an economic treatise. In making books the rules of mathematics do not apply, and the whole is more than the sum of all its parts.

There is, however, an underlying synthetic principle, not distinctly avowed by the author, but really giving unity to his work. It is suggested by the sub-title, "The Relations between Private Property and Public Welfare." We shall not be far wrong in saying that Prof. Hadley holds property to be only a means to the welfare of society. In so far as rights of property are proved not to conduce to this welfare they are to be condemned and abolished. He does not say that the individual man has no natural rights; but he implies it. "The various institutions under which capital is invested have been sanctioned by society for the sake of their effect on the public well-being; . . . when they stand in the way of progress, society does not hesitate to modify them." It is true that we are assured that there is a distinction between the rights of capital and the more general right of property. The latter right is, comparatively at least, sacred. But this distinction appears rather fanciful; for it would be impracticable to exercise the right of property to any great extent if society refused its sanction to the investment of capital.

The futility of the distinction is in fact exposed by the author when he says: "While it is undoubtedly true that the various rights of the capitalist depend upon the existence of a civilized society which maintains them, it seems equally true that the existence of a civilized society in the stress of the struggle for existence among different members of the human race depends, for the present at any rate, upon maintaining the rights of the capitalist." Can anything more than this be said of rights of property? We incline to the opinion that in this discussion, as well as in some others, Prof. Hadley has occasionally confounded society with Government. To say that society does not hesitate to modify institutions that stand in the way of progress, is a highly ambiguous proposition. If it means that men give up appliances that they find do not answer their purpose, the proposition is true. If it means that by giving up such appliances one community of men may beat another in the struggle for survival, it is true. In either case it applies to rights of property. But, as Prof. Hadley states it, the implication is that Government is able to foresee wherein progress consists, and to modify institutions so as to promote progress. All that can be granted is that Government is able to modify institutions, and that it does so. If its action is in the line of the action of individuals, it may promote progress; otherwise probably not. However this may be, it is evident that Prof. Hadley recognizes the right of the community to change institutions, and, if this be true, rights of property must take their chances with the rest. The community is sovereign, and we can only point out what action on its part is expedient with reference to particular ends, or to some general end.

The general end formally recognized by Prof. Hadley is the "tendency of human evolution." Things are good or bad according as they do or do not conform to this tendency. This formal definition, however, is too indefinite for practical purposes, and we find that "the general welfare" is substituted for it. Thus we come around in effect to Adam Smith's concept of the "wealth of nations" as the standard of economics; this wealth, however, consisting in the enjoyments of the members of the nation rather than in the money value of the means for such enjoyments, or their physical amount. This latter distinction appears to be introduced partly because certain enjoyments, enjoyments too of high value, have a relatively slight physical basis. Æsthetic pleasures may be enjoyed by the poor; there may be plain living with high thinking. But the chief reason for the distinction is to be found in the importance attached by Prof. Hadley to the distinction between capital and income as modes of measuring resources—a distinction which he regards as neglected in current economic discussion. But as the value of capital is certainly measured in the minds of most people by its income-producing power, or "earning capacity," we incline to think that the importance of the distinction is overrated. Of course material things do not constitute wealth unless they are utilized; but as they are not reckoned as wealth unless they are utilized, and as they are perhaps more easily measured than the processes of utilization, they serve well enough as an economic standard. A somewhat similar criticism may be passed on the distinction made between public and private wealth. Public wealth consists of all means of enjoyment; private wealth, or property, consists of rights to part of the public wealth. It is pertinent to ask if enjoyment is not a prerogative of human beings, and only metaphorically of communities. Why may we not say that private wealth consists of means of enjoyment, and that the public wealth is simply the aggregate of these means?

But to return to the fundamental principle of Prof. Hadley's treatise, we find it to be substantially that the community is sovereign, but that to realize its ends it is expedient that the customs and institutions of its members be respected. The whole book, we may say, is an elaborate essay showing that individual action in the main tends to public welfare, and especially that the acquisition and use of property tend in this direction. Of course there are many exceptions to this, and Prof. Hadley is at his best in analyzing the nature, the purposes, and the results of speculation, and the good and bad effects of great combinations of capital. On the whole, he makes out a strong case for what we suppose must be called individualism, but which is more correctly described as industrial freedom. Especially fine are the passages in which he traces the effects of this principle in modern civilization:

"A few centuries ago the principle of individual freedom was not recognized in law or in morals any more than in trade. It was then thought that liberty in trade meant avarice, that liberty in politics meant violence, and that liberty in morals meant blasphemous wickedness. . . . Constitutional liberty in politics, rational altruism in morals, and modern business methods in production and distribution of wealth have been the outcome of the great individualistic movement of the nineteenth century."

We should be glad to dwell on the criticism of the position of the Socialists, which Prof. Hadley says is only another way of looking at things, due to emotional temperament. Holding, as he does, that the individual has no rights as against the majority, he properly maintains that the issue between individualism and socialism is a question of means, not ends. But we must leave this department of the work and glance briefly at the author's treatment of some of the more technical portions of economic doctrine. In the main he leaves the recognized positions undisturbed, after a careful review of the more important assaults on them. The results attained by the "Austrian School" are respectfully considered, but it is not surprising to find them treated as, on the whole, more ingenious than valuable. There is a certain originality in the conception of loss arising in modern times from excessive saving and investment of capital, which is held to tend to result in an "overproduction of machinery," rather than in a fall in the rate of interest. The danger of the modern world is underconsumption, and when this takes place a commercial crisis may follow. But we are not prepared to criticise this theory until we are told whether a general overproduction is meant, or only an excess in certain directions. Nor can we do more than mention the assertion that "the justice of interest is not based primarily on equities between borrower and lender, but on the public advantage of encouraging guaranteed investments." This may be true, but it is stated obscurely, and will perplex many readers.

To economists the most interesting chapters, after that on the function of the speculator, will probably be those on profits and wages. But the number of suggestive points is embarrassing, and, owing to the appearance of Prof. Taussig's elaborate essay on 'Wages and Capital,' it is hardly worth while to comment on Prof. Hadley's necessarily abbreviated statement, further than to say that in the main his conclusions agree with those of Taussig. We must not close our review without calling attention to our author's happy way of compressing an argument into an epigram; as when he speaks of George's argument "that collective property in land is perfectly practicable because so many races have tried it and given it up." Another instance is to be found when the statement, "It is not the wealth that the capitalist consumes which really goes to the laborers, but the wealth that he does not consume," is substituted for that ancient stumbling-block, "A demand for commodities is not a demand for labor." In general, however, Prof. Hadley's style is rather severely plain, nor is it always free from

awkwardness. But the defects of his book are slight in comparison with its merits. It will not only be found invaluable by readers at large, but will also at once command the attention and admiration of economists the world over.

THE OLD SOUTH.

Southern Sidelights: A Picture of Social and Economic Life in the South a Generation before the War. [Library of Economics and Politics, edited by Richard T. Ely, No. 10.] By Edward Ingle. New York: Thomas Y. Crowell & Co. 1896.

THE aim of the author of this volume has been, he says in his introduction, to give a sketch of "social and economic life in the South during the generation before the war." It must be added that the sources drawn from are all Southern, which accounts for the fact that the names of most of the writers familiar to us as observers of the old South are not given: we go for our facts not to Olmsted or to Mrs. Kemble, but to *De Bow's Review*, the *Southern Literary Messenger*, to census reports, and to a number of writers whose fame was and remains local. There are chapters on the traits of the people, on Cotton and Industry in general, on Trade and Commerce, on Education, on Literature, on Slavery, on Plans for Progress, and on the Crisis. Taking it altogether, the picture is not so much of the times immediately before the war as of the period preceding the dissolution of the Whig party, when the Slavery question had not yet become acute in national politics, when parties were still dividing on other questions, when a war between North and South was hardly yet dreamt of, and when there were still in the South many slaveholders who thought slavery a mistake.

Apart from the statistics, of which there are more than enough, the picture is worth drawing because it shows that, to the more enlightened Southern people themselves, their condition really appeared very much what it did to the world outside. Southern witnesses may be found for almost everything said by Northern and foreign critics. Later, when the Southern heart had been fired and war was imminent, everybody who supported the South, or was of it, was bound in honor to maintain that the country was an earthly paradise, and slavery what made it so; but in the earlier period, the tone as to the actual condition of the South was often the reverse of self-laudatory. In 1837 the Rev. E. F. Stanton, speaking to the members of the Literary Institute of Hampden-Sidney College, complains of the "low state of mechanic arts and agriculture among us," and the "prevailing vice of indolence"; another writer insists that the great fault of the Southern people is that they are "too proud to work," and work badly because they are "half ashamed of it"; John Forsythe of Mobile, in *De Bow's Review*, points the contrast between the poor white and the Yankee—the one eager for work, the other content to doze life away, and rousing himself only to find food, drink or fight—in language which, a few years later, would probably have caused its author to be lynched on the spot. In 1852 a Mississippian, after drawing a picture of what thrift might do for the South, sarcastically asks his correspondent: "What did you see in your tour last year? Did you see any little twelve-by-six log cribs covered with four-feet board? Any fodder stacks, with the Mississippi mud? A pasture for calves without grass or water? Sheep with one-half of each without wool? Fences as if the rails had fallen from above and happened to light upon each other? Men riding with rope bridle-reins?" So acutely did a certain class of Southerners feel their backward material condition that they were fond of holding conventions to devise ways and means of bringing the South up to the level of the rest of the world. In 1858 a Virginia newspaper suggests to the delegates to one of these that, on their way to it, they should take note of "a few particulars" as follows:

"They will start in some stage or railroad coach made in the North, an engine of Northern manufacture will take their train or boat along; at every meal they will sit down on Yankee chairs to a Yankee table spread with a Yankee cloth. With a Yankee spoon they will take from Yankee dishes sugar, salt, and coffee which have paid tribute to Yankee trade, and with Yankee knives and forks they will put into their mouths the only thing Southern they will get on their trip. At night they will pull off a pair of Yankee boots with a Yankee boot-jack, and, throwing a lot of Yankee toggery on a Yankee chair, lie down to dream of Southern independence in a Yankee bed, with not even a thread of cotton around them that has not gone through a Yankee loom or come out of a Yankee shop. In the morning they will get up to fix themselves by a 12x14 Yankee looking-glass, with a Yankee brush and comb; after, perhaps, washing off a little of the soil of the South from their faces with water drawn in a Yankee bucket, and put in a Yankee pitcher on a Yankee washstand."

In matters intellectual the old South played no part at all in the world. "How few of our families," cries some one in 1838, "are reading ones in the strict sense of the term! Besides the newspaper, the *Farmer's Register*, the *Sporting Magazine*, and the year's almanac, a few trashy novels constitute, it is feared, the major part of the libraries of our otherwise social, agreeable, and hospitable country-houses." The idea of the old South as the home of culture was really spread by a few families, mainly belonging to two or three of the seaboard States (in the previous century more or less family-governed), who kept in touch with the rest of the world, often educating their children in the North or in Europe, coming up to Newport and Saratoga for the summer, giving their tone to life at Washington, and known in England and to "visiting Englishmen" who came over here. These people, now nearly extinct, had good manners, not only in public, but in private, were hospitable, and had the ease which comes from the consciousness that your breeding is as good as that of anybody; among those of their own class in England they seemed almost English, and even now such representatives of them as are left often bear a strong likeness to the ancestral colonial country-gentleman planter (who was an Englishman), a type unknown in the North. There were not a great many of them, but the mark they made was a striking one. Wherever they went (and they alone of Southerners travelled much) they represented the South. If this is the South, people said, what a charming place the South must be!

This society, however, had no intellectual *cachet*. They did not read more than was necessary to keep up with the conversation of the times; and as for writing, that was not their business. And in the real South there was no reading public to be written for. Of course the suggestion that there was no intellectual life in the South was bitterly resented, especially as Northern critics, with their tiresome iteration, would insist on the fact being connected with slavery. It is amusing now to read Bishop Polk's argument on the subject of the relation between slavery and literature, in which he shows that the Bible itself was produced by a slaveholding people—*ergo*, there was nothing in slavery to hinder the production of literature by the South. The favorite theory to account for the non-appearance of a Southern literature was that there was a literary cabal in the North to prevent the production of Southern books. Griswold and other editors were supposed to be members of it, though it was always rather difficult to make out where the cabal had its headquarters. In fact, Northern publishers published books by Southern writers when they could find any to publish, as a list given by Mr. Ingle proves.

What the author says about slavery only confirms everything said about it already. The old South knew what it was, or rather the educated class to which we have referred did. It was not the wrongs connected with the institution which affected them, for they were in general humane masters themselves, and the inhumanity of others which they did not see or share in they probably regarded as a necessary evil that must be endured. But many of them felt that slavery was an economic blight, a poison which permeated the whole social system, which sucked up its blood, and exhausted the earth from which it got its sustenance. They knew that they must have more territory or perish; they felt that they were hemmed in and at bay. It is easy enough now to see that they were doomed. There were fewer than 400,000 slaveowners in the old South.

Less than fifty years have gone by, and hardly a vestige of the society and civilization described in this book remains. The open, brave, kindly, hospitable, shiftless St. Clare and his country-house, the brutal Legree, pious, martyred old Tom, poor little Eva, and Topsy, the cruel overseers, the bloodhounds, the slave-market, the plantation with its dilapidated slave cabins—the old South, with its provincial grandeur and its economic havoc, is gone. Even the war has gone too, with its fire, famine, and sword. There is a new South, with mines and factories and railroads, and winter resorts, and a new agriculture, and a new labor system, a new society, and even a new literature, and, strange to say, notwithstanding all the destruction and desolation through which it has passed, it is richer and stronger to-day than it was when its misguided leaders attempted their wild scheme of a modern slave dominion founded on the ruins of a free republic.

BERTHELET'S PAPAL CONCLAVES.

La Elezione del Papa: Storia e Documenti. Per Giovanni Berthelet. Rome: Forzani.

THAT so important a subject as the election of the popes should have been almost neglected, shows that the field of history has by no means been worked out. In English there exists nothing satisfactory except Cartwright's little volume, 'On Papal Conclaves,' expanded from an article in the *North British Review*, thirty years ago; and even in Italian Sig. Berthelet is the first who has compiled in chronological order the various laws by which papal elections have been governed. The history of special conclaves has, indeed, been frequently told, for the oath of secrecy which the cardinals and their conclavists swear to observe, has always been taken by

them in a Pickwickian sense. So true is this, that whosoever chooses can follow, for instance, from hour to hour, in De Cesare's voluminous chronicle, the conclave of 1878, which elected Leo XIII. There are set down the witticisms of the cardinals, not less than their graver actions, and such details as that, on the night preceding the final vote, Cardinal Pecci was so disturbed by the snoring of Cardinal Payá y Rico and his attendants that he had his mattresses taken into the corridor and slept on the floor.

Sig. Berthelet, however, confines his attention to the legislative rather than to the gossipy history of conclaves, and herein lies his merit. The student of institutions cannot fail to be interested in the development of the laws by which the oldest institution in the world has passed on, from pope to pope, during thrice six hundred years, the symbol and reality of its headship. In no other case has elective monarchy been able to maintain an unbroken line. The Holy Roman Empire endured, indeed, for a millennium, but during nearly half of that period its continuity depended on the fact that the succession was practically hereditary in the House of Hapsburg. So, likewise, the Dogeship of Venice, the only other elective office which resisted the vicissitudes of many centuries, became, after the locking of the Council in 1297, the appanage of a small oligarchy.

Sig. Berthelet wisely refers very briefly to the election of the first Roman pontiffs, because the record is often obscure, and his purpose is not controversial. That corrupt practices early crept in, however, we can surmise, for in 498 Symmachus promulgated canons to punish any one who, during the lifetime of a pope, openly or secretly intrigued for the election of his successor. In 681 the Eastern Emperor, Constantine Pogonatus, out of reverence for Benedict II., absolved future popes from the obligation of imperial confirmation. But it was not till 1059 that Nicholas II., in creating the College of Cardinals, distinctly granted to them the right of voting for a Pope, and left to the clergy and populace only a perfunctory expression of consent. Nicholas specified further that the Pope should, if possible, be chosen from among the members of the Church at Rome; if none of them were fit, a candidate might be sought outside. It is well to remember, perhaps, that not long before this a corrupt layman, John XIX., had bought his election, and that at least one other layman, Adrian IV., has been Pope. No law against the election of a layman exists to this day; but a custom stronger than law has limited eligibility to ecclesiastics, and for many hundred years past none but cardinals have been elected.

Alexander III. in the Lateran Council (1179) fixed two-thirds of the cardinals present at a conclave as the majority necessary to make valid an election—the number still required. The long contests of the popes with the German kings, and chronic disorders in Italy, called for more strenuous rules. After the death of Clement IV. in 1268 the interregnum dragged on for thirty-three months, till the people of Viterbo grew enraged, and took off the roof of the building where the conclave sat. Even exposure to the elements could not force the stubborn and fractious cardinals to yield; but the Pope whom they finally chose, Gregory X., compiled a constitution to govern future conclaves, and his constitution is now the first to which reference is usually made for authority. He ordered that strict secrecy should be maintained; that, after five days, the cardinals should be put on a diet of bread, wine, and water; that they should receive no emolument till they had finished their work; that, under penalty of committing mortal sin, they should not allow their own or their family's interest, or any bargain, to influence their vote. Several succeeding popes legislated to prescribe what the cardinals should eat during the conclave, and even how they should sleep; but simony and wire-pulling were the two great evils against which, down to the end of the sixteenth century, one decent pontiff after another fulminated. Thus, Julius II. (1505) declared not only that a pope who got his office by simony should be held an heresiarch and anti-pope, and that the cardinals who supported him should forfeit their benefices and cardinalship, but also that all go-betweens and agents should, if clerics, be deprived of their livings and forbidden to bequeath property by will, and, as if guilty of leze majesty, should forfeit their possessions to the Holy See; if laymen, their goods and fiefs should revert to their secular lord. Fifty-three years later Paul IV. felt obliged to launch a similar anathema, holding out promise of pardon, however, to those who turned state's-evidence and revealed the names of bargaining cardinals.

To Pius IV. belongs the constitution, promulgated in 1562, which established much of the ceremonial and procedure that have since been followed. He prescribed, for instance, that the cardinals shall enter the conclave ten days after a pope dies; that they shall take at least one vote a day, besides the *accessus*, or supplementary vote; that the cells occupied by them shall be drawn by lot; that each cardinal may have two attendants, or conclavists; that a cardinal who has not taken orders shall not vote; that the food shall be carefully inspected to prevent surreptitious letters from being forwarded in it to the cardinals, etc. On most of these matters, the constitutions framed by subsequent popes—those of Gregory XV. and Clement XII. are the most important—either repeated the injunctions, or amplified them by going into more minute details. Gregory XV., for example, laid down the rules still in force as to the methods of election—by inspiration, by compromise, and by ballot—prescribing also the size and form of the ballots, and how they should be counted.

This rapid survey will illustrate the steady tendency towards rigid formalism which we should expect to find in an ancient institution like the Roman Church, which depends so largely on tradition and precedents. But as a proof of the sagacity of its rulers, as well as of the vitality of the institution, we find also in the legislation governing papal elections ample provision made for emergencies. To prevent the cardinals from usurping pontifical authority during an interregnum, to compel them to elect a new pope as speedily and honestly as possible, and to insist on rigid conformity to canonical procedure in ordinary circumstances, did not suffice; the laws must also instruct the cardinals how to proceed when political disturbances make it impossible to follow the usual routine. Within the past century, for example, the popes have twice been fugitives from Rome, and, since 1870, they have ceased to rule there as temporal sovereigns. Pius VI., driven into exile by Bonaparte, and foreseeing that the conclave would be greatly embarrassed, decreed that in whatever city the largest number of cardinals happened to be at the time of his death they should convene and choose his successor. He further absolved them from various prescribed forms, while insisting, however, that the new Pope must secure two-thirds of the votes of those present. Pius IX. likewise, after the loss of the temporal power in 1870, issued three several bulls releasing the cardinals from their oath to observe the electoral constitution as to time, place, and conclave, as well as the more purely ceremonial customs. He also determined what should be done in case the conclave had to assemble outside of Rome, by instructing the cardinal dean, or the next in seniority, to choose its meeting-place. Thus we see how the papal legislators have succeeded in making laws, now rigid and now supple, to correspond on the one hand to the assumed immutability of their institution, and on the other to the most varied emergencies. In this respect, at least, they have shown themselves unequalled masters of statecraft.

The great value of Sig. Berthelet's book lies in the fact that it contains the text, in Italian, of these different constitutions, which he has knit together with succinct explanations of his own. In addition he furnishes important extracts from papal bulls and rescripts on the temporal power and on papal nepotism, and appendices containing the ceremonial prescribed by Gregory XV., the autograph instructions of Clement XII. in regard to the procedure of the conclave, the vestments prescribed by the Master of Ceremonies in 1878, and the text of the oath which each cardinal takes on his admission to the Sacred College. The work is sufficiently important to deserve translation into English.

KÜLPE'S OUTLINES OF PSYCHOLOGY.

Outlines of Psychology, Based upon the Results of Experimental Investigation. By Oswald Külpe. Translated from the German by Edward Bradford Tichener. London: Swan Sonnenschein & Co.; New York: Macmillan & Co.

THIS work is dedicated "To my revered teacher Wilhelm Wundt," and it pursues, in general, the method of Wundt. The translation is exact, but too literal. The sentences are not sufficiently broken up; and inaccuracies of expression, customary enough in German, are reproduced, which will be serious obscurities to the English reader. Thus, the effect of the translation upon the mind of the English reader is not so close to the effect of the original upon the German reader as it would be if literalness had been somewhat sacrificed to English habits of thought. Psychology is now, of course, one of the inductive sciences; and the present work is not a popular presentation, but a higher treatise on the science. It is not an encyclopædic handbook. It is, as its title describes it, an outline account, yet it is by no means an elementary book; and it has 450-odd pages, of 42 lines to the page and 10 words to the line. It has the usual qualities, good and bad, of a German treatise. It is scientific, earnestly bent upon the ascertainment of the truth, in the general current of scientific research, painstaking. Let us examine a section or two, which shall be fair samples of the whole.

The subchapter on the quality of visual sensations begins with a section (§17) which we are told at its opening is to treat of the relations existing between sensation and the various forms of light stimulation. But when we come to read it, we find that it also treats of the relations between the different sensations, and of other matters. Meantime the two most

striking relations of the kind proposed to be treated—namely, first, that two lights which, when unmixed, match to the eye, also have precisely the same effect in mixtures, and, second, that a three-dimensional continuum is adequate to represent the relations of lights, in so far as they appear differently to the eye—are neither of them stated. The first assertion in the section, after delineating the subject of it so falsely, is that "the velocity of the individual waves is very different in different cases." This vague German way of speaking of "different cases" ought in a translation to give way to the more definite style to which the English reader is accustomed, and be rendered, "for different parts of the spectrum." But, of course, the statement is not true. No doubt, the author was thinking of the *frequency of oscillations*, which is not a velocity at all. He next goes on to say that the sensation of brightness varies from the deepest black to the most brilliant white. This is a capital error. The color of brightness is not white, but intense yellow. Whoever is capable of making an observation of what he sees (as a psychologist, at any rate, ought to be able to do), and who compares the color of a piece of white paper where direct sunlight falls upon it with the color of the rest of the paper illuminated by irregular reflection from white walls, will find the bright part to be yellow; and exact experiment will show that the color of brightness is a yellow, differing little from, though somewhat more chromatic than, the D line. To mistake white for the color of brightness is to involve the subject in a terrible snarl.

Light is absurdly divided into *mixed* and *homogeneous*. Mixed light is defined as that "in which no particular wave-length has a noticeable predominance," so that it might be of any color; but we soon find the author means white light. Then comes the following: "We reach two conclusions, then: (1) that brightness qualities do not possess intensity as a separate, variable attribute; and (2) that an analysis of the qualities contained in mixed light requires their spatial or temporal isolation." Observe what this means. It is, first, that if we take a certain colored surface (for whether it be white or not, makes no difference) and merely vary its illumination, we shall vary it in only one respect. Perhaps the author means that the sensation will have the same hue with all intensities; but that is not true. And, second, it is gravely stated that to analyze the "qualities" it is necessary to separate their constituents. This may mean that we cannot analyze them by attending to one and neglecting the rest; but (not to speak of the inappropriateness of the remark in a section on sensation pure and simple), since the sensation itself is incomplex, the author might as well remark that nobody can analyze water by attending to the hydrogen and overlooking the oxygen. In short, the conclusion introduced so formally is as good as meaningless.

Külpe then goes on to homogeneous light. "Homogeneous light, in the strictest sense of the term, has never been seen, so that we cannot say how it would be lensed." This is not true. The parts of any good spectrum of considerable dispersion, say from half-a-dozen flint-glass 60° prisms, are sensibly homogeneous. But perhaps what our author is thinking of may be that on Young's hypothesis, according to which there are three fundamental sensations—red, green, and violet—the pure green is certainly not seen *by a normal eye*, and probably not the red either; so that we cannot *exactly* imagine how they would look. Külpe then goes on to say, "We thus have the curious result that what we call a color is really a connection of two simple qualities, color-tone and brightness." Now, in the first place, there are three, and not two elements only. They may be stated as *hue*, *chroma* (or saturation-intensity), and *illumination;* or they may be stated as *red*, *green*, and *violet;* or in any one of innumerable other ways. Külpe has given no proof that any one of these methods of analysis is more or less true than any other, certainly not that the particular method he imperfectly describes is the only true one. He goes on to talk of sensations as if they were so many distinct entities, as contradistinguished from coördinates of a continuum, without the slightest pretence to any proof of such a conception. Then he makes this formal statement: "A mixture of two mixed lights produces on the physical side a mean intensity, and on the psychological a brightness sensation lying midway between the two primary sensations." This is simply absurd. Do two lights shining on a piece of paper illuminate it less than the brighter light alone would do? He refers to the result of aggregating the lights and then halving the energy. But even that is very false "on the psychological side." There is no use of following further this sadly confused, vague, and somewhat inaccurate description. As Külpe proceeds, it becomes worse and worse, and the section on "Theories of Visual Sensation," besides overlooking entirely the theory of Mrs. Franklin, discusses the other three weakly, and without understanding what real arguments can be brought forward.

Let us, by way of another sampling, see how the limen is defined. "The just noticeable stimulus is technically termed the *stimulus limen*, and the just noticeable stimulus-difference the *difference limen*." Now the stimulus limen is not a question of *noticing* at all. It is the limit between what is *sensed* and what is *not sensed*. As for the "difference limen," if there is any such thing, it is not what *can* be just noticed, but what the subject makes just sufficient effort to notice, and nothing more.

Let us next assay the chapter on Association. Here we find matter of real, though mainly negative, value. The first remark is, that the common assertion of the English school that ideas differ from sensations only in being fainter "has never been demonstrated." Certainly, if it be meant that remembering the sight of a Jacqueminot rose is indistinguishable from seeing a tea rose, it has not only not been demonstrated, but we are in possession of all the facts needed to explode it for ever. It may be doubted whether any English writer has ever distinctly stated that there are two sorts of intensities to sensations—the objective intensity of the sensation, and the subjective intensity of the percept, or height of consciousness, insistency of presence, and overriding of other ideas. Külpe describes some experiments instituted by himself to ascertain whether ordinary persons could, in their normal waking state, mistake fancies for things seen or the reverse. He finds that when, in a perfectly dark room, a light very close to the stimulus-limen is thrown upon a screen, most persons, though not all, occasionally, but rarely, think that it is only fancy and that they do not really see it; and that the same persons more often fancy they see a light when there is none. Some persons never have such fancies. This accords with ordinary experience so entirely that we might be tempted to declare the experimentation futile. Yet whoever will actually make experiments in the general line of Külpe's will find them instructive. If they are so made that they can be subjected to mathematical analysis, it will be found that there is a subjective intensity (whatever that consists in) which, in ordinary persons, for sensations well above the limen, is vastly greater than for any ideas, but which depends besides upon the objective character of the idea, upon the effort of attention, upon the strength of the association, etc. Persons there are whose ideas so closely resemble sensations that they can distinguish some of them as unreal only by their being more influenced by efforts of attention. Thus, some artists speak of copying upon the canvas the imaginary pictures which they see by the side of their easels, and will request a person who stands where the image is to stand aside. Composers with a genius for instrumentation do something still more surprising when they combine the sounds of different instruments in their mind's ear and experiment upon the effects so produced. Other persons, as Külpe has found, have no memorial or imaginative ideas which seem to them at all comparable with sensations. It is remarkable that those persons have not necessarily bad memories for sensations. The writer of this notice, until past middle life, could not seem to call up in his mind anything in the least like a color; but he has since acquired the power in a slight degree. Yet he always had an unusually accurate memory for colors. Külpe divides recognition into the *direct* and the *indirect*. The former is that in which the feeling "I am acquainted with that," or "That is what I am after," appears directly as soon as the right object is presented to sense. Indirect recognition is recognition by means of a comparison with an image carried in the memory. Külpe remarks that the existence of direct recognition is proved by certain diseases of the brain. Thus, a patient has been known to describe a fork accurately, and yet when a fork was put into her hands she declared she was familiar with it, but did not know what it was. Now her not recognizing it as a fork shows that a satisfactory image was not called up by the definition of the fork; and yet the feeling of being acquainted with it was there just the same.

It appears, then, that the merit of this work is unequal. Sections which are exceedingly instructive will be found sandwiched with others upon which not sufficient study seems to have been bestowed.

My Literary Zoo. By Kate Sanborn. D. Appleton & Co. 1896. 16mo, pp. 149.

Four-handed Folk. By Olive Thorne Miller. Boston: Houghton, Mifflin & Co. 1896. 12mo, pp. 201.

The Evolution of Bird-Song: With Observations on the Influence of Heredity and Imitation. By Charles A. Witchell. London: A. & C. Black; New York: Macmillan. 1896. Crown 8vo, pp. x, 253.

Artistic and Scientific Taxidermy and Modelling, etc. By Montagu Browne. London: A. & C. Black; New York: Macmillan. 1896. Fcp. 4to, pp. xii, 463, 33 illust.

THE title of Miss Sanborn's booklet becomes intelligible on discovering that she means a collection of the sayings of literary people about their dogs, cats, and other pets; but there is nothing novel and hardly anything original in this lot of staple ana. The collector has done better work than this piece of jobbing, and is likely to do better work, now that she has cleared her desk and thus freed her

mind of a batch of cullings. One of the best anecdotes is that of the child who begged her father to come home, because the donkey was so lonesome without him. This reminds us of a jest which Miss Sanborn unaccountably missed; being that of the game-keeper who wrote to his master that the emu had laid an egg, which, in the absence of his lordship, had been put to hatch under the biggest goose on the estate. The 'Literary Zoo' is further incomplete in lacking specimens of the types which are presented in such advertisements as: "Wanted, a man to take care of a horse of a religious turn of mind"; and: "Wanted, a horse suitable for a young lady with a long flowing mane and tail."

Mrs. Miller's subjects are mainly kinkajous, marmosets, lemurs, spider-monkeys, and some other pedimanous quadrupeds, including the late lamented Mr. Crowley, the popular chimpanzee of Central Park; but she also toys with armadillos and pangolins, whose specialty it is to roll up like balls. The author is so good at story-telling about such pets that she makes us feel quite sure that we want none of them about the house. It is very easy to overdo this sort of thing; anecdotes that would make a readable magazine article, set off with the little dabs and touches which she can give, like pats on the heads of her pets, become as tiresome as the animals themselves are troublesome, when spun out to the degree of attenuation of a spider-monkey itself.

Mr. Witchell's claim of entire originality for his theories is well founded, and some of his views are novel; but whether his book is the better for this is another question. He shows himself a close observer, of considerable experience, and a faithful recorder of his observations. Yet we are constrained by his own showing to suspect that the raw material of facts which he has brought together in this volume is more valuable, on the whole, than the manufactured product which represents his conclusions. This is no special derogation of his ability, but an indication of the wide difference there may be between the observation and the interpretation of fact. He is wandering in pleasant paths when he listens to bird-notes; he is also on legitimate scientific lines in making his musical scores of bird-songs; but also is he in a field of unverified if not unverifiable conjecture, with every temptation to stray further into those realms of the imagination where the reflection of moonshine in a bucket of water and the location of a rainbow just over the next hill may be mistaken for astronomical and meteorological data.

Aside from matters of fact, which the author will be found to state satisfactorily, we find much of this book devoted to threshing old chaff, with the usual negative result, and much more of it to be simply swinging the flail in the air. The whole burden of the book is nugatory. Of what avail, for example, is it to reach the conclusion that we may consider "the voice to have been evolved from a toneless puffing, indicative of anger, or from snorts or grunts accidentally produced"? Nobody doubts that human articulate speech has been evolved by "mimicry or imitation," under conditions of environment reacting upon heredity, from such puffing, snorting, grunting, or other noises as any baby can make; and we are not much wiser than we were before when we have finished a book which is devoted to establishing a similar conclusion in the case of birds. Mr. Witchell's work concludes with a very inadequate bibliography.

Taxidermy is both an art and a trade, and under either aspect is indispensable to science. Its development of late years has kept pace with the progress of the biological sciences, in two respects: in improvement of method and results, and in their scope. Its former scope was mainly the stuffing of skins of mammals and birds, either for decorative or scientific purposes, by methods so crude that they answered for the preservation of such objects of natural history much better than for their presentation as works of art. But taxidermy has gone far beyond the higher vertebrates to include specimens of all animals, and so far beyond the etymological applicability of the term as to take in plants and minerals. Good work now stops nothing short of the absolutely lifelike representation of an animal, in any desired attitude, amid appropriate surroundings; the whole so prepared as to last indefinitely. This comely growth of the "handmaid of science" has developed a literature in developing as an art; and the old-fashioned cheap manuals of "bird-stuffing" are not to be compared with such a spacious and sumptuous volume as Mr. Browne's.

Nevertheless, competition is as keen in the literature as in the art of taxidermy; and neither the author's clearness, nor his comprehensiveness, nor his evident respect for his calling, nor the merit of many of his processes, will send his book up to the head of its class. His fellow-artists who may not dispute the originality of some of his methods will fail to see any other merit in them, will resent a certain tone of dogmatism with which they are presented, and continue to follow their own methods. It is as invidious in a reviewer to compare methods in this as in other kinds of art, say painting or music, but we imagine that most taxidermists will consider Mr. Browne's book behind the times as a whole, and retrogressive rather than progressive in some respects. The average of excellence is sensibly lowered by the author's unsound if not vicious treatment of various important matters—that of arsenic as a preservative, for example; and this is all the more surprising in connection with what he says of corrosive sublimate. There is one very curious thing about this work on "taxidermy": the further it gets from taxidermy proper, the better it becomes. That is to say, the author is at his best in what have been usually regarded as the accessories of the art, such as casting and modelling plants, various forms of invertebrates, and even the lower vertebrates; not so good regarding birds and mammals, which so largely preponderate as objects of taxidermal solicitude; and at his worst regarding the collection and preservation of these as specimens for scientific study—in other words, as the "skins" which make so large a proportion of the contents of every educational museum. Many thousands of such have come from the present reviewer's hands, at an average rate of five or six an hour, at times so long gone by that their continued existence is an indication that they were at least well preserved; yet he does not think he could have effected this result according to Mr. Browne's recommendations either for the manipulations or for the preservatives required. In fine, this book is bigger than it need have been, and not so great as it might have been.

Bayard Taylor. By Albert H. Smyth. [American Men of Letters.] Boston: Houghton, Mifflin & Co.

Mr. Smyth has drawn his materials for this book mainly from the full biography of Taylor which was made soon after his death by his wife and Mr. Horace E. Scudder. Here we miss the abundance of letters which made that so attractive, but they are quoted freely in illustration of the most significant events and purposes of Taylor's life, and the writer has availed himself of Mrs. Taylor's manuscript collections and of the letters and reminiscences of many friends. His book amply justifies itself, if only that its matter has been so well chosen and put together. Much that Taylor wrote can hardly be revived, nor is it desirable that it should be, but not a little is so good that it should not willingly be let die. Mr. Smyth has spent more of his strength upon the man's personality and the circumstances of his wide experience than on the criticism of his work. If his biography is defective in any respect, it is in this. The novels are criticised more fully than the poems and with marked frankness. 'Hannah Thurston' was the punishment which Taylor meted out to the neighborhood of reformers in which he was born at Kennett Square, and to which he had the misfortune to return when he would become a landed proprietor and build himself "a lordly pleasure-house." The criticism upon the climax of 'The Story of Kennett' is a severe reflection upon Taylor's taste, which could hardly have made such a break in a particular instance if it had not been generally less than completely trustworthy.

The lack of adequate criticism is most keenly felt when we come, at the close of Taylor's life, to his *opus magnum*, 'Prince Deukalion.' No other book of his fell so flat upon the reading world, and it was a blessed thing that the poet did not live to know how miserably he had misreckoned. It was far above the heads of the general public, but Taylor would not have minded this if it had appealed successfully to that inner circle at whose bar he had resolved to justify himself as a great poet. This it did not do. The poem meant so much to Taylor, he worked over it so eagerly, so passionately, and with such happy confidence, that the reader cannot but resent the rather cursory manner in which it is dismissed. It should have had the carefullest consideration. Taylor's confidence in a future life was perfect, and if it was not unwarranted and he meets Mr. Smyth in the Elysian Fields, we cannot imagine that the rencontre will be a pleasant one for his biographer.

The failure of 'Deukalion' was closely connected with the greatest literary success of Taylor's life, his translation of Goethe's "Faust." On this he worked tremendously and at much conscious disadvantage because of the imperfections of his early education, which he felt he never had made good. It cannot be said that the recognition of his work was all he could desire, because he came accidentally upon a copy of his translation in Lowell's library, *uncut*, and the circumstance stung him to the quick. But this circumstance was exceptional. The general chorus of applause was loud and long, and many haughty Germanists and Germans took part in it. At the present time it is probably more read than all his other writings together. But the effect of his devotion to the genius of Goethe was injurious to his own. It warped him from his native centre, and made him a copyist of Goethe.

It is impossible to avoid the impression that Taylor's ambition was not only to be a great poet, but to be so regarded and to carry himself accordingly. Cedarcroft, with its big house and grounds, smacked of imitation of Scott at Abbotsford. Like that, it brought the burden

of debt and the slavery of incessant work, less congenial to Taylor than to Scott, because, with the exaltation of his literary ideals, his work became less remunerative, and he was obliged to return to lecturing, which he hated, to raise the money necessary for his lavish way of life. Worse than this happened: he had hoped to make himself respected and loved by the rustic neighborhood that had known him from his childhood up. In the event, he excited its criticism and antipathy by his mode of living—less in the matter of eating, probably, for it was a Quaker community, than in that of drinking. He resented the interference and made sharp reprisals. The situation became intolerable to him, and the place so passionately coveted was deserted and put up for sale.

Nothing speaks better for Taylor than his art of making friends, and it was inevitable that the book should end with Mr. Aldrich's exquisite tribute to his memory, the conclusion of which he has changed from its original form without improving it.

La Famille et la Jeunesse de J.-J. Rousseau. Par Eugène Ritter, Doyen de la Faculté des Lettres de Genève. Paris: Hachette. Pp. 305.

THIS is the third important work on Rousseau published within the last year and a half, and the most important of all recent publications on the subject, if judged by the amount of new material offered. Prof. Ritter's name has for years been familiar to students of Rousseau through his contributions to European journals and reviews. In the present volume he gives us the results of his patient researches in the archives of Geneva, as far as they are concerned with the ancestors and the earlier life of Jean-Jacques. The book is thus, chronologically, divided into two parts; but, aside from this, two rival interests contend for the reader's attention throughout the book, viz., the various members of the Rousseau family during five generations, and the *milieu*—the Geneva of Calvin and his followers for two centuries.

Among the Protestant refugees who left Paris for Geneva in the reign of Henry II. was Didier Rousseau, a bookseller, who in 1555, after due investigation of his character and conduct, was received as citizen of Geneva for the consideration of twenty écus (200 francs) and a leather pail (for fire protection); less than 10 per cent. of the new citizens of the year paid a higher admission tax than Didier. He opened a cabaret in his adopted city. His youngest son, Jean, became a tanner, and lived in comfortable circumstances, leaving in his turn two daughters and one son. This second Jean Rousseau made a fortune at watchmaking: he had nineteen children, and left 31,000 florins to the ten surviving him. The seventh of these was David (the grandfather of Jean-Jacques), who died almost a centenarian. He too was a skilful watchmaker, and of his fourteen children three sons who survived him followed the same occupation. Isaac, the father of Jean-Jacques, however, had learned to play the violin and "preferred the fiddle-bow to the file"; he became dancing-master, associating himself for three years with two others of that profession, which was tolerated by the authorities for the sake of the children of rich foreigners in the city. But these disciples of Terpsichore would occasionally get into trouble for teaching "ceux de la ville." Isaac was also fond of roaming in the woods and of shooting partridges and hares, and, while in pursuit of this sport, he would so little brook interference that he once aimed his gun at a proprietor who endeavored to keep him off his meadow. He was irritable and perhaps quarrelsome, and the registers of the Council show that he was summoned, censured, and fined for his conduct more than once, though it must be said, not always justly. "Mon père partit pour Constantinople. . . . Il revint," says Rousseau in his 'Confessions.' M. Ritter devotes fifteen pages to the elucidation of this episode, of which the son knew little, for he was not born till after his father's return from the Orient after an absence of six years. Several corrections and additions to passages in Rousseau's writings are furnished by M. Ritter. Isaac left his family a second time when Jean-Jacques was ten years old and motherless. Apparently the grandfather, David, did not cultivate to any extent *l'art d'être grand-père*. We know how Jean-Jacques understood his obligations to his offspring.

It is easy enough, with the aid of M. Ritter, to trace the peculiar traits of Rousseau's mental and physical character back to his father and mother and several of his ascendants, and in this lies much of the chief interest of the book. His French ancestors were bourgeois, but proud and free in their ways, and they left their native land for an idea. The family belonged to what might be called the liberal opposition in Geneva. His relatives shared with many of the Genevese of the time a restless and nomadic disposition; they were scattered widely over Europe and more distant lands. His father, his uncles, his aunt, were all musical and did not discountenance dancing. David Rousseau gave little *soirées dansantes* a few months after the death of his wife, and the Consistory called him to account for it. The sisters of Isaac scandalized some neighbors by playing cards on Sunday, and were censured by the Consistory. Isaac had a passionate fondness for the novels of the "grand siècle," 'L'Astrée,' 'Cléopâtre,' 'Le Grand Cyrus,' which he read till late in the night with his ten year-old boy. Both father and son had the gift of winning the love of those with whom they came in contact.

In the 'Confessions' Rousseau speaks of his mother, but he never knew her; she died a few days after his birth. M. Ritter has fuller information concerning her and her family. Her father, Jacques Bernard, was a *mauvais sujet*, and died at thirty-three. But Suzanne was well brought up by an uncle, a pastor. Still, Consistory and Council had to keep a watchful eye on her; she would receive visits from a gentleman she had been forbidden to see; she went to a show in the disguise of a peasant woman. Her brother Gabriel and his wife, Théodora Rousseau (daughter of David), had to appear before the Consistory "pour anticipation scandaleuse de leur mariage." From all the preceding details the reader may draw his inferences with respect to Jean-Jacques. We can only make allusion to the interesting chapters on Jean Jacques's childhood and youth, on Mme. de Warens and her venerable guardian, the Pietist Magny of Vevey.

A prison in the midst of Paradise—this is the impression of Calvinistic Geneva in the past centuries left on our mind as we close the book; a gloomy city with its dark, narrow streets, and the Consistory, the Council of XXV, and the Council of CC, for keepers, situated on one of the fairest spots on earth; a small republic whose government was democratic in form, but in reality very aristocratic, and whose bourgeoisie could be conceived of as divided into nine strata (p. 58); an asylum open to fugitives from persecution, but in which religious tolerance or indifference was a punishable offence and from which unbelievers were banished.

The Balance of Power, 1715–1789. By Arthur Hassall, M.A. New York: Macmillan. 1896. Pp. vi, 433.

MR. HASSALL, general editor of the series, contributes the sixth volume to "Periods of European History." History, like food for use in the arctic regions, must be compressed into small tablets before busy people can take it. A drawback to meat extracts is that the fat is not reduced and preserved. Similarly with compressed history, one gets a great deal of lean and muscle, but little juice, and very few tit-bits. Jane Austen contrasts a good novel with the hundredth abridgment of English history, much to the advantage of the novel, and she is right if one looks only to entertainment. Alas, the facts must be mastered, and here an abridgment comes out ahead.

Our attitude towards the present work depends largely on whether it is to be considered alone or in connection with its companions. Mr. Hassall's editorial announcement sets out the following aim: "To present in separate volumes a comprehensive and trustworthy account of the general development of European history." This statement implies more than a political synopsis. Intellectual and social conditions ought also to be considered if the phrase "general development" has a meaning. Mr. Hassall, in 'The Balance of Power,' treats lucidly of those international relations which fall under the precise subject, but leaves the fringe of anything beyond diplomatic and constitutional history untouched. Of course, one shoulders a heavy load when he undertakes to dispose of the eighteenth century in fourteen chapters. Mr. Hassall lightens the burden by excluding all that is apart from wars, treaties, and domestic government. His selection of topics within this range is well considered, and, did he not out-Freeman Freeman in accepting the notion that history is past politics and nothing else, we should be able to praise his manual highly. By the terms of the series Mr. Hassall is responsible for one-eighth, in bulk, of European history, from the abdication of Romulus Augustulus to the Berlin Congress; and yet, writing on this broad scale, he averts his ken from rather more than one-half of human fate. As Renan observes, politics is not everything here below.

A close student of eighteenth-century statecraft, Mr. Hassall does not shrink from laying bare its hideous immorality. "Diplomacy, which had taken the place of religion in the councils of Europe, was unscrupulous, while the *secret diplomacy* of the middle of the eighteenth century marks the lowest depths arrived at in the history of the relations of the European States to each other." The War of the Austrian Succession and the partition of Poland are standing illustrations of this general profligacy, and both are fully discussed here. We recommend to our Jingo politicians, when they burn to "lick creation," Mr. Hassall's narrative of the partition. The faithlessness and brutality of three Governments professing to respect law and Christian precept ought to be a warning for ever to men whose instincts lead them to war for glory and plunder. The balance-of-power theory permitted

the infamy, and must share the blame along with Frederick, Joseph, and Catherine.

Northern and eastern Europe do not, as a rule, receive their fair share of attention, and we are glad to see that Mr. Hassall is fuller than most general historians in describing Russian, Swedish, and Turkish events. The beginnings of the Eastern Question, dating from the treaty of Kainarji, are skilfully handled, and the author's intention of "showing the close interdependence of Northern, Eastern, and Western politics" is fulfilled. Want of space leads to economy on the side of Portugal and the Papacy. The foreign policy of France is elaborated, though we get little about her domestic administration. The ministers of Louis XV.'s reign are seen in high relief, and Mr. Hassall manages besides "to emphasize the full meaning of the diplomatic revolutions of 1717 and 1756, and to bring out clearly the disastrous effects upon France of her entry into the war between England and the revolted American colonies."

Altogether, the book is thoroughly executed within the limits of its title, but falls somewhat short of its opportunities and obligations. In the matter of bibliographies the series suffers by comparison with the 'Histoire Générale.' The maps are clear and good, though one must object to the inclusion of Geneva, the Valais, and the Grisons in the Switzerland of 1740. The three appendices furnished by the Rev. A. H. Johnson present admirable analyses of the Austrian and the Prussian possessions and of the imperial constitution in the eighteenth century. Mr. Hassall writes in good style, but condenses so closely that his pages are sometimes a trifle dull. Historians who strive to be concise may avoid becoming obscure. It is harder for them to avoid the tone of a catalogue. They ought to remember Maitland's warning: "At x there was a y named z."

Sunrise Stories: A Glance at the Literature of Japan. By Roger Riordan and Tozo Takayanagi. Scribners. 1896. 12mo, pp. xii, 281.

THOUGH upwards of fifty of the best-known pieces of Japanese literary art have received translation in one or more of five European languages, there seems to have been no effort to furnish just the service which this volume creditably attempts. To convey some idea of the subjects dealt with in Japanese literature and of the several leading forms of expression; to set forth in translation or abridgment a few of the representative and classical specimens; to supply the important element of perspective by using a chronological and fairly comprehensive treatment; and, finally, to sketch the traits of society and nature in which this literature found its setting—a plan having these purposes was one worthy of being carried out. In no one of these features could it expect to be entirely accurate and sufficient within the compass of a small volume, or within the powers of perhaps any one living worker, Japanese or foreign; but for popular purposes and within these inevitable limits the work is successful. The few and unambitious efforts at analysis and generalization are particularly fortunate; the pages are the utterances of a full mind, rich in illustrations and skilful in presentation. The careful rendering of the poems into the original seven-and-five syllable metre is worth noting. There are some minor omissions and blemishes, which do not mar the usefulness of the book. Mr. Riordan's share is not stated, but has apparently been to give an English finish to Mr. Takayanagi's text.

BOOKS OF THE WEEK.

Adams, F. W. R. New Wheels in Old Ruts: A Pilgrimage to Canterbury. London: Unwin; Philadelphia: J. B. Lippincott Co. $1.50.

JUST PUBLISHED.

International Bimetallism.

By FRANCIS A. WALKER, President Massachusetts Institute of Technology, author of "Political Economy," "Money," "The Wages Question," "Money, Trade, and Industry," etc. 12mo, $1.25.

The book is the outcome of a course of lectures delivered at Harvard University, and was prepared without reference to the impending political contest in the U. S. It, however, will prove instructive not only upon the question which is destined to underlie that great struggle, but will also be found a valuable work of reference, treating, as it does, of the precious metals from the earliest times down to the present day.

Francke's Social Forces in German Literature.

A Study in the History of Civilization. By KUNO FRANCKE, Assistant Professor in Harvard University. $2 net.

The author endeavors to give an account of the great intellectual currents of German life as expressed in literature, to point out the mutual relation of action and reaction between these currents, and the social and political condition of the masses from which they sprang or which they affected—in short, to trace the history of the German people in the works of its thinkers and poets.

RECENTLY PUBLISHED:

In India.

By ANDRÉ CHEVRILLON. Translated by William Marchant. A vivid and poetical description of Hindu India, luminous with the atmosphere, spiritual and physical, of that super-sensitive clime. 12mo, $1.50.

On Parody.

By ARTHUR SHADWELL MARTIN. An essay on the art, and humorous selections from the masters, beginning with the Greeks and Romans. 12mo, $1.25.

Richard Brinsley Sheridan.

A Biography. By W. FRASER RAE. With an Introduction by Sheridan's great-grandson, the Marquess of Dufferin and Ava. With portraits, etc. 2 vols., 8vo, $7.00.

Send 40 cents for 4-oz. sample to

SURBRUG, 159 Fulton St., N. Y. City.

Among the Freaks.

By W. L. ALDEN, author of "Told by the Colonel," "Trying to Find Europe," etc. With 55 Illustrations by J. F. Sullivan and Florence K. Upton. 12mo, $1.25.

"The excellence of the book, however, is not so much in the line of screaming farce, although many of the adventures which form part of the dime-museum manager's reminiscences are laughable enough. It lies rather in the quiet humor with which he has reproduced the views and sentiments of the assumed narrator. It is American humor, pure and simple, of that subtle and unexpected character which is so different from the English joke. . . . It will, however, as the author says, open a new world to most people, and prove a vivid revelation of how a portion of the other half lives."—*Critic, New York.*

Mount Desert Lands.

As attorney for trustees I have lands for sale, comprising some of the choicest building sites on this beautiful island. They are between four and five miles from BAR HARBOR, accessible by a delightful shore drive, situated mainly upon the Cliffs, and embracing the famous geological wonder known as THE OVENS.

These lots were selected by the late owner for their peculiarly attractive features before there was a modern hotel or more than a few cottages on the island. The views from them of the Maine Coast, Frenchman's Bay, Bar Harbor, and the ocean are unequalled. They will be sold as a whole or in parcels, as may be desired.

Address BENJAMIN P. MOORE,
224 St. Paul St., Baltimore, Md.

CAMBRIDGE, MASS.

TO LET, from 15th September, house in immediate vicinity of best private schools, and only 8 minutes' walk from Radcliffe. Nine rooms, two bathrooms; slate trays. Address W. M. GRISWOLD, Seal-Harbor, Me.

NEW BOOKS.

The Cruise of the "Antarctic."

A Voyage to the South Polar Regions in 1895. By H. J. BULL, a member of the expedition. With a Map and Illustrations by W. L. Wyllie and W. G. Burn Murdoch. Large 8vo, $4.00.

Persia Revisited (1895).

By General Sir THOMAS EDWARD GORDON, K.C.I.E., C.B., C.S.I., formerly Military Attaché and Oriental Secretary to her Majesty's Legation at Teheran, author of "The Roof of the World." With Map and Illustrations. Crown, 8vo, $3.00.

Colonel Gordon's book is the most recent, and in many ways the most authoritative utterance on the situation in Persia. It deals with the recent assassination of the late Shah with the new Shah and his brothers, and the Sadr Azem and the succession.

EDWARD ARNOLD, Publisher

70 FIFTH AVE., NEW YORK.

Museum of Fine Arts, Boston.

CATALOGUE OF CASTS

FROM

GREEK AND ROMAN SCULPTURE.

By EDWARD ROBINSON,
Curator of Classical Antiquities.

New Edition, Enlarged and Thoroughly Revised. Crown 8vo, boards, pp. viii and 392.

This catalogue is intended not only as a guide for visitors to the Museum, but as a manual for students of Greek art generally. Its description of each object includes a statement of the material of the original, its restorations, the publications in which the best illustrations and accounts of it may be found, and, in the case of every work of importance, a brief discussion of the present theories regarding its date and position in the history of Greek Sculpture.

Price, 50 Cents; By Mail, 65 Cents.

FOR SALE AT THE MUSEUM.

William Lloyd Garrison, 1805-1879.

The Story of his Life told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net*.

This important work (till recently published by the Century Company) has been reduced in price from $12 00 to $8.00, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

*** *For sale by booksellers. Sent, postpaid, on receipt of price by the Publishers,*

HOUGHTON, MIFFLIN & CO.,
BOSTON AND NEW YORK.

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

The Nation.

NEW YORK, THURSDAY, JULY 30, 1896.

The Week.

The action taken by the conference of sound-money Democrats at Chicago on Thursday last puts a new face on the campaign by introducing a fresh element into it. By calling a convention to put another Democratic ticket in the field, they have insured the permanence of the defection against Bryan, free silver, and repudiation which was disclosed at the Chicago convention and has been growing ever since. There has been a widespread belief that a third ticket would draw votes away from the Republican ticket, and thus contribute to the success of the Populistic-Democratic combination. We believe that the best interests of the country now require the election of McKinley and Hobart. We could not commend or advise any policy which, in our judgment, would not promote that end. If we believed that a third ticket would take from McKinley and Hobart one vote more than it would draw from Bryan and Sewall, we should certainly advise against it. Experience and observation of the drift and tendencies of the American voter, and some special knowledge of the issues of the present campaign, convince us that nearly all the Democrats who thoroughly understand those issues, and who have refrained up to this time from endorsing the nomination of Bryan, will vote for McKinley, no matter how many other tickets may be put up. We are equally convinced that these are not more than one in ten of the Democrats in the country at large, and that the other nine will gravitate to their own party, or be "whipped in" before election day, unless special pains are taken to hold them back. The question before us, therefore, is one of means to an end—the end being to keep votes away from Bryan which he would naturally get.

The Populist convention violated all precedents in nominating a candidate for Vice-President before making its choice for the first place on the ticket, and it was only proper that it should be equally reckless in picking out the man who represents the real feelings and desires of the party. Thomas E. Watson is a typical Southern Populist. Elected to Congress in 1890 nominally as a Democrat, he soon became as bitter against that party as the other, and, before the end of his first year, ceased to call himself a Democrat, running unsuccessfully for reëlection in 1892 as the candidate of the People's party. During his brief service at Washington he became notorious as a demagogue, who disgusted all sensible people by his wild ideas and abusive language. His easy nomination for the Vice-Presidency on the first ballot will show the people of the United States what a reckless and dangerous party the Populist is.

Mr. Bryan's dash and decision are oozing away painfully. Whether to accept or to refuse the Populist nomination, with its onerous conditions, he cannot make up his mind; so he puts out a bulletin deprecating "harsh criticism," and declaring that he "will act with deliberation." But the trouble is that he has already acted, with or without deliberation, in a way to make an honorable retreat impossible. His action was taken on July 24, when he telegraphed Chairman Jones: "I agree with you fully. If Sewall is not nominated, have my name withdrawn." What is there left for him to deliberate about? If he was honest then in withdrawing, he cannot be honest now in accepting. The truth is, that a most frightful dilemma is now thrust upon the young man who so gayly set out to run for the Presidency. To take this Populist nomination will be disastrous, and to refuse it will be disastrous; the only question being which will be the more so. In such a case deliberation only makes matters worse, as it notifies the public that the candidate is engaged in a choice of evils. Deliberation is confession. Did ever a nominee hesitate before about accepting 1,000,000 votes offered him? And we wonder how the Populists will like being deliberated over by Mr. Bryan. We should be glad to get "Cyclone" Davis's unforced opinions on this subject.

The platform adopted by the Populists is in many respects an improvement on that of the gathering at Chicago. The latter was vague; the former is explicit. Both agree that the principles of the founders of the republic must be maintained, that our independence is in peril because of the money power, and that this country is big enough to have a standard of value of its own without regard to the rest of the world. Both demand the free coinage of silver at the ratio of 16 to 1. Both condemn the sale of bonds for gold. Both denounce banks; the Chicago platform apparently limiting its complaint to national banks, but declaring at the same time that all paper money must be issued by the Government. Both favor an income-tax; the Chicago platform calling for one that shall cause wealth to bear its due proportion of the expenses of the Government, the Populist platform demanding in terms a graduated tax. Both decry the Supreme Court. Both repudiate "government by injunction." Both demand legislation prohibiting gold contracts. Both declare that the Government shall exercise its option of paying its obligations in silver. Both "sympathize with Cuba," and want the Territories admitted as States. Both reject all terms offered in settlement of the debts of the Pacific railroads.

Practically the only differences between the platforms are to be found in the planks concerning railroads and concerning the issue of money. The Chicago platform wants the control of Government over the railroads enlarged indefinitely; the Populists declare frankly for Government ownership of railroads and telegraphs. The Chicago platform proposes that Government notes shall be redeemable in coin, meaning thereby silver coin; the Populists content themselves with favoring the issue of money by the Government without saying anything about its redemption. This money is to be "safe and sound," and there is to be "a just, equitable, and efficient means of distribution direct to the people and through the lawful disbursements of the Government." We fear that this plank will not satisfy the rank and file of the Populists. In 1892 their platform called for a distribution of money "direct to the people at a tax not to exceed 2 per cent. per annum," according to the sub-treasury plan of the Farmers' Alliance. If there is nothing to hope for except a distribution through the lawful disbursements of the Government, how are the people to get hold of the money? That means nothing but the continuance of the present system, and in that case the Chicago platform is practically identical with that of the Populists. Had it been adopted last, it would read like a timid copy; as it is, the Populists have improved on the Chicago precedent.

Mr. George Fred Williams is furious because the Democrats of Massachusetts are not willing to admit that all their convictions have been erroneous, that their understanding of the principles maintained by Jefferson and Jackson has been incorrect, that whatever they have regarded as honorable is wrong, and that they must openly proclaim their adhesion to and support of views which they have always detested and always will detest. The quite natural reluctance to make such shameful admissions Mr. Williams describes as a "desperate effort to injure the cause of the national Democracy in the coming campaign." To counteract these desperate efforts Mr. Williams pleasantly invites every citizen of Massachusetts to join in forming a State organization which shall support the Chicago platform. The invitation is not a particularly attractive one. As we understand

Mr. Williams's theory of political morality, it makes no difference whatever to the members of a party whether the policy of the party is changed or not. If the Republican platform had declared for the reënslavement of the negroes, according to Mr. Williams all who had called themselves Republicans must support that measure. Possibly Mr. Williams would say that the Chicago platform expresses the principles hitherto supported by the Democratic party. He is welcome to that opinion; but he cannot deny that other people have a right to hold opinions of directly opposite character.

The sound-money men in both parties are becoming thoroughly aroused to the importance of securing a House of Representatives which can be depended upon in the next Congress. The thing to do is to unite the votes of those Republicans and those Democrats who oppose the silver craze in such a way that a majority of Representatives may be secured who will oppose either free coinage or any compromise with silver. In a normally Democratic district a gold-standard Democrat should be supported by gold-standard Republicans, rather than run a sound-money Republican and take any risk of a silver man slipping in between the two. In strongly Republican districts the sound-money Democrats should reciprocate. Where neither the Republican nor the Democrat is sound, the gold-standard men should run a candidate of their own. In the Detroit (Mich.) district the candidate of the Republican party is to be a man who cannot be trusted to stand up for honest money against any pressure, while it seems more than probable that a strong effort will be made to oppose him with a Democratic candidate who can be trusted just as little. If this cannot be prevented, the *Free Press* (bolting Democratic) holds that "an effort should be initiated to secure the nomination of a candidate for whom the friends of honest money can cast their votes with some degree of confidence."

As Mr. Depew remarks, the policy of frightening English capital away from this country has the effect of stimulating industry in England. It produces such an abundant supply of loanable funds there as to make the rate of interest extremely low. This means that enterprises which would be unprofitable if capital had to be borrowed at a high rate of interest, become profitable. It means that employers are relieved of the necessity of reducing wages and are enabled to increase them. The general prosperity of the country has been evidenced in various ways, notably by the increase in the revenue of the Government. Additional evidence is now at hand in the report of the Board of Trade on the bankruptcies occurring during the year 1895. The number of cases decreased about 9 per cent. from 1894, and the estimated losses to creditors were but £8,328,000—a decrease of £1,367,000. The liabilities of the bankrupts were also about 15 per cent. less; and, as compared with 1893, the losses of creditors have fallen 23 per cent. According to the report, the annual amount of trading insolvency is on the whole steadily diminishing, and during the last few years it has fallen to a lower level than at any time during the present generation. If this does not demonstrate the prosperity of trade, it at least shows that trade is conducted, so far as the system of credit is concerned, on sound principles. Our harassed bankers and business men may well turn their eyes with envy to a country where the standard of value is not in constant danger of subversion by the Government, and where people do not have to speculate on the chances of coming down to a silver basis.

Mr. McKinley's little speech on Saturday had rather more about the tariff in it than the political situation just now seems to call for. That non-partisan campaign in defence of the national credit upon which he says we are entering does not mean a tariff campaign. It is especially futile in him to assert that "everybody knows" that the next Congress, if Republican, will pass a tariff bill as one of its first acts. Everybody knows that the next Senate will do nothing of the kind, and there is no use in holding out false hopes to anybody. On the money question the Major was as emphatic as a practised dealer in generalities can be. He was pronounced against any measure that would debase the currency or destroy public confidence. He undoubtedly means that he is in favor of the single gold standard, but it would be just as well to say so in terms. He should know that the times call for incisive statements, and that phrases fitted to put an edge on public sentiment are the ones for him to seek. Nothing is to be gained by being mealy-mouthed or trying any longer to butter the silver parsnips with fine words.

The announcement by the Atlanta (Ga.) *Journal* that it will support Bryan, despite its opposition to the free-coinage principle, should not surprise the public. The Mobile (Ala.) *Register*, which at first repudiated the Chicago ticket, has recanted, and the Savannah (Ga.) *News*, which left its attitude somewhat in doubt, announces that it will support the regular ticket. In Florida the Jacksonville *Citizen*, which has always been a sound-money journal, has accepted the result at Chicago, and other Democratic newspapers in that State, which have also opposed free coinage, take the same position. The independent voter is as yet not developed in most of the States in the Farther South, and a Democratic newspaper which should advise readers to help the election of a Republican President would be in danger of losing readers. The race question also enters into the matter, as the Democrat who votes the McKinley ticket in one of those States must cast his ballot for "niggers" as Presidential electors. Further north the conditions are different, notably in Kentucky, where the race issue is less acute and where the Republican party locally is more respectable. In such border States Democratic newspapers not only can bolt, but find a large proportion of their readers glad to keep them company in so doing.

The silver organs in the Southwest are making much of a statement, which is credited to Mr. Perry Belmont, that the Bank of France maintains the parity of gold and silver in that country by paying out both metals indiscriminately and at its own option. From this it is argued by the silver organs that we could do the same if the Treasury would exercise the same option. The fact is, that parity between the silver five-franc pieces and the gold coins has been maintained by stopping the coinage of silver and restricting the amount of five-franc pieces to the quantity in circulation twenty years ago. This was an act of the Government, not of the Bank of France, which is a private institution owned and managed exclusively by the shareholders. It is true that the Bank does exercise an option in paying out silver or gold when its notes are presented for redemption. It makes a profit by doing so—that is, it swells its own dividends. If a million francs of gold is called for, and the Bank sees a chance to "turn an honest penny," it offers its customer half a million in gold and half a million in silver. The customer says, "No, I must have it all gold because I want to send it out of the country, and foreigners will not take silver." The Bank has made a calculation that it will cost the customer say 1-8 per cent. to sort gold out of the circulating medium of the country, and that it can therefore safely charge 1-10 per cent. premium on the gold which it pays out, which premium is a profit to itself. This is the whole mystery of the premium on gold in France. Of course, the Bank exercises a discretion in this matter. Sometimes it charges a premium and sometimes it does not. The operation has nothing whatever to do with maintaining the parity of the two metals. In fact, it produces the only disparity which exists there. If the Government of France should go in for the free coinage of silver, parity could not be maintained a single day. Mr. Perry Belmont knows all these things, and is a sound-money Democrat through and through. It is evident, therefore, that the silver organs in the Southwest have either misquoted him or misconceived his meaning.

The Republican conventions that are being held in States between the Missis

sippi and the Rockies furnish little evidence that the free-coinage heresy has a hold upon the party in that section of the country. The convention in North Dakota was held last week, and it endorsed the St. Louis platform; an effort to tack a silver plank to the resolutions being easily defeated. In South Dakota, Senator Pettigrew used all his influence to prevent a similar endorsement, but he was overwhelmingly defeated. In Iowa the Congressmen and other politicians who seemed so doubtful at St. Louis whether their constituents would endure a declaration for the gold standard, found that the delegates to the State convention were impatient with their timidity, and were quite ready to "stand up to the rack." Indeed, there has been little evidence of revolt among Republicans in the central part of the Union, outside the States of Minnesota and Michigan, and in these two States the bolters from the St. Louis platform do not seem to be gaining ground as time passes.

The commission on the Greater New York charter have displayed great speed in preparing a draft of the first five chapters, and great good sense in giving it out, even in incomplete and tentative form, for public scrutiny. Whatever the plan evolved, its acceptance must depend on popular approval; and as that can be secured only by thorough discussion, and as the time is short, discussion cannot too soon be invited or begun. Of the general outline submitted, it is to be said that the centralizing of power and responsibility in the Mayor is in keeping with the prevailing opinion among municipal reformers. The practical working of this plan in Brooklyn and Cleveland and other cities has revealed few operative objections to it, and it seems now destined to widespread trial in this country. How to secure an efficient legislative body to go with this strong executive, and an interested and honest local control of local affairs, is the great problem. The commission propose to solve it by the adoption of a borough system, the greater city to be provided with nine borough boards, each having its local jurisdiction and each electing representatives to the central legislative body. In the details of this adjustment of local to central government will come the rub. Whatever may be found to be the difficulties or practicability of this part of the plan, the commission are certainly to be praised for the direct way in which they declare for ample powers in the Mayor's hands and for single-headed departments.

In the course of President Walker's address in London before the Bimetallic League, he fairly got on his knees to that city, begging it to give the world international bimetallism. He said: "Of all the vast expanse of the globe, one square mile alone blocks the way to the adoption of a world's money as wide as the world's trade." Athanasius against the world was nothing to this; his patriarchate covered much more than one square mile. The orators lately in action at St. Louis are, in fact, the only ones able to equal this flight of Prof. Walker's. It is a common Populist conception that four men meet in a back room in London, not larger than 200 square feet, and mark up the price of the dollar and the rate of interest as the fancy strikes them. "Cyclone" Davis would agree in general with the head of the Boston School of Technology, that three or four Jews in London were keeping the rest of the world from having their own way, but the Texan remedy is not to beg but to break heads. That, we fully believe, is the only way of making that one square mile in London "let up" on the rest of the globe. President Walker's method will only make it more conscious of power and unscrupulous in the use of it. In this connection, it is interesting to learn from President Walker's 'International Bimetallism,' just published, how that beautiful world's money as wide as the world's trade is to be established. It is not to be through international conferences. President Walker is as sick of them as Bryan himself, and with as good reason. There is such an unpleasant publicity about them, so much speechmaking and explaining to do, and now such an inevitable air of solemn farce. No, conferences are to be thrown over, and international bimetallism brought about, how? "Through diplomatic negotiations *quietly conducted*, without speechmaking or ceremony, between the four nations, France, England, Germany, and the United States." In other words, four monarchs are to get together in the good old secret way and agree to debase the coinage, letting the people and the press know nothing about it until it is an accomplished fact. But if international bimetallism can come only without observation, its arrival is even further off than we had supposed.

Even in "bimetallic France" people are occasionally reminded that silver coin has, after all, rather a factitious than an intrinsic value. The Paris correspondent of the London *Economist* writes that dissatisfaction and inconvenience have been caused by a proclamation of the Ministry of Finance calling attention to the fact that silver coins of dates previous to 1866 for pieces of one and two francs, and smaller pieces older than 1864, are not current. Such coins have hitherto been in circulation and have never been withdrawn by the Government when received at the post-offices and other public departments. The Ministry of Finance is now obliging enough to offer to purchase these coins at 53 per cent. of their face value, in order, as it ironically observes, to facilitate the elimination of such coins from circulation. The silver coins current in France are as varied in character as our paper money. The silver coins of Belgium and Switzerland and Italy are worth their face value if they have the right year stamped on them; otherwise they are not a legal tender. In the case of Swiss coins, if the female figure on them is erect, they are good; if seated, they are bad. There is a good deal of "fiat" in the value of such coins, while gold appears to maintain a perverse independence of all legislative assertions of its value.

Sir William Harcourt's question about the Venezuela controversy in the House of Commons last week made it clear again that Lord Salisbury has not kept abreast of English public opinion in pushing for arbitration. He has accelerated his pace of late, it is true, and now admits that time should not be lost, and that the present situation should be utilized for the purpose of securing a permanent solution for similar difficulties. But there is no doubt that the English people and a good part of his parliamentary supporters have been vastly impatient at the way he has let the affair drag along. He made public the recent correspondence on the express ground that it would be an advantage to test public opinion. The cheers that greeted Sir William Harcourt's pressure for dispatch in the business give a test of parliamentary opinion at any rate. Secretary Olney has been readier to go on than Lord Salisbury, but he, as well as the British Premier, shrinks from going the full length of arbitration, and proposes to reserve a class of difficulties that cannot be arbitrated. In other words, both negotiators abandon the principle of the duello in some cases, considering it an obsolete and monstrous principle, but in others propose to apply it as rigorously and wickedly as ever.

There is reason to think that the disturbances in Macedonia are of a more serious character than has been supposed. The German and Austrian papers are full of reports of an extremely disquieting character; and when we consider the outbreak in Crete and the situation in Armenia, it is hard to resist the conclusion that the dissolution of the Turkish empire may come sooner than it was looked for. Its collapse can hardly occur without a general convulsion, but the framework of the ancient despotism has become so rotten that it seems doubtful if the European Powers united can hold it up much longer. It is by no means improbable, as is sincerely believed by some of the American missionaries, that Russian influence is at work to stimulate disorder. Now that Russia has brought Bulgaria to terms, her hands are comparatively free, and when Turkey finally breaks up, Russia at least will be no loser.

A REAL BUSINESS CAMPAIGN.

We have had feigned or fraudulent "Business Men's campaigns" in this country, but this time it is the genuine article. The business interests of the country are for the first time almost absolutely solidified on one side in a Presidential election. Hitherto it has been possible for one party to offset the other's great "Dry-Goods Parade" with an imposing "Manufacturers' Demonstration" or "Solid Men in Line" of its own. Free silver astride the Democratic party has changed all that. In the contest between party and bread-and-butter, party goes down every time. The business world has now a common consciousness created in it by the bold threat of the Chicago platform and candidates against its very life, and the most powerful impulse in that consciousness is the instinctive one of self-defence. Every active business man becomes of necessity a political agent from this time on. It is not a matter of artificial and perfunctory parades and processions, but of a spontaneous, a continuous, an overwhelming fight with the forces of civil disorder and business disaster.

The bankers and brokers of this city have just furnished a most striking proof of the way the business interests of the country are bound together, and are necessarily bound together, against every assault on the national credit. They have combined their powerful forces not only to replenish the Government's gold reserve, but to protect it against further depletion. They are, in other words, proposing to do now voluntarily what the syndicate obligated itself to do last year. Then it was, according to the Populists, only a question of blood-sucking and wicked profits wrung from the people. What they will say to this similar step, without any Government contract or any profits, we do not know; but it is safe to predict that it will throw them into a fresh fine frenzy.

We do not suppose for a moment that this combined action to protect the national credit is regarded by its promoters as a piece of disinterested patriotism. It is a business move, and there are the best of business reasons for it. Bankers are first of all business men, and would have no right to use the funds in their charge for patriotic purposes, merely as such. But there are cases when good patriotism is also good business, and this is one of them. If confidence can be maintained, or if at least an impending panic can be averted, the business basis for the action taken is clearly established.

We believe, furthermore, looking at the matter narrowly, that the project to check gold exports and supply needed sterling exchange for ninety days has a reasonable business basis in existing conditions. Those closest in touch with the international situation are confident of large foreign buying of our cotton and wheat. It is noticeable that one firm in particular, which last year would not go into the combination to protect sterling exchange, because it did not believe the export situation warranted it, is now acting with the others. The operation thus promises to be successful, purely as a business stroke. But even if it is not, even if the work should turn out to have been done at a loss, it would be a wise and defensible business move nevertheless. The general gains resulting from improved confidence would more than make up for incidental losses. Every vast business interest is intimately related to public confidence and the national credit, and any action taken by it to build up that confidence and sustain that credit is legitimate business.

This is the great significance of the spontaneous arrangements making by New York business men to protect the gold reserve. It shows that the great commercial and industrial forces of the country are wrapped up in the preservation of a stable currency. It shows how inevitably they come together and unite their tremendous powers in defence of the national finances. They are bound to do it. It is not patriotism merely, it is horse-sense. Individual bankers, isolated millionaires, could of course protect themselves in a general smash; but the vast business fabric of the country would fall in irretrievable ruin. To prevent that is the beginning of business wisdom. That was really the underlying motive with many subscribers to the Government bond sales. They did not particularly want the bonds. The enormous profits, as a little figuring would show, were all in the Populist's eye. But a general business disaster must be staved off at all hazards. It was an argument, in fact, of one of the promoters of the syndicate loan, that bankers must come in and take a share, "or else we shall all go to the devil together."

Politically, the effect of American business men being aroused and embattled as never before cannot fail to be enormous. What we see here in New York on a large scale is going on proportionately all over the country. The business instinct is one and the same thing wherever you find it. Because a manufacturer or trader lives in Alabama or Texas, there is nothing in the climate to make him imagine that cutting the dollar in two will be anything but disastrous to those who produce as well as those who buy and sell. As a matter of fact, Southern and Western business men who come to New York by the hundred say that they and their kind think about the situation just as we do, and are going to vote the same way, too. This will appear more and more evident as the campaign goes on. The solidification of business men against the party of repudiation and riot will be, we believe, by October, so complete and overpowering that all doubt about the result will be over long before election day comes.

THE PLIGHT OF THE WESTERN FARMER.

The *Evening Post* publishes a letter from a correspondent who appears to have a personal acquaintance with the condition of the farmers in several of the Western States. He declares that an appalling change has come over their circumstances during the last ten years. He asserts that there is no mystery about the cause of this, which is, in brief, the fact that farmers get for their products prices that will average scarcely one-half what they received ten years ago. Hence farmers by the thousands have lost their farms, and tens of thousands are struggling to avert foreclosure, and the writer thinks that allowance should be made if such distress as this has bred a tendency to fanaticism. Certainly the condition of men who have borrowed moderate sums of money to use in legitimate and safe business enterprises, who have been disappointed in the outcome of these enterprises, and who have heroically struggled to prevent the lenders of this money from being deprived of their property, must command general sympathy. We know of no community where such men are not respected, or where their creditors are not willing and anxious to assist them in every possible way to retrieve their losses. Nor do we doubt that in the Western States many such sufferers are to be found. For a number of reasons, however, their number appears to be exaggerated.

In the first place, such evidence as we have, although it is of an imperfect nature, shows that probably the majority of farmers own their farms "free and clear." To all such men the course of general prices is really a matter of comparative indifference. Granted, which we do not grant, that the Western farmer sells his products for half the price of ten years ago, what difference does it make to him, when free from debt, provided the prices of everything that he buys have fallen in like proportion? And if they have not fallen in like proportion, then it conclusively appears that the demonetization of silver has nothing to do with the case, for that must affect all prices if any. We are unable to see that the Western farmer who is free from debt has any excuse whatever for either financial dishonesty or fanaticism. In the second place, the circumstances under which large parts of Kansas, Nebraska, the Dakotas, and Colorado were settled are notorious. It was very well known that the rainfall was uncertain in those regions, and they had been marked on the map as parts of the great American desert. Nevertheless, there were railroads that had land grants in those parts, there were State immigration agencies, there were farm-loan companies, and there were women and clergymen and teachers and even trustees and savings-bank officers in the East who were ready to lend money on the security of lands which they had never seen and

which they generally could not have found on the map if they had looked for them—to lend it, too, to borrowers whom they did not know and who were in many cases entirely impecunious.

Nothing else could well have happened under such conditions than what did happen. There were plenty of immigrants who were willing to buy land of the railroad companies if they could borrow the money to pay for it, and to take their chances of getting a crop. The money-lenders in many instances were dishonest, and frequently persuaded the borrower to take more money than he really needed, charging him enormous commissions, which were of course paid out of the money of the Eastern investor. Perhaps these money-lenders believed that, as had often taken place in the past, there would be such a rise in the value of farm lands as to bring everything out right. Probably the borrowers generally had this belief, although in many cases they were easily persuaded to drop enterprises in which they had never invested a dollar of their own capital, and to abandon "farms" which they had bought for less money than they had mortgaged them for.

However this may have been, it is evident that the whole business was speculative. Even the Eastern investor was a speculator to a certain extent, for he was tempted by higher interest to accept security without proper scrutiny; and we may say here parenthetically that the sufferings of this class deserve some consideration even from the silver men. But the latter was even more a speculator. He was borrowing money with which to embark on a perilous enterprise. He knew at the start that unless "rain followed the plough," he could not count on a crop in the arid belt more than one year in three. But he took the chances. He knew that time and again men had taken up land and paid for it with the proceeds of a single crop, and he had faith that open furrows would tempt showers out of a clear sky.

We need not examine the many causes that coöperated to bring this speculation to ruin. Their enterprises were not legitimate business enterprises, the amounts that they borrowed were frequently such as no one who wished to protect his creditors from possible loss would borrow, and their conduct when they found that their enterprises were failures was frequently disgraceful. We are well aware that human nature is weak, and that debtors are easily persuaded to do things the morality of which they would question if they were not embarrassed. We are ready to "make allowance" in the sense of admitting that distress occasions fanaticism and dishonesty; but we are not ready to admit that it justifies dishonesty. No matter what the sufferings of the Western farmer, his condition shall not bring us to consent to the financial dishonor of the nation, to the cheating of creditors, to the robbery of the poor. Should the Western farmers overwhelm us with their votes, we shall submit only as the opponents of human slavery submitted when they were outvoted by the South, confident that in this country honesty and integrity shall at last rule.

ON THE BARGAIN COUNTER.

THE *Journal* of this city makes some suggestions that are well adapted to cause sober reflection among the readers of that paper. Why, it asks, should millionaire holders of American securities fear a panic through the unloading by English holders of American securities? Would not this great unloading place the purchasing power in their own hands? Would they not have an unparalleled opportunity to invest—"to secure some very good property at a bargain"?

These observations appear to us to indicate a very correct estimate of the gains that would be made by the possessors of great wealth if the American people should declare in favor of the free coinage of silver. That there would be a terrible panic does not admit of a doubt. If such transactions in securities as we now see take place under the influence of vague apprehension, the situation would be far worse when the certainty of disaster was established. If these things are done in a green tree, what will be done in a dry? We may safely assume, therefore, that the election of Mr. Bryan will be the signal for a great "unloading"; that is, for the forced sale of large amounts of securities for whatever they will bring.

These sales, as the *Journal* intimates, will be made not *by* the plutocrats, but *to* the plutocrats. They will be made not by those who will have enough to live on in times of distress, but by those who will not have enough to live on. They will be made not by the rich, but by those in moderate circumstances, who will feel that they must at any cost have something on hand with which to meet their ordinary expenses—with which to pay their rent, and to buy food and clothing and fuel for their children. They will be made by the officers of savings banks in order to raise funds wherewith to pay their frightened depositors. They will be made by directors of banks for the account of merchants who have pledged securities as collateral for loans of money to be used in their business. They will be made by hundreds of people in moderate circumstances (elderly people, school-teachers, single women), who will feel that, terrible as it is to have their savings reduced, it is better to make sure of something than to endure the strain of the possibility of losing all.

Such will be the sellers, and, as our millionaire journalist intimates, he and the other "plutocrats" will be the buyers. They can afford to forego dividends and interest for a year or two, provided they can purchase substantial properties at a fraction of their real value. It is by taking advantage of such conditions that many men have become millionaires, and it has generally been maintained that the existence of such conditions was deplorable, and by all means to be prevented, precisely because they give the very rich "opportunities to secure very good property at a bargain," at the expense of people of moderate wealth. It may be laid down as a maxim that "plutocrats" are in position to get the first news of whatever is likely to cause a fall in prices, and to take advantage of it. They are in the best position to judge when the decline has reached its limit, and, as we have seen, they have the means to use their advantage. They need not sell unless they choose, and they can buy when they choose. Other people have to sell when they do not want to, and cannot buy when they see that bargains are to be had.

Millionaires, therefore, as the *Journal* cheerfully assures them, need not worry about the silver craze. It will only give them another chance to carry out the principles which the Populists assert animate the rich. It is conceivable that some millionaires may have acted on these principles. They may have believed that the people were going to be humbugged by the owners of silver, and have converted their American securities into gold or British funds. They may be chuckling now over their astuteness, and gloating over the prospect of future wreck, when they will step in and "secure some very good property at a bargain." They may even reason that it is quite impossible for a commercial country like this to remain on a silver basis, and foresee an eventual return to gold, with further panic, ruin of debtors, foreclosure of mortgages, etc., as necessary consequences of financial dishonesty. Whatever happens, their withers will be unwrung.

But it is infinitely melancholy to see a great body of our fellow-citizens bent on forcing this opportunity on the "plutocrats." It is inconceivable that they have any hostility to the possessors of moderate wealth, for many of them belong to this class. Nor are they unaware that the "plutocrats" can take care of themselves, for they continually attribute to them almost superhuman craft and quite inhuman principle. Nevertheless, they seem determined to bring on a crisis which can result only in transferring property from the less wealthy to the "plutocrats." Does it not occur to them to inquire into the influences that have established the silver propaganda, and to ask whose interests will be immediately promoted by its success? Such questions may well be suggested by the friends of honest money to those who are confused by the claims of the silver advocates. If a period of disturbance in values is to result in gain to the poor and loss to the rich, it will be the first instance of the kind in the world's history.

A FREE-COINAGE CATECHISM.

Q. What do the free-coinage leaders especially charge against the gold standard? A. They declare that it has helped the rich, and has caused distress and loss to everybody else.

Q. Is this statement true? A. It is not.

Q. Suppose the gold standard had worked injury to every one except the rich; how should we know the fact? A. People with small incomes would have been growing steadily poorer since the gold standard was adopted.

Q. Have such people been growing poorer? A. On the contrary, their prosperity, since this country returned to the gold standard in 1879, has increased in an unprecedented degree.

Q. What proof have you of this? A. The increase in savings-bank deposits.

Q. By whom are such deposits made? A. They consist almost entirely of the surplus income of tradesmen, wage-earners, and small producers.

Q. What are the figures of these deposits? A. In 1879 the total savings-bank deposits in the United States were $802,490,298; in 1895 they were $1,844,357,798; increase, $1,041,867,500, or 129 per cent.

Q. What is your authority for these figures? A. The official statements of the savings banks to the United States Government, published in the reports of the Comptroller of the Currency.

Q. What do the figures show? A. They show that during the seventeen years since this country's return to the single gold standard, the savings of its poorer people have been a thousand million dollars larger than they were in any preceding period.

Q. Are the savings-bank deposits our only proof that the people have prospered under the gold standard? A. The building and loan associations are another striking proof.

Q. Who are the depositors with building and loan associations? A. Chiefly wage-earners, tradesmen, and people with small salaries.

Q. What do the reports of these associations show? A. Twelve years ago the deposits with such associations were comparatively insignificant. In 1892 the returns of the United States Department of Labor showed the aggregate to be $500,000,000. To-day the total of these deposits in this country is estimated at $750,000,000.

Q. How do all these figures compare with savings-bank deposits and with building and loan association accounts in countries now on a silver standard? A. Such countries have neither savings banks nor building and loan associations, at least on any such scale as to furnish a basis for comparison.

Q. How do you explain so enormous an increase in the savings of our people? A. Wages have increased since the return to the gold standard. Great improvements and extension of production have lowered prices and reduced the cost of living. This has necessarily increased the people's savings.

Q. What is your authority for stating that wages have increased since our adoption of the gold standard? A. The highest known authority: the United States Senate report of 1892.

Q. How much does this report show average wages to have increased since the resumption of specie payments? A. Up to the latest date covered by the report, they had increased 20¾ per cent. In many industries the increase had been much larger.

Q. Then the average wage-earner's income has increased under the gold standard, while living expenses have decreased for everybody? A. Such are the facts.

Q. Would this advantage continue under free silver coinage? A. It could not. Wages would not increase spontaneously if at all, while prices for necessaries of life would rise rapidly.

Q. Do the free-coinage leaders admit this certain rise in prices? A. They do; they declare that all prices are now too low, and that free coinage will raise them.

Q. But do not these people claim that high prices for food, clothing, and household necessaries will cause general contentment and prosperity? A. They do.

Q. How can we be sure that they are not right? A. Read the record of years when currency inflation had caused high prices in this country. Look into the condition of other countries where prices now are high under a silver standard.

Q. When were prices and living expenses highest in this country? A. In 1865 and 1866.

Q. What did the American people of that time think of the high prices? A. They complained bitterly.

Q. Where can we find any record of such complaint? A. Go to a public library and read the newspapers of those years.

Q. Give some illustrations. A. In 1865 the New York papers seriously advised people to stop eating meat, in order to check the high prices. Letters from readers published in these papers complained that milk, butter, coal, and ice were almost beyond the poor man's reach. One letter, in the New York *Times* of June 29, 1865, deserves to be quoted. "All last winter," the writer says, "I could hardly afford to buy any meat. The little bits of beef and mutton that we poor people buy cost so much that my wife says it is like eating money." You can readily consult all these published letters.

Q. Would people object to high prices now as much as they did then? A. Every head of a family and every housekeeper is competent to answer this question.

Q. If prices advanced under free coinage, would not the employer of labor be able to pay very much higher wages? A. His own living expenses would increase as fast as his income, his business would be thrown into confusion, and all his profits would become a matter of speculation.

Q. Was this his experience when prices rose before 1865? A. It was emphatically his experience.

Q. But, surely, if the money supply increased, the wage-earner would get his share? A. He could get no more than his employer paid him.

Q. But might not his employer advance wages simply because the money supply had increased? A. We leave the answer to this question to the wage-earner himself.

ERNST CURTIUS.

NORWICH, Conn., July 27, 1896.

I FIRST met Ernst Curtius in June, 1871, at the Hôtel des Étrangers, Athens. He had just returned from Asia Minor, where, in company with Stark of Heidelberg, Adler of Berlin, and Major V. Regely of the German Engineer Corps, he had been superintending the excavations at Pergamos. I had the good fortune to be placed next him at table-d'hôte, and the circumstance that I spoke the modern Greek with some facility led to conversation between us in that language, and roused also Curtius's interest in me, one of the earliest Americans who made a prolonged residence in Greece to gain a knowledge of land, language, and people. This personal interest led to a subsequent intimate acquaintance in Berlin, where I was so favored as to be, for a year (1872-'73), a member of Curtius's household. Thus it comes about that I am qualified and justified in writing, shortly after Curtius's death, these reminiscences of one of the noblest natures that I have ever known. How well I recall the impression which Curtius made upon me at that first meeting! He was then fifty-seven years old, but bore hardly any visible marks of age. He was small of stature, but of beautiful physical development. His light step, his large, prominent eye, his dark-brown, wavy, abundant hair, his animated, rapid speech, his gay flow of spirits, all come back to my memory.

To few men did birthplace mean more than to Curtius. He was born September 2, 1814, in the stately historic town of Lübeck, capital city of the Hansa League, which in 1400 numbered eighty towns in its membership and controlled the commerce of the world. The carved front of many an old Lübeck house bears witness to the wealth which world-commerce brought into this city, and the Marien-Kirche is one of the largest and noblest churches in Europe. Its monuments, by their number and their variety, testify to the wealth and enterprise of the citizens of the good old town, and many an ancient gate and guild-hall speaks to the thoughtful visitor of the bustle and wealth of long ago. Curtius's father, Carl Curtius, was for a long period syndic of Lübeck, had studied law, possessed decided literary tastes, and had maintained a correspondence on subjects connected with the drama with the poet Schiller while the latter was professor of history at Jena. The name Curtius was formed by giving a Latin termination to the German name *Kurz*, "short." Ernst Curtius had two brothers, Theodore, the oldest of the family, who studied law and became burgomaster of Lübeck, and

George, born in 1817, who attained great eminence as a comparative etymologist, and died, full of honors, in Leipzig, some ten years since.

Ernst Curtius received his early training at the gymnasium called the Katharinum, originally the Monastery of St. Catharine, and, with the reputation of a brilliant student, went, in 1834, to Bonn to study classical literature. He took with him from Classen, who had lately come to Lübeck, an introduction to Prof. Brandis of the University of Bonn. Classen had been, while Niebuhr was professor at Bonn, the historian's secretary and private tutor to his son. Brandis had been Niebuhr's secretary when he was German Minister at Rome. Brandis was in due time succeeded by Bunsen, whose brilliant subsequent career in England was opened to him at the German Embassy at Rome. All of these men, except Bunsen, were natives of Schleswig-Holstein; and attachment to their little native state, so wonderfully productive of great men, made them ready each to lend a helping hand to the other.

In 1835 Otho, a Bavarian Prince, the first King of Greece, attained his majority and took the reins of government. Great hopes were entertained of the future of the Greek kingdom, and in 1837 Brandis was selected as the Privy-Councillor of the King, who had barely completed his education. Brandis needed a teacher for his children, and he selected the talented, enthusiastic Ernst Curtius, whom he had been teaching for three years in his lecture-room at Bonn. At the same time, Emanuel Geibel, one of Germany's valued lyric poets, a schoolmate of Ernst Curtius at the Katharinum, accepted an appointment as private tutor to the children of the Russian Ambassador. What a romantic beginning of life was this for a gifted youth of twenty-three! The party, numbering eight or ten souls, started from Hamburg in an emigrant-wagon, and their journey was continued, in this same wagon, until it terminated in Ancona, on the east coast of Italy. Nearly three months were required, but what a fund of impression, of knowledge must have been gained. Doubtless Curtius's journal is still in existence. A companion to it is Goethe's journal of his tour to Italy. It is difficult for us to conceive of the transformations which have taken place in Europe since this journey was undertaken. Think of the formalities of passport, of the varieties of costume, of the multitude of independent States! The longest halt was made at Munich, where, from Brandis's relations to the Bavarian Prince, the party had a warm reception. Then the Alps were crossed, Lombardy and the Po Valley were passed, and a sailing-vessel was taken at Ancona. Curtius's family used to take special delight in hearing him relate the story of this journey.

The hopes of the Philhellenes in regard to Greece were hardly realized, in part because they had been unwarrantably high. Brandis, perhaps, felt in after years that he had sacrificed much in interrupting the quiet course of his fruitful labors at Bonn, but to Curtius the whole experience was full of the greatest advantage. Sensitive far beyond most men to natural scenery, with a quick and unerring eye for beauty in nature and art, he gained, in the most impressionable period of life, an intimate acquaintance with Greece which bore unceasing fruit to the very close. Who can measure the effects upon facilities and ideals in classical study, upon museums, upon the popularizing of Greek art, of Ernst Curtius's residence for two years in Athens? Two specially important journeys were undertaken by Curtius towards the close of his stay in Greece: one, with K. O. Müller, to Delphi; the other, with Karl Ritter, a protracted tour in the Peloponnesus. The first journey was saddened by the death of one of the most brilliant of German archæologists, who was prostrated by sunstroke while copying inscriptions at Delphi. Curtius brought back the remains of Müller to Athens, where they are now interred. The second journey, in the companionship of the father of modern geography, unquestionably laid the foundation for one of Curtius's most valuable works, 'The Peloponnesus,' which, though published in 1850, has not been superseded.

Curtius took his doctor's degree, in Bonn, in 1841, and was immediately appointed instructor in the Joachims-Thal Gymnasium in Berlin. The director of the gymnasium, who was Curtius's personal friend, soon requested Curtius to deliver one of the free popular lectures in the Royal Academy of Music (Sing-Akademie) which have for more than fifty years formed one of the winter attractions in Berlin. In the dense audience were Humboldt, Boeckh, and Ritter, and among the royal household was the Princess Augusta, wife of Prince William, and mother of the heir to the Prussian throne. Curtius chose as his subject the Acropolis of Athens. With that wonderful skill which he possessed he made his account of this famous rock nothing less than a living picture of Greek history, art, and religion. The audience was charmed, and the Princess is said to have remarked at the close of the address, "That is the man whom I must have to educate my son." In fact, three years later, in 1844, Curtius was appointed Educator of the Crown Prince, with the title of Professor Extraordinary in the University of Berlin. He devoted six years to this duty, having the general charge of all the historical, linguistic, and literary studies of Friedrich William. His relations with the royal family became familiar. In 1848-'49, when revolutionary feeling ran high in Berlin, the Prince of Prussia (afterwards, as Emperor William, the most popular sovereign in Europe) was so unpopular that it was thought necessary for him to leave Germany and reside in England. During this time Curtius lived in the intimate relations of common family life, in Potsdam, with the heir to the German throne and his mother, the Princess Augusta.

In 1850 Curtius accompanied his distinguished pupil to the University of Bonn, and in the same year his work on the Peloponnesus was published. This is not the place to attempt a bibliography of Curtius's works. Yet his address on Olympia in 1852, which is believed, owing to the personal interest which it excited in the Crown Prince, afterward the Emperor Frederick, to have been the cause of the German excavations of 1876-80, with all their wonderful results, should here be mentioned. In 1856 Curtius was appointed professor at Göttingen. He had already been induced to undertake the preparation of a History of Greece, and this history, his most extensive work, was completed in 1867. The English edition of this work is published in five volumes. Its capital merits are the intimate acquaintance of the author with the land he describes, his personal familiarity with the range of Greek literature, and his insight into Greek archæology and art. In 1869 Curtius was called to Berlin as professor in the University, and his life henceforth was to be identified with the German capital. The most important enterprises of this last period of his life were the excavations at Olympia, with which his name was peculiarly associated (in company, of course, with a large number of other scholars), and the establishment of the German School of Classical Studies in Athens, about 1872.

Any sketch of Curtius would be incomplete which should not mention the festival addresses, of which he delivered so many at Berlin. From the time of his appointment to the Berlin professorship, it devolved upon him to deliver, on the birthday of the Prussian King, the solemn address before the University. The subject of these birthday addresses was generally drawn from classical antiquity, but he would always make some application, pertinent and striking, to modern conditions and to modern needs. These addresses, delivered through almost thirty years in honor of three emperors, are a beautiful illustration of Curtius's patriotic feeling, of his versatility, of his exquisite literary talent.

In 1884 his admirers presented to him a noble bust of himself. Nearly a hundred Americans participated in this gift, the chairman of the American committee being the historian Bancroft. On Curtius's eightieth birthday a great demonstration in his honor was made at Olympia, where his bust, a copy of that of 1884, was crowned, and laudatory addresses were made by eminent scholars of all nationalities resident in Greece. The enthusiasm shown on this occasion is described as having been remarkable.

The nobleness of Curtius's personal character was something which altogether transcends description. Those who learned to know him recognize the peculiar inspiration which his nobleness has imparted to them, and are bound together by the tie of discipleship of him. Perhaps his influence has been peculiarly strong in America. A large number of the most eminent American classical scholars have been admitted to his hospitality and friendship, and count themselves as his fervent admirers. The interest felt in America in museums of casts, illustrative of Greek art, is largely due to the influence of Curtius. I am in doubt whether to attempt to characterize the home of Curtius as I knew it in Berlin. On the whole, I question whether a brighter family life could anywhere be found. Frau Curtius supplemented, in a wonderful degree, the gifts of her husband. Both delighted in the social life of the home, but Curtius would often lose himself in reverie, and find his own thoughts more interesting than the struggling speech of the foreign student or even the somewhat commonplace talk of the ordinary Berlin professor. Then Frau Curtius would come to the rescue, and, with a tact which must be seen to be appreciated, would discuss the subjects in which all were interested, and either set the company in animated conversation, or make, herself alone and unassisted, such speech as all would delightedly sit and listen to. Curtius leaves two children, Frederick, a man of brilliant literary endowments, who holds an important judicial position in Alsace, and a daughter, the wife of Richard Lepsius, professor in the Polytechnic School at Darmstadt. Prof. Lepsius is the son of the eminent Egyptologist.

Of the later years of Curtius's life it may be added that, with unabated industry, he toiled on until the end. Almost the only sign of physical failure was weakness of the eyes. He submitted to several operations for cataract, and, when his sight had grown so dim that he could work only very slowly and painfully, the use of his eyes was twice, to a considera-

ble extent, restored to him. His physical elasticity and his mental powers suffered little impairment until within the last three months, when the disease to which he succumbed declared itself. ROBERT P. KEEP.

AMHERST ECLIPSE EXPEDITION—II.

YACHT CORONET,
YOKOHAMA HARBOR, July 3, 1896.

REMARKABLE disturbances of nature seem to accompany the Amherst Eclipse Expedition upon its travels. Tales of the mighty eruption of Mauna Loa, just ending, greeted us at the Hawaiian Islands. Upon the arrival of the *Coronet* in Japan on June 22, it was learned that an enormous tidal wave had recently devastated more than thirty towns and villages in the north, washing away over five thousand houses and destroying nearly thirty thousand persons. Detailed accounts of this appalling disaster are still hard to obtain, for the few survivors in the devastated districts are even now too dazed to give clear descriptions of the horror which befell them. But it is known that a seismic wave, rising to a height of almost sixty feet, swept across the land, carrying everything in its course with irresistible force. Along a coast line of 175 miles in one province alone the wave overwhelmed the seaboard of three districts—Miyagi, Iwate, and Aomori, extending from Hachinoye on the north to Kinkasan, an island at the mouth of the bay of Sendai, on the south. Several shocks of earthquake were felt during the few hours preceding, and shortly before eight o'clock in the evening of June 15 a terrifying noise was heard, like the boom of gigantic artillery, a black wall of water was seen advancing from the ocean with fearful speed, and in less than two minutes whole towns were swept away and thousands of human beings perished. Their Majesties the Emperor and Empress have come nobly to the rescue with gifts of 15,000 yen, and the Tokyo journals at once opened subscriptions for the relief of the starving survivors, the *Jiji* collecting in a few days over 10,000 yen, and the *Nichi-Nichi* more than 8,000, while the Iwate branch of the Red Cross Society has established a temporary hospital among the suffering people.

And still the pleasant life of the foreign residents in Yokohama goes on much as it did nine years ago; men-of-war of many nations lie at ease in the beautiful harbor, now smooth and unruffled behind its superb new breakwater, and astronomers of several nations are on their way to lie in wait for the shadow of the moon when it rushes across the Hokkaido on the 9th of August. Once more will our satellite circle around us in her celestial pathway before she slips quietly in between us and the sun to shut off his light in Yezo for two precious minutes and a half.

A new system of meteorological observations made before an eclipse and with special reference to it was inaugurated for that of 1893. Taking the exact track as soon as published in the Nautical Almanac, and having careful observations made at the best and most accessible points, gave excellent results on that occasion. As the Ephemeris is issued about four years in advance, this insures three complete series before an eclipse. Noting the general meteorological conditions of the heavens is not sufficient, for the sun is in a particular part of the sky at a given hour, so the observations must be of a special character, and with distinct reference to the position of the sun, season of the year, and hour of the day when the eclipse takes place. The tabulation of this information assists greatly in selecting the best stations for eclipse-observation, and those who followed the "indications" as to clearness of sky in 1893 achieved the best results.

In that year Prof. Todd wrote to the Director of the Imperial Japanese Weather Service, requesting observations similar to those he had obtained for 1893 at different points in the Hokkaido, and his suggestions have been carried out in every particular Prof. Nakamura, Director of the Central Meteorological Observatory at Tokyo, has had printed and distributed to the different legations a pamphlet for the information of eclipse students, containing not only all the observations referred to, but a sufficiently minute discussion of them to enable all the astronomers to weigh most intelligently the probable chances of clear skies at every available point in the path of totality. The establishment of any station is thus made with full knowledge of whether it is best or worst in probable clearness; and if obliged to plant himself in some less hopeful location, the intending observer takes his own risks, with eyes wide open to the law of probabilities.

The three provinces of Yezo in which the shadow falls are Kushiro, Kitami, and Nemuro, each containing several towns, most of them, however, small and but little known to foreigners. Tri daily observations were made from July 25 to August 25 during three years, at two o'clock, half after two, and at three o'clock, at a number of these villages in the eclipse track, the results being carefully compared and comparative tables shown. From the percentage of cloud at the observation hour itself, Akkeshi, on the southeast coast, comes first in probabilities of clearness, and Esashi, on the northeast coast, second; but from the point of its constancy thirty minutes before and after the eclipse, Esashi presides over all the others, as shown by the full tables given for thirty-two days at seven towns. The selection of a station always involves much care and forethought, and responsibility enough to whiten the hair of any one except a philosophic astronomer, accustomed to take chances with nature. The probabilities at Esashi are considerably more than half in favor of clearness, and, after studying the reports and tables carefully and consulting with the meteorologists here, Prof. Todd finally selected that as his observing station, although it is farther and more difficult of access than Akkeshi, of which he had thought for a time as a probable location. But the Imperial Government has been most courteous to the Expedition, affording every facility possible, which included, with a truly royal generosity, requests to both railroad and steamer corporations for free transportation for the whole party and the instruments to any point they might select, and many other favors without which our comfort and convenience would have been much less in every way.

The interest of astronomers in this eclipse is shown by the large number assembled here for its observation—French, English, American, Japanese, and perhaps others. Already, a little less than six weeks before the important day, most of the parties have already started upon their northward way. France is represented by M. Henri Deslandres of the Paris Observatory, who is accompanied by M. Millochau and the brothers Mittau. He left Yokohama July 1st in the French warship *Alger* for Esashi. Prof. Schaeberle, head of the Lick Observatory expedition, has also started for Yezo, and will station himself at Akkeshi with his party, consisting of Mr. Burckhalter of the Chabot Observatory at Oakland, Mr. Maston, and Dr. Shuey. Prof. Terao, Director of the Tokyo Observatory, will be at Esashi; and the Astronomer Royal of England, Mr. Christie, with two assistants, is expected very soon.

Prof. Todd left Yokohama for Esashi on July 1, with his principal assistants, and about five days will be occupied in the journey. Others of the party will proceed thither after two or three weeks. With special steamers and men of war on the sea and the several cheerful eclipse camps on shore, the northern side of Yezo will see a surprising summer, and the innocent Ainu will probably date future history from this peaceful invasion of the foreigner. But it is a happy thing that some spots are still left on this fair earth where modern enterprise and cosmopolitan life can still afford astonishment. Yokohama is far less Japanese than it was a few years ago. More English is spoken, higher prices for simple things prevail, and jinrikisha men and sampan coolies show possibilities of brotherhood with the New York and London cabman. Japan is obviously prosperous and very happy. But I have heard seven Japanese babies crying since I came to this lovely land, and at a delightful tea house entertainment the other evening no painted lanterns swung in the breeze, but electric lights flashed forth from a bronze chandelier. MABEL LOOMIS TODD.

MARSHAL CASTELLANE.—II.

PARIS, July 17, 1896.

ON the 1st of January, 1813, Castellane was in Paris, "much surprised at his making visits on that day, when a month before he had found himself shoeless on the banks of the Niemen." He received his appointment as Colonel; nine years before he was a private, but, as he says, under Napoleon one had only to live to attain the highest rank. Napoleon was organizing new forces and preparing for a new campaign; he received on the 24th of January at the Tuileries the officers of the national guard of Paris, announced to them that he left in their protection the Empress and the King of Rome, that the enemy had offered him humiliating terms which he could not accept. "General Hullin, the Adjutant Laborde, Regnault de St.-Jean d'Angély, the Chamberlains Marmier, Janson, and others wept. Mme. de Marmier, who accompanied the Empress, fainted away. In the evening the household of the Emperor took the oath to the Empress, the new Regent." Castellane gives us day by day notes on the campaign of 1814, brief, but none the less eloquent. It is clear that he could hardly bear to enter into details on the terrible events which marked this year 1814. The notes become shorter and shorter as the end approaches: "March 18th. The Emperor is at Fère-Champenoise.—20th. The Emperor is at Arcis-sur-Aube.—25th. The Allies occupy Château-Thierry, La Ferté-Milon, and Soissons." On the 5th of April Castellane's regiment received orders to return from Tours to Versailles. It had not been engaged in the military operations in the East of France. On the 9th of April Castellane goes to Paris to secure the adhesion of his corps to a provisory government, composed of Talleyrand, Jaucourt, the Abbé de Montesquiou, the Duke of Dalberg, and General Beurnonville. "The sight of foreigners in the

capital," he says, "makes me ill. They told me at Talleyrand's, who is the sovereign *ad interim*, that I must leave off my tricolor cockade. I know no other; it made me angry. They pointed out to me that the marshals now wear white cockades. I submitted grumbling, but twenty-four hours afterwards my cockade left my calpac."

Castellane belonged, by birth, to the world of the émigrés, who were returning to the surface; but he had entered the army at eighteen, had followed the Emperor on many battlefields, and was a soldier *par excellence*. He had won every grade by hard work, and he was dissatisfied when "many men who never served are appointed lieutenants in the King's household. . . . Many people think now that the military career will be less fatiguing, less dangerous; they feel a surprising zeal for it." Castellane says in a note that if he had asked for promotion at this time, he could have been made *maréchal de camp* (the equivalent of brigadier-general). "I would not do it," says he, "as I was exasperated by all the grades bestowed by Louis XVIII. on his household troops, among which I saw improvised colonels who had never seen any service, and who thought no more of the Bourbons than we ourselves before their arrival. We knew nothing of the Bourbons, except that under the old régime the sovereigns bore that name; but these faithful servants were walking in the Bois de Boulogne while we were fighting."

Castellane's anger against the Duke de Berry was intense. The Duke was reorganizing the army and filling it with émigrés. "He is very obstinate, very rude; he thinks he can ape the Emperor (who was rude only when he thought it politic to be so). This does not give him the talent of Napoleon. . . . It is impossible to find a more stupid prince; he is mad, furiously mad—the Duke de Berry struck Meyronnet of the First Chasseurs with his sword. He called Colonel Robert and Major Villate d——d rogues, General Mensian a fat pig, etc." Castellane adds: "The Duke d'Orléans makes himself beloved by his politeness, his good manners; he is witty and well instructed." We can see in these notes the cause of the great unpopularity of the Bourbons in the army. "It is enough now to have done nothing for twenty years to obtain high grades. The reason given is that, if it had not been for the Revolution, these gentlemen would be *maréchaux de camp*, lieutenant-generals; but, if they had made war, they would not be so numerous! They complain of the bad spirit of the army. I think myself that the army is very patient to bear such things; if liberty of the press existed, such appointments could not be made; they would be exposed in all the papers."

When Napoleon returned from Elba, Castellane left Paris to join his regiment, the First Hussars. "I met at Meaux the First Lancers; the soldiers were anxious to see the Emperor Napoleon. They said openly: 'It was wrong to send us against him; we will join him.' Many soldiers showed their tricolor cockade concealed under the white cockade. They said: 'The weather is favorable for violets.' After a little while they called the Emperor 'Père la Violette.'" The Duke de Berry did not even attempt resistance in Paris, and left with the King for Lisle. Castellane learned on his way that his regiment, the First Hussars, had adopted the tricolor cockade at Metz. He returned to Paris. "From the 30th of March," says Castellane, "to the 1st of July, 1815, I took only a few notes in a pocket-book; very curious things are thus omitted." We must regret it, but we understand it.

Castellane was not a psychologist, an analyzer of human feelings, but it is easy to gather that his feelings were very mixed during the eventful period of which he speaks. He was quite unable to describe the conflicting emotions of his own heart, but we can, even at this distance, understand his perplexities. He had fought on the personal staff of the greatest military genius of our time. He had approached Napoleon familiarly, he had lived in the nimbus of those rays which had spread all over the universe. At the same time, he was quite shrewd and practical enough to see that all was lost for Napoleon, that the world was against him. He belonged by birth to a caste which was preparing to recover all it had lost, under a restored monarchy; he was a man of the world as well as a soldier, and he saw his best friends and relatives all ready to make room for him in the new order of things. He shared somewhat the views which Napoleon had on the subject of the Faubourg St.-Germain: "I offered them places in my army," said the Emperor; "they refused them. I offered them places in my anterooms; they all wanted them"—a rather exaggerated and unjust view, as Napoleon had on his own staff several distinguished officers, belonging, like Castellane, to the Faubourg St.-Germain. Still, the citations I have made from Castellane show how severely he judged the Bourbons in their relations with the army. In the conflict of his passions, Castellane had, fortunately, an unerring guide, the discipline of the army. This respect for discipline was his guide during all his lifetime; it was, with him, a sort of religion. He took no part in the last campaign of Napoleon; he remained with his family and nourished no illusions as to the end. On May 1, 1815, he writes: "The Government of the Emperor Napoleon is making great strides towards a fatal issue. Public opinion is against it. Desertion is considerable in the army. Except Champagne, Alsace, Franche-Comté, Lyons, Dauphiné, Lorraine, and a part of Burgundy, France refuses to move. La Vendée is on the point of revolting. Flanders and Picardy, on the point of being invaded, show no energy against the foreigners."

Castellane notes several times that Napoleon, though he had gone through the form of convoking a chamber, was now obliged to lean chiefly on the populace. "The Emperor has held a review, in the Place du Carrousel, of the faubourgs St.-Antoine and St.-Marceau. The spectacle was at the same time pitiful and laughable. This mob, mostly literally *sans culottes*, screamed, 'Vive l'Empereur! Down with the nobles! Down with the priests!'" After Waterloo, the note is very short: "We hear the news of the loss of the battle of Mont-Saint-Jean, called Waterloo by the Allies, on the 18th of June. The *matériel* of the artillery—the reserve park, the forage carts, the carriages—is in the hands of the enemy. The disorder was such that it was no longer possible to recognize a regiment. The Imperial Guard has been crushed; the rout was complete."

Castellane had to lodge twenty-five English soldiers in his house. "Their conduct is perfect," he says; "they pay for all they ask for. People compete for the English; they avoid, as much as they can, having Prussians, as these insist on being fed at the expense of their hosts." Castellane's father was president of the electoral college of the Basses-Pyrénées, and, before starting for the new elections, received his instructions from Prince Talleyrand, who told him that the ministry wished for Constitutionalists; that he did not conceal this fact, nay, was ready to proclaim it from the housetops. He begged him to "avoid electing pure Royalists as much as and more than Jacobins." These pure Royalists, sometimes called Ultras, headed by the Count d'Artois, wished to give the King an unlimited prerogative, and abhorred the Constitution. Talleyrand had succeeded in keeping the Princes from having a place in the King's Council. The Count d'Artois said to him: "Well, we have no thanks to offer *you*; you have put us out of the Council." The Prime Minister answered merely: "Monsieur will thank me for it when he is King."

Castellane expresses in his notes humane and creditable sentiments with regard to the condemnation and execution of Marshal Ney, the condemnation of Lavalette, etc. "Party spirit creates unexampled cruelty in the ranks of the ultra-Royalists. It is horrible to find in the world ladies of mild appearance speaking in favor of capital punishment, and complaining that there is not enough of it."

Castellane became, toward the end of 1815, an habitual visitor at the house of Talleyrand, where all the diplomatic society met every night. How could Talleyrand's health resist the life he led? "People arrived only towards one o'clock in the morning and stayed till four or five. This was the period of my life when I played most at cards and for the largest sums. M. de Metternich won much money from me at *creps*. Talleyrand used to throw the dice with the imperturbable tranquillity which never deserted him. The old Countess Tyokiewicz, sister of Prince Poniatowski, always, in her admiration for Prince Talleyrand, consoled herself for the loss of her money by the happiness of playing with him."

Meanwhile, Castellane had to form a new regiment of hussars, and took his recruits chiefly from Alsace and Lorraine; "the best men," he says, "for hussars." The regiment was formed at Provins and quartered at Soissons, and afterwards at Chartres. Castellane was able to spend much time in Paris, and he gives us many anecdotes on society during the years which followed the Restoration. His journal in these years savors a little too much of gossip, and I do not find much in it worth noticing.

In 1822 Castellane received his appointment as commander of Hussars of the Royal Guards. "Louis XVIII.," he says, "wrote my name with his own hand on the *ordonnance*—a thing he never does—adding: 'As for this one, people will not cry out; he has well deserved it.'" He parted with some regret from his pet regiment, the Fifth Hussars, which he had formed and disciplined. When the Spanish intervention was decided on, he hoped to be sent on active service to Spain; the regiments of the Guards drew lots for the occasion, and his regiment was not favored. So he remained in Paris while the bloodless expedition took place—an expedition very different in character from the war which Castellane had seen in his youth in the Peninsula. On his return, Oudinot said to him: "Console yourself for not having been in the army; I have not done any more than yourself."

Correspondence.

A GOLD-STANDARD TICKET.

To the Editor of The Nation:

Sir: Now that the Populistic portion of the

Democratic party has put in nomination for the Presidency a typical Populist, I think it is time the gold-standard Democrats were deciding whether they will put in the field a Presidential ticket. For one I am very strongly in favor of a ticket which shall truly represent the gold-standard sentiment of the country. I know there may seem to be danger of so dividing the gold vote as to allow Bryan to be elected; but I believe there are many Democrats who will refuse to vote for McKinley because they do not believe that he would be an obstacle to any iniquitous silver legislation which Congress might pass. It is so difficult to foretell the course of the campaign on the part of the Republicans, and it is so uncertain as to which they desire most, sound money or a high tariff, that I believe we ought to make sure of a rallying-point for the sound-money sentiment of the country. Many of the Republican papers are saying that before November the financial question will sink into insignificance and the tariff assume its rightful position of priority. So far as I am personally concerned, McKinley is to me one of the most objectionable men in the Republican party, on account of his protection principles and the narrowness of his mind. But I could subordinate personal feelings if I could be sure that he would stand as firmly against the silver lunacy as did Grant, Hayes, and Cleveland. This I do not believe, for I think there can be no doubt that, at heart, McKinley is at least a bimetallist, and that he will sign whatever bill Congress may pass. I never have seen in him any sign of firmness of character.

I do earnestly hope that those Democrats who have the ability and the influence necessary to carry through such a movement will start it at once. THEODORE ALVORD.

SANDUSKY, O., July 20, 1896.

GOVERNOR RUSSELL'S PROPHECY.

TO THE EDITOR OF THE NATION:

SIR: Four years ago ex-Gov. William E. Russell, speaking in a manufacturing centre upon tariff reform to an audience largely composed of Republican protectionists, said:

"You are asking Government by law to add to your wealth and prosperity; to tax the people to give you profit; to burden them to make you rich. If she can do this for you, she can and must for any class who, by influence or corruption, can control her legislation. Take care. You are sowing the wind; you will reap the whirlwind. What will you say to the silver mine-owner who demands that Government by force shall add value to his product? What to the farmer who demands that Government shall take under its fostering care his grain and his cotton, and bank upon his crop? There is no answer to this question if Republican protection is a sound and safe principle."

The fulfilment of Governor Russell's prophecy seems dangerously near at hand. The wind has been sown, and now we are on the threshold of reaping the whirlwind. So dangerous seems the outlook that Republican protectionists are in desperation calling upon patriotic Democrats to help save the country from the wrath of the storm. And this in spite of the fact that the mine-owners are only asking what the Republican party has for the last ten years been vigorously protesting the manufacturer should have. If the Government is to make a market for the products of the manufacturer, there is no earthly reason why it should not do the same for the mine-owner, the farmer, and every other producer. If McKinley's theory of protection is right, Bryan's theory of free silver is right, and the many vagaries of the Populists are also worthy of consideration. They are all of a kind.

Evidently the Government ought to go out of the market making business entirely. This can probably not be done immediately, but, if we wish to prosper and not have our prosperity threatened by periodic revolutions and panics, we must have such an end in view, and patriotic citizens and a patriotic press ought to labor incessantly until such an end is attained. If protection is again fastened about our necks, free silver will surely follow, and the farmers and the laborers will also be heard from, and our destruction will be complete. We shall have sown the wind, and the whirlwind we shall surely reap. C. J. ALBERT.

ELMHURST, ILL., July 20, 1896.

THE COWARDICE OF HIS CONVICTIONS.

TO THE EDITOR OF THE NATION:

SIR: Not long since I had occasion to call at a bank which does a large business in one of the agricultural and mining districts of the West. Naturally the conversation turned upon the financial situation, and the president of the bank, as though it were the only attitude possible for a thinking business man, expressed himself in favor of the gold-standard as essential to our national credit and general prosperity. As I was about to leave, I noticed a pile of silver literature upon the counter, whereupon he said, with a meaning smile, "That is for distribution among my customers."

The bank president referred to holds an important State office and has further political aspirations. His customers, many of whom are interested in silver mines, and nearly all of whom are disciples of Teller, Tillman, and their ilk, must be humored or he will lose their votes; so he holds back what he believes to be the truth, and deliberately feeds his customers upon the false, meanwhile laughing at their gullibility. Thus does Bryan's popularity grow in the silver States.

A WESTERN GOLD BUG.

JULY 20, 1896.

INTERNATIONAL ARBITRATION.

TO THE EDITOR OF THE NATION:

SIR: The quotation from Chateaubriand, communicated by Mr. Kuhns in the *Nation* of July 2, does indeed show that the idea of international arbitration is not new. If, however, we substitute a single arbitrator for a court of arbitration, we shall find the idea to be still older. *Cf.* Isaiah ii., 4 and Micah iv., 3, according to the rendering of the "American Committee" in the Revised Version. Moreover, these passages are the original from which our new wisdom is derived. All credit to these Hebrew prophets of old!

Yours truly, W. WILLNER.

MERIDIAN, MISS., July 17, 1896.

BRADDOCK'S DEFEAT.

TO THE EDITOR OF THE NATION:

SIR: In the appendix of Winthrop Sargent's 'History of the Expedition to Fort Duquesne' are printed three French accounts of Braddock's defeat, and in No. 13 of J. G. Shea's "Cramoisy Series" several other French "Relations Diverses" on the same subject are given; but, so far as I have been able to discover, a French account recently procured in Paris has escaped not merely the attention of these two editors, but of Parkman and Winsor as well. It is a four-page quarto leaflet, with the lined heading given below. Judged from its wording, it must have been the earliest account printed in France, and the writer seems to have extracted part of it from some English version. It is remarkable also as being the only French narrative that names Washington or describes his part in the defeat, which it does with high praise. Thinking this alone sufficient to make it of importance, I copy the portion which deals with the actual battle. PAUL LEICESTER FORD.

Relation | De la Victoire remportée par les François, sur un Corps | de Troupes Angloises, commandé par le Général Braddock, | près l'Ohio dans l'Amérique septentrionale. |

Le Général Braddock vint camper dans les premiers jours du mois de Juillet au petit Meadows, en deçà du Fort de Cumberland à Wills-Chreck, avec son Corps d'Armée composé de deux mille Hommes, & avec l'Artillerie, les Bagages & les Munitions. Pour profiter de l'ardeur que marquoient les Troupes, il jugea ne devoir pas différer de marcher aux François qui avoient leurs forces rassemblées au Fort du Quesne Il s'avança vers eux avec 1200 hommes & dix pièces de canon, & laissa le reste au petit Meadows sous les ordres du Colonel Dumbar, qu'il chargea de venir le joindre aussi promptement qu'il lui seroit possible. Après avoir campé le 8 Juillet à dix milles de distance du Fort du Quesne, il se remit en marche le 9. pour s'avancer à ce Fort, en débouchant par un Bois qu'il étoit obligé de traverser, ses Troupes furent attaquées avec beaucoup de furie par des Détachemens de François & d'Indiens postés en embuscade sur des collines qui bordoient la liziere du Bois, & d'où ils fondirent avec tant d'impétuosité sur les colonnes qui exécutoient le débouchement, que la confusion se mit parmi les Troupes, nonobstant tous les efforts que le Général Braddock & tous les Officiers firent pour les rallier, deux des Régimens du Corps envoyés d'Irlande, qui lâcherent pied dès le commencement de l'attaque augmenterent le désordre, & précipiterent la déroute qui fut telle que les Officiers abandonnés de leurs Soldats se virent exposés seuls au feu de l'ennemi. Le Général Braddock qui se porta de tous côtés avec une activité des plus grandes, & qui eut cinq Chevaux tués sous lieu, reçut à travers le bras & la poitrine un coup de feu, que le mit hors de combat. Le Chevalier Pierre Halkette Colonel, qui le seconda avec beaucoup de bravoure, fut tué sur le Champ de Bataille, où près de soixante Officiers furent tués ou blessés; au milieu des efforts qu'ils faisoient pour ramener les Fuyards, le Colonel Washington se distingua encore dans cette occasion d'une maniere qui lui a mérité de grands éloges. Les débris de ce Corps d'Armée se retirerent à Wills-Creck auprès du Colonel Dumbar, obligés par la précipitation de leur Retraite d'abandonner Artillerie, Bagages, Tentes & Munitions qui tomberent entre les mains de l'Ennemi. Le Général Braddock transporté à Wuills-Creck y mourut le 13 de ses blessures, Messieurs Robert Orme & Roget Morris, ses Aydes de Camps, ont été blessés; M. Guillaume Chirley, Sécrétaire des Guerres dans ce Corps de Troupes, & fils du Gouverneur de la Virginie, a été tué; le Chevalier Jean Saint-Clair second Quartier-Maître Général, & M. Mathieu Lecsley Assistant du Quartier-Maître Général, tous deux blessés; du Régiment de Halkette, dont le Colonel est resté mort sur le Champ de Bataille, M. Gage qui en est Lieutenant Colonel a été blessé, & deux Capitaines tués, des Subalternes du même Régiment il y a eu deux Lieutenans & deux autres Officiers tués, & huit Lieutenans ou autres Officiers blessés; du Régiment de Dumbar, M. Button Lieutenant Colonel, & M. Sparkes Major ont été blessés, le Capitaine Cholmeley tué, & les Capitaines Brouvrer & Noss blessés; des Officiers subalternes de ce Régiment, il y en a eu cinq de tués & huit de blessés; du Corps d'Artillerie, le Capitaine-Lieutenant Smith a été tué, & trois Lieutenans blessés; du Corps des Ingénieurs, trois Officiers blessés; du Détachement de la Marine, deux Officiers tués; du Corps des Volontaires, le Capitaine Stone du Régiment de Warbutton blessé; des

Compagnies indépendantes de la Nouvelle-York, le Capitaine Gates blessé, un Lieutenant tué, & deux autres Lieutenans blessés; des Troupes de la Virginie, le Capitaine Stephens blessé, & les Capitaines Poulston & Peronie tués, outre quatre Officiers subalternes tués & un blessé. On ignore à combien monte la perte des François, qui va à très-peu de chose; & nous aurions peut-être gagné, si les Troupes d'Irlande avoient tenu ferme.

Après que les débris ont été rassemblés à Wills-Creek, le Colonel Dumbar, & le Colonel Washington sont marchés avec les Troupes au Fort de Cumberland, d'où les derniers avis qui sont du 19 Juillet marquent qu'elles y étoient retranchées, qu'il ne s'étoit rien passé de nouveau dans l'intervale de ces onze jours. Que la nuit du dix-huit au dix-neuf on avoit été informé de quelques nouveaux mouvemens des François du côté de Monongehela; mais que comme on attendoit des Renforts au Camp, il y avoit lieu d'espérer que l'on seroit en état de leur tenir tête, au cas qu'ils revinssent à la charge. Si les rapports qu'on a eu des Indiens sont justes, le Corps des François avant l'action étoit supérieur en nombre, & montoit à 1100 hommes de Troupes réglées, soutenu de 600 Indiens. Leur perte, disent encore ceux-ci, n'a pas été bien forte par la furie avec laquelle les Américains répondirent aux premiers efforts des Assaillans; mais tout ce qui se publie à cet égard n'est que vague; & l'on n'attend par des Avis ultérieurs des détails plus exacts de ce Combat, & des suites qu'aura eue cette fatale ouverture de Campagne.

IS ESTHER WAKE A MYTH?

To the Editor of The Nation:

Sir: Joseph Seawell Jones, in his 'Defence of North Carolina,' states that the appropriation for Governor Tryon's costly "palace" was secured largely by the fascinations of the beautiful sister of "Lady" Tryon, Esther Wake, and that the county of Wake, in which is the capital, was named in her honor. Most of the old inhabitants of New Berne, which was, under Tryon, the seat of government, think that this tradition is true. On the other hand, William Gaston, a citizen of New Berne, one of the ablest judges of the Supreme Court our State has had, believed that there was no such person. He stated that he had often talked with his mother about the Tryon household, with whom she was well acquainted, and that she never mentioned Miss Esther.

A New Berne tradition in regard to her seems to negative the story of her influencing the votes of colonial legislators. This is, that "Lady" Tryon taught her sister an erect carriage by fastening a pointed stick under her chin. The subject of such heroic persuasion to good manners could hardly have been a persuader of men.

The present head of the house of Tryon, Richard Tryon, Esq., and the head of the house of Wake, Sir Hereward Wake, a descendant of Hereward the Wake of the time of William the Conqueror, have been applied to for information, but neither is able to furnish any. It occurs to me that if "Lady" Tryon had a sister with her in North Carolina, they must have been together in New York when Governor Tryon was transferred to that State. If so, it seems probable that some of the old families of your city may have contemporaneous letters describing the members of the gubernatorial household, which may throw light on the interesting question that forms the heading of this letter.

Truly yours, Kemp P. Battle.

Chapel Hill, N. C., July 23, 1896.

Notes.

In our late review of Stevenson's 'Vailima Letters,' the present publishers, Messrs. Scribner, should have been designated; they having, since the appearance of the work, acquired the rights to it, as well as to 'The Amateur Emigrant' and 'Macaire,' of Messrs. Stone & Kimball.

Macmillan Co. will shortly bring out 'An Introduction to the History of the Church of England, from the Earliest Times to the Present Day,' by Henry O. Wakeman.

Ginn & Co. have nearly ready 'The Child-Life: A Primary Reading and Education Chart,' by Mary E. Burt.

'Bushy,' a romance by Cynthia M. Westover, is in the press of the Morse Co.

Miss Georgiana L. Morrill, who took her degree as Doctor of Philosophy at the University of Heidelberg this spring, was the first American woman to receive the degree at that university. Her edition of the important Middle English poem, 'Speculum Gy de Warwik,' will soon be issued by the Early English Text Society.

Pope's 'Rape of the Lock,' "embroidered with nine drawings by Aubrey Beardsley" (London: Leonard Smithers; Philadelphia: Lippincott), will take its place among all handsomely printed books, on the one hand, and on the other among historical curiosities of art. The poem has lent its full share to our stock of familiar quotations; were it otherwise, Mr. Beardsley would hardly serve as mediator between Pope's time and the present day. He has, however, subordinated his grotesque fancy to his duty as illustrator, and shows here his best manner of design and composition.

The versatile banker and member of Parliament, Sir John Lubbock, well known for his observations on flowers and insects, now surprises us with a most attractive volume on the 'Scenery of Switzerland' (New York: Macmillan), a subject to which he has been giving his attention in vacations for thirty years past. It is of somewhat the same order as the 'Beauties of Nature,' published a few years ago, but is more systematic and thorough, being directed to the explanation of the physical features of a single region. Less technical than Fraas's 'Scenerie der Alpen,' it is in all respects a most admirable book for the intelligent reader, indicating not only a thorough acquaintance with the subject, but also a sympathy with nature that must do more good than the great array of facts so compactly presented. With Baedeker as a guide and this book as a friend, Switzerland will be even more delightful than ever before.

'From Cairo to the Soudan Frontier' (London: John Lane; Chicago: Way & Williams), by H. D. Traill, is a series of detached sketches of scenes and incidents of two recent visits to Egypt. They are varied in character, humorous, historical, imaginative, and descriptive, now giving the impressions made by the great hall of the temple of Karnak or a sunset on the Nile, now picturing the Christmas sports of the British soldier or the multifarious methods of the fellah for extracting bakshish. When the author has little to tell he indulges in a turgid style, known as "Telegraphese," after the paper for which the sketches were written; at other times he shows a keen appreciation of the fascination of Egypt, and enters fully into the spirit of both its ancient and its modern life, and then writes clearly and graphically. The sketches of greatest present interest are those describing visits to a Nubian village which was raided last December by the Dervishes, and the frontier post of Wady Halfa on the eve of the departure of the Anglo-Egyptian expedition for the Sudan.

The great undertaking of Dr. Giuseppe Pitrè to which we have so often referred in these columns, the "Biblioteca delle Tradizioni Popolari Siciliane," is drawing to a close. The nineteenth volume, 'Medicina Popolare Siciliana,' has recently appeared from the press of Carlo Clausen (Turin and Palermo). The preceding volumes have been of more general interest, perhaps, but none surpasses in value the present one. The collector is peculiarly fitted for the difficult task imposed by this division of his work, having been a practising physician in Palermo for thirty years. The work is divided into five parts: the first treats of the medical practitioners of Sicily, quacks, barbers, herbalists, etc.; the second, of anatomy, physiology, physiognomy, and hygiene; the third, of general pathology; the fourth, of special external medical and surgical pathology; and the fifth, of special internal pathology. This list gives no idea of the varied contents of the work and its wealth of proverbs and popular superstitions. The whole island has been ransacked to furnish materials, and a bibliographical note at the end mentions, for the benefit of those who wish to institute comparisons, the similar works published in other parts of Italy. An appendix contains the rude images of the saints most commonly invoked in Sicily by the sick, who carry them about with them or apply them to the diseased organs. Among these saints the reader of Dante will be interested to find Santa Lucia, who is the protectress of eyes as well as the patron saint of Syracuse. An excellent index facilitates reference to the manifold contents of the work, which contains countless points of similarity to the medical superstitions of other nations.

Students of finance will be glad to learn that Léon Say had completed before his death a work on the revenues and expenditures of the French Republic, which is now published in the *Vie Nationale* Series under the title 'Les Finances' (Paris: Léon Chailley). The subject is too technical to deal with here, but we cannot resist transcribing a few lines from the tribute paid by the editors of the series to the distinguished author, who devoted his last moments to the completion of this work. They say: "C'est ici comme le testament politique du meilleur ministre des finances de ce temps; de celui qui, pour les collaborateurs de tout rang qui l'avait vu à l'œuvre, et qui avaient connu tant d'autres chefs après lui, était resté le ministre par excellence; du seul, assurément, qui puisse être comparé aux grands ministres d'autrefois."

'La Société Américaine,' by Mlle. M. Dugard (Paris: Hachette), is the outcome of the visit paid by this accomplished woman to the United States at the time of the Chicago Exposition. Mlle. Dugard, who is a professor in the Lycée Molière at Paris, came here with the special purpose of studying educational establishments, and this in no perfunctory manner. She went to work in earnest, visited schools and colleges, questioned presidents, principals, professors, and teachers, studied programmes and delved into reports, attended classes and lectures, familiarized herself with the taught as well as the teachers, put aside prejudices, prepossessions, and misconceptions, and honestly tried to see things in this country as they are. Now she tells, in this interesting book of hers, the result of her labors, investigations, and experience. She gives infinitely more facts than impressions, aims at being exact rather than witty, and consequently

presents a truer and more thorough picture than any other we have had shown us for some time. Mlle. Dugard writes easily, intelligently, and pleasantly, and her book will command the attention of thinking readers here and in France.

Teodor de Wyzewa, whose articles are now well known to readers of the *Revue Bleue*, has published a volume of somewhat brief studies of 'Écrivains Étrangers' (Paris: Perrin & Cie.). The chapters on De Quincy, Edgar Allan Poe, and Walt Whitman are some of the more interesting. That on Whitman is almost enthusiastic, and he is called the only American writer worthy of the name of poet in recent years.

In a large thick octavo, with some admirable illustrations, 'Chateaubriand, sa Femme et ses Amis' (Bordeaux: Feret & Fils), M. G. Pailhès makes a noteworthy contribution to the literature of the Romantic movement in France which is inseparably associated with the name of Chateaubriand. M. Pailhès has had access to much unpublished matter, a large portion of which is valuable as casting additional light on the character and ways of the great Frenchman. He has composed a most interesting book, which must henceforth be consulted by all students of French literature at the beginning of this century.

Léo Claretie's 'Jean-Jacques Rousseau et ses Amies' (Paris: Chailley) is useful to students of Rousseau's works, inasmuch as it gives very full accounts of the different women whose influence made itself felt by turns upon the misanthrope. It is on Mme. d'Houdetot that M. Claretie has bestowed the greater part of his attention. His short account of Thérèse Levasseur is not very sympathetic.

A remarkable feature of the current proceedings of the Massachusetts Historical Society (2d series, volume x.) is the inclusion of a memoir of the society's late president, Rev. George E. Ellis, by the Rev. O. B. Frothingham, followed by one of Mr. Frothingham himself. The volume contains numerous papers of value, some of which we have already commented on in advance of publication, thanks to "offprints": such are Mr. Wm. S. Appleton's tabular "Century of the Senate of the United States," Mr. J. T. Hassam's list of confiscated estates of Boston Loyalists, and Mr. Edward L. Pierce's extracts from the Diary of John Rowe, this same writer contributing also a very salutary admonition about "Recollections as a Source of History." The chief plum of the inedited matter is beyond question the private letters of John Quincy Adams during his residence at St. Petersburg as United States Minister in the closing years of Napoleon's duel with Europe, and while the war of 1812 was in progress. They are characteristic of Adams's judgment and penetration, and fit in well with the present revival of interest in the great military genius who, in Adams's words, "will be ranged, not among the Alexanders, Cæsars, and Charlemains, but among the Hannibals, Pompeys, and Charles the 12ths." We detect a plausible typographical error on p. 379, eleventh line from bottom. "Little man" (as if Napoleon) should read "little men," and the comma deleted that separates "little men" and "little means" "by which the great powers and resources of England are wasted in this contest."

The Report of the Sixth International Geographical Congress, held in London in 1895, has lately been issued by the Secretaries, Keltie and Mill, in a large volume of nearly a thousand pages (London: Murray). The papers are printed in the language in which they were delivered at the Congress, and afford a pleasing polyglot exercise in the reading. Among many interesting items, a few may be mentioned: the map showing the numerous triangulation belts in the Great Trigonometrical Survey of India; Buchanan's retrospect of oceanography; the announcement by Lallemand, director of the French service of general levellings, that the Mediterranean and the Atlantic are, after all that has been said, really at the same level; Libbey's account of the Gulf Stream and the Labrador current; Penck's essay on geomorphological nomenclature, and several essays on the educational aspect of geography by Levasseur, Lehmann, Herbertson, and Henkel. Discussions on the polar regions, the habitability of Africa by white races, and other standard geographical subjects are duly represented. The resolutions adopted by the Congress are printed in full (pp. 779-787).

The principal article of the *Geographical Journal* for July is an admirable account of the Pamirs by the Right Hon. Geo. N. Curzon. It is largely descriptive of a journey to this region in 1894, and gives a clear idea of the Pamir, which is "neither a plain nor a down, nor a steppe, nor a plateau, but a mountain valley of glacial formation." The meaning and derivation of the word he regards as uncertain, notwithstanding the numerous theories of the philologists. The Pamirs are eight in number, and vary in length from ten to eighty miles, in width from one to six miles. Considerable space is devoted to a description of the *Ovis Poli*, which Mr. Curzon fears is in danger of extermination by British sportsmen, and to a discussion of the claims of a stream issuing from an ice-cavern in the Wakhan Pamir to be regarded as the true source of the Oxus. A fine map of this part of Central Asia accompanies the paper.

We read in the *American Amateur Photographer* for July of a collection, long in forming, but not yet exhibited, in the National Museum at Washington, "illustrating the history and methods of the art of photography." Some fifty prints were bought at the Washington Salon of the present season, and it is intended to keep the collection abreast of the development of the photographic art.

A correspondent writes to us from "Oxbow," Newbury, Vermont: "I have just noticed your letter from Mr. Albert Matthews about the word Oxbow. Here both the bend in the river and the land enclosed are spoken of as the Oxbow, and also the little settlement of five houses and a number of farms. For over a hundred years 'Oxbow mail,' 'Oxbow people,' etc., have been spoken of. The town is, however, Newbury, not 'Newburg,' as Mr. Matthews has it [a typographical error]."

—The latest volume of the Mermaid Series of Plays, "The Best Plays of the Old Dramatists" (London: Unwin; New York: Scribners), contains Sir John Vanbrugh's "Relapse," "Provoked Wife," "The Confederacy," and "Journey to London." None of them have held the stage, but this is not because they have no inherent principle of vitality. If the "Relapse" or "Virtue in Danger" could be acted now, we venture to say that it would draw a great crowd. *Miss Hoyden*, the heiress, daughter of *Sir Tunbelly*, is a capital character, and the scene between her and her nurse would send any audience into shouts of laughter. The difficulty is that no manager would dare to put it on the stage, and if any so bold could be found, the police would never allow a second performance—and this though the author assures us that any lady will find it so innocent that she will be quite ready to put it on the same shelf with her prayer-book. What was the idea of the contemporaries of Sir John on the subject of propriety? It has often been pointed out that what we call coarseness was not coarse to them; but no one, so far as we know, has made any thorough investigation into what did offend their sense of decency. Garrick, acting *Sir John Brute*, is said to have changed the disguise in the drunken scene from that of a clergyman to that of a woman of the town, "to suit the delicacy of the time." If he were acting to-day he would have to go back to the clergyman. The editor's notes are good, and Leigh Hunt's biographical notice is included. Vanbrugh's plays seem to have brought him more fame than his architecture, as to which, unfortunately, the only thing that most persons recollect is

> "Lie heavy on him, Earth, for he
> Laid many a heavy load on thee."

He was the architect of Blenheim, of which every illustrated paper in the world has lately had cuts, and his employment led to no end of trouble for him. Parliament neglected to supply the money to build it, the Duke of Marlborough protested it was no concern of his, the Duchess, after his death, tried to fasten some of the expense on Vanbrugh himself, and behaved in such a way that he expressed the opinion to his friend Tonson that she ought to be hanged. Blenheim was lampooned by Pope:

> "Thanks, sir, said I, 'tis very fine,
> But where d'ye sleep, or where d'ye dine?"

Indeed, almost everything that Vanbrugh built seems to have been pronounced fine and laughed at at the same time. The reason for this his critics do not make clear.

—Under the title 'Old French Romances' (Scribners), Mr. William Morris has reissued for the general public his versions of four mediæval French tales, already printed for the æsthetic few at the Kelmscott Press. The new edition contains also a brief but valuable introduction by Mr. Joseph Jacobs, of which we need say only that it displays its author's customary erudition in matters of this kind, not to mention his gay and at times even jovial manner. The stories chosen by Mr. Morris are four of the five in the little volume 'Nouvelles françaises en prose du 13ième siècle,' published as long ago as 1856 by MM. Moland and d'Héricault (the fifth tale in that collection being the delightful *chantefable* of "Aucassin et Nicolete," which Mr. Andrew Lang has done into English, as everybody knows). The present volume contains, then, the stories of "L'Empereur Constant," "Ami et Amile," "Le Roi Flore et la belle Jehane," and "La Comtesse de Ponthieu" (or, as Mr. Morris prefers, "Istore d'Outre-Mer"). In the case of the first two of these, readers of Old French will regret that the translations should be based upon the decidedly inferior prose forms of the tales rather than on the earlier and more poetical narratives in verse which are preserved to us. The last two exist in French only in prose, and we must perforce be satisfied with them as they are. All four stories are, however, in any form engaging and delightful. The first, "L'Empereur Constant," Mr. Morris has already retold (with some variations derived from other forms of the legend) in the 'Earthly Paradise,' as "The Man Born to be King." The second, "Ami et Amile," is the most famous mediæval representative of stories about perfect friendship,

like that of David and Jonathan or of Orestes and Pylades. The third, "Le Roi Flore et la belle Jehane," gives us one of the mediæval forms of the Cymbeline story of a wager about a wife's virtue. The last, "La Comtesse de Ponthieu," describes a strange and pathetic adventure extrinsically connected with the Crusades. It is probable that all the tales were originally Byzantine or Oriental.

—It is perhaps not a matter of consequence whether Mr. Morris's version is philologically sound or not (it really is not very bad from this point of view), for he does not profess to be a philologist. The question of the character of the English style he has adopted has, on the other hand, some interest. A German has already written a dissertation on the sources of the 'Earthly Paradise'; perhaps we may later get one on the sources of Mr. Morris's Romantic grammar. We should like to know, for example, how he came to be so fond of the ugly word "much" used as an intensive ("a *much* valiant man," "a *much* good dame," p. 119). His conjugation strikes us at times as having a curious similarity to that of the American negro ("And the Emperor Constans . . . did do christen his wife," p. 23; "The Emperor did do slit the belly of him with a knife from the breast down to the navel," p. 6). We are somewhat at a loss to translate into the vernacular such locutions as "much long aloof thence" (p. 13); and though the statement that the young Constans "entered into the garden all a-horseback" (p. 14) seems to reproduce the French *si entra ou gardin tout à cheval*, it can hardly be called a current English equivalent of it. But no doubt the style adopted by Mr. Morris, both here and in his translations of the Northern Sagas, is intended to be caviare to the general. One thing is sure, that the style of the Old French narrators stood in no such relation to the common speech of mediæval France as Mr. Morris's to our tongue. And if translation be reproducing as nearly as possible the manner and tone, as well as the matter, of the original, this is not translation at all.

—Mr. Poynter, the new Director of the National Gallery in London, seems anxious to prove his readiness to fill certain much criticised gaps in the collection now under his charge. The refusal of his predecessor to recognize any French painters later than eighteenth century masters has long been a scandal, and, as yet, Mr. Poynter has done nothing to improve matters in this respect. But scarcely less serious have been the omissions in the Spanish room. Here, it is true, are two very fine portraits of Philip, as well as other fairly characteristic, if not very splendid, examples of Velasquez in different phases of his career; and here, too, are the inevitable Murillos. Hitherto, however, there has been little else. A poor specimen of Il Greco was added recently. But all the pictures of the Spanish school can still be hung in a small gallery, while the Italian Primitives alone monopolize three or four times as much space. One of the Spaniards whose absence until the other day was most conspicuous was Goya, but it is to make place for him that Mr. Poynter has set about the much-needed reform. The late Osuna sale in Madrid should have been an excellent opportunity for the director no less than the dealer. The Duke of Osuna, among his treasures, could boast of many of the finest canvases Goya ever painted, and, indeed, indignation throughout Spain was strong when it was found that he was about to part with his collection. As every one knows, there is not much wealth, public or private, just now in the country to be invested in art, and the scattering of the Osuna Goyas beyond the Pyrenees was inevitable. But at this sale Mr. Poynter managed to secure only two small paintings—"Merienda Campestre," a Watteau-like composition, not without charm in the landscape background, but hardly characteristic of Goya except in the central figure, and "El Hechizado por Fuerza."

—The tiara of Saïtapharnes is perhaps the most interesting and most precious of all the recent acquisitions of the Louvre. It is a crown of gold in the shape of an Oriental mitre, of most surprising workmanship, and of inappreciable value, both artistic and historic. It is certainly the finest known specimen of Greek art in this kind, and is in an absolutely perfect state of preservation. It has become so well known since its purchase last spring for the Louvre that there is no need of speaking of it in detail. Its authenticity has hitherto been undisputed, but the *Petit Journal* of June 27 puts it in question, relying upon a letter of a professor in the University of St. Petersburg, M. Vesselovsky, who challenges the genuineness of the tiara in the *Novoe Vremya*. "It is time," the professor writes, "to say that this tiara is a piece of the Otchakof work of our time. The manufacture of spurious antiquities has been going on at Otchakof for some years, and has reached such a point of perfection as to deceive archæologists. The famous tiara of Saïtapharnes is not the only object of this sort. There exists at Kherson, in private hands, a crown of the same workmanship, but of a different shape." By a lucky chance the crown of Kherson happens to be in Paris and not elsewhere—in private hands, indeed, but in hands which have already offered it to the Louvre, where it has been rejected. The comparison which was made between it and the tiara of Saïtapharnes showed at first glance that there was no likeness between the two objects, whether in workmanship or in style, and consequently no likelihood that they were of the same origin. M. Héron de Villefosse, keeper of antiquities at the Louvre, writes to the *Temps* in this sense, and adds that it does not appear that the Russian professor has ever seen the tiara of Saïtapharnes. He adds, with such tender mercy as now and then survives in the breasts of archæologists, that M. Vesselovsky finds full satisfaction in saying that they make a good many false antiquities at Otchakof, and goes on to say: "We knew that a good while ago. Such counterfeits are made also at Rome and at Naples; but until now it has never come into anybody's head to account an object spurious simply because it happens to come from Rome or Naples."

—The department of antiquities illustrative of legal usages in the Germanic National Museum has been recently enriched by a curious and unique collection of so-called "Leibzeichen" (body tokens), the grewsome heirloom of the town of Scheinfeld. The term *Leibzeichen* is common enough in old lawbooks, and is defined by Grimm, but will be looked for in vain in any ordinary German dictionary or in the omniscient "Conversations-Lexikon." In case of murder, German jurisprudence in the Middle Ages (and also in modern times as late at least as the first half of the eighteenth century) demanded positive and ocular proof of the commission of the crime in the form of a *corpus delicti*, which had to be taken from the body of the victim in the presence of a magistrate or other officer of justice. A finger, a foot, a fragment of the skull, a blood-stained piece of clothing served this purpose. One can easily imagine the hideous effect produced by a whole collection of such objects, each labelled with the name of the murdered person and that of the murderer, together with the manner and date of death, and signed by the "Centknecht" or reeve of the "Centgericht," corresponding to the hundred court of England and the district court of the United States. The oldest specimen in the Scheinfeld collection is of the year 1669, and the latest is dated 1731. From an historical point of view these "Leibzeichen" are interesting survivals of the painful and superfluous pedantry that once prevailed in German criminal courts and often hemmed and thwarted the course of justice. Such ghastly tokens are no longer required as evidence, but the spirit which found expression in them is by no means foreign to the judiciary of Germany at the present day.

—The European nations are keeping up a peaceful rivalry in laying the foundations for a nobler physical manhood in the rising and future generations. The Germans, through the Central Committee for the Advancement of Games for the People and for Youth, decided against participating in the Olympian Games at Athens (for reasons which will be explained in No. 3 of *Das Humanistische Gymnasium*); but the plans are being matured for instituting a German Olympia, a national festival after the manner of the Olympian Games, to be celebrated for the first time in 1900, and at regular intervals thereafter, probably at Leipzig, the spot "consecrated by the great Battle of Nations." The secretary of the above-mentioned committee, Realschuldirector Raydt, has published a brochure on the subject, 'Nationaltage für deutsche Kampfspiele' (Leipzig: Voigtländer). During the present month the second German congress *für Volks- und Jugendspiele* has been in session at Munich. A former congress, held in Berlin, was attended by representatives of fifty cities, of several hundred societies, and of ten German governments, so that a large meeting at Munich was anticipated. In France the question of public bathing and swimming and the establishment of baths in connection with the schools is seriously agitating the minds of reformers. Little has been done in this direction by French cities in comparison with those of other countries, notably in Belgium, England, Germany, Austria-Hungary (see the *Revue Pédagogique* for June). It appears that of Belgian soldiers 80 per cent. can swim, while in the French army scarcely 10 to 12 per cent. have learned this useful art. England spent for public baths the sum of 27,500,000 francs in the period 1883–89. In Budapest (Hungary) these establishments give out 3,000,000 tickets (at two cents) each year, a daily average of 7,000 in winter and 9,000 in summer. Reports from departments both in the north and south of France show that the agitation against the abuse of alcoholic drinks is not relaxing; lectures by specialists before teachers and students, and the forming of "ligues scolaires contre l'usage des boissons spiritueuses" are in vogue. The latter are affiliated with a central society in Paris at No. 46 Rue de Vaugirard, and make use of pledges which do not jar with national custom; the youthful signers simply binding themselves for a definite period (one year) to

abstain from the use of brandy and *liqueurs*, and to use wine, beer, and cider only in moderation.

WOMAN UNDER MONASTICISM.

Woman under Monasticism: Chapters on Saint-lore and Convent Life between A. D. 500 and A. D. 1500. By Lina Eckenstein. Cambridge: University Press; New York: Macmillan. 1896. Pp. 496.

MISS ECKENSTEIN'S book has involved a vast amount of research and of keen critical judgment; it is a splendid specimen of the result to be obtained by modern scholarship when applied to a fruitful theme which has had the chance to be strangely overlooked; it is, besides, a picture of absorbing interest, which can be read with delight by the plain person who gives no thought to the immense amount of labor involved in putting it together.

There is an increasing tendency, as a result of wider research and of a more unbiassed weighing of the plain evidence of contemporaries, to acknowledge the debt of gratitude which mankind owes to the monastic and religious orders. The present work deals with the subject only as it concerns the share of women in utilizing the religious retreats as a storehouse for the preservation, during troublous times, of the world's acquisition of learning and of the gentler ways of living; but it is the share of women in this good work which has been most conspicuously overlooked. To use the words of our author:

"The woman saint has met with scant treatment beyond that of the eulogistic but uncritical writer of works of devotion; the literary nun has engrossed the attention of few biographers. The partisan recriminations of the Reformation have been too widely prevalent. The saint is thrust aside as a representative of gross superstition, and the nun is looked upon as a slothful and hysterical, if not as a dissolute, character. She has been too long thought of as those who broke with the Catholic Church chose to depict her. As part of an institution which had outlived its purpose, she was perhaps bound to pass away, but the work she had done and the aims for which she had striven, contributed their share in formulating the new standards of life."

In the present volume it is the development and history of monastic life among German and English women only that is depicted; it is to be hoped that the subject will also be taken up as it concerns the women of Italy and France, where documentary evidence is still more abundant. This story begins, for the sake of completeness, with the position of women among the pre-Christian Germans. Early hagiology reproduces in many respects the incidents connected with the religious influence of women during heathen times. The chapter on the transformation of the tribal goddess into the Christian saint is particularly interesting. In the legends concerning the earliest women-saints, there is much that is pre-Christian, and even anti-Christian, in character. Usually the legend of a saint does not get written until after her cult has become of long standing, and then the legend-writer refers her life to a remote historical background, frequently to a time when Christianity was unknown in the neighborhood in which she was reverenced, and he blends with her story local traditions often of very discordant character. Her cult frequently centres, for instance, around a cave, a fountain of peculiar power, a tree, or some other site of primitive woman-worship, and there are survivals in many cases of details which can have had their origin only in the period of matriarchy.

We have no space to touch upon all the interesting topics discussed in this volume, from the establishment of numerous nunneries as places of retreat for royal maidens and widows after the Frankish invasion, through the important development of the religious life among the Anglo-Saxons, the interesting phase of conventual experience at Poitiers, and at Gandersheim in Saxony (where the learned Hrotsvith lived and wrote), the work of the nuns in art industries, in literature, and in philanthropy (under the auspices of Hildegard a book was compiled on the uses of drugs and simples which forms a landmark in the history of mediæval medicine), and finally the causes of dissolution (which were already effective before the Reformation, and which are here depicted in a masterly manner), and, as a closing scene, the heroic resistance to the breaking up of her nunnery made by Charitas Pirckheimer, Abbess of Nuremberg. The extent to which it is shown that learning was cultivated among the nuns will be a surprise to those who approach the subject for the first time. In the sixth century the royal abbess Radegund wrote epistles in verse under the tuition of an exiled Roman poet; to an Anglo Saxon nun whose name is not recorded we owe one of the earliest and most interesting accounts extant of a journey to Palestine; in the eighth century the nun Lioba was trying her hand at Latin verse in a convent at Thanet; in the tenth and twelfth centuries Hrotsvith and Herrad made their better-known contributions to literature. The curriculum of study in the nunnery was as liberal as that followed by monks, and embraced all available writing, whether by Christian or profane authors. Cicero, Virgil, and Terence were read as zealously as the writings of the Fathers of the Church. From remarks made by Hrotsvith, it is plain that the coarseness of the later Latin dramatists was not held to be a reason for their being forbidden to nuns, though she would have seen it otherwise; and Herrad was so impressed by the wisdom of the heathen philosophers of antiquity that she pronounced it to be the "product of the Holy Spirit also."

The most interesting chapters of the book are those devoted to the lives of the two learned women whose names we have just mentioned. The literary work of Hrotsvith was of three forms—metrical legends written for the edification of members of convents; seven dramas in the style of Terence; and contemporary history in metrical form. As a writer of legends and of history, she ranks with other authors of the time; as a writer of Latin drama, she stands alone. Between the comedies of classic times and the miracle-plays (which consisted at first of only a few scenes, with dialogue of the baldest kind), there are no other dramatic compositions except hers. Ebert, the historian of the literature of western Europe, writes of her: "This fruitful poetic talent, which lacks not the inspiration and the courage of genius to enter upon new ground, evinces how the Saxon element was destined to guide the German nation in the domain of art." The modesty with which she speaks of her own work is very charming. Like many another woman, she wrote, at first, "unknown to others, and secretly." A letter to some friends, now unknown, who had engaged to criticise her plays, shows the attitude of the religious woman towards profane learning. She writes:

"Till now I have dared to show my rude productions only to a few of my nearest friends. From you I take confidence, and feel strengthened by your approval. And yet I am divided between joy and fear, which contend within me; in my heart I rejoice, praising God through whose grace alone I have become what I am, and yet I am fearful of appearing greater than I am, being perplexed by two things, both of which are wrong, namely, the neglect of talents vouchsafed to one by God, and the pretence to talents one has not."

There has recently been a revival of interest in Hrotsvith's work, and much has been written about her during the last thirty years.

Herrad, the abbess of a nunnery in Alsace, conceived the idea of making for the use of her nuns an encyclopædic book, which should embody, in pictures and in words, all the knowledge of her time. The importance of this work has long survived its original purpose; with its hundreds of illustrations and its copious text, it has afforded a wealth of information on the customs, conceptions, and mode of life in the twelfth century which is not to be obtained elsewhere. The work itself is no longer in existence; the manuscript was destroyed in the fire which broke out in the library of Strasbourg when that city was bombarded by the Germans in 1870. The Society for the Preservation of the Monuments of Alsace is at present collecting and publishing a reproduction of all existing tracings and copies of the pictures or of parts of them. This collection already numbers nearly two hundred; they are mere fragments of the work itself, but they are of the highest interest. Gérard, who was probably the last to see and handle the work of Herrad, was especially struck by her pictures of the Last Judgment and of Heaven and Hell; on the strength of these pictures he numbers Herrad among the most imaginative painters the world has known. She also wrote verses; this couplet of hers deserves to be remembered:

"Spernere mundum, spernere nullum, spernere sese,
Spernere sperni se, quatuor haec bona sunt."

These are specimens of the learning which was open to women and was seized upon by them with avidity and enthusiasm five hundred and a thousand years ago. By a curious fatality, the very cause which made learning freer and more untrammelled for men, and started it upon the immense developments of modern times, was what rendered it inaccessible to women—the growth of the great universities. In the eighth century Bede could be a learned man though he never stirred from his convent; in the thirteenth and fourteenth centuries this was no longer possible: the centre of education was the disputations of the lecture-room. The monasteries of men secured houses at the university centres, to which they sent their promising pupils; but the tone at the universities was such that no attempt was made in this direction by the convents of women. As a result, their standard fell. There followed a want of interest in intellectual acquirements among nuns, and this was accompanied by a growing indifference in the outside world to the intellectual acquirements of women in general. Thus the preservation of a higher moral tone among women has been at the cost of their participation in the intellectual interests of men. As has been pointed out upon occasion in these columns, the restriction of women to the frivolous interests of life has in the end acted adversely upon an ideal moral tone for men and women alike.

Miss Eckenstein's book is an earnest of the contributions to knowledge which will result from the revival of learning among women at the present time. She is conversant with

classical, mediæval, and ecclesiastical Latin, and the voluminous original sources of her subject are familiar to her. She is, moreover, keenly alive to the important bearing of her picture of mediæval activity on the part of women upon the question of the status of women at the present day. The right to self-development and social responsibility which is asked for by the modern woman is analogous to the right which the convent secured to her eight centuries ago. Provided she agreed to forego the claims of family and sex, an honorable independence was assured her, and she was brought into contact with the highest aims of her age. Such was the prestige enjoyed by the heads of religious settlements that kings and queens frequently installed their daughters as abbesses instead of seeking matrimonial alliances for them. Many married women left their husbands for the purpose of founding and governing convents; sometimes they intrusted their management to others, and themselves retired to them later in life. The career which was open to an inmate of a convent was greater, both in England and on the Continent, than any other ever thrown open to women in the course of modern European history. In the Kentish charter the names of the abbesses follow those of the bishops. In Saxony it fell to an abbess to act as representative of the Emperor during his absence. As independent landowners, who held their property of and from King and Emperor, abbesses took rank with the lords temporal and spiritual, and shared their right of being represented in Parliament or at the Imperial Diet.

The causes for the change that ensued in this state of things were at work long before the wholesale suppression of the monasteries at the time of the Reformation. Quite in accord with the discovery made by those who have investigated the historical development of marriage, it appears here also that it is only to the extent to which women have been able to keep the control of their property in their own hands that they have been able to preserve their independence. Consequent upon the spread of the feudal system of land tenure, which, in the interest of an improved military organization, reserved the holding of property for men, women forfeited their chance of founding and endowing independent monasteries; the houses founded after the monastic revival of the 12th century were of decreasing influence, and their heads were more and more subjected to the domination of the monks. The lesson to be drawn for modern times is plain.

RECENT FICTION.

Embarrassments. By Henry James. Macmillan.

His Honour, and a Lady. By Mrs. Everard Cotes (Sara Jeannette Duncan). D. Appleton & Co.

In a Dike Shanty. By Maria Louise Pool. Chicago: Stone & Kimball.

The Way They Loved at Grimpat. By E. Rentoul Esler. Henry Holt & Co.

THE critic in the first of the four stories in Henry James's latest collection, 'Embarrassments,' who scratches his head and asks, in regard to the mysterious secret of Hugh Vereker's literary quality, "Is it something in the style or something in the thought—an element of form or an element of feeling?" puts a question over which, as regards the author himself, many have puzzled. The material for judgment is amply spread in this volume. That style and form count for a vast deal with Mr. James is evident. Such verbal niceties and felicities, such crisp compactness varied by such leisurely lingering over evanescent detail, are not the offspring of an effortless imagination. They betray the patient and watchful artificer. But there is something in the thought, too, in these stories which makes the style seem to fit it like a glove. Two of the themes are subtly psychological—one, in fact, psychical-researchical—and two propound vague literary problems. They are well named 'Embarrassments,' and to almost any other writer would have proved such. But Mr. James plays with his mysteries so deftly and delicately, seems so on the verge of disclosing them as you think he easily might, only to leave the veil over them finally, as you see, on reflection, that he really has to do, that his very elusiveness and indefiniteness of effect somehow prove his mastery. If you are slightly mystified, it is because he meant you to be. The last story, "The Way It Came," is a *tour de force* in one particular at least: none of the characters is named, yet by use of pronouns alone the somewhat complicated interplay is kept perfectly clear, so neat is the management.

Ever since Thackeray led the way in spitting Anglo-Indian officers and their ladies on the darts of satire, writers of fiction have been quick to perceive how openly human nature exposes its foibles in India, where, in military and civil service circles, the full blaze of tropical day shines down on every one's passions and jealousies. Among the colony of exiles in her Majesty's service whose social focus is Government House in Calcutta, Mrs. Everard Cotes naturally finds several who are irresistible objects of ironical pleasantry. But snobs are not her first consideration; they are merely sport for lighter moments. Hearts are the stuff of serious argument, and if one—warmest though most erring of all—is caught and crushed between the upper and nether millstones of ambition and treachery, this might as easily have happened in a climate of fogs as in a setting of pipal trees and dusky syces and coolies. Judith Church, whom destiny thus singles out to suffer and grow strong, and whose expiation for having failed in the spirit while keeping the letter of her marriage vow, it would be interesting to follow in a sequel, is not merely ornamental in her rôle of heroine and temporary great lady, but is also an animate and palpable person. In this respect her whilom rival, Rhoda Daye, has not fared so well at the hands of her delineator. "You can't have it, mummie; it isn't a nice book for you to read." Such are the terms in which Rhoda Daye protects her mother from the contamination of 'Cruelle Énigme,' and from which it may be clearly inferred that she represents the typical young woman of the period. Very typical indeed she is in her nonchalance and self-poise and with her unbridled tongue. On this basis she will be cheerfully accepted by the experienced reader, who knows that the novelist's type can seldom be at the same time a creature of unmistakable flesh and blood. There is plenty of smart writing, about her as about others; and smartness, there is good reason to suspect, is the fault of Mrs. Cotes's style. Something, at least, there is in it which produces after a while a sensation of ennui and a desire to stretch the limbs and rest. Nevertheless, as stories go nowadays, 'His Honour, and a Lady' holds its own in interest, and the catastrophe which follows the exposure of the Chief Secretary's disloyalty, though saddening, gives rise to the conclusion that an involuntary deflection from the line of duty, if duly repented of, need leave behind it no weakening of the moral fibre.

'In a Dike Shanty' deserves appreciation for the humor, cheerful and hearty, with which the peculiarities of gnarly country character have been observed and recorded. Whatever is oddest or most provocative of a smile in the sayings and doings of the natives of an outlandish corner of New England has been gathered together, freely intermingled with fictional invention of her own, by their note-taking neighbor of the shanty. In many respects the dike folks will be found to resemble their country kindred the world over, particularly in their prejudice against the race of trained nurses, led with the energy of a war-cry by the veteran July Burns, and shared by her neighbors far and near. Fresh air and hay-making are always good things in their way, even in a book, but the dike haymaking has features it would have been agreeable to dispense with. Mirth at the expense of an idiot is necessarily, indeed, of doubtful expediency, and it is not surprising that, in making merry with Ozias Baker and his unfortunate parent, Miss Pool has not been able to steer altogether clear of the disgusting. Entirely false in pitch are the descriptions of the dangerously magnetic young person who sustains the sentimental parts of the piece. She is "Southern New England," has a smile which causes "a permeable and pleasurable knowledge," a face and eyes of "delicious suggestions," and various other disqualifications—if there is anything in heredity—for playing niece to Rodge Peake's wife and heroine to a quiet tale of plain country ways. Her "Tallahassee gentleman" puts a finishing touch to her incongruities. But for whatever acquaintance is given with the idiosyncrasies of a shrewd and simple people, before an intrusive and progressive age has wiped out their local character, there is reason to be grateful to any writer.

Grimpat is not a name that is English in sound, though it figures effectively as an English village in the handful of short stories to which it gives a background and a common title. Grimpat lovers are, with few exceptions, modest folk, whose historian has happily known how to unfold the simple annals of the poor in plain and unaffected language. Let fortune treat them well or ill, or the course of true love run smooth or troubled, the how and the why of it are set down with the perfection of unpretending directness. Or if my lord or my lady chance to be drawn into the noiseless current of obscure events, as happens in the story called "Linnet's Lover," the same homely simplicity suffices to give them the desired air of reality. Lady Courtland is one of the gracefully sketched figures it is a pleasure to watch in the pages of fiction; while Lady Joanna, into whose startled ears the country-girl Daisy Wynn flings the name of "My cousin, Lord Glenheather," is another of the imaginary persons who, if they could be transferred to actual life, would, with all their faultiness, add largely to its attractions. Stories so void of sensationalism, and dealing so modestly with the romance of humble destinies, are, as a rule, the natural growth of an Old World, where the knowledge, religiously inculcated and cheerfully accepted of the limitations of lowly station, has given to character an outward and inward finish rarely seen in the New. They raise anew in the mind the long-mooted question whether all

the blessings of uniformity to be enjoyed in a democratic world, where never a pretty girl need drop a curtsy to her betters, will ever serve so well the purposes of imagination as the piquancy of contrasts in social levels. Let this be as it will, these are tales that may act as a reminder to all whom it concerns that the way to avoid commonness, if not to achieve distinction in fiction, is never, in writing any more than in manner, to strain after effect.

GIDDINGS'S PRINCIPLES OF SOCIOLOGY.

The Principles of Sociology. By Franklin Henry Giddings. Macmillan Co. 1896.

THOSE who have perused what philosophers have heretofore offered the world under the title "sociology," must have been frequently tempted to repeat the question which Kant so often put concerning metaphysics: How is it any way possible? Whatever form of definition be adopted, it is evident that we have in some way and to some extent to deal with the sum-total of knowledge. Nothing human can be excluded from the field. According to the French saying, man is born in society and there he remains. No such thing as an isolated human being can be found in all our experience, or can even be conceived. The necessity of being born involves some form of the institution of the family; and the existence of the family involves in embryo all the phenomena of human society. All our knowledge is therefore attained through a medium that inevitably colors it, and in a sense every human event is a sociological datum.

The author of this work supplies us with some instances of the failures of various writers in their attempts to grapple with so vast a theme. "No image has been too fantastic," he tells us, "no speculation too mystical, no belief too absurd, to enter into the description and philosophy of society." Comte's objective interpretation was "extremely crude." The subjective explanation has become "a tiresome endeavor to enumerate all the motives that actuate man in his varied relations and in the satisfaction of all his wants." Those who have identified social statics with an account of social structure, and social dynamics with an account of social function, have been guilty of "profound misconceptions," and have propagated "subtle and misleading errors." Some attempts to state the first principles of sociology have approximated to success, but they have failed to attain it. Nevertheless these essays have brought us gradually to the point where success is attainable. "Sociology must go right from this time forth, . . . because it has tried all possible ways of going wrong." The strait gate and the narrow path are at last before us.

What, then, is sociology in this purified and sublimated form? "It is a science that tries to conceive of society in its unity, and attempts to explain it in terms of cosmic cause and law." "It is the systematic description and explanation of society viewed as a whole. It is the general science of social phenomena." "It is an interpretation of human society in terms of natural causation." "It is an attempt to account for the origin, growth, structure, and activities of society by the operation of physical, vital, and psychical causes, working together in a process of evolution." "It insists, also, that one fundamental logic underlies the objective or physical, and the subjective or volitional, explanations of social phenomena." "A true sociology must combine the subjective and the objective interpretations." In order to accomplish this combination, we require some fundamental postulate, "which can be no other than this, namely: The original and elementary subjective fact in society is *the consciousness of kind.* By this term I mean a state of consciousness in which any being, whether low or high in the scale of life, recognizes another conscious being as of like kind with itself." And a society "is a naturally developing group of conscious beings, in which converse passes into definite relationships that, in the course of time, are wrought into a complex and enduring organization."

It cannot but be regarded as unfortunate that, in the definition of the sociological postulate, the vital word "kind" should be used to define itself. We have searched for some clear and precise statement of its meaning, but in vain. It is probable that in the author's mind it is generally synonymous with species; that the recognition of kind takes place when one cat or one man sees another. But species is a word not free from ambiguity, and we do not feel sure that we are justified in attributing any meaning to this postulate except the very general one of the perception of similarity among conscious beings. If we are correct, the science of sociology consists of the observation and classification of such perceptions, and the deduction of laws and principles therefrom. But it would seem to be necessary to add the impulses and actions associated with these perceptions, which practically turns us loose in the whole field of human activity. We must then, we suppose, abstract from this vast aggregate of phenomena such acts as are especially suggestive of the "consciousness of kind" and take them for our subject matter.

It is obvious that we must have further guidance before we embark on such a boundless ocean as this. The mere enumeration of what we may call social acts would be an endless labor. We may reduce it by appropriating the results of the other sciences, especially biology and psychology, to say nothing of the aid to be had from general history, from ethics, and from politics. These sciences, however, have for the most part found progress possible only by limiting their scope. They have been obliged, as a condition of advance, to confine their attention to certain comparatively narrow classes of phenomena. If now we reverse the process, and endeavor to generalize from them, what are we doing but going out of the door at which we entered? We learn that our postulate is true, and that one of the common features of all these sciences is the "consciousness of kind."

But are no other generalizations possible? They are, by the introduction of other postulates. Prof. Giddings lays it down that the sociologist has three main quests. He must discover the conditions that determine aggregation, the law that governs social choices, and the law that governs the natural selection and the survival of choices. This certainly promises better results. By the use of existing knowledge we are able to say that social aggregations depend on conditions of food supply; that pleasurable social relations are preferred; and that these preferences may be prejudicial or beneficial to particular societies. But here we are at once met by the shadow feared of all investigators, the plurality of causes. Prof. Giddings is not unaware of this. He admits that Mill's chapters on the logic of the moral sciences must be the foundation of sociological method; but we fear much of his own work rests on a different substructure. To attain the empirical generalizations without which sociology is impossible, he finds it necessary to assume what we cannot but regard as the true sociological postulate, that we may make "a preliminary elimination of possibly coöperating causes." Thus, if we wish to explain the prosperity of a country, we must not be hampered by Mill's logic. "Prosperity is the effect of a bewildering plurality of causes, but among them not half-a-dozen are commensurate with any great, sudden, or long-continued increase of material well-being. All others may be eliminated at the outset."

The opening of Pandora's box did not let loose a greater variety of mischiefs than follow from this proposition. Were it sound, science would be at the mercy of every sciolist. Upon this principle more fallacious arguments than can be counted have been constructed. It is the principle on which every half-educated legislator shapes his conception of public policy, and every fanatic defends his measures. It is at the bottom of the prohibition craze, the silver craze, the tariff craze, and the military craze. Grant any orator the liberty of eliminating such causes as he does not believe in, and his flights will soar far beyond all reason and experience. "What do we care for abroad?" shouted Stanley Matthews, and eliminated at a whiff all inconvenient and "incommensurate" arguments; and half the speeches in Congress are equally logical. It avails nothing to reply that the elimination must not be arbitrary. Who is to decide whether it is arbitrary or not? Unless we have a new set of canons of "elimination" we are altogether helpless. We are set afloat, without pilot, chart, or compass, and the severe methods of science give place to the freaks of human conceit.

If it be urged that without this process of elimination no sociology is possible, we shall not dispute it. But we are unable to accept results so obtained as science, and are therefore disqualified from criticising the conceptions of "sociality," "propriety," "institutionality," "ideality," and "conventionality," as corresponding to stages of historical evolution known as zoögenic, anthropogenic, ethnogenic, and demogenic association. Under these classifications Prof. Giddings has accumulated many facts of greater or less interest, and it would be ungracious to deny him the merits of patient industry and of careful elaboration. Many of the generalizations from history which he offers are true and suggestive. Many are the baldest platitudes, posing as oracular wisdom. But as to the future of the human race, we confess that it appears to us to be shrouded in as dense obscurity as it was before the appearance of this volume. We know something of what has taken place in the past, and if the conditions remain unchanged we may forecast what is to be. But we cannot forget the terrible warning presented by Mr. Spencer's example. Just as he had brought his system of sociology to perfection, and shown how the reign of justice and freedom must necessarily result from the evolution of the social organism, society took a perverse list towards socialism, and he was obliged to drop to the humiliating rôle of a Hebrew prophet cursing the chosen people for turning aside after Baalim and Ashtaroth. The task that sociologists set themselves is too great for their present equipment. Let them provide themselves with a *novum*

organum adapted to the requirements of their stupendous problem before they offer us its solution.

Early Long Island: A Colonial Study. By Martha Bockee Flint. G. P. Putnam's Sons. 1896.

MOST of the local history of this country is written from such a purely antiquarian standpoint as to have interest only for the locality chronicled, but the author of the present work has written for a wider audience. Avoiding both the pitfalls of purely local concerns and dry genealogy, on the one side, and the temptation to pick out the exceptional in order to be picturesque and quaint (a now prevailing disease in a number of our "old-time" writers), Miss Flint clearly distinguishes the forces which went to make the history of Long Island. Her book is never dull—quite the reverse—and the trials and sacrifices, daily life, and relation to the world of the people stand out very clearly and correctly in the mind of the reader. Even without the long list of authorities, the work manifests the care with which it has been prepared.

The early contest between the Dutch and New Englanders, the resulting religious toleration, equalled only in Rhode Island, and the whaling and the smuggling which so much contributed to Long Island's material prosperity, are all well set forth. The political struggles, in which Stuyvesant complained that in elections "by the populace, each would vote for one of his own stamp—the thief for a thief, the rogue, the tippler, the smuggler, each for a brother in iniquity—that he might enjoy greater latitude for his own offences," bring home how little humanity has changed in the interval, however much conditions have varied. Perhaps even these are to the mass of mankind not so different, for as early as 1737 there were market-gardens on the island, and the lines along which most of the developments of the last hundred years have proceeded, even to the manors and country houses for New Yorkers, were already marked out.

The author, following other writers, believes that the Howes lost their opportunity, after the battle of Brooklyn, by neglecting to bring the British fleet into the East River and carry the American works by assault. This entirely overlooks the fact that, during the three days between the defeat and the retreat, the wind was adverse, and it was quite impossible to move a vessel. For the second point, the British had had a lesson in assaulting earthworks at Bunker's Hill, and at Brooklyn there were no trenches the work of a single night, but elaborate lines, the work of months. Had Howe's army only made the attempt, instead of adopting the more prudent course, the story of those few days would have been very different. During the whole war the Americans were never beaten when they were fighting behind breastworks, and Howe proved his good sense in nothing more than by not assaulting them at Brooklyn, at White Plains, and at White Marsh. Again, Miss Flint's account of the American treatment of the Tories under the famous "fifth clause" of the treaty is open to criticism. The English understood thoroughly that all the treaty bound the Americans to was to "recommend" to angry tigers that they be merciful to their prey, and the outburst in Parliament when that clause was read showed that they, as well as the Americans, understood that the Loyalists had been sacrificed in order to obtain peace. The conduct of the Whigs was merciless and outrageous, but it was no breach of the treaty.

An error into which the author has been led by Lossing is the ascribing of the lines from "M'Fingal" to Judge William Smith of New York, when they really belong to Rev. Dr. William Smith of Philadelphia. Minor errors are references to the Simstiere collection, for Simitiere, and to H. M. Murphy for H. C. Murphy.

Cyrus W. Field: His Life and Work [1819–1892]. Edited by Isabella Field Judson. Illustrated. Harpers. 1896.

MRS. JUDSON has succeeded in giving an account of her father which all who knew him will value, and which the public at large will find of considerable interest. His life was a strange blending of prose, romance, and tragedy. The story begins in one of the quietest New England villages in the year 1819. The father of Cyrus Field is the "dominie" of Stockbridge, wielding an authority, religious and secular, now already long obsolete. He offers up prayers for the sinful in church by name; he determines when the Sabbath begins and ends—he seems to have rather inclined to the theory that it lasted for one day and two evenings; he stops little boys who play marbles in the village street at improper times. He brings up a family of children with the rigidity of discipline befitting the town in which Edwards taught, but destined soon to vanish before the advancing spirit of laxity. There is something pathetic in the *res angustæ* of the parsonage, and something inspiring in the strict honesty of the New England Puritan village atmosphere. The little account which the boy sends back to his father from New York of the petty sum given him to get there was worth preserving; it is a glimpse behind the scenes which reflects the times. In that remote New England, people brought up their children to be scrupulous about small sums of money.

Cyrus begins life as an errand boy on $50 a year. It is not long before his restless energy enables him to accumulate a large enough sum of money to embark in business, and no sooner does he do this than he fails. Nothing daunted by a disaster for which he is not to blame, he settles with his creditors (they are all afterwards paid in full) and begins again. This time he is more successful, and he accumulates what, for the first half of the century, is a fortune. This success, however, merely fires his ambition, which must always have been boundless, and it is about this time that he first turns his attention to the project of a telegraphic cable between the old and the new worlds. To this scheme, which to the general public appeared at the time utterly chimerical, he devotes twelve years of his life, struggling unwearied through every sort of difficulty and disaster to the triumph which he seems to have been inspired to foresee, predict, and make his own. For it is not a triumph of scientific knowledge over popular ignorance (there does not appear to have been at the time any means of knowing whether his plan was feasible or not), but rather the unerring insight of a man possessed. To John Bright and other orators his success recalls that of Columbus—one had brought the two worlds into communication with each other; the other moors them side by side.

While engaged in this gigantic enterprise he again fails in business, and again he is able later to repay his creditors in full. His daughter, with natural pride in this unusual feat, prints some of the acknowledgments received by him. We fear that their tone will be, for the historian of our period, proof that Mr. Field's act was not an every-day tribute to integrity. In this part of his career, however, success is sure in the end to be his, whatever he undertakes. He not only wipes out his debts, but makes another fortune, and, moreover, by the time the cable is finally laid, has come to have an international reputation. He is as well known in London as in New York; his name he has made a household word throughout the world.

But this is not enough. Always driven forward by an enthusiasm and optimism which make him typical of his times and country, he is not capable of being content, and is determined to have all or nothing. Everything is embarked in a new venture, and again, while visions of colossal wealth float before his eyes, everything is lost. But this time is the last. Mr. Field is an old man, broken by domestic sorrows of a kind harder to bear than loss of money, and he cannot survive the shock. In closing the book the reader cannot but feel that the event is too recent to enable us to estimate with critical accuracy how Mr. Field's career will look to the generations to come; but no one who sympathizes with daring and ambition can read the story without being moved. The volume contains a valuable letter from Mr. Gladstone, hitherto unpublished, defending and explaining his attitude towards the United States during our civil war.

A History of Modern Banks of Issue. With an Account of the Economic Crises of the Present Century. By Charles A. Conant. G. P. Putnam's Sons. 1896.

THE principle adopted by Mr. Conant as his guide in this historical investigation is that "the currency of a commercial country should be regulated by commercial conditions and not by the whims of politicians." Stated in this way, we may admit that it is an "axiomatic truth"; but the statement is not a fortunate one. It puts Mr. Conant in the position of a sentimental opponent of the issue of currency by Government, whereas his book is conspicuously free from sentimental prejudice or emotional criticism. He lets the facts speak for themselves, and they speak loud enough. Their lesson is that the safest currency, so soon as metal is displaced by credit, is furnished by the private enterprise of banks subject to the ordinary laws of business liability, and that the interference of Government has almost without exception been prejudicial, and prejudicial in proportion to the extent of the interference. The most disastrous results have taken place when Government has issued its own notes as currency; and when it has limited itself to establishing or aiding banks, the least injurious results have followed when the banks have been most left to themselves.

We are so accustomed to the limited liability of the stockholders of commercial corporations that we are apt to forget that the common law knows nothing of this principle. Those who associate themselves in any business enterprise, unless protected by statute, are partners, and their whole estates are subject to the claims of their creditors. Where this principle has been applied to banks, as in Scotland, the security of noteholders has been practically complete. It has often been found possible to depart from it with a considerable degree of safety, and in practice the partnership principle in banking is obsolete; but un-

less the laws under which banking corporations are formed are extremely conservative, there is sure to be trouble. Mr. Conant's book is a commentary on such legislation, and it is deserving of high praise. He has brought together the principal facts concerning banks of issue throughout the commercial world—facts in many cases inaccessible to American readers—and has produced an encyclopædia of the subject, brought down to the present year. It contains much matter that is outside the strict limits of bank currency, but the activity of government has been so incessant and so potent that it would have been impossible to ignore it.

The history of banking in this country and in the United Kingdom may be presumed to be familiar to most readers, and Mr. Conant's account of it calls for no particular comment. His description of the banking experience of the kingdom of Italy, especially in recent years, might well have been more detailed. The lessons to be derived from it are precisely those which the American people must somehow learn, and would do well to learn from the experience of other nations. Concerning the Bank of France it is perhaps worth while to note that its charter expires in 1897, and, with the present constitution of the French legislature, it is appalling to think of what may be proposed when that period is reached. We can only say that concerning the banks of Germany, Austria-Hungary, and Russia Mr. Conant writes in an interesting way, and that he furnishes but meagre information concerning the banks of Latin America, Africa, and the Orient. The chapters on commercial crises are of course germane, but it would perhaps have been better to give the space to more particular details of some of the institutions concerning which we know little. The concluding chapter, on the advantages of a banking currency, is excellent, and the essence of the matter is well expressed in an observation of Lord Sydenham's, that "nothing is easier to conduct than the business of a banker, if he will only learn the difference between a mortgage and a bill of exchange." Altogether Mr. Conant's book is to be heartily recommended.

Lectures on the Darwinian Theory. Delivered by the late Arthur Milnes Marshall, M.A., M.D., etc. Edited by C. F. Marshall, M.D., etc. London: D. Nutt; New York: Macmillan & Co. Imp. 8vo, pp. 236, illustrated.

PROF. MARSHALL says the best that has been said for the Darwinian theory. His exposition is better adapted to general readers than that of more prominent authorities. He has a charming style; his lectures are models of lucidity and compactness. That he is a partisan is evident, but not disagreeably so. There is a familiar appearance in many of his statements, and perhaps we cannot do better than bring together such a number of them as will define the theory as he saw it. "The theory of natural selection teaches that there are in nature causes which act in much the same way as man acts when selecting artificially for breeding purposes; causes which must lead to structural modifications." (Man's principal function in this connection may rather be likened to isolation, in that he provides opportunity for the action of evolutionary factors.) "Natural selection is a slow process, depending on the gradual accumulation of small variations for the acquirement of which we have no actual standard of time"; it "accounts for any amount of modification in an organ when once established, modification in any direction, either of increase or decrease, but does not offer any explanation of the first appearance of such an organ"; it "can only act on an organ after it has already attained sufficient size to be of practical importance and utility"; it acts "by the continuous preservation of a series of very minute variations." (Hence, all variations have equal chances of preservation until one or more is made use of. "Sports" are neglected here; and a tendency to sport and to accumulate such variation is outside the limits.) "The vast majority of animals and plants that come into the world are doomed to die early"; "the more favored ones will not only survive, but will tend to hand down to their descendants their special advantages"; "the struggle for existence results in the survival of the fittest"; the theory "does not say that the ideally best survive, but those most in harmony with their surroundings for the time being"; "the real struggle is between the most closely allied and therefore competing forms." (The inference that the early death of the vast majority is caused by closely allied forms is not warranted.) "Natural selection does not of necessity involve progression or change of any kind, and is quite consistent with a stationary condition, provided that the environment, or at least all the features of the environment affecting them [the persistent types], remains unchanged." In mimicry, "at first there is more or less accidental resemblance"; "the mode of acquisition of mimicry is by the gradual action of natural selection, and must have been accidental in the first instance"; "the colors of animals and plants are no mere accidents, and are not created for our special benefit, but are directly useful to their possessors and have been acquired because they are useful." "Every species is for itself and for itself alone"; "natural selection acts for the good of the species"; "it will tend to preserve the instinct because it is *advantageous to the species, although of no benefit to the individual.*"

The following extracts, for comparison, are from Darwin: "Although natural selection can act only through and for the good of each being, yet characters and structures which we are apt to consider as of very trifling importance may thus be acted upon." "Natural selection acts only by the preservation and accumulation of small inherited modifications, each profitable to the preserved being." "As the individuals of the same species come in all respects into the closest competition with each other, the struggle will generally be most severe between them." The subjoined quotation, also from Darwin, is of a kind which our author considers to be most in need of proof: "There can be little doubt that the tendency to vary in the same manner has often been so strong that all the individuals of the same species have been similarly modified without the aid of any form of selection."

A eulogistic notice of Darwin's life and works concludes the series of lectures.

Notes on the Text of the Book of Genesis. With an appendix. By G. J. Spurrell, M.A. Second edition, revised and corrected. Oxford: Clarendon Press; New York: Macmillan. 1896.

THESE "Notes," the first edition of which appeared in 1887, are, as is frankly professed in the preface, substantially a compilation from the commentaries of Tuch, Delitzsch, and Dillmann, and are intended for the use of beginners who take Genesis for a first reading-book in Hebrew. For the benefit of this class, the forms of words and the structure of sentences are very minutely explained, with superabundant references to various grammars. The appearance of a second edition proves that the book has not been found useless; but it is very ill adapted to its primary purpose. The author's "beginners" are supposed not to know their paradigms or the rudiments of syntax, and at the same time to be able to profit by extracts from the Targums and the Syriac and Arabic versions in the original, and to digest etymologies in all the Semitic languages and alphabets. Much space and time is wasted on the etymology of rare or foreign words and of proper names. Thus, of the word "cherub" no less than eight explanations are quoted, six of which the author himself dismisses as "precarious and improbable," the other two being unproved; the only thing reasonably certain is that it is a foreign word. Much of this matter, like the six etymologies of "cherub" exhumed from Gesenius's 'Thesaurus,' is sheer rubbish, and hardly any of it is of any conceivable use to the beginner.

The second edition is enlarged by an Introduction on the sources and composition of Genesis derived chiefly from Holzinger and Driver, which takes the place of the very inadequate treatment of the same subject in Appendix I. of the former edition. Some additions have been made to the text and some errors corrected; but it can hardly be said that the work has been thoroughly revised and brought up to date. We miss references to many important recent discussions of points treated in the notes.

BOOKS OF THE WEEK.

Advertising in New England: A Complete Handbook for 1896-7. Boston: C. H. Guild & Co.
Alden, Mrs. G. R. Making Fate. Boston: Lothrop Publishing Co. $1.50.

The Nation.

NEW YORK, THURSDAY, AUGUST 6, 1896.

The Week.

THE practical failure of the New York city loan of $3,800,000 and the similar failure of the $1,500,000 loan in Brooklyn must be ascribed to the silver scare, for, although the bonds are specifically payable in gold, people who have money are very loath to part with it in squally times. They prefer to "keep themselves strong," as the saying is. This is especially true of savings banks, which are usually glad to get New York city bonds bearing 3½ per cent. interest. If they find their customers in an uneasy frame of mind, they fortify themselves with cash, not with securities, even of the gilt-edged variety. The Comptroller says that if he cannot sell the bonds, the city improvements must stop. Precisely so. The public business is getting into the same condition as other business. People will not invest their money in private enterprises till they know what the standard of value is to be. If that question is settled satisfactorily, there will be such an outpour of capital for American investment as has not been seen since 1879-82, when specie payments were resumed. Then everything that has a substantial value behind it will sell, and investors will climb over each other to get city bonds bearing 3½ per cent. interest.

Mr. McKinley is to be congratulated on having at last screwed his courage to the sticking-point and actually pronounced the dread word "gold." On the ears of some Pennsylvania pilgrims to Canton the word first fell on Thursday, and they did not blanch or tremble, but loudly cheered the gallant Major. He said "gold," it is true, in a casual and somewhat furtive way, looking around, as it were, for something to catch hold of when the crash came, and also hastening thereafter to take a good pull at the tariff to steady his nerves. But no crash came; the sun kept on shining and the earth did not rock. The next day, accordingly, Mr. McKinley rose fairly and squarely to the demands of the situation, declaring that in the future every dollar paid out by the Government, whether to bondholders or pensioners, should have the value of a gold dollar, as it had had that value in the past. He was especially happy in recalling to the old soldiers the distinguished services of their great commander, Grant, in vetoing the inflation bill and in signing the act that at once made the credit of our country unsurpassed by restoring the gold standard of value. It is greatly to be desired that in this campaign the issue of national honor shall be made prominent. Appeals to the selfish interests of classes may be effective, but they cannot arouse much enthusiasm. But appeals to loyalty and patriotism will be irresistible. They cannot be met by the free-silver advocates. The strongest motives to which they can appeal are the desire to get gain by dubious measures, and the emotion of envy. These are at times powerful motives, but they stand no chance of prevailing when honor is on the other side. Many plain people are confused by the intricacies of numerical ratios of values and coinage, and by confounding money and capital; but they can grasp the simple issue of maintaining the good faith of the Government. On this ground an aggressive campaign can be fought, and the advocates of cheap money compelled to explain away their own proposals.

Those who have been shuddering for fear the ship of state might be driven from her moorings by the cyclonic blasts of Bryan, may be counselled to read the calm utterances of Secretary Morton. He has a way of packing about as much good sense in his speeches as plain words will convey, and it is to be remembered that he is a Nebraskan, that he has been long prominent in political life, and that he has been very popular. It is certainly a cause for gratification that the issues of the present election are to be presented to Western farmers by so able and persuasive a speaker as the Secretary for the Department of Agriculture, and Mr. Bryan may find, when he undertakes the invasion of the Eastern States, that his enemies have captured his own stronghold. Mr. Morton brought out very forcibly, in the speech that he has just delivered at home, the influences that led to the demonetization of silver. If there was a conspiracy in 1873 against silver, he said, there was a crime against the flatboat by the steamboat, and a crime against the steamboat by the railroad, and against the horse by the trolley car and bicycle. We have enough silver dollars now, he said, to put $5.50 into the hands of every man, woman, and child in the United States. But they will not circulate. Modern business cannot be done with ancient appliances. A mowing-machine costs more than a scythe, but no farmer thinks that a scythe is cheaper because it costs less. A locomotive may cost $10,000 and a horse but $100; nevertheless the locomotive is a more economical instrument than the horse. Money does not differ in this respect from other tools. No one who wielded an axe would choose one thirty times as heavy as one that was equally good, although the latter cost thirty times as much. Every one who drives a plough selects the lightest one that will do the work. The term "cheap" applied to money is no recommendation unless we take efficiency into account. Such plain truths as these need to be repeated, line upon line, and we are glad that Secretary Morton has taken up the work.

Mr. Bourke Cockran has lost no time since his return from Europe in choosing and stating his position in the pending electoral contest. He squarely repudiates the repudiating candidates and platform of his party, and announces his intention to do all in his power to secure the election of Mr. McKinley. He has already offered his services as a stump-speaker for the honest-money cause, and no one who knows his capacities as a popular orator, and especially his great effectiveness in dealing with economic questions, can fail to regard this reinforcement as a notable one. Mr. Cockran also reminds Tammany how large a share of its brains it lost when it lost him, by pointing out to the eager Sheehans and Purroys that what they have done by their endorsement of Bryan is really to declare in favor of incorporating into the statute law of the country doctrines which they themselves had denounced as a singular combination of lunacy and villany. On the question of a third ticket Mr. Cockran takes a somewhat novel line. He agrees that there should be a convention of gold-standard Democrats to assert the true party creed and to associate themselves in an effort to bring about the defeat of Bryan. But he thinks that they should not nominate independent candidates of their own. They should, he believes, make an explicit avowal of their principles and of their determination to oppose Bryan and the Chicago platform at all hazards, and then simply endorse the McKinley electors. This, it seems to us, for reasons already set forth in these columns, betrays a somewhat defective grasp of the case for a separate Democratic ticket, with separate candidates pledged to make an aggressive fight.

Senator Jones of Arkansas occupies an uncomfortable position. It was a thankless task to attempt to guide such a horde of discordant and opinionated human beings as were gathered at the Populist convention at St. Louis, and the result achieved has been so embarrassing that apparently neither Mr. Bryan nor any one else knows what to do about it. The terrible Watson is openly defiant, and, being the most prominent representative of the Populists, he can make the diplomatic politicians of the Bryan party a great deal of trouble. In fact, Mr. Watson appears to have exhausted the stock of patience with which Senator Jones was provided, and the latter has been guilty of the extraordinary mistake of holding a "conversa-

tion with two newspaper men" which he "regarded in the light of a private conversation." The two newspaper men, true to their nature, took a different view of the matter and gave the conversation a most awkward publicity. According to their account, Senator Jones gave the Southern Populists a very bad name, and intimated a willingness to have them "go to the negroes, where they belong." Probably nothing more offensive to the Southern Populists could have been said; and as they have the uncomfortable feeling of being really engaged in pulling the Democratic chestnuts out of the fire, they are sufficiently ready to take offence. It is but justice to Senator Jones to say that he denies having used the expression in question.

The election in Alabama on Monday seems to have resulted in an honest victory for the Democrats. The Fusionists will, of course, cry fraud, now that they have been beaten, but the evidence appears overwhelming that a good majority of the voters of the State preferred the Democratic ticket to the Republican-Populist combine. There was every reason why an intelligent man should make this choice. Johnston and Goodwyn, the Democratic and Fusionist candidates for Governor, are equally strong free-coinage men, but the influences behind Johnston promise a far better administration of State affairs than could have been expected from the "combine." Sound-money men, like Secretary Herbert, therefore, supported the Democratic ticket, and its success is undoubtedly best for the State.

The point raised in the arbitration correspondence between Lord Salisbury and Mr. Olney by the former—that it is important in a general treaty of arbitration to provide means in advance for withdrawing from it—is one which ought not to stand in the way of an agreement. A treaty of arbitration is like any other treaty, binding only so long as both parties feel bound to adhere to it. If either party becomes thoroughly convinced that a treaty imperils its substantial interests or honor, it will infallibly withdraw, and if necessary go to war. No treaty can prevent this, and it is therefore unnecessary to agree that it shall not be prevented by a treaty. One or two notorious instances in our own history illustrate this. The controversy over the claims for damage done by the *Alabama* created a state of popular irritation between England and the United States which threatened war. To avert this danger the claims were referred to arbitration, and hardly had this been done when the presentation of what were called our "indirect claims" made feeling on the English side run high again—the English grievance being that claims, enormous in amount, and not intended to be included in the treaty, ought not to be discussed at all. England threatened to withdraw. Had she withdrawn, the arbitration itself, the object of which was to secure peace, might have ended in war, and the arbitration treaty would have been mere waste paper. The knot was cut by the tribunal at Geneva deciding in advance that no such claims could be entertained. To this we voluntarily submitted, but no one could have compelled us to do so. In the same way the United States withdrew from its treaties with France of 1778, on the ground that France had violated some of their provisions. The important thing is to agree to arbitrate. Elaborate machinery to enable people to break a treaty is something new in diplomacy.

Such machinery in a treaty of arbitration is especially out of place because it tends to give the document an air of unreality. The essence of arbitration is that both parties agree in advance to *submit* to the award, and hence Lord Salisbury's suggestion of an agreement that any difference whatever (*i. e.*, such as involves honor or national integrity) may be submitted, with the proviso that the award shall not be valid unless accepted by both parties, is really a suggestion not of arbitration, but of escape from arbitration. Mr. Olney's suggestion in reply that it should be agreed that either party may withdraw in advance, on declaring its honor or integrity involved, is unnecessary, because this is what will be done whether it is provided or not, and it would seem as if final submission was not the whole object of the treaty. The fact is, that the ways of escape from arbitration are so unlimited in number that neither party risks anything in submitting to it, except the danger of being prevented by a sense of duty from committing a wrong—the very danger which it is desirable to prevent.

The proclamation of President Cleveland warning all persons of the consequences of violating our neutrality laws by rendering active assistance to the Cubans, is certainly a very commendable exercise of the power of the executive. Coming immediately after the wholesome result of the trial of the "filibusters" led by Dr. Jameson, it is calculated to promote respect for the obligations of international law, and to restrain the sympathizers with Cuba within bounds. It is quite probable that, before the recent decision of our Supreme Court, many of these persons believed that they might organize expeditions to land arms and forces in Cuba without danger except from the Spaniards. Mr. Cleveland points out that the organization of such expeditions, or the furnishing arms therefor, or the aiding in their transportation, is punishable and will be punished under the statutes of the United States. The proclamation is thus an act of mercy towards ignorant persons who are in danger of being misguided by the Cuban agents, and it can hardly fail to have a good effect upon Spanish feeling, as showing that the gratuitous expressions of hostility by Congress will not affect the punctilious discharge of our international obligations by the Administration.

There are two important points which lie at the root of the New York charter question, yet which down to the present moment have received little or no intelligent discussion. The first is, that, as matters now stand, the same body which has power to adopt a charter for Greater New York has power also, except so far as restrained by the Constitution, to amend, alter, or even repeal it the next day. One of the things which make it so difficult to get any good government in the city at present is the constant meddling of the Legislature with the form of government. Only last winter we barely escaped a complete remodelling of the Police Board to satisfy the private ends of Platt, whose relation to the legislative control of New York was much the same as Sheehan's or Croker's would be were Tammany in power. Now the object of a new charter is, in part, to give the public at large the control of city affairs, and to take it away from both machines, Republican as well as Tammany, and this will not be attained by any new form of government which does not take away from the Legislature at Albany all control over the charter. This control of the Legislature, which is in reality the control of a boss, will not be done away by the adoption of a new charter, either by popular or legislative vote. Nothing short of a constitutional amendment forbidding special legislation at Albany with reference to the city will accomplish this. The city of Chicago has been entirely freed from its former legislative incubus by this means, and it is conceded that the change has been followed by just that sort of stimulus to municipal spirit and growth of corporate responsibility and energy which everybody desires so much here.

The other point is, that experience proves that the work of a city like New York is not legislative but administrative in its character; and hence we do not need a local legislature, like the British Parliament or the Congress of the United States. Opening, paving, lighting, cleaning, and watering the streets, taking care of the public money, protecting the city's legal interests, policing it, taking care of the poor, insane, and criminals, putting out and preventing fires, preventing disease, taking care of the parks and docks, are all matters of administrative business affecting the whole city. They have been attended to now for twenty years by administrative bodies called commissions, which have only been hindered and

interfered with by legislation at Albany. Even the taxes have been successfully raised during this period by a similar board only in part elective. For nearly a generation the whole legislative branch of the city government, which once consisted of two large popularly elected bodies, has withered away and lost its powers by a kind of atrophy because the organs are no longer of any use. To go back now to this antiquated form of government, as Messrs. Dean and De Witt's first charter draft seems to contemplate, would merely be to set on foot again a species of government which experience shows we have outgrown. Their proposed borough boards, for example, are to have local powers over matters which are not local at all, such as streets and avenues, and which are now satisfactorily discharged by the Police Commissioners and the Commissioners of Public Works. Such boards are merely superfluous, resembling in this respect the old school trustees, and could only tend to confusion and corruption.

They have strange ways of administering justice in England. We are supposed to have substantially the same criminal jurisprudence in this country, but if Dr. Jameson and his associates had been put on trial in New York, no one can say how long the trial would have taken, or whether a conviction would not have been upset by the higher courts, and it is very doubtful if a conviction could have been obtained anyway. In the first place, it would probably have taken a month to get a jury. Everybody that had any business of his own would have tried to escape serving, knowing that it would be several weeks, probably, before he would be discharged from his attendance at court. Everybody that manifested any degree of intelligence would have been excluded, and whoever had any clear convictions, as in such a matter as the Jameson raid people who keep informed of the course of events must have, would have been challenged. After a jury entirely free from every suspicion of intelligence and independent judgment had been obtained, the lawyers would have had unlimited opportunities for irrelevant inquiries and magniloquent speeches, and the incompetent jury would have been so thoroughly confused as to be unable to agree on a verdict. The expense of all this would have been enormous, and the law would have been brought into greater contempt. But in England the whole thing is over in less time than it would have taken here to secure a couple of jurymen; and, the court being strongly constituted, there is no reason to expect a pardon. The sentences were certainly light in view of the bloodshed that was occasioned by the raid, but, considering all the influences and sentiments involved, it must be said that the majesty of the law has been vindicated, and that too with most satisfactory promptness.

Mr. Gerald Balfour has had little better luck with his Irish Land bill than his brother Arthur had with the Education bill. The failure in either case has been due mainly to the fact that the legislation attempted was class legislation. The Education bill was shaped to meet the views of the bishops, and the Land bill, for a time, to meet the demands of the landlords. The crux of the bill was that old and familiar crux of all Irish land legislation—the question of tenants' improvements. These seemed to be safeguarded in the first draft of the bill, but suddenly a lot of amendments were put down on the paper by the Irish Secretary, the intent of which was practically to confiscate all tenants' improvements in the fine old Irish way. Then came on a tremendous row, extending to the sacred precincts of the cabinet. T. W. Russell, who had accepted a place in the Government on the distinct agreement with Lord Salisbury that the new Irish Land bill should afford complete protection to tenants' improvements, was bitterly outspoken against these landlords' amendments, and had the quiet but powerful aid of Mr. Chamberlain. The result was such a pressure on the ministry that they incontinently withdrew the very amendments they had put forward. But their vacillation has aroused all sorts of angry suspicions, one of the most generally believed being that the offensive amendments will be tacked on in the House of Lords.

It is not very surprising that the anarchists of Europe should have been tempted to insist on participating in the counsels of the International Congress of Socialists and Trade-Unionists at London. Perhaps their inflammable imaginations were fired with the reports of Gov. Altgeld's remarkable achievement in this country, whereby he captured in a day a great political organization. This international congress was really a gathering of some importance. The number of representatives from Great Britain was large. Some years ago the Socialists succeeded in getting control of the Trade-Union Congress, and although they were shaken off by skilful management, they have maintained a great deal of influence, and apparently represent the sentiments of a pretty large body of workmen. Probably half of the British delegates to the recent congress were elected by socialistic organizations, the other half being direct representatives of trade-unions. The Social Democratic Federation and the Independent Labor party each had more than 100 delegates. The French Labor party sent its representatives; quite a number of the Socialist members of the Chamber of Deputies were there, and many of the Socialist mayors and councillors. From Belgium there came seven representatives of the Society of Socialist University Students, and of course a large contingent was present from Germany. Delegates were in attendance from Austria, Italy, Hungary, Sweden, Denmark, Russia, and even the Balkan States; Australia and the United States being scarcely represented.

The attempt to establish "International Socialism" has encountered so many difficulties of late as to have become almost hopeless. Some of the German Socialists have advanced so far as to prefer the interests of mankind to those of their own country, and at the recent congress at Lille they assured the delegates from France of their disapprobation of the conquest of Alsace and Lorraine. The allusion, however, was too much for the impetuous Gallic temper, and the enlightened Germans were informed that the era of universal brotherhood would be postponed until revenge had been taken for the "crime of 1871." This outbreak of chauvinism naturally has had the effect of causing the Germans to withdraw their fraternal suggestions as premature, and the prospects of "internationalism" are again beclouded. Of course the fierce quarrels at the London congress have contributed to this result, and a tone of discouragement is notable in the Socialistic journals; the gloom being intensified by complaints from all quarters that the funds of the party organizations are running low.

It is somewhat surprising to find a man like Leroy-Beaulieu defending the French annexation of Madagascar on the ground that only in that way can French trade enjoy a monopoly in the island. If a mere protectorate were to be assumed by France, as was at first proposed, the existing favored-nation treaties with England, Germany, and the United States would be still in force. By making Madagascar a French colony outright, however, the slate is sponged clean, and French commerce, under French protective tariffs, given first chance. After losing 7,000 men and spending $30,000,000 in conquering the island, it would be the most exquisite simple-mindedness, argues M. Leroy-Beaulieu, to pursue any other course. Shall Frenchmen labor and then stupidly allow Englishmen and Germans and Americans to enter into their labors? Yet just this exquisite simple-mindedness has always marked English colonial policy, the success of which contrasts favorably with the rather painful results of French colonizing experiments. In an English colony one nation has as good a chance as another, and somehow the plan has worked well. Strangely enough, the more the foreign capital that has been brought in to develop the colonies, the more rapidly they have developed, and the better it has been both for the colony and for England. Colonial monopoly, on the other hand, is as bad in practice as it is in theory.

MR. REED'S SPEECH.

Mr. Thomas B. Reed made the opening speech of the campaign at the town of Alfred, Maine, last week. By "opening speech" we mean the first one made by any man, on either side of politics, that can be considered a thoughtful argument appealing to the human reason, and treating its hearers as men assembled together to consult for the common good and not as mere "hollering" machines. In this respect it forms a happy augury and suggests the campaign of education, about which we hear so much promise and meet with so little performance. It is a long time since we have heard a Republican stump speaker allow that there was any good in the Democratic party. Mr. Reed's discoveries in that line have been rather meagre in former campaigns. It is all the more to his credit that he now recurs to the Democratic support extended to President Lincoln in the war for the Union in such strong terms as these:

"I have said that it would be unwise, unjust, and senseless to confound the Democratic organization with individual Democrats. I have said, also, that that would be flouting a part of our own history, and a glorious part of our history, too. Why, it is within the memory of a third, and perhaps half, of this very audience which listens to me, that when the terrible war of the rebellion burst forth, tens of thousands of Democrats—politicians, strong party men—sprang to their feet, representing hundreds of thousands, aye, millions, and thenceforth and always were part and parcel of the bone and sinew of the victorious republic. What matter if the party had gone wrong? They were right. One man among them, one man alone, by a single sentence gave aid and succor to this Government which outweighed a whole army corps of veterans, musket on shoulder. When Stephen A. Douglas declared, after Sumter was fired on, that 'thenceforth there could be but two parties, patriots and traitors,' he won the respect even of foes and an imperishable place in history. We shall certainly welcome all such men today—not that they are to be Republicans, for they will not be, but because they are patriots, for that they must be."

Mr. Reed's references to the tariff question were not in any sense offensive to those who consider protective tariffs a delusion. All persons recognize the fact that if the Bryan ticket is to be beaten in this campaign, it must be beaten mainly by Republican votes, and that the kind of campaign necessary to hold those votes together and make them conducive to success must be made. The Republican leaders ought to know best what kind of campaign is needed to secure this part of the common result. We think that Mr. Reed has hit the mark pretty well in putting the tariff first in the order of his discourse, but making it second in the amount of time bestowed upon it. At least two-thirds of his speech was on the money question, and here he was very strong.

He plunged *in medias res* by showing the effect of a cheap dollar on the wages of laboring men. This, as we have heretofore pointed out, is the keynote of the campaign. "Wages," said Mr. Reed, "in greenback times, did not go up as other things did. They went part way, but not all the way up, and were very slow about that." This is the exact truth. Every experiment with depreciated currency in our history—and there have been many such in colonial as well as later periods—has had that invariable result. The prices of commodities have risen at once because there was no resistance to a rise. Indeed, they have generally risen in anticipation, before there was any actual need of a rise. They have done so because people knew beforehand that there must be a rise, and have bought on speculation to get the advantage of it. But there is always resistance to a rise of wages. The rate of wages is a matter of agreement between two persons or two classes. Wages are never advanced merely because the workman's expenses have increased. Other considerations come in, and principally the employer's ability to pay an increased rate. Now it almost always happens that a depreciation of the currency, instead of making business better, and thus enabling the employer to pay more, makes business worse because investors are alarmed. They either hoard their money or send it out of the country. This is generally the first consequence, so that the advance in prices of commodities is accompanied by a loss of employment for a certain number of laborers at the outset. What the wage-earner has to look forward to, as an immediate result, if the silverite policy is adopted, is a 53-cent dollar at the pay-table in place of the 100 cents he now gets, and an increased price of the goods he buys. What will happen afterwards is a matter of conjecture. Our conjecture is that the next step will be a paper dollar more depreciated than the silver one, and that there will be no end short of the fate that overtook the Confederate currency and the Continental currency and the assignats of the French Revolution. This is what the Populists want now. What they want to day the Populist-Democracy or Popocracy will want to-morrow, because it is only on such terms that the two wings can be held together, and in fact the difference between them in this matter is a difference of degree and not of kind.

We cannot point out all the excellences of Mr. Reed's speech. One effect it will have most undoubtedly: it will confirm the intentions of those sound-money Democrats who are inclined to vote the Republican ticket this year. Those who cannot do so will be equally confirmed in the purpose to support a third ticket. It would be possible for a man in Mr. Reed's position to make himself and his party offensive and thus send votes back to Bryan and close up the ranks. The tone which he has adopted ought to be the tone of the Republican campaign throughout. If it is so, the happiest results may be expected. The sound-money Democrats will go their own way, but none of them will be goaded to the support of Bryan by reason of anything done or said by the Republicans.

SECRETARY CARLISLE'S LETTER.

Secretary Carlisle has written a letter to F. W. Alsop of Little Rock, Ark., on the effect which the free coinage of silver would have on policies of life insurance, and incidentally on all money payments whatsoever. The letter was written officially in response to a request for information regarding the powers and duties of the Government. President Greene of the Connecticut Life Insurance Co. had written a statement, which had been widely published, saying that if the policy of free coinage of silver were adopted, his company would be compelled to pay its policies in silver dollars worth only a little more than fifty cents each. Mr. Alsop cut out this statement, sent it to Secretary Carlisle, and asked whether this were true. The Secretary replied that it was true, because the insurance companies and all other institutions would continue to make their payments by drawing checks on the banks; and that under free coinage "the whole volume of our currency would sink at once to the silver basis, and these checks and drafts would be paid in silver dollars or their equivalent, instead of gold or its equivalent, as is now the case." Here the Secretary might have stopped, as he had answered the specific question put to him, but he went on and gave some explanations that are particularly needed at the present time. Already in this campaign it has been made abundantly manifest that a great many people think that the Government would "stand behind" the silver dollar and keep it at par with gold if a free-coinage law were passed, just as it does now. One of the hardest things to make people understand is that the Government could not possibly do such a thing. The strongest Government in the world could not do it, since it would be no less a task than to give a full dollar for every 53 cents' worth of silver in the whole world, including all that is worn for ornament in India or sold as sycee bars in China, and all that may be mined hereafter. The Government is able to keep at par the silver dollars heretofore coined for its own account, because the number of them is limited to about the amount that will circulate from hand to hand. If the amount were materially increased, it could not do so. If it were indefinitely increased, they would fall to the value of the bullion contained in them.

"I presume," says Mr. Carlisle, "no one supposes for a moment that it would be the duty of the Government to attempt to keep the standard silver dollar, coined free for private individuals and corporations, equal in value to a gold dollar—or, in other words, that it would be the duty of the Government to attempt, under a system of free coinage, to maintain the parity of the two metals. The dollars would be coined on private account and delivered to private individuals and corporations as their own property, the Government having no interest whatever in them, and being, therefore, under no obligation to sustain them by guaranteeing their value."

Mr. Carlisle might have said much less

than this while fully answering the question put to him. The fact that he went into explanations somewhat lengthy indicates, at all events, that he is not going to support Bryan and Sewall in the campaign, for he could not deliberately advocate a policy which, as he shows, would result in cheating widows and orphans out of nearly one-half of the money laid up for their benefit by the toil and savings of their deceased husbands and fathers.

Why could not the insurance companies pay as good money as they have received in the past? Simply because what they have received in the past they have already paid, minus what they have accumulated as surplus. Their past claims have been paid with their past receipts. Future ones must be paid with their future receipts. No company or person can pay out 100 cents where he receives 53 and continue long in business. If we should see any merchant doing so now, we should know that his name would soon adorn the list of bankruptcies. It would be possible for the companies to issue gold policies thereafter on condition that the premiums should be paid in gold, and by making their loans and other investments specifically on the gold basis. This would be possible under present laws, but we cannot overlook the fact that both of the platforms on which Mr. Bryan is running for President call for the passage of laws by Congress to prevent people from making gold contracts. Any other kind of a contract may be made, and the law will enforce it—contracts for stone, iron, whiskey, or dynamite—but a contract for the one article which constitutes the money of civilized mankind, including ourselves, must not be tolerated if the Popocracy carry the election.

It is needless to say that all principles governing life-insurance policies govern all other financial institutions—fire, marine, and accident companies, trust companies, savings banks, national banks, and the whole list. These are your true debtor class. These are the concerns that owe the largest sums of money to the people of the United States. They represent fully one hundred times as much debt as all the farm mortgages in the country. Why are they not usually classed as debtors? The fact that they are debtors is notorious, and is acknowledged by every one who bestows any thought on the subject. The reason why they are not so classed must be because they are in the habit of paying their debts promptly. The popular conception of a debtor, or at all events the Populist conception, is one who does not pay promptly. The ideal debtor is one who does not pay at all. It is for the benefit of this interesting class that all the business of the country is to be turned upside down.

THE SOUTH IN THE NEW WARFARE.

It is not without significance that the defenders of our national honor find themselves confronted with a "solid South." The Southern States for many years practically controlled the policy of the general Government. Seeing the control passing away from their hands, they attempted to dissolve the Union, and since the failure of that attempt they have been powerless to a humiliating degree. The bitter memories of the civil war made it impolitic to nominate Southerners for high national office, or for Southerners to make themselves prominent in support of any policy. They had to play the part of repentant prodigals, who may be welcomed back to the family circle, but who are expected to maintain a submissive and unobtrusive behavior. They were miserably poor, but they had to support the pension acts of Congress, which taxed the South practically for the exclusive benefit of the North. At any aggressive action of theirs they were liable to be called rebels and traitors, and altogether their political leaders were compelled to pick their way with the utmost caution.

So long as the old aristocracy of the South maintained its traditional authority this policy was skilfully carried out. But this aristocracy was doomed by the loss of its slaves, which involved the loss of its land. As Tocqueville says, there is no real aristocracy but a landed aristocracy. Only land secures at the same time prestige and loyalty, and the great families of the South were gradually dissolved among the people. So far as they were educated and intellectually gifted, their members had influence; but the "poor whites" could not indefinitely tolerate the assertion of a superiority which had no more substantial basis to rest upon than the traditions of a former generation. They revolted, and during the last few years the Southern States have sent to Congress many representatives of a very degraded type — men like Tillman and Watson, whose intemperance of language shows their ignorance of the very elements of statecraft. It is hardly necessary to add that the illegal practices connected with the suppression of the negro vote were not of a nature to develop statesmanship of the purest order.

The mischief of this result is now clearly apparent. So long as the policy of the "solid South" was directed by statesmen, the country was in no danger from the fact that the vote of a large section was controlled by one party. There was sufficient wisdom among the leaders of that party, whose principles were on the whole sound and conservative, to prevent any distinctly sectional legislation. But with the disappearance of the old-fashioned Southern statesmen the management of the party became more difficult. Mr. Cleveland succeeded for a while, and to a certain extent, but the demagogues, knowing that they were the people, and that wisdom would die with them, finally revolted. They have overborne by numbers and clamor the counsels of the former leaders, and, intoxicated with apparent success and the hope of power, have unfolded a political programme worthy of the French Convention of 1793.

In the remarkable letter written by Mr. Cleveland to Justice Lamar in 1892, which has just been published, this situation was clearly predicted.

> "Forces are at work," he wrote, "which certainly mean the complete turning-back of the hands on the dial of Democracy, and the destruction of party hopes. . . . Our Southern friends, if they persist, will be left alone with their free-coinage heresy. The danger is that another Southern idea and a charge of heedlessness for the public safety on the financial question will do service in the place of the memories of the civil war."

That danger has not been escaped, and we once more behold the Southern States assuming an air of hostility to the civilization of the North. Our institutions are based upon the idea of freedom of contract, and we are threatened with laws prohibiting contracts payable in anything but what Congress shall from time to time declare legal tender. Our wealth has been developed by the just and generous remuneration of labor by capital; and in the section where formerly laborers were slaves, and where they are now scarcely free citizens, a policy is proclaimed which would injure every laborer in the land.

A still more remarkable warning was long since uttered by a sagacious man, Samuel J. Tilden, to which attention was called last week by a correspondent of the New York *Times*. In a conversation, the date of which is unfortunately not given, with a gentleman from one of the seceding States, the latter remarked that the Democratic party appeared to be permanently disabled. Mr. Tilden replied:

> "It seems to be broken down at present, and it is broken down; but it will come up again, and will once more gain control of the Government. But this situation will not be permanent. In order to come into power the Democracy must have the support and assistance of the Southern States, and that support and assistance may very soon prove to be its ruin. The Southern States will insist upon ruling the Democracy utterly, and, being poor, they will try to foist into the Democratic programme ideas and measures contrary to all Democratic principles. Against this the whole country will protest. The United States will never consent to be governed by the South or by such Southern ideas. The Democracy will be voted down, and then its last situation will be worse than the first."

It is true. The Southern States have insisted on ruling the Democracy utterly, and because they are poor they have attempted to commit the Democratic party to the principles of communism. This so-called Democracy will be voted down; but it will be voted down by a combination of the honest and conservative men of both parties, who, after agreeing to sink their political differences in their devotion to the welfare of their country, may find that, after all, there are practically no differences to sink, and that the establishment of the national finances

and the money of the people on a firm and permanent basis will constitute a party platform broad enough for all genuine patriots to stand on.

THE QUESTION OF HONESTY.

MUCH has been said of the danger of applying unpleasant epithets to such of our fellow-citizens of the West and South as favor the free coinage of silver. We are warned that they are perfectly sincere in their convictions, that they are to a large extent moral, law-abiding, and God-fearing people. When such persons are called anarchists and repudiators, they are naturally indignant. Conscious of the purity of their motives, they repel the charge of dishonesty, and vituperation only intensifies their devotion to their cause. They are sustained by an overwhelming public sentiment in their own regions, and to question the virtue of their financial policy is like questioning the truth of their religion. Some doubt may therefore be felt concerning the hopefulness of converting such firm believers from what we consider the error of their ways, but even if converts are to be made only from the ranks of the undecided, it is undeniable that the true way is to appeal to reason rather than prejudice. If the free coinage of silver will lead to repudiation, it is better to show just what it will lead to, and to let the hearer characterize the result for himself. If it is a dishonest policy, let it be thoroughly explained and understood; and if, when clearly understood, men will calmly and rationally maintain that they see nothing dishonest in it, it is vain to denounce them. The question would become a mere dispute concerning the meaning of words.

Let us strip the matter of all technical and perplexing details. Let us narrow it down to the closest and clearest issue. Let us dismiss all other questions, and ask simply, "Will it be an honest thing for Mr. Bryan to pay the notes and bonds of the Government in silver?" That is the issue in a nutshell. Mr. Bryan is committed to doing this thing. It is immaterial that the principal of the bonds is not now payable; the money that is used to pay the interest will fix the value of the principal. Whoever votes for Mr. Bryan, votes beyond question for this policy, and he cannot claim to be an honest man unless he holds this to be an honest policy. We do not see how any one can conscientiously hold such a view, and we shall state what it implies in a few simple words.

The silver dollars under free coinage will not be worth so much as the gold dollars. They will not buy so much bread, or fuel, or clothing, or pay so much rent. There is no disagreement about this. Those who want silver coinage say distinctly that they want it because it will make prices higher—that is, because silver dollars when coined freely will not purchase so much as the gold dollars. That is the reason why they want free silver, and that is the reason why their opponents do not want it. If prices were not going to rise under free coinage, no one would care whether we had it or not. So much, then, is beyond dispute: with free coinage, prices would rise—that is, the dollars that we should have would not buy so much as those we have now.

Let us now, for the sake of simplicity, suppose that the bonds of the Government are all held by the savings banks. No doubt many of them are held by other banks, trust companies, fire and life insurance companies, and by individuals. But let us keep to the case of the savings banks alone. For nearly twenty years all our dollars have been as good as gold dollars. Every one who had a silver or a paper dollar could get the value of a gold dollar at any time, and debts due to people in other countries could practically be settled with our dollars at a par with gold. During this time the savings now held by the banks must all have been paid into them; if there are any accounts of longer standing than this, they have been drawn down and replenished within that period. Hence it is true that all the dollars of deposits now in these banks have been paid in gold dollars, or in dollars equal in buying power to gold dollars. And all the Government bonds bought with these deposits have therefore been bought and paid for with gold dollars, or with dollars equal to gold dollars. Moreover, the people who, through these banks, converted their savings into Government bonds, supposed that these bonds were to be paid in gold. Such bonds always have been paid in gold, or in dollars convertible into gold, whenever they have been paid, and the interest has always been paid in gold or its equivalent. And this interest was so paid when the Government had practically to buy the gold to do it, and when the war taxes were higher than now, and when there were not so many people in the country as now, and when the people were not so well off as they are now. There was some talk at one time of paying the interest in paper, but it was shown that this would be a breach of good faith, and the people voted it down.

Now, what Mr. Bryan proposes to do is to pay off the people who lent gold dollars to the Government through the savings banks in silver dollars; to give them back dollars that will not buy so much as the dollars they lent. Perhaps prices have fallen since 1873. But these savings, setting off the withdrawals against new deposits, have all been made within a few years, and gold has not risen perceptibly in value in that time. And during recent years the Government has paid off its old bonds and issued new ones bearing very much lower interest, so that the savings-bank depositors have lent their money to the Government with less gain to themselves than before, even if gold has risen in value. On the other hand, the silver dollars will be worth very much less than the gold dollars. The silver in one of them if melted would sell for only 53 cents in gold just now, and would probably be worth not much more if silver dollars were coined freely. Suppose it would sell for 60 cents; then every one who had bought a Government bond, paying for it 100 gold dollars, would be paid off in 100 silver dollars, which would be worth 60 gold dollars. The savings, therefore, would buy perhaps three loaves of bread when they would have bought five if the Government had paid back what it borrowed, three tons of coal instead of five, three months' rent instead of five, etc., etc.

The people who put their dollars in the savings banks, and in that way in the bonds of the Government, are for the most part plain people, workingmen, domestic servants, teachers, and old people, who have never thought about bimetallism, or the act of 1873, or the appreciation of gold. Least of all have they thought that their Government would commit a breach of faith. The proverb "Good as a Government bond" expresses their simple confidence, and probably most of them have no idea now what Mr. Bryan proposes to do or how it will affect them. But the believers in free coinage know what he is going to do, and if they say that what he is going to do is honest, they must offer some explanation of its effects as described above. They must convince the people who have put their money in the savings banks that it is right and just that they should get back what is worth little more than half what they put in, in full satisfaction of their claims. This matter has got to be explained, and not slurred over, if Mr. Bryan expects to make converts in this part of the country, and if it is ignored, it will be treated as a confession of dishonesty.

A PATRIOTIC DEED.

THE conduct of the bankers in parting with gold for the purpose of maintaining the credit of our Government has occasioned some embarrassment to those who are in the habit of denouncing the "money power," "selfish wealth," "corporate greed," and other abstractions. These critics have been unable to deny that the proceedings had a generous and patriotic look; that the bankers really gave gold in exchange for promises to pay "dollars" which may possibly in a few months be worth much less than gold. They have, however, hastened to point out that the unselfishness of the act may have been more apparent than real; that it is greatly to the advantage of the bankers that the solvency of the Government should be maintained; and that really their action was forced on them by self-interest.

We do not question the justice of these

considerations. The interest of the bankers we know to be promoted by the maintenance of the financial honor of our country. We regard it as bound up with the prosperity of business men in general, with the welfare of merchants and manufacturers and farmers, and with that of all the workmen employed by these classes. When the bankers make a sacrifice such as they have made they are benefiting all their fellow-citizens, and in that way benefiting themselves. But we may be allowed to point out that self-sacrifice is very apt to have precisely this tendency. Soldiers are frequently called upon to breast the attack of the enemy, knowing at the time that, unless they expose their own lives without flinching, such demoralization will take place among their comrades as will result in universal slaughter. Sailors run the greatest risks, knowing that if they shrink from them they will be drowned as well as the passengers. Doctors expose themselves to contagion, knowing that if they let pestilence spread they may become its victims. The world is so constituted that brave and benevolent and patriotic acts have a tendency, directly or indirectly, to benefit those who do them as well as those for whom they are performed, and it seems ungracious to stint our praise because we are not quite sure that we behold the exhibition of purely altruistic motives.

We are, however, aware that some of our contemporaries are occasionally troubled with the suspicion that we are the advocates—possibly the paid advocates—of "plutocracy," and that whatever we may say in praise of the present or any other action of bankers will be attributed by them to unworthy motives. This might not materially restrain us did we not think that sensible people appreciate the conduct of the bankers as it deserves. Their action is the talk of the world, and it requires no commendation of ours.

Not so, however, with the action of a humble citizen reported in the *Sun* of the 25th inst., the story of which we reproduce. Michael Murphy is an elderly man, a native of Ireland, who has been an American citizen for fifteen years. During that time he has saved from his wages the sum of $820, which he has kept in gold coin. Last Friday he went to the sub-treasury and exchanged his gold for Government notes, making a plain statement of the reasons for this proceeding. He declared that this country had been good to him, "as it is the friend of every laboring man." He declared that he loved its institutions and its freedom, which were in danger because of a class of men who would ruin its credit and reduce the dollar in which wages are paid to nearly 50 cents if they had their way.

"Since this agitation of the currency question has begun," he continued, "it has scared a great many people, but all I have I owe to my country. Therefore I desire to show my confidence in the Government and in the good people of this country by depositing in the sub-treasury all of my earnings which I have accumulated, amounting to $820 in gold, during the fifteen years I have been here, to sustain the credit of the Government during this perilous time. While the Government issues all kinds of currency—silver notes, Treasury notes—I know that the bullion in the silver is worth about 53 cents, and I also know that by keeping the reserve of gold in the Treasury the Government will be enabled to maintain all the dollars it issues at par with gold. I therefore desire to make this offering to the Treasury, and thereby show my appreciation of the Government so free and so beneficent to me."

Cynical observers may be inclined to suggest that a deposit of gold of this magnitude would not go far to replenish the gold reserve. Neither did the widow's mite go far to fill up the poor-chest in the Temple; and yet perhaps the mere story of that mite has brought forth more abundant contributions to charity than any other influence. Prudent men might have advised Mr. Murphy to keep his gold and make sure of having something to live on in his old age. But Mr. Murphy cared less for such security than he did to show his confidence "in the good people of this country." And in our opinion the good people of this country owe Mr. Murphy a considerable debt of gratitude. It is to men in his position that we must look to save the country from ruin. Never more than at the present crisis does our fate depend on the good sense and the patriotic feeling of the common people. It is very well to point out where the interests of people lie in the present contest; but we should be glad to see higher considerations more generally appealed to. Mr. Murphy has made such an appeal and we honor him for it. He is more creditable to the land of his adoption than many who were born citizens. He appreciates what our freedom and our institutions have done for workingmen, and he stands ready to sacrifice his savings in defence of liberty and good faith. His action will cheer many despondent hearts, and we rejoice to believe that it represents a spirit among the masses of the people that will display itself on a grand scale as soon as the nature of the present crisis is clearly understood.

HENRY CLAY AND HIS FRIENDS.

NEW YORK, July 27, 1896.

THERE has come into my possession an unpublished letter of Henry Clay's, addressed to the late Robert S. Hamilton of this State. This letter was written shortly after the failure of the attempt, in which Mr. Clay was so deeply interested, to change the Constitution of Kentucky so as to provide for the gradual abolition of slavery in that State. In January of that year, 1849, he addressed a letter on the same subject to Richard Pindell, which is published in part in Schurz's Life of Clay. The Hamilton letter differs somewhat from that, and from anything else of Mr. Clay's which I have seen, in the peacefully philosophical view which it takes of the certainty of the extinction of slavery through natural causes. The next to the last paragraph of the letter reads now as a prophecy of the civil war, which is foretold as inevitable unless some intelligent means should be found to take hold of the institution of slavery and dispose of it cautiously and safely. It will be remembered that Mr. Clay was reëlected to the United States Senate in that year, 1849, in spite of the fact that he was diametrically opposed to the general sentiment of his State on the question of slavery, and although he had some time before announced his intention of withdrawing into private life, and had for a time put that intention into execution.

ASHLAND 2nd Oct, 1849.

DEAR SIR,—

I have received and thank you for "The Scheme of African Colonization," presented by you in a Discourse delivered at Xenia in July last, which I have perused with much satisfaction. It is distinguished by eloquence, public spirit and ability, and I think most of the principles which it developes and enforces are founded in truth.

After the recent failure to establish a system of gradual emancipation in Kentucky, I confess that I have not much hope that Slavery will ever be extinguished in any of the States, by legal enactment, at least for a long time to come. That failure may be attributed to the violent and indiscreet course of Ultra abolitionists in the North, to the great amount of property invested in Slaves, and to the repugnance with which a People change long established habits.

There remains in prospect the other mode, the natural extinction of slavery, treated by you. Whenever the rearing and maintenance of slaves become unprofitable, as it will be, when there is a certainty of the supply of cheaper free labor than Slave labor, the institution of slavery will decline and finally terminate. That may happen, either by the increase of the colored population, or by the increase of the white population of the U. States, or, as is most probable, by the increase of both.

You have considered the subject in the form of demand and supply of labor. That is a modification, with some variation, of Malthus's principle of population, founded on the quantity of human food or subsistence.

In December 1829 before the Colonization Society of K. I pronounced a discourse, in which I treated of the natural termination of Slavery founded on the reduction of the wages of labor. I am sorry that I have not a copy of it by me to send you. It was published in Niles's Register, in the African Repository and in other periodicals. If you can lay your hands upon it, you will be struck with the coincidence in our views, although we express ourselves in different terms.

It is a consoling reflection that, altho a system of gradual emancipation cannot be established, Slavery is destined inevitably to extinction, by the operation of peaceful and natural causes. And it is also gratifying to believe, that there will not be probably much difference in the period of its existence, whether it terminates legally or naturally. The chief difference in the two modes is that, according to the first, we should take hold of the Institution intelligently and dispose of it cautiously and safely, whilst according to the other it will some day or other take hold of us, and constrain us, in some manner or other, to get rid of it.

I apprehend that you are mistaken in supposing that the greater ratio of increase, in the colored race between 1800 and 1810 than in other decimal periods, was owing to the importation of slaves from Africa. It was owing to the acquisition of Louisiana, whose slaves were enumerated in the census of 1810.

With great respect
I am Your obᵉ. Servᵗ,
H. CLAY.

Robert S. Hamilton, Esq.

I have also in my possession a narrative of the life of Mr. Clay's intimate friend and correspondent, Judge Francis T. Brooke of Fredericksburg, Virginia, composed by Judge Brooke himself, and printed for circulation in his own family only. A considerable number of the published letters of Henry Clay contained in Colton's Life of Clay, as well as in Schurz's more recent Life, were addressed to Judge Brooke or to his brother Robert Brooke,

once Governor of Virginia. The originals of these letters were in the Brooke homestead, St. Julian, seven miles from Fredericksburg, when the Union army occupied the latter place. The house itself was not destroyed in any of the various battles in and about the town, but it was thoroughly rifled. All the books in the library were carried away, and it is possible that Henry Clay's letters to Judge Brooke were carried off at the same time and are still in existence somewhere. It is equally possible that they were burned as waste pa per. Henry Clay studied law in the office of Gov. Brooke, Judge Brooke's elder brother, and was Judge Brooke's most intimate friend He always maintained an active correspondence as well with Judge Brooke as with his brother, Gov. Brooke. Judge Brooke's narrative has nothing at all to do with Mr. Clay, but it is very interesting in itself on account of the notices therein contained of various famous men of the first days of the republic, with whom Judge Brooke was intimately ac quainted.

He devotes the following paragraph to George Washington:

"I personally knew, (as well as so young a man could know,) all the eminent military characters of the Revolution, with the exception of Alexander Hamilton and General Knox. I knew Washington, Green and Gates—I knew Washington in my boyhood. He came to Smithfield with General Spotswood, in 1773, I think it was. He was then a Colonel in the British army. I remember his dress; he wore a deep blue coat, a scarlet waistcoat, trimmed with a gold chain, and buckskin small clothes, boots, spurs, and sword; he had with him a beautiful greyhound, was fond of the sports of the field, and proposed to my father, who had a tame deer, to try if the greyhound could not catch him; to which my father assented, and after leaping over the yard palings they went through the garden where they leaped the palings again; when the deer turned towards the river, he got a start of the greyhound, and got into the river before he could catch him. General Washington was afterwards at Smithfield two or three times; he was fond of horses, my father had some excellent ones, so had Gen. Spotswood; they took the horses to the road, and mounted the boys upon them, to try their speed. General Washington, in the year 1774, came to Fredericksburg to review the independent companies. After the review, they gave him a collation in the old market-house, where he had all the boys of a large grammar school, of which I was one, brought to him; gave them a drink of punch, patted them upon their heads, and asked them if they could fight for their country. After the war he frequently came to Fredericksburg, where his mother resided, and his only sister, Mrs. Lewis. He attended the ball of the 22nd of February, opened it by dancing a minuet with some lady, then danced cotillons and country dances; was very gallant, and always attached himself, by his attentions, to some one or more of the most beautiful and attractive ladies at the balls. The next day, his friends gave him a dinner, at which, after the cloth was removed, and the wine came on, a Mr. Jack Stewart (who had been Clerk of the House of Delegates), a great vocalist, was called upon for a song; and he sung one from the novel of 'Roderick Random,' which was a very amusing one Gen. Washington laughed at it very much, and encored it. The next day, when I went to his sister's to introduce strangers to him, I found him one of the most dignified men of the age. While he was President of the United States, at the instance of my father-in-law, General Spotswood, he offered me the collector's office, at Tappahannock, but I preferred my profession, and declined it; though the office at that time was a very lucrative one. Washington was undoubtedly a great man, and there was a sublimity in his greatness, which exceeded that of any of the great men of ancient or modern history."

Fancy the outcry if the present incumbent of the Presidential chair were to do what the Father of his Country is here reported to have done—treat all the boys of one of our large grammar schools to a drink of punch!

In view of the present interest in the Monroe Doctrine, the following statement, made by Calhoun to Judge Brooke with regard to the responsibility for the authorship of that doctrine, possesses considerable interest:

"I knew Mr. Monroe, practised law with him, and I think, though a slow man, he possessed a strong mind and excellent judgment. When I was at York, in 1824, with General La Fayette, Mr. Calhoun, then Secretary of War, was there, and I asked him the question, whether it was the President Monroe, or his Cabinet, who were in favor of that passage in his message which declared to the Holy Alliance, that America would not be indifferent to any attempt to aid the Spanish Government to prevent the enfranchisement of the South American Provinces, then at war with Spain; and he replied, that it was the President's own sentiment, and that though he was a slow man, yet give him time, and he was a man of the best judgment he had ever known."

Of Mr. Jefferson and Mr. Madison he says:

"I knew Mr. Jefferson very well. The first time I saw him was at the magazine, at Westham, above Richmond, as I have mentioned before. I was afterwards often at Monticello, and saw much of him there; and while he was President of the U. States. He was a man of easy and ingratiating manners; he was very partial to me, and I corresponded with him while I was Vice President of the Society of Cincinnati; he wished the funds of that Society to be appropriated to his central college, near Charlottesville, and on one occasion I obtained an order from a meeting of the Society, to that effect; but in my absence the order was rescinded, and the funds appropriated to the Washington College, at Lexington, to which General Washington gave his shares in the James River Company, which the State had presented him with. Mr. Jefferson never would discuss any proposition if you differed with him, for he said he thought discussion rather rivetted opinions than changed them. When I was elected Speaker of the Senate of Virginia, he sent me his parliamentary Manual, with a very flattering note wafered in it, which is now in the possession of my son, Robert. Of Mr. Madison, I personally did not know as much; his manners were not so fine or insinuating as Mr Jefferson's; he was devoted to Mr. Jefferson, but differed with him in some respects; he never shunned discussion, but courted it—told many excellent anecdotes of times past—and was among the purest and ablest statesmen we ever had."

Following out the implied advice of Washington to the boys of the grammar school to whom he had given the drink of punch, Judge Brooke entered the Revolutionary army at the earliest possible age. He was appointed lieutenant in Gen. Harrison's regiment of artillery at the age of sixteen, in the year 1780. He fought under LaFayette during the invasion of Lord Cornwallis in 1781, and gives a most interesting account of the campaigns in Virginia and the South during that and the succeeding years, in which he took an active part. A note in his diary with regard to the depreciated currency of the time is interesting in view of the proposition of the Populists to bring back similar conditions by introducing fiat money:

"The troops at Cumberland old Court House, were at length ordered to join Gen. Green, under Col. Posey. Having received no pay, they mutinied, and instead of coming on the parade with their knapsacks, when the general beat, they came with their arms, as to the beat of the troop. A sergeant named Hagarltoy was run through the body by Capt. Shelton, and Col Febiger ordered the barracks to be set on fire, and we marched about eight miles in the evening. I have said the troops received no pay; one company of them, commanded by Alex. Parker, had been taken prisoners in Charlestown, and had been very lately exchanged, when it received orders to return to the South; the officers received one month's pay in paper, which was so depreciated that I received, as a first Lieutenant of artillery, thirty-three thousand and two-thirds of a thousand dollars, in lieu of thirty-three and two thirds dollars in specie; with which I bought cloth for a coat at $2,000 a yard, and $1,500 for the buttons. Nothing but the spirit of the age would have induced any one to receive money so depreciated; but we were willing to take any thing our country could give."

Judge Brooke married as his first wife the "eldest daughter of Gen. Spotswood and Mrs. Spotswood, the only whole niece of Gen. Washington." JOHN P. PETERS.

THE FIRST ACT OF SOCIAL JUSTICE TO SICILY.

ITALY, July 13, 1896.

BY a majority of ninety-three votes the ministry has carried through the House the bill for the legalization of a civil Commissary for Sicily, despite the organized opposition of all the political opponents of the ministry, and, sad to say, of most of the Sicilian Deputies. In my letter on social regeneration in Italy the duties of the Commissary were defined and the reasons for the remedial measures shown; but as the project has been considerably modified by the commission selected by the offices to report on the bill, and as we have before us the report of the majority of five who approve, of the minority of four who disapprove, with all the reasons pro and con given during the debate, it is interesting to note the causes and reasons that have led up to the final victory.

The reasons given by the opponents of the measure are summed up by Deputy Spirito, reporter for the minority of the commission. They affirm that the institution of a civil Commissary for all the provinces of Sicily will revive the regional hopes and sentiments of Separatists, offend the unitarian sentiment of the population, and weaken and strain the moral, political, and administrative ties which bind those provinces to the rest of the nation. They admit that Minghetti's regional system proposed in 1861 was similar, but argue that while it would have given a governor to every region in Italy, Rudini allows one to Sicily alone. They oppose it also as an exceptional measure, implying that the laws of the whole land are insufficient for a portion. They admit the necessity of exceptional laws and measures, such as states of siege and military tribunals, for the restoration of public security and order, but find it impossible to justify exceptional, temporary, and local laws of a purely civil, political, and administrative nature. Affirming that the evils under which Sicily groans are due to agricultural and industrial crises, and to superfluous expenditure, as a remedy they suggest waiting patiently until the natural force of great commercial currents shall resolve the crisis in the wine, sulphur, and fruit markets, while institutions of credit, public works, etc., shall correct administrative disorders. They demand decentralization for the entire kingdom; for Sicily they consider that better civil servants, and especially better prefects, would completely suffice. They object to the subordination of the seven prefects of the isle to this Royal Commissary. "The long and short of it is," writes Spirito, "that the Government has chosen to create a new and high

political office in order to be prepared for all possible eventualities of general elections."

These are the principal objections of the opponents specified and elaborated by the ten orators who presented ten separate, hostile orders of the day. We come now to the report of the majority, drawn up by Deputy Franchetti, whom you will remember as the author, with Sonnino, of the two exhaustive volumes on the social, economical, and political position of Sicily in 1875, and later as the organizer of the agricultural colony in Eritrea, which, had it been organized in Sicily, might have had more lasting and beneficial results. He admits that the general conditions, from an administrative point of view, are unsatisfactory throughout Italy, and seems really to share the opinion of your correspondent "X." in his intensive and extensive application of the word *Camorra;* but he affirms that in no portion of the new kingdom have the multiform grievances weighed so heavily or produced such disastrous consequences as in Sicily during the last six and thirty years. So far from attributing the disorders to the Fasci or Socialistic propaganda, Franchetti says, "Probably not one of those who were condemned by the military tribunals was born when the same sentiments in a different form provoked the popular tumults which convulsed the island in 1860—tumults, alas! all alike inspired by the sentiment, so bitterly profound among the agrarian plebs, of wrongs suffered too long without any hope of redress; wrongs inflicted by those who, placed over them and living in their midst, administered the provinces, the municipalities, the communal lands; who disposed, in short, of land and of labor, and who also imposed the taxes." Franchetti demonstrates the enormous excess, in Sicily, of the taxes on food over the land tax as compared with the other provinces of Italy; the enormity of the poll or hearth-tax; the concentration of all public offices in the hands of the *clientele* or rings; the creation of new and useless offices by them for themselves; the usurpation, by these factions, of lands belonging to the commune—of lands belonging by right, by law, and by recent adjudication to the poor of each commune.

In order to break the bonds which have leagued together many of these local administrations, it is deemed necessary to impart a uniform impulse to all. Hitherto all the worst civil servants, prefects on trial, prefects in punishment, or prefects awaiting promotion, have been drafted off to Sicily, and there become subjects of the local rings and subservient to the orders of the central Government, which, especially on the eve of elections, has found itself compelled to yield to all their demands and satisfy all their exactions. In sending one man invested with the title of minister to investigate, to suspend (not dismiss) public servants, to examine the budgets, the local taxes, and especially their incidence —a man who cannot be influenced by local factions—it is hoped that the ring of illegitimate influences and abuses will be broken. One other important function is to examine the administration of the charitable institutions, to compel the obstinate administrators to send in their balance sheets; to execute the existing law concerning the division of the communal lands among the people to whom they belong. The Commissary must reorganize public security, receive the reports of the prefects, and add his comments before transmitting them to the Minister of the Interior.

The following is the order of the day presented finally by the commission:

"The House, considering the mission of the Royal Commissioner for Sicily indispensable to remedy the chief grievances that afflict the island, and to render possible the alleviation of others, invite the Government to prepare, during the present year, a law for the regulation throughout Italy of agrarian contracts, based on the studies already made, in order to prevent unjust and usurious contracts which are injurious to the tillers of the soil; secondly, to initiate a large experiment in internal colonization under the form of concessions on the part of the State to the peasants, as freehold or on long leases, subsidized by the advance of capital sufficient for the preliminary expenses—such lands to be cultivated exclusively by the peasants with the assistance of their own families."

The discussion lasted six days. All the speeches delivered were monotonous. The only ones worthy of note were those of Fortunato, a well-known patriot and writer of Calabria, and Filippo Turati, the scientific expounder of collective Socialism, editor of the *Critica Sociale*, elected by an immense majority last month at Milan, despite a formidable coalition of all parties. Fortunato said that he should vote for the commission's order of the day, and for all the measures proposed by the Minister of Agriculture, though he was aware that all remedies would be useless until the system of protection and privilege was abandoned and an end was put to international adventures. Italy must establish an honest budget in which income and expenditure shall be really balanced. A rigid inspection and control of local taxation and expenditure would prevent ulterior spoliation of the rural classes. On these lines in a few years the Government would be able to resolve the economical problem throughout the whole of Italy. Turati regarded the question from a political point of view, opposing the Ministry because the amnesty granted was partial and insufficient, because the iniquitious deportation of hundreds of innocent men remains unrevoked, and because the present Government persecutes the press and denies the right of public associations and pacific propaganda, with the same zeal as former governments.

The President of the Council, Minister of the Interior, Marchese Rudini, who had listened attentively to all the speeches, making only an occasional comment, summed up the arguments pro and con in a sober, serious, sometimes dryly humorous speech, set aside the accusations of lèze-unity as a bogey that had ceased to frighten even children. As to the accusation formulated by the minority of the commission that the commissaryship is destined to become an electoral manufactory,

"Allow me," said Rudini, "to record my conviction, founded on experience, that the result of governmental interference in general elections is the preparation of a majority for the opponents of that government. It is quite possible that were I to put in motion the orthodox electioneering machinery I could secure a House, ostensibly exclusively Rudinian, which in a month or so would inevitably enthrone my successor—possibly Sonnino!"

Then Rudini frankly and simply explained why, instead of awaiting the consent of the House, he had obtained a royal decree for the immediate dispatch of Codronchi to Sicily.

"The amnesty for political prisoners condemned by the military tribunals, which I found it my bounden duty to recommend to his Majesty, had created such agitation in Sicily that the prefects and all other authorities implored me to send military reinforcements. Such was the panic generated that for a moment I thought I should be compelled to endow General Pelloux with the same authority granted last year to General Mirri. But the idea of a second military occupation of Sicily was repugnant to me; therefore I committed the irregularity—call it by its right name, the *illegality*—of obtaining a royal decree for the instant dispatch of the civil Commissary."

He then announced his intention of proposing the reform of the entire land tenure in Sicily. Referring to the criticisms on Codronchi for receiving the memorandum of the Socialists, he said that many items therein were worthy of consideration. They demanded the abolition of the *dazio consumo* (tax on retail food). This reform could be effected only gradually, but all are agreed on the fact that the working and rural populations, compelled in Sicily to inhabit the closed communes, were taxed to a point beyond the power of endurance. Other items, such as the exemption of the poorest from the poll or hearth tax, of workmen and microscopic proprietors from the income and land-tax, were reasonable demands. So the abolition of the truck system and the weekly payment of the miners, the freedom of the cooperative system, the concession of certain public works to properly organized coöperative societies, the exemption of the poor man's ass or mule from taxation, he likewise considered just demands. After reiterating his intention to oppose the re-formation of the Faschi or the formation of associations of workmen (similar to the English trades unions), he ended his speech "loudly applauded and congratulated."

After the victory it was the intention of the Minister to present at once the bill for the abolition of the export duty on sulphur and other practical measures for Sicily. But Ricotti, the Minister of War, insisted in the Council of Ministers on the presentation of his bills for military reform and reduction. His colleagues entreated him to defer the debate until November, pleading the impossibility of detaining the Deputies at Rome during the dog-days. Ricotti refused and resigned. Rudini, who has always upheld ministerial solidarity, presented the resignation of all to the King. This is a mere formality. The Minister of War, and possibly one or two others, will be at once replaced. The Sicilian bills discussed, the House will adjourn for the summer vacation.

"Cosa fatta capo ha," and this first act of social justice to Sicily, which has secured the immediate and complete pacification of the island, will, if followed up to its natural and legitimate issues, mark a new departure, not only in Sicily, but in the entire social and economical policy of Italy. I forgot to say that the entire Extreme Left voted for Rudini's project—even to Napoleon Colajani, the "reasonable Socialist."

J. W. M.

Correspondence.

THE ONE ISSUE.

To the Editor of The Nation:

Sir: I have recently received letters from four friends, all of whom may be partially described to readers of the *Nation* by my saying that they read the *Nation*. They are men occupying honorable and responsible positions. They are men of education, open-minded, and solicitous for good government. In the early days of civil-service reform each of them was an active worker in its behalf. They have been earnest supporters of Mr. Cleveland on

the tariff issue, but were disgusted with the last Democratic Congress for its tariff timidity. At heart each of them is a free-trader. They represent three distinct parts of the country, north, south, and west, and I think they might be taken as representative independents of their respective sections.

Now these four good citizens all inform me that they expect to vote for the Chicago ticket. One says that he has recently become converted to the 16-to-1 doctrine. Another says that he considers the money question unimportant, that he is uncertain what the result of free coinage of silver would be, and that he will vote for any reform ticket rather than support McKinley. The other two say outright that they are opposed to the free coinage of silver, but that they will "swallow anything to down McKinleyism." One of them goes so far as to say that he believes the "independent coinage of silver at 16 to 1 will do great harm."

These letters confirm the opinion I had formed in talking with people at several points in a recent trip from New Orleans to this place, namely, that many people have not yet defined the issue in their minds as one of sound money alone, and that the "friends" of sound money have all to gain and nothing to lose by insisting more and more upon this question as the sole issue of the coming campaign.—Respectfully,

JAMES H. DILLARD.

AMHERST, MASS., July 29, 1896.

SOUTHERN EXPERIENCE THROWN AWAY.

TO THE EDITOR OF THE NATION:

SIR: We of the old Confederate days remember it was a common saying that a man went out in the morning with his market-basket full of banknotes and returned with it half-full of food. Granted that we get free coinage of silver, and considering the potential output of silver by the Western States, then we may see history repeat itself. Only this time the man's load would be more cumbersome and more ridiculous, for instead of being an indication of a sentiment of patriotism, it would be the badge of a nation of dupes. AN OLD READER AND ADMIRER.

SEVENOAKS, KENT, ENG., July 22, 1896.

DYNAMITE AND THE DECLINE OF SILVER.

TO THE EDITOR OF THE NATION:

SIR: Among the many agencies contributing to the fall in the value of silver, the principal one seems to me to have been least observed. In 1873 the miners of the West were using black powder almost exclusively. During the two or three subsequent years nitroglycerine, or dynamite, came gradually and generally to be used. While black powder was in use, the average contract price for driving tunnels and drifts in mines was $15 per foot; with the advent of dynamite the price dropped to $10 and less. I make this statement as a practical miner working then and now, and fully aware of the local variations in prices, but venture to say that no miner will deny that the use of dynamite effected a very large average reduction in the cost of metal-mining.

As formerly the world's yield of gold was principally from alluvial washings, the influence of the new explosive on gold was slight; but now that gold is being increasingly sought in reefs and veins, the effect must soon become manifest. The New York *Engineering and Mining Journal* of the 18th inst., in an article on the difficulties incident to mining in the Transvaal, is my authority for the statement that the tax on dynamite alone yields the Transvaal Government $2,405,000 a year. The South African ore is not high-grade, and without the use of dynamite it is doubtful whether those mines could be profitably worked at all. Four-fifths of the gold yield of the world is now obtained from fissure veins or rock in places requiring the use of dynamite. If, in spite of the tremendous demand for gold for the war-chests of Europe and for various economic requirements, such as resumption of specie payments, changes from silver basis, etc., its value has not measurably appreciated, then we must attribute the result to the invention of dynamite, and we may deduce that, the more urgent demands being satisfied, gold will be cheapened with the inevitable increasing production.

Gold, being the final measurement of value for all countries, whether gold or silver-using, must always be in demand. Its apparent value remains constant; its real value fluctuates relatively to the price of any one commodity, or of all commodities taken in aggregate. The discovery and exploitation of new and rich gold-fields create an immediate and pressing demand for the products of art and industry, and the result becomes visible in rising prices.

The silverite is loath to admit that silver has become too cumbrous a medium of exchange between nations. He complains of an appreciation in the value of gold, and yet wants his silver raised to that value. He does not ask that the value of gold be made less, but wants that of silver made more. He demands a double standard (a manifest absurdity), and will not see that a world-pulsating cause, as potent and insidious as the law of gravitation, will regulate values in spite of legislation or standards of any kind.

It is commonly asserted, and perhaps believed, by silver men that silver was never demonetized before this century. The historical variations in the ratio coming down through the ages from 3 to 1 to the present legal 16 to 1 and real 30 to 1, do not seem to suggest anything to their minds. Senator Wolcott, whom we might suppose to be a man of some learning, made a grandiloquent assertion in the Senate to the effect that the Cæsars never dared to tamper with the sacred functions of silver, and his statement went unrebuked and uncontradicted by the venerable Solons, his associates. As a matter of fact, silver was demonetized by the Roman Government early in the third century. I would refer Mr. Wolcott and others to so easily accessible and indisputable an authority as Gibbon. As early as the time of Constantine, gold was required in payment of taxes and imports, and as late as the time of Justinian gold alone was receivable in payment of all taxes and dues to the Government. If that be not demonetization, it would certainly be very injurious discrimination; and as the Roman Government coined only such silver and copper as it deemed necessary, and never entertained the idea of free coinage, silver must have stood a very poor show in those days.

There are some things to be said about the ancient production of silver and the decline thereof, but that is another story.

GEORGE EVERETT ROBIN.

HILLSBORO, NEW MEXICO, July 25, 1896.

THE PRODUCTION OF GOLD.

TO THE EDITOR OF THE NATION:

SIR: Your article in the edition of July 9, 1896, entitled "Cornering Gold," has caused some difference of opinion in this office. Will you kindly give figures and authorities which lead you to say that the total amount of gold produced since 1492 has been between nine and ten and a half billions of dollars? How much of this amount of gold do you now consider is in circulation, or could be considered as gold money? Do you mean to imply that the total amount of gold produced since 1492 is available or in use as gold coin? Please produce authorities and figures to show that the Imperial Bank and Treasury of Russia has a larger amount of gold than the Bank of France.

The writer is thoroughly with the *Nation* in favor of sound money, and writes this letter at the request of a rabid silverite.

Yours very truly, P.

BALTIMORE, MD., July 29, 1896.

[We gave our authority for the amount of gold in the world—that of Mr. Charles S. Gleed, in an article in the *Bond Record* for April—but without endorsing it. Estimates of the amount of gold in the world, even those of trained statisticians, must be regarded as largely guesswork. Our arguments on "cornering gold" would not be essentially impaired if Mr. Gleed's estimate were reduced one-half. The amount of gold in circulation is purely conjectural. Our authority for the amount of gold in the Imperial Bank and Treasury of Russia was an article by M. Leroy-Beaulieu, published in the *Forum* magazine a few months ago, in which the amount was put at $400,000,000. The Bank of France has now reached this figure, but we have reason for thinking that the Russian accumulation is considerably larger than the amount stated by M. Leroy-Beaulieu.—ED. NATION.]

TEACHING HISTORY IN THE SCHOOLS.

TO THE EDITOR OF THE NATION:

SIR: The letter entitled "Our Schools and Chauvinism" in your issue of July 16 has moved me to reply. Any thoughtful person must agree with its writer in deeply regretting the time worse than wasted by our schools in the study of dates and wars, not only in the history of our own country, but in all so-called historical studies. No one can deprecate more than the intelligent teacher, "usually a woman of limited attainments," the instilling of the blind egoism which we call patriotism, and the unutterable folly of the flood of bombast and stupidity let loose upon our children about "Old Glory." But let the blame rest where it belongs, upon the male "educators." *They* make the examination papers and pass or reject our pupils over whom we toil and pray and—yes, weep. For we, with our limited attainments, love them and would fain use those poor attainments to make peace-loving, honorable men and women; but at the order of our men superiors we are training them into machines full of dreary facts and unreasoning prejudices. Given, for instance, the Regents' Examination (and it is worthy of

capitals, for it has slain its thousands and tens of thousands), and the time usually allotted for the study of history, and what can the bewildered, overworked teacher, bound with red tape, forbidden to discuss political issues, do except stuff the unfortunate little manikins with dates and names and plans of fortifications such as the text-books and examination papers call for?

This matter of history-teaching has been a source of much grief to me, and fate has always thrown some exceptionally dull class in my hands. I have tried various methods to teach what I called history and arouse the interest of my somnolent pupils. The latter I can do. But this time, my dear old superintendent, with a look of affectionate solicitude, admonished me, after an active discussion on the part of the pupils in regard to the difference in the formation of the civil code in English-settled States and French-Spanish territory, that it might excite comment. Again, discussion of the tariff is politics, I am told. Another time, in regard to the same "little *pasear* into Mexico," my principal informs me that he wishes patriotism taught, and does not consider that drawing out criticisms upon the Government from a class in their teens is the way. A discussion of banks and banking which a class had looked up for days is criticised by a school official as tending to produce a lack of respect for the States, as that section had repudiated after the crash of State banking—a fact which, knowing, I had absolutely forgotten in the discussion. A still more lofty official, after hearing my class, complimented it highly, wished I could show his teachers how to inspire a class—it was excellent, etc., etc.; but—er—wasn't it—er—unusual, so to speak, revolutionary? And probably if my position depended upon him I should have lost it.

Now give us a chance, an object of ambition, and we will work up to it. We would rather teach what is true and good, and if we do not know how yet, we can learn. Only let us be sure our position depends upon our good work, not upon freaks; let us know that, if we are able, principalships, superintendencies, commissionerships are open to us women as to men. Give us intelligent, practical, liberal supervision with men or women who have experience and brain; not conceited, ignorant boys or reactionary "cranks" whose one qualification is masculinity. Then we will try to do our part.

I do not pretend that all or any women teachers can discuss with their classes ably "financial, social, and economic events," besides teaching competently some twenty other things, including usually drawing, coloring, and music. But, if a woman teacher may be pardoned for criticism, candidate Bryan is said to have devoted his life to the study of American economic conditions (politics), and yet his utterances are not fraught with wisdom nor characterized by exactitude, and he has been paid five thousand per year and more, we five hundred and less, and he has not been called upon for intelligent instruction in the twenty other branches. Let each teacher in graded schools teach a related group of subjects in which she is interested, and not waste energy in a treadmill round of duties to her as distasteful as they are burdensome, and we will give you as results work worth our doing, and it will secure to us what now we alone of laborers cannot hope for—success, hope, health, and content.

A Woman of Limited Intellectual Attainments.

THE ETHICAL VALUE OF MEN OF LETTERS.

To the Editor of The Nation:

Sir: The "Department of Publicity" of a prominent "Manufacturing Company" in Hartford sends, to writers who are supposed to have the ear of the public, a circular asking the recipient to write a contribution "bringing in" a certain article made by said company. After this contribution has been printed and paid for by "some leading magazine or other periodical," the writer, who is to keep the money, is to be rewarded for his service by allowance to that amount on the article itself, when he may learn what its merits are after he has aided in advertising it.

Has anything in the conduct of American men of letters encouraged those who hold this peculiar view of the integrity of their aims; or are the agents of departments of publicity alone to blame for the outrage? It may, at least, be well for those who receive the circular, or others like it, to consider these questions.

K. S.

July 28, 1896.

Notes.

In view of a contemplated 'Life and Letters of Mrs. Stowe,' it is requested by her family that any persons having letters from her will send them for examination, copying, and possible use to Houghton, Mifflin & Co., 4 Park Street, Boston, Mass., or to Mr. A. P. Watt, Hastings House, Norfolk St., Strand, London. They will be carefully returned.

A Life of Richard Cobden, by John Morley, is announced for publication in the fall by Macmillan Co.

'The Bay Colony,' by William Dummer Northend, a history of colonial Massachusetts to the death of John Winthrop, is in the press of Estes & Lauriat, Boston.

Copeland & Day will publish 'A Boy's Book of Rhymes,' by Clinton Scollard.

The title, 'Le Premier Théâtre Parisien et les Arènes de Lutèce,' by Charles Normand (Paris: *Ami des Monuments et des Arts;* New York: Dyrsen & Pfeiffer), of a forthcoming work on Parisian Gallo-Roman antiquities, has a piquant reference to discoveries made from 1870 to 1892 of a theatre and amphitheatre in one. The work will be fully illustrated.

A selection from Goethe's Poems, 327 in number, by Karl Heinemann, with nearly 200 illustrations in the text and twelve full-page photogravures by Frank Kirchbach, in folio form, is promised for monthly issue ending October, 1897, by Adolf Titze, Leipzig (New York: Lemcke & Buechner).

A monumental systematic work, 'Das Tierreich: eine Zusammenstellung und Kennzeichnung der recenten Tierformen,' under the general editorship of Franz Eilhard Schulze, and the auspices of the German Zoölogical Society, will bear the Berlin imprint of Fridländer & Sohn (New York: Lemcke & Buechner). A great corps of specialists will collaborate, and a quarter of a century from January, 1897, must elapse before the completion of the work, which will appear in parts, sold separately. It will be thoroughly indexed. If subscriptions warrant, a one-page impression on writing-paper will be issued.

A timely popular edition at a low price of Mr. Horace White's 'Money and Banking' has just been put forth by Ginn & Co., Boston. The chapters on Money will be found to satisfy by far the greater number of *relevant* questions now being asked regarding the burning issue of the hour.

Mr. William Eleroy Curtis, the veteran correspondent and the manager of the Bureau of American Republics under Mr. Blaine, was last year sent to Japan, by Mr. Victor F. Lawson of the Chicago *Record*, for a three months' sojourn, and his letters are now republished by Stone & Kimball, in pleasing form, under the title of 'The Yankees of the East: Sketches of Modern Japan.' Mr. Curtis's sketches cover many things not before brought into a traveller's journal, and in novelty of material and range of topics make perhaps the most interesting of recent books of the sort; the effort, also, at fairness of view is unusually successful. The work is, however, chiefly a recension of various untested hearsays, such as the hasty sojourner has always to be contented with (except that this author has shown more than the usual traveller's recklessness in publishing unfounded and misleading statements), and must not be taken in any degree whatever as an authority.

The story of the Ashanti expedition is well told by Lieut.-Col. R. S. S. Baden-Powell in the 'Downfall of Prempeh' (Philadelphia: Lippincott). After a clear and satisfactory statement of the reasons for the expedition, the author describes in detail the careful preparations made to lessen the dangers and difficulties of the march through the bush. Though these were most efficiently and successfully carried out, still fifty per cent. of the men and about eighty per cent. of the officers were attacked by fever. The author was placed in charge of the native levies, and his description of the methods by which he brought his motley command to obey orders shows that he possesses no small degree of tact, humor, and sympathy for the negro. The incidents of the march 150 miles through the forest to Kumassi differ in no respect from those of every other large Central African expedition, and the abject submission of the king gave no opportunity for the narration of striking events. Little is added by the author to our knowledge of Kumassi—literally the "death-place"—or of the Ashantis, who are so imbued with a lust for blood through the extent and frequency of their human sacrifices that their existence as an independent nation was a nuisance which had to be abated in the interests of mankind. The book, which contains several illustrations, closes with an encouraging chapter, by Sir George Baden-Powell, on the development of Ashanti.

The 'First Theatre in America,' being New Series No. 1 of the issues of the Dunlap Society, whose earlier publications were formerly noticed in these columns, marks a phœnix-like revival. Judge C. P. Daly's paper was privately printed a number of years ago, and is now reissued, unchanged, but with a "supplement" which adds a hundred pages to the original sixteen and shows how much further light has come to the author. Even now the account is very fragmentary—one is tempted to say scrappy—and proves clearly that Judge Daly has used only such material as he has stumbled upon, making no attempt to dig out the facts for a real history of the early American theatre. It is, however, a good basis for some more exhaustive account. As to dates, the work must be used with care; a Virginian newspaper of 1732 would be indeed an historical find, as would a 1736 edition of Graham's History. The long extract from Cooke's 'Virginia Comedians,' a pure work of

fiction, and the lengthy "Considerations of the Objections to the Stage," are so aside from the subject of the essay, and of such trifling value, that they savor strongly of padding.

The Museum of Fine Arts in Boston has just issued a new edition of Mr. Edward Robinson's admirable 'Catalogue of Casts from Greek and Roman Sculpture,' first published in 1891 (Houghton, Mifflin & Co.). The original work was reviewed at length in these columns. The new issue has been subjected to a thorough revision, and almost every page testifies, not only to the progress of archæological research during the past five years, but to the author's growth in mastery of his subject. In its present form the book is one of the few first-rate catalogues of Greek and Roman sculpture (whether casts or originals) in existence, and we warmly recommend it to every student of the subject, whatever his other appliances for study may be. We note that Mr. Robinson, like Mr. Ernest Gardner in his 'Handbook of Greek Sculpture,' though for different reasons, maintains a sceptical attitude regarding the Phidian character of the statue restored by Prof. Furtwängler and identified by him with the Lemnian Athena of the great Athenian sculptor.

A few weeks ago we remarked in these columns, in connection with Miss Tarbell's biographical study of Madame Roland, that "a volume of Madame Roland's unedited letters with notes" would be of value. We were then unaware that precisely such a volume had just appeared, 'Le Mariage de Madame Roland : Trois années de correspondance amoureuse (1777-1780),' published, with an introduction and notes, by A. Join-Lambert (Paris: Plon). This correspondence leaves no question that the marriage was due to the ardent wishes of Mlle. Phlipon, and that her view of it in later years was a complete misconception.

Among several works of older date to which renewed interest has been imparted by their relation to questions of our day, Th. G. von Hippel's 'Über die bürgerliche Verbesserung der Weiber' is one of the most curious. The book was first published in 1792 by Voss of Berlin, the title-page bearing a pretty vignette in place of the author's name. It is remarkable for its full line of arguments in favor of the advancement of woman; few new ones have been added since. In moral elevation and loftiness of air Hippel resembles Condorcet, who pleaded for woman's civic rights two years before the appearance of the Königsberger's book, and who may have inspired him.

Few families, we trust, are visited with more tribulations than M. Maubert's, in Henry Gréville's 'Céphise' (Paris : Plon) ; but the heroine of the story, with a rare combination of fortitude and womanly tact and gentleness, succeeds in averting the worst, and, by harmonizing discordant elements, restores peace and comparative happiness to the family. Finally, her own good fortune comes to her as the just reward of unselfish devotion and renunciation. The story is full of incidents, and is told with the animation to which the reader of Mme. Durand's books is accustomed.

E. Rodocanachi's 'Renée de France, Duchesse de Ferrare' (Paris: Ollendorff) is an historical study of a great protectress of the Reformation both in France and in Italy, and is a conscientious yet brilliant piece of work, written in a clear, picturesque, and taking way that holds the reader with absorbing interest.

'Le Cœur de Régine,' by Jean Rameau (Paris: Colin & Cie.), is a charming novel, full of the beauty of the Bearnese land and of human interest; absolutely pure, well constructed, and touching, told with simplicity that conceals art. Régine herself, her farmer father, the brilliant and artificial Countess de Thorn, are excellently drawn characters.

Mr. John Bartlett, the veteran author of 'Familiar Quotations,' four years ago presented to the Library of Harvard College his exceptionally fine collection of works on angling and cognate themes. The group of works on angling proper was reinforced by the Library's own possessions, and the collection as a whole has now been catalogued by Miss Louise Rankin Albee among the Library's "Bibliographical Contributions." A subject-index is subjoined.

The *Scottish Geographical Magazine* for July opens with an account of explorations made in Celebes during the past three or four years by Messrs. P. and F. Sarasin. Their latest discovery is of a lake in which was a village on piles. The inhabitants manufactured "earthenware and bronze utensils similar to those found in European lake-dwellings." The slave-trade prevails, notwithstanding the efforts of the Dutch Government to repress it. There is also an abstract of M. Raoul Pictet's paper on irrigation by solar energy, read before the Geneva Geographical Congress. Basing his theory on the observation of the sand-spouts in the desert near Cairo, which sometimes attain a height of 13,000 feet, with funnels having a diameter of 2,000 feet, he says that if an area of one hectare (two and one-half acres) were covered with blackened plates of sheet iron under which water was conducted, a huge boiler would be constructed capable of heating the water by the solar rays alone to 150° Fahr., and thus developing two thousand horse-power, by means of which the Nile water could be raised to the proper height and poured over the desert.

The article of most general interest in the sixth number of *Petermann's Mitteilungen* is Dr. Baumann's description of a small lake in German East Africa. Though it has neither inlet nor outlet, its waters are drinkable and abound in fish and hippopotami. Finding a village on the shore whose inhabitants cultivated manioc, he refers to the immense increase of this American plant in Equatorial Africa, due probably to the fact that the locusts spare it. An excellent geologic and tektonic map of Venezuela is accompanied with notes and profiles.

The Russians are displaying great vigor in the construction of the Siberian Railway. From a report to the committee of which the Czar is president, it appears that 918 miles were built last season, and that the road is now completed to the River Yenesei, more than a third of the whole distance. The great engineering difficulties in carrying the road around Lake Baikal are to be avoided by ferrying the trains across the lake, a distance of twenty miles. It is probable that the surveyed route from this point will be abandoned, and, thanks to the new relations with China, that the line will be carried directly through Mantchuria. Not only would this shorten the distance to the Pacific by 663 miles, but the road would pass through a densely populated region, rich in natural products and lacking in manufactured goods.

—Natives of Maine who are sometimes at a loss for illustrations of the appropriateness of the motto on their State seal, will take satisfaction in examining Judge Joseph Williamson's 'Bibliography of the State of Maine from the earliest period to 1891' (Portland: The Thurston Print). For this work, though not above criticism from the standpoint of the professional cataloguer, must be awarded leadership in scope, in completeness, and in fulness of entry over every previous attempt at the bibliography of an entire State. The eleven thousand entries contained in its two substantial volumes aim to give the full title of every book, pamphlet, and magazine article, either printed in Maine, or referring to that commonwealth, or written by a resident thereof. The intentional omissions are certain public, municipal, and legal reports, together with pamphlets relating to organizations not of an historical, literary, charitable, or religious character. The plan of the book also excludes—unfortunately for the literary fame of Maine—publications of natives issued after they ceased to be residents. Within these limits the work seems fairly exhaustive. Certainly it is an invaluable catalogue for use in historical and genealogical or in literary investigation. On comparing it with that helpful tool, the Boston Public Library Index to American Local History, by means of an examination of the references under the names of three Maine cities chosen at random, the writer finds that in the same field the Bibliography records one-third more articles than the Index, and that the number of historical books and essays cited is thrice as great. Under the respective localities described are found references not only to well-known novels like Hawthorne's 'Fanshawe,' Mrs. Stowe's 'Pearl of Orr's Island,' and Howells's 'A Modern Instance,' but also to a large number of stories and poems of places that may hardly rank as literature, yet are of interest to residents and sojourners in the Pine Tree State. The compiler's carefulness is shown by the inclusion of the full title of Longfellow's rare 'French Exercises,' one of his educational books, that is almost invariably omitted in bibliographies of the poet. In many cases Judge Williamson notes the successive editions of a popular work. At the beginning of the eighteenth century, Rev. Samuel Moodey of York appears as the favorite Maine author. His 'The Vain Youth Summoned to Appear before Christ's Bar,' issued in 1707, reached a third edition in 1760, and his 'Judas the Traitor, Hung up in Chains,' met with similar honor. At the end of the nineteenth century his successor in popular esteem is a lady living in the adjoining town, Miss Sarah Orne Jewett, whose 'Deephaven' reached its twenty-fourth edition in 1892.

—Charles Scribner's Sons have recently put on the market two sumptuous and excellent books of adventure. The one is Mr. W. A. Baillie-Grohman's 'Sport in the Alps,' and the other is Mr. E. A. FitzGerald's 'Climbs in the New Zealand Alps.' Mr. Grohman has probably a better knowledge of the whole range of Alpine shooting than any other Englishman. Seven or eight years ago he had brought down his hundredth chamois, and ever since boyhood he has had the run of the preserves of dukes and princes, besides the freedom of many communes. He is, moreover, a delightful writer, and many readers who never saw a chamois or heard of a steinbock will linger over the pages of the present volume. Mr. Grohman's 'Camps in the Rockies' introduced him to the sportsmen of this continent, but long before its publication he was

well known to lovers of the eastern Alps. He now recurs to his old theme of the Tyrol. Switzerland is left out of sight because of the comparative inferiority of its shooting. "Republican equality of civil rights and game-preserving cannot, we know, exist side by side." The chamois takes first place in any account of Alpine game, and Mr. Grohman gives more space to it than to all other species. The best chamois preserves are situated in the north Tyrol limestone group of the Karawendel Mountains, along the march-line between Austria and the Bavarian Highlands. Over 8,000 chamois are killed in Austria annually, and this district in proportion to its extent heads the list. Mr. Grohman discusses the history of chamois-hunting, the nature and the present number of the animal, chamois-driving in the preserves, stalking in peasants' shoots, and stalking in winter. A chapter is devoted to the late Duke of Saxe-Coburg-Gotha and his shoot in the Hinter-Riss. The Prince Consort's elder brother was no less a born Jäger than a born gentleman, and Mr. Grohman's sporting reminiscences of him are among his best touches. The remainder of the volume deals with the other principal species of Alpine game, to wit, the red deer, the roe-deer, the black-cock, the capercaillie, and the practically extinct bouquetin or steinbock. Throughout, Mr. Grohman enlivens his text with many of the good stories which we have come to expect from him in every new book. His sketches of the art of Alpine venery in the past are also very entertaining.

—Mr. FitzGerald is a geographical pioneer as well as a climber. The Alps of the southern island of New Zealand were visited in 1882 by the Rev. W. S. Green with Emil Boss and Ulrich Kaufmann of Grindelwald. This party got to within a stone's throw of the summit of Mount Cook, 12,349 feet, but were obliged to retreat at the last moment. No serious attempt was made to explore the glacier region above the Hermitage till 1894, when Mr. FitzGerald went out with Mr. C. L. Barrow and the now famous Mattias Zurbriggen of Macugnaga. The snow-line is extremely low in the New Zealand Alps, and Mr. FitzGerald's results, measured in terms of exertion, equal the more showy record of many a Caucasian or Himalayan expedition. Zurbriggen was, of course, indispensable, and his unaided ascent of Mount Cook is a splendid exploit. He and Mr. FitzGerald nearly lost their lives on Mount Sefton, and were saved only by the third strand of their rope after two had broken. Mr. FitzGerald's geographical novelties are the more thorough examination of the Tasman glacier and its lateral ice-fields, and the discovery of a pass across the ranges between the Tasman and the Copland Rivers. Five important peaks were ascended, and Mr. FitzGerald's account of the attractiveness of New Zealand climbing will probably draw more Englishmen to the same group. Suitable appendices on geology, flora, and fauna are added to the narrative of adventure, and the illustrations are among the best ever presented in a book of the kind. The photogravure of Mount Cook from the summit of the Silberhorn is the limit of what this art can do in the way of faithful delineation. A large folding map of the New Zealand glaciers accompanies the volume.

—Dr. George Clarke's little monograph on 'The Education of Children at Rome' (Macmillan), originally prepared as a dissertation for the degree of Ph.D. in the University of Colorado, contains a clear summary of the facts, and is written in a bright and not unentertaining style. The first chapter sets forth the purpose of education at Rome; the most original of the following seven is that entitled "Pedagogical Ideas of the Romans"; the others treat of home training, the curriculum of primary and secondary schools, school buildings, and the status of teachers. There is really nothing else in English which covers the ground so thoroughly, and Dr. Clarke's book will therefore be useful in many quarters as an introduction to the subject. Naturally, he makes much use of Quintilian, whose criticisms on the evil influences which in his day beset the sons of the rich, both at home and in the streets and schools, often read as though addressed to the same class in our own time and country. Many, too, who have lately joined in the hue and cry against the neglect of English in our schools might profitably take to heart what Cicero says in the *Brutus:* "It is of great moment whom one hears every day at home, with whom one speaks in boyhood, and what sort of language is used by one's father, mother, and pedagogues [*Anglicè*, "nurses," not "teachers"]." On the other hand, the Roman fault of banishing all but the eminently practical from the curriculum should be a warning to those modern teachers whose sole aim seems to be not to educate but to "prepare for college." Dr. Clarke is in general well acquainted with the material, although we miss in his bibliography the names of several recent writers, such as Pottier, Rossi, Rothenberg, Budaker, and Bresnik. Ussing's book, too, is cited in its Altona translation of 1870 instead of in the Berlin version of 1885. With his interpretation of the authors we have little fault to find. The quotation from Pliny on p. 6 is perhaps a little out of place, since in that passage Pliny is not speaking of the education of children. Of the trick practised by Persius, who says that when a boy he used to rub his eyes with olive oil to prevent his being "called up" on declamation days, Dr. Clarke remarks that this was done "to give him the appearance of illness, though how oil would have that effect is not apparent." But the point here is that oil was a common remedy for *lippitudo;* the boy (though we can't believe that the goody-goody Persius ever really did it) would apply the remedy to help out his pretence that he had the disease. We note these misprints: 222 for 223 on p. 63; 24 for 44 on p. 68; *Instaur.* for *Restaur.* on p. 55.

—That the merit system pays is rather strikingly shown by a recent publication of the United States Civil-Service Commission, from which the following statistics are taken: In 1883, when the civil-service law first went into effect, the 5,530 places (salaries attached $7,035,820) made subject to competitive examination were in the departmental service. Under the merit system, in the face of normal increase in business, the number of these classified departmental officials has been decreased 2 per cent., with a present salary cost of $6,960,602, or at a yearly saving of $75,218. In this same departmental service, the unclassified employees numbered 7,847 in 1883 and 10,760 in 1896, while the salary charge has increased from $6,792,377 to $9,746,252. The full bearing of these figures, however, is brought out only when compared with the statistics of other branches of the public service. In 1883 there were 154 Senate officials, total salaries $276,044; in 1896 there are 326 such employees, salaries $432,228. The House of Representatives in 1883 employed 197 officials, salaries $364,028; by 1896 the number had risen to 591, salaries $624,022. In the judicial department of the Government the officials have increased during the past thirteen years from six to eighty-nine, their salaries from $15,000 to $114,150. We find, therefore, that in 1883 there were, in the legislative, judicial, and unclassified departmental services, 8,204 employees, receiving salaries amounting to $7,447,449, and that in 1896 these figures have risen to 11,766 employees, salaries $10,916,652. Even admitting that the work assigned to the unclassified positions has grown more rapidly than that of the classified (of which there is no pretence), these official returns should supply food for thought to the non-political mind.

—The seventeenth volume of the *Goethe-Jahrbuch* (1896), the midsummer gift of the Goethe Society to its members, is this year of especial interest. It contains the eleventh annual report, in which the work of the first decade of the society's existence is reviewed. Since last year the membership has fallen off; on December 31, 1895, there were 2,693 members—only sixty-four more than in the year when the society was founded. It may, therefore, safely be assumed that the present membership is practically permanent, and the treasurer's report shows that the income thus assured is adequate to the actual needs of the society. During the past ten years 345,953 marks have been expended, more than half of which has been devoted to the two annual publications; the assets are set down as 106,650 marks. When, in connection with this satisfactory showing, we consider the uniform excellence and public value of the work done and the unrivalled facilities afforded to students by the archives, we must assent to the complacent claim of the committee that the Goethe Society is one of the most flourishing literary organizations in the world. Besides the bibliography, which is always a model of classification and completeness, the present *Jahrbuch* contains the usual mass of interesting and more or less useful material. From the archives there are numerous hitherto unpublished letters to Goethe from Tieck, Brinckmann, and the elder Voss, together with several bits of Goethe's own writings, principally relating to art. There are also seven original treatises. One, dealing with Goethe's masterly exposition of Leonardo's "Last Supper," is accompanied by reproductions of that composition in three forms: the original painting, the copy in the Brera, and the engraving by Morghen. Max Friedlaender's essay on "Goethe's Gedichte in der Musik" furnishes much curious information concerning the fate of Goethe's songs in the hands of various composers, and there is a valuable bibliography of the musical settings which his best known lyrics have received. This is a forestudy to an exhaustive work, which is soon to appear, on German song in the eighteenth century. Among the countless "Miscellen" we note especially a carefully reasoned article by an Englishman on the chronology of the first paralipomenon to "Faust," which is here reproduced in facsimile. The writer's conclusion is that, although in the autumn of 1773 "Faust" had been begun, the Gretchen episode had not been clearly thought out, but that the poet had already recognized the necessity of a second part. This deduction coincides with Goethe's express statement towards the close

of his life, and is further evidence of the trend of modern criticism which, Prof. Dowden to the contrary notwithstanding, is to establish the view that the entire "Faust" is, in its essential features, the outgrowth of a single original conception.

CHARLES BULFINCH.

The Life and Letters of Charles Bulfinch, Architect; with Other Family Papers. Edited by his Granddaughter, Ellen Susan Bulfinch. With an Introduction by Charles A. Cummings. Boston: Houghton, Mifflin & Co. 1896. Octavo, pp. xiv-323.

THIS life of the first American architect of distinction appeared at a most opportune moment, when the question of the virtual destruction of his principal work, the Boston State-house, was a burning one. It was well that we should be reminded at this time what manner of man was this true artist and good citizen, who "has fairly earned, by his respectful treatment of old historical monuments, a similar treatment of his own buildings." The material for a biography of him seems unfortunately scanty, and the present volume attains its handsome proportions by dint of large draughts upon "family papers" which have little direct bearing upon his own life and work, but which give us full-length portraits of his mother and other relatives. Slight as is the sketch of Bulfinch himself, however, it is prettily touched, and reveals to us a personality of much charm.

Charles Bulfinch may almost be included in that list of amateur architects which would embrace the names of Michelangelo and Perrault and many another to whom the world owes notable buildings. Architecture was rather a pastime with him at first than a business, and it was only after his dallying with it had brought financial ruin that he made of it a bread-winner. Born in Boston in 1763, the son of a physician of repute, his boyhood was coincident with the Revolutionary war. His father did not wish him to pursue the profession of medicine, and after his graduation from Harvard in 1781 he was placed for a short time in a counting-house, where he seems to have done little work, devoting himself rather to cultivating that taste for architecture which had shown itself in his earliest scribblings in his school-books. A trip to Europe in 1785 fostered this tendency still more. Late in life he wrote: "These pursuits did not confirm me in any business habits of buying & selling; on the contrary, they had a powerful adverse influence on my whole after life." His portrait, painted in London at this time, shows a pleasing and refined face of no great power. "You will find it very rough," he writes, "but that is the modish style of painting, introduced by Sir Joshua Reynolds. Mr. Copley, indeed, paints in another manner, his pictures are finished to the utmost nicety, but then—they are *very dear*." On his return to Boston he married and lived the life of a gentleman of substance and of leisure, dabbling in architecture, designing the Beacon Hill monument, and so forth.

In 1789 he was elected one of the Selectmen of the town, and his relations with the municipal government of Boston continued with a brief interval for twenty-nine years. He was chairman of the Board of Selectmen for twenty-one years, from 1797 to 1818. In his quality of artist and dilettant he was much interested in the founding of the Boston Theatre, was one of its original trustees, and the designer of its building, which was first opened in 1794. The plans were presented to the trustees, and a gold medal, which shows the design of the theatre, and which served as a perpetual ticket of admission, was the only remuneration received for them. It was his love for architecture rather than for speculation in real estate that led him into the scheme of building Franklin Crescent, which brought about his first bankruptcy. "With what remorse," he says, "have I looked back on those events, when, blindly gratifying a taste for my favorite pursuit, I involved for life myself and wife with our children—my Father and Mother and Sisters, who all held the utmost confidence in my measures and pride in my expected success."

But if "these pursuits" had exercised "a powerful adverse influence" upon his life and had led him to financial disaster, they were now to become the means of his livelihood and to give him a reputation which is likely to be enduring. For the rest of his life he was a professional architect. He had no professional training whatever, was never an accomplished draughtsman, and his architectural library was very meagre. With so slight an equipment he produced a series of buildings which not only are the best of their period in this country, but are intrinsically beautiful. A transparent rectitude, an admirable simplicity, and a gentle refinement and dignity seem to have been the most marked characteristics of the man himself, and these characteristics he translated into the terms of his art. Sincerity, simplicity, dignity, and refinement mark everything he produced. Much that he designed is now destroyed, and much of what is left is of extreme simplicity and almost bareness. It was the day of small things, and often, as Mr. Cummings remarks, "a little architecture was made to go a long way." Even in more elaborate works his materials were generally plain brick and wood. But, as the same writer puts it, "out of his slender resources he created . . . a body of architecture which possessed the grand qualities of simplicity, dignity, repose, not without a certain modest elegance which was of the nature of the man himself." Purity of taste and an unfailing sense of proportion made the plainest of his buildings interesting. His first truly professional undertaking and his best work is the Boston State-house. The professional standing of the President of the Boston Society of Architects makes his judgment so authoritative that we shall quote once again from his introduction his estimate of that building:

> "Measured by the modern standard, it is by no means a large building: its frontage being no more than 175 feet, while its depth is only 60 feet. There is no richness of material, brick and wood serving all the purposes of construction and decoration. Yet its disposition of parts is so happy, its treatment is so broad and simple, its sparing ornament is so correct in itself and so judiciously used, that it produces the effect of size and dignity, combined in a remarkable degree with elegance and grace. Its site is the finest in the city, and the adaptation of the building to its site is perfect."

In spite of several alterations, the building is not greatly changed, and the well-executed photogravure illustrations of this volume give an excellent idea of its quality, both as to the exterior and the beautiful interior. Other buildings well illustrated either by photogravures or by drawings are the New South Meeting-house, the old City Hall of Boston, the McLean Asylum with its charming and original interior staircase, the Massachusetts General Hospital, and the State-house at Augusta, Me., his latest known design. Three of these buildings have been entirely demolished, and the General Hospital has been greatly altered and enlarged. The State-house at Augusta is the only one of the five that remains as it was originally built.

In 1812 business reverses again befell Mr. Bulfinch, and he seems to have suffered a short imprisonment for debt. He had been engaged in the draining of flats, and had not sufficient capital to carry him over the hard times brought about by the war with England. Others engaged in the same enterprise made fortunes in it. How little he lost in the esteem of his fellow-citizens is shown by the curious incident that befell in 1815, when he and two others failed of reëlection to the Board of Selectmen, upon which "every elected member . . . immediately resigned, and on a second trial Mr. Bulfinch and the others were reinstated by decided majorities." Such a vote of confidence can have been rarely paralleled.

At the end of the year 1817 Mr. Bulfinch was appointed architect of the Capitol at Washington, to succeed Mr. Latrobe, and his work there was not completed until 1830. As is well known, the Capitol had been burned by English troops during the war, and its reconstruction had been begun by Mr. Latrobe. How far Bulfinch followed Mr. Latrobe's plans and how far he altered them, seems to be unknown. It is certain that the dome did not follow the old plan, but also that it did not satisfy Mr. Bulfinch, who thought it too high. Judging from old drawings, we think he was right in this. A flatter dome would have been more in accord with the character of the original building. That which was built was neither high enough for the kind of dignity that the present dome possesses, nor low enough for the breadth of effect that Bulfinch aimed at. What Bulfinch certainly designed is the arrangement of terraces on the west front, which give such dignity to the Capitol when seen from that side. The west portico, also, shows such a marked resemblance in style and arrangement to known works by Mr. Bulfinch that it seems probable that it was partially or wholly designed by him. The alteration in the appearance of the building by the addition of the present dome and the enormous wings is so great that it is only with difficulty that one can form a conception of its appearance when Mr. Bulfinch left it in 1830. To us it appears that this original building must have been far finer and more artistic in effect than the present structure, and that the west portico must have been the finest part of the building. To-day the Capitol is imposing by sheer bulk, but has neither unity of design nor beauty of proportion. The porticos of the wings are of a pompous pseudo-Greek, not lacking in a certain dignity, but entirely without the charm that Bulfinch knew how to impart to his freer classic design with its grouped and unfluted columns. One notable difference between the old and the newer portions of the Capitol is that, in the newer parts, the heavy window pediments are carried on straight under the porticos, thus putting a roof within a roof, while in the older nucleus these pediments are replaced by plain caps or round arches under the porticos. In this it seems to us the old architect, whether Bulfinch or Latrobe, was more logical as well as more artistic than his modern successor.

In 1830 Mr. Bulfinch returned to Boston, where, with one brief interval, he lived until

his death in 1848. No professional work of his is known to exist of later date than 1832, the year in which the State-house at Augusta was completed. The last sixteen years of his venerable and much respected old age were spent in retirement, and it is in the letters of this period that we get some of our most valuable glimpses of his charming personality. His unaffected modesty, his simplicity, shrewdness, and genuine taste are shown in a number of slight touches, until we feel that we know the man. There is a delightful tinge of naïveté in his remark, in answer to the question whether he should train up any of his sons as architects, "that he did not think there would be much left for them to do. The States and prominent towns were already supplied with their chief buildings, and he hardly thought a young man could make a living as an architect." His remarks on the difficulty of costume in modern sculpture and the unsatisfactoriness of no costume are sensible, and his suggestion with regard to Greenough's Washington is good humoredly humorous. "If I should give any advice," he says, "it would be to send the Statue to Athens, a present to King Otho, to be placed in the Parthenon, with other naked great men."

Although much of the matter included in this volume bears, as we have said, little direct relation to the life and work of Charles Bulfinch, it is by no means without an interest of its own and we are far from wishing that it had been omitted. One is sorry not to hear more of Bulfinch himself, but one is glad of these old family letters as one is of almost any old letters with their fragrance of gentility like a faint scent of lavender. They all help to form a picture of the life of Boston in its old provincial days, and to give an idea of the atmosphere in which alone such a life and such a character as Bulfinch's could have been possible.

GREGORY'S PURITANISM.

Puritanism in the Old World and in the New, from its Inception in the Reign of Elizabeth to the Establishment of the Puritan Theocracy in New England: A Historical Handbook. By the Rev. J. Gregory, Edinburgh. Introduction by the Rev. Amory H. Bradford, D.D. Fleming H. Revell. 1896. Pp. x, 406.

DURING the last three or four years we have reviewed several volumes dealing with the beginnings of New England religious life, and publication in that already well-worked field seems decidedly increasing in frequency. The latest writer to come to our notice is a Scotch Independent minister, whose prominence among his denominational brethren is shown in their choice of him as chairman of the Congregational Union of Scotland six years ago. Mr. Gregory's claims for his volume are modest. His sub-title is "A Historical Handbook," and he frankly declares, "I am not solicitous to clear myself from the imputation of being biassed, nay, of being very strongly biassed, in favour of the Puritans." The result is a vivacious volume, in spite of the fragmentary character which the subdivision of each chapter into brief paragraphs imposes; and the work, without indicating much acquaintance with the sources, shows considerable familiarity with the more recent —though not always the most recent—literature of the theme. Of course 225 loosely printed pages devoted to an account of Puritanism in the Old World, and 125 to its transplantation to America, permit only a general outline; but the main features of the story are for the most part indicated.

Mr. Gregory, however, seems to have a hazy conception of what Puritanism itself was. While it is the Puritan and the Separatist parties of history regarding which he writes, he affirms that "Samuel was a Puritan, so was Ezra, so was Nehemiah, so was John the Baptist. It was the zeal of Puritanism that moved the Divine Son to expel the traffickers from the temple. . . . Nor is this using the word Puritan in a loose, inexact sense. All that is originally connoted by it is zeal for purity—purity of faith, worship, and manners." A little later the author remarks: "The significance of Puritanism is not doctrinal but ethical. It was not necessary that it should be permanently identified with the system of Calvinism." Doubtless this is etymologically true, just as it is true that republican broadly indicates attachment to a republic; but historically it is as impossible to separate the Puritan party from its intense Calvinism or its opposition to ceremonies as to divorce the American Republican party from its support of the national Government, its hostility to slavery, and its high protection. The Puritan was a reformer; but it is far from true that all reformers have been Puritans in any sense historically attachable to that name. Mr. Gregory has a clearer conception of the points of divergence between the Puritans and Separatists, but he regards them as of little practical consequence, therein differing widely from such contemporary champions of either party as Browne and Barrowe, Cartwright and Gifford. He prefers the name Puritan as a designation of the whole movement. The beginnings of Puritanism he ascribes, not at all conclusively, to Holland.

Our author is no more satisfactory when he endeavors to explain the Puritan position. He tells us: "The ruling powers contended that every prince had authority to correct all abuses of doctrine and worship within his own territories. This the Puritans resisted as an invasion of the rights of conscience." On the contrary, none asserted more strongly than the Puritans and most of the early Separatists that it was the obligation of all magistrates to exercise their power for the purification of the church. Cartwright, as Mr. Gregory himself recognizes, deemed the punishment of heresy a duty. The poor Separatist exiles at Amsterdam wrote, in their Confession of 1596, regarding the Church of England, "that by Gods Commandement all that will bee saued must vvith speed come forth of this Antichristian estate, leaving the suppression of it vnto the Magistrate to vvhom it belongeth." The same feeling prompted John Norton, in 1651, to affirm "That licentious and pestilent Proposition, The care of the matters of Religion belongs not to the Magistrate, is a Stratagem of the Old Serpent and Father of lies, to make free passage for the doctrine of devils." It was, indeed, not what the ruler preferred, but what the Bible taught, that men were, if needful, to be coerced to follow. As the Cambridge Synod expressed it in 1646: "For the Magistrate to command or forbid according to God, as it is not persecution, so neither doth it of it selfe tend to persecution. Power to presse the Word of God and his truth, doth not give warrant to suppresse or oppresse the same." Mr. Gregory's assertion is the more difficult to understand in view of the instances of Puritan intolerance which he himself cites. Holding this view of Puritan aims, it is not surprising to find Mr. Gregory affirming, in regard to the Plymouth pilgrims, that "they had crossed the then comparatively untraversed path of the Atlantic for love of God, and in search of liberty of conscience," but it is pleasant to observe that he adds later a phrase which puts matters somewhat more truly: "They simply wanted an asylum where, free from all molestation and disability on account of their faith, they could worship the Great Being to whom they owed no doubtful or wavering allegiance."

When we turn to minuter features of Mr. Gregory's volume, we find it no more satisfactory. In spite of the general felicity of his style, the writer seems at times to have difficulty in reaching clearness of thought. Thus, he states that Robert Browne "became, according to Strype, private chaplain to the Duke of Norfolk. He was cited to appear before the Ecclesiastical Commissioners on a charge of disseminating seditious doctrines; and had not that nobleman befriended him and taken his part, he would doubtless have become acquainted with the inside of a prison much earlier than he did." Yet, notwithstanding the want of doubt thus expressed, Mr. Gregory adds a foot-note to the effect that this chaplaincy and ducal intervention "appears to be an error on the part of Strype." In describing the sufferings of Barrowe and Greenwood in 1593, Mr. Gregory says: "In the 'Apology or Defence of such True Christians as are commonly (but unjustly) called Brownists,' written a day or two before his death, we have a description of what followed from Barrowe's own pen." Barrowe's letter was written just before his execution in 1593, but the "Apology" in which it is inserted is of 1604. Mr. Gregory, speaking of the application of Whitgift's repressive measures to England, says: "It must be remembered that at that time there were not more than two thousand clergymen in the whole country"; a statement hard to reconcile with the quotation from Neal which immediately follows, that "there were only two thousand preachers to serve near ten thousand parishes, so that there were almost eight thousand parishes without preaching ministers," and Mr. Gregory's own comment on this quotation—a comment borrowed word for word from Hallam—that "in general, the number of those [ministers] who could not preach, but only read the service, was to the others nearly as four to one." We can hardly suppose Mr. Gregory to mean that only preachers were "clergymen."

Of downright mistakes the book has its full share. On p. 127 Mr. Gregory asserts that Browne gathered at Norwich, in 1580, "a numerous congregation, which comprised, probably, a considerable number of Dutch refugees"; on p. 206 he informs us that this church was "mainly composed of people from the Netherlands." Now, whatever aid may have unwittingly come to Browne from the dissemination of an Anabaptist way of thinking by exiles from Holland settled in Norwich, Mr. Gregory's statements, though having some countenance from historians before the careful researches of the late Dr. Dexter, are unwarranted in view of the facts that no Dutch names appear among those of this congregation whose names have come down to us, and that Browne's own elaborate spiritual autobiography exhibits no conscious indebtedness to Dutch sources. The declaration that John Eliot "gave up his settled ministry at Rosebury" to become a missionary to the Indians contains a double error. The

statement that in the New England of 1648 "the leading or organizing minds were Cotton, Hooker, Norton, Davenport, and the learned and credulous Cotton Mather," is startling in view of the facts that Hooker died in 1647 and Cotton Mather was not to be born till 1663. A son of Connecticut might well wish that Mr. Gregory was not contradicted by the Colonial Records when he says that that colony refused to make church attendance compulsory; and the New Englander cannot avoid a feeling of wonder as to the process of reasoning by which Mr. Gregory can recognize the participation of those who were not church-members in the franchise in Plymouth and Connecticut, and yet say, of the electoral limitations of the founders of Massachusetts, that "it is difficult to see how they could have acted upon any other principle than that which they did, though it was sure to be found unworkable as the colony grew stronger." If little Plymouth and Connecticut found such restriction needless, it is easy to see—in fact, even seventeenth-century Puritans did perceive—how Massachusetts might have acted upon another principle than that of confining the ballot to church-members.

We may regard as at least very doubtful, in view of recent investigations, Mr. Gregory's unqualified assertion that Roger Williams "was a Welshman, born in Carmarthenshire." His reference to the Colony of Rhode Island, for which Williams obtained a patent, as "that island," like his designation of the author of 'The Sabbath in Puritan New England' as "Miss Earle," is readily accounted for by lack of personal familiarity with America; but enough of the quality of Mr. Gregory's book has been indicated to afford a comment on the commendatory opinion of the writer of the introduction with which the American edition is prefaced, that "its characteristics are perspicuity and careful scholarship."

REVOLUTIONARY MANUSCRIPTS.

B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773 1783. Vol. XXIII., Nos. 1946 to 2023. London.

THE first document (No. 1946) in the present volume is one of the choicest in the whole series; it reveals George III. in the very act of administering one of his favorite remedies, "some gold pills" (and they say the King had no humor!), to his patient, Lord North, then languishing from a severe attack of bad debts. The skilful apothecary who compounded the prescription was the Hon. John Robinson, he of the Little Red Book, Secretary of the Treasury, and leader of the House of Commons. There was no harshness in the treatment, and the dose was administered in a soothing menstruum as follows and in brief: In March, 1778, Robinson made over to Wedderburn, Whately, and Pulteney notes for £20,000, for which he held the receipt of the King. At the end of three months, these gentlemen, seemingly weary of the "trust" vested in them, turned the whole sum back to Robinson. With the receipts properly given them, the whole matter seems to stop abruptly. But what was the next step in the course of this incident of "Our Special Service"? The King in the September previous wrote to Lord North: "You have at times droped [*sic*] to me that you had been in debt ever since your first settling in life, and that you had never been able to get rest of that difficulty; I therefore must insist you will now state to me whether 12 or 15,000l will not set your affairs in order; if it will, nay, if 20,000l is necessary, I am resolved you shall have no other person concerned in freeing them but myself." In 1782 the King refers to "20,000l I gave him leave to take for the discharge of his debts." The thing was delicately carried out considering the coarseness of the age, and the sensibilities of Lord North were humanely spared. It is commonly known that Lord North's debts formed an issue in the prosecution of the war with the colonies.

After this obvious corruption one welcomes the more urbane and less strenuous self-seeking of the unhappy French officers who took across the sea much ambition and much "honneur," and found so little to flatter the one and so much to offend the other. It is evident in these letters that severe external discipline represses but does not subdue a fault-finding yet hopelessly uncritical spirit in the military character. Is it of necessity that a soldier shall be by the nature of his profession mentally crude, incapable of the nicer discriminations? De Kalb's letter (No. 1771) to the Comte de Broglie reaffirms the jealousy of Americans towards France, which is due, he says, to their "English origin." "They all have the highest opinion of themselves," and "one sees them suffer inwardly when the French obtain some advantage over the British arms." He does, however, admit the French tendency to exaggeration in these matters. A delightful instance of this is in the Chevalier de Fleury's letter to De Broglie of Nov. 1, 1778 (1986), when, after covering lightly D'Estaing's campaign, he says, "After M. d'Orvillier's success, the Strait of Dover is hardly more than a ditch." To return to De Kalb, who again writes to De Broglie on Nov. 7, 1778 (No. 1987), this time in cipher: he favors the conquest of Canada, for he thinks the Americans will inevitably reunite with England. "They bear impatiently the idea of the humiliation of England; the least check which the English armies experience from any others besides the insurgents seems to pain and humiliate them." Speaking in the same letter of the American idealization of Washington, he asserts that "if they were sure of always having Generals like him, they would soon lay down the law to the universe . . . this is said so often, that Washington believes it himself. I do not wish to decry his merit nor many good qualities which he possesses, but he is a poor General; his reputation is due to good fortune, to the misconduct, to the blindness of his adversaries, and especially to Providence"—phrases which anticipate Mr. Charles Francis Adams's late critique of the battle of Long Island. In No. 1988, writing in cipher on Nov. 11, 1778, still to the Comte de Broglie, De Kalb unconsciously goes far to explain why Americans may have heard impatiently of the "humiliation of England." "Do you not think, General," he says, "that it is better, as I said in my letter of the 7th November, to leave them some bone to pick which will keep up a quarrel for a long time, for otherwise we shall not succeed in securing a total separation?"

The French King seems to have partly understood the character of some of his officers when, in his direction to M. Gérard, he says that they "generally place too much importance on their services, which causes the insurgents to care little for them." The caution of Vergennes is as evident in this volume as it is everywhere else in these times. He even forbids the presentation of a piece, "La Fête Bostonienne," at the Comédie-Italienne, nominally because it was of too recent a date (Nos. 2001, 2003). Writing to Sartine, who asks in behalf of the Chamber of Commerce of Aunis and of other places that La Rochelle be made one of the free ports for Americans, this wary statesman says, "We cannot deal with this matter until after the peace. You are aware that until that period all our ports are free to the Americans" (Nos. 2004-2006).

There are several interesting papers (Nos. 1992, 1993, 1995, 1996, and 2000) which touch upon American credit in France. Nos. 1953, 1972, 1978 are concerned with our earliest relations as a nation with the Barbary Powers and our commerce in the Mediterranean. Vergennes in No. 1966 refuses a loan to William Lee, and says that the "Government takes no cognizance of private operations"; but Lee soon asks him for brass and iron cannon for Virginia (No. 1982), and represents that fortifications in that State would be of service to the French fleet, inasmuch as "Boston, the only fortified Port to the North, is frozen up every winter, and where Provisions are generally dear." The climate of Boston has softened much since Arthur and William Lee knew it.

The end of this volume (Nos. 2010 to 2023) is taken up with valuable material relating to the siege of Savannah and to the movements of D'Estaing's fleet at that time. To particularize is quite unnecessary, since Mr. Stevens's grouping and editing have made everything clear. In D'Estaing's notes on O'Connor's journal (No. 2018) it is asserted that an "appearance of success" was the motive of attacks, and that a refusal on the part of the French would have been considered cowardice by the Americans, "who are doubtful of nothing even when they have not the most elementary resources." The most significant document is Pechot's Journal (No. 2010). It is long and confused, as such accounts are apt to be, but is noticeable for what seems an undercurrent of innuendo against D'Estaing and the Americans. Upon the whole, however, one receives happier impressions of the French who aided us from this group of documents than were afforded by the letters written to France by disappointed officers earlier in this interesting volume.

On Snow-shoes to the Barren Grounds: Twenty-eight hundred miles after musk-oxen and wood-bison. By Caspar Whitney. Harper & Brothers. 1896. 8vo, pp. x, 324. Many illustrations.

THIS is a vivid narrative of one of the most daring adventures ever undertaken for the sole purpose of hunting big game. The main features of this exploit have been made public in *Harper's Magazine*, but here we have the full-rounded story. Until recently, comparatively few persons have had any adequate idea of the Barren Grounds, either as to the situation, the extent, or the physiography of these analogues of the Siberian tundras, where the musk ox is the only permanently resident large quadruped, and where no man lives the year round—for the Eskimos are maritime, not inland, people. The difficulty of penetrating far into this desolate region is almost insurmountable; access is practicable only in consequence of the migratory herds of caribou at some seasons and the fish that may be caught at others. During the few months when the waters are open, the dreary waste may be reached by canoeing; but this is arduous, owing to the length and frequency of the

required portages. The first white man who ever surmounted the difficulties and dangers of the Barren Grounds was Samuel Hearne, who in 1771–'72 succeeded in reaching the mouth of Coppermine River, from Prince of Wales Fort on Hudson's Bay, after failing in two different attempts to discover that river, in 1769 and 1770. Hearne's journey to the Coppermine was made in a different direction from Mr. Whitney's, and under different conditions of season, for the most part; like our author, he was the only white man of his party. Mr. Whitney's adventure finds its closest parallel, in most respects, in the expedition of Lieut. (afterward Sir) John Franklin, in 1821; in fact, his trail coincides with Franklin's at some points, notably that known as Fort Enterprise, at the "last wood." The map of the journey, though very small and showing little detail, enables us to follow our traveller intelligently.

Leaving the railroad at Edmonton—which was Fort Augustus before it acquired its present name—Mr. Whitney went north by sleigh to Lac la Biche, where his travel on snowshoes with dog sledges began in the depth of winter. The distance hence to Fort McMurray is 240 miles; and it is 185 miles further to Fort Chipewyan on Lake Athabasca. This is still the most important post in that region, and one which has a long history, going back to 1788, though the original site of this "little Athens of the hyperborean regions," as it used to be styled, is at some little distance from the position first pitched upon by Roderic McKenzie for an "emporium of the North." From this point it is 118 miles down Great Slave River to Fort Smith, where Mr. Whitney diverged from his main route for a round trip after wood-bison—that northerly variety of the so-called buffalo, now apparently quite as rare as the same species has become in the United States. From Fort Smith it is 170 miles to Fort Resolution on Great Slave Lake, where the daring enthusiast on the subject of musk-oxen made up his party of seven Indians and twenty-eight dogs for his final plunge of 475 miles still further northward—past the limit of trees, through the "Land of Little Sticks," where the last lingering traces of arborescence give way to sphagnum that stretches unbroken to the polar sea, and for most of the year is mantled with snow. It is a scene of such desolation as one would be tempted to call indescribable, had not Mr. Whitney's own description given rise to that temptation. Holding still northward, approximately along a meridian of 114°, the undaunted traveller passed the headwaters of Coppermine River; and, with the main stream on his left, at an increasing distance as he went on, he penetrated the arctic circle, and looped about on his return from a latitude apparently near 67°.

This is but a dry, bare skeleton of the perilous journey. The country was a great white desert, but there is no lack of color in the graphic and varied narrative. There was not often enough to eat in camp, but we have our fill in the book. The writing is particularly strong in its delineation of character: the Indians of various tribes, the ubiquitous half-breeds, and all the personalities with whom Mr. Whitney came in contact, stand before us with life-like reality. And the dogs, too, those unhappy creatures, those indispensable slaves of man, doomed to life-long misery of famine and the merciless lash—humanity is shocked at such suffering, in sole requital of services rendered. But what of the musk-ox, almost the sole object of so arduous and so dangerous an enterprise? They were found in plenty in their forbidding haunts, and are brought before our very eyes, from the time when the presence of a herd is first revealed, curiously enough, by the cloud of vapor arising from the animals, to that supreme moment, to a hunter, when the big game is bowled over. Let Mr. Whitney himself say how he felt under the excitement of the chase:

"Everything waltzed about me. I ran on and on in a sort of stupor, until, as I got to the top of a little ridge, I saw two musk oxen about a hundred yards ahead of and running easily though directly from me. And then the blood surged through my veins, the mist cleared from my eyes, and the rocks stopped whirling about me, for there, within range, was my quarry. I swung my rifle into position and dropped on my knee for surer aim. Heavens! my hand shook so that the front sight travelled all over the horizon, and my heart thumped against my side as though it would burst. I had sense enough left to realize that my shot might mean success or failure—for I felt my force was nearly spent. For a moment I rested to get my breath—and the musk-oxen were still going from me and then—another attempt—the foresight for an instant held true—another second's breathing—a quick aim—and I pressed the trigger. What a feeling of exultation as I saw my quarry stagger and then drop! I was dizzy with delight" (p. 221).

The book is full of such word-painting as this, though of course not always pitched in such a high key. Among the best things in it is the cooler description of the animal from a naturalist's standpoint; this is carefully done and may be relied upon. One of the most curious things we note is what Mr. Whitney has to say of the deceptiveness of apparent distances and magnitudes in that country. It is exactly the reverse of the illusion with which we are more familiar on our Western plains, where objects loom up bigger and seem nearer than they really are. In the Barren Grounds, things look smaller and seem further off, as if viewed through a field-glass reversed. Along with this spatial illusion there seems to occur a still more singular one regarding one's sense of lapse of time; and the whole effect recalls what some hashish eaters have told us of their phantasmagoria regarding magnitudes, distances, and especially duration. "When I tripped over a rock," says Mr. Whitney, p. 220, "I seemed to tumble a hundred feet and to take a hundred years to regain my feet." Aside from any question of exaggeration in thus describing a sensation, the author's style may perhaps be open to some criticism on the score of superlatives; but if so, it is the hyperbole of enthusiasm which deceives no one, and raises no suspicion of the traveller's long bow. We think intentional exaggeration would be difficult in such a case as the present, which only a ready and skilful pen could set forth with requisite distinctness, even with the aid of numerous illustrations. These are simply admirable; we have seldom seen a book of travels more copiously and tellingly illustrated. The text is also beautifully printed, in large and brilliant type.

Mr. Whitney is to be congratulated, first, upon getting back from the Barren Grounds alive to tell the tale, and then upon telling it so well that this book is sure to take its place among the very best of its kind.

A Text-Book of the History of Architecture. By A. D. F. Hamlin, A.M., Adjunct-Professor of Architecture in the School of Mines, Columbia College. Longmans, Green & Co. 1896. Pp. xxv, 441; 229 illustrations in the text.

THIS book is second of the series of College Histories of Art edited by Prof. John C. Van Dyke, and of which the History of Painting, written by the editor of the series, has already appeared. The book before us is extremely well furnished with bibliographies and lists of monuments, each important division of the work having at the head of the chapter the list of books recommended, and a list, at the close, of the monuments thought most worthy to be cited. As regards the bibliographical part, the author finds the difficulty which we all feel, namely, that there are few general treatises of any value, while the monographs are too elaborate, too costly, and too limited in their application for the general student, and altogether too numerous for any serious attempt to classify and select with judgment from the overwhelming mass. Among the books given are some which are mere folios of plates, and some which are hopelessly antiquated, with their critical opinions now recognized as wholly misleading; but we mention this merely as an illustration of the great difficulty attending the task. The lists of monuments are excellent. It would be very hard to improve upon the choice here presented, and the dates are given according to the latest authorities in every case we have been able to test. In this matter of the dates we think that a suggestion of their frequent uncertainty would have been in place, as such a notice was thought to be by Mr. Longfellow in Scribners' 'Cyclopedia of Architecture,' recently reviewed in these columns. On the other hand, Prof. Hamlin's way of giving the dates, even when not absolutely certain, seems the right plan, because errors in history are recognized as very common things, and the way to get them corrected is to keep before the student the knowledge so far gained and the inferences so far drawn as an encouragement to further investigation. All the books are written on the supposition that S.-Front at Périgueux, let us say, was begun in 1047. Now, if it could be proved that the building was begun sixty years later, it would be a valuable contribution to knowledge, and one chapter of history would have to be revised; but in the meantime the accepted date is a part of history as it now exists, and must be kept before the student.

The text of the book is very valuable because of the singularly intelligent view taken of the building of each separate epoch. The chapter on Primitive and Prehistoric Architecture shows a complete grasp of the subject, brief as it is. The facts here given and the inferences drawn from them are the essential facts and the safe inferences. In like manner Roman architecture is explained according to its essential characteristics. A complete analysis and explanation of the whole could only be an enlargement of the same theme, with additional facts and an array of evidence and examples. The story is told as completely as the brief space would allow. It is hard to say in advance whether any one book will make a good school-book or not, but if any reasonable part of the contents of this book can be got into the heads of those who study it, they will have excellent ideas about architecture, and the beginnings of a sound knowledge of it.

Jewish Ideals, and Other Essays. By Joseph Jacobs. Macmillan. 1896.

MR. JACOBS, well known for his work in Jewish history as well as in the field of popular tales and fables, has gathered into this interesting volume a number of essays which have appeared in various periodicals during the

past eighteen years. Some deal with theology, some with history, one with the diffusion of popular tales, and one with a famous legend of mediæval times. It is only with the last two that we are at present interested. In the remarkable diffusion of the great Oriental literary collections of tales, the Jews played, as is well known, an important part. They were well fitted to act as intermediaries, and their Hebrew and Latin versions of Arabic translations or adaptations of Indian originals furnished all Europe with entertaining tales. In the essay "Jewish Diffusion of Folk-Tales," the author deals with five works which he calls "junctions," *i. e.*, translations which in turn were translated and acted as channels for the further diffusion of the work in question. These five are: Petrus Alphonsi's 'Disciplina Clericalis'; Simeon Seth's translation of the 'Alexandreid'; the various Jewish versions of the fables of Bidpai, known by the name of 'Kalila and Dimna'; R. Joel's 'Mishle Sendabar'; and Pauli's 'Schimpf und Ernst.' The second is one of Mr. Jacobs's "finds," and, as it cannot be substantiated, may be dismissed. The first differs somewhat from the others in that it is, as a collection, original with Petrus Alphonsi; the stories, it is true, are from Oriental sources. One of the most interesting facts about the diffusion of this collection was discovered by Mr. Jacobs while editing 'The Fables of Æsop as first printed by William Caxton in 1484,' that is, that thirteen of Petrus Alphonsi's stories were printed at the end of Caxton's translation under the title of "The Fables of Alfonce." The fifth book hardly belongs in the list at all. Pauli, it is true, was the son of Jewish parents, and early became a Christian and later a famous Franciscan preacher. His book, 'Schimpf und Ernst,' is relatively a modern production (it was finished in 1518), and contributed little to the diffusion of specific Oriental tales. Mr. Jacobs's remarks on the two other books do not add materially to the knowledge of the subject.

The second essay, on Little St. Hugh of Lincoln, is an excellent example of the author's skill in constructive criticism. The child was supposed to have been crucified by the Jews of Lincoln in contumely and insult of Jesus Christ. Mr. Jacobs shows how impossible it was for the Jews to use human blood or human sacrifices in any way as a part of their religious rites, and then endeavors, by the aid of history and topography, to reconstruct the probable event. The child, in his opinion, was accidentally drowned in a cesspool attached to the house of a Jew, where it was discovered during the wedding festivities of the daughter of the chief rabbi of the town. The Jews committed the mistake of trying to conceal the body by removing it from the neighborhood of the Jewry and casting it into a well. It was found there three days later by a woman passing by. The accusation of the Jews was partly the result of Christian desire to add to the attractions of the cathedral, and was partly due to the hatred of Henry III. for the Jews and his wish to extort money from them. This explanation is extremely plausible, and the whole essay is, in the words of the author, "an object-lesson of the modern methods of research in history, archæology, and legend."

A Federal South Africa: A Comparison of the critical period of American history with the present position of the Colonies and States of South Africa, and a consideration of the advantages of a Federal Union. By Percy Alport Molteno, LL.B. With maps. London: Sampson Low, Marston & Co. 1896.

RECENT events lead us to feel an unusual interest in anything which seems likely to help us understand the domestic affairs of South Africa, but Mr. Molteno's book will find its largest field of usefulness in that country. It has little to offer to the outsider, especially to the American. He is a most earnest advocate of the federation of the South African states, and his book was written to further that cause. Its special purpose is, by relating the difficulties in the way of the formation of the Constitution of the United States, and by describing the most important features of that Constitution, to show the people of South Africa how they may overcome the difficulties in the way of their union—which he believes to be very similar to those in America in 1787—and to point out the objects to be aimed at. The work is so well done that it ought to be of great practical assistance in his own home, and very likely in Australia as well. To the American the book seems full of the most elementary and commonplace instruction, but it must be remembered how little the Anglo-Saxon, outside of North America, knows of federation as a working system. The author's chief guides are Fiske's 'Critical Period of American History,' Bryce, and the 'Federalist,' and he has read with good judgment and understanding. It is a most encouraging sign when the troublous times which created the federal system for the modern world begin to be studied with intelligent purpose by those whose political future demands the formation of a federal union.

The problem before the South African differs from that which the Canadian had recently to solve in that two of the states concerned are non-English and independent. This leads Mr. Molteno to the opinion—and he is undoubtedly right—that freer hand must be allowed to the people of South Africa in the formation of their union; that their Constitution must be wholly their own act and be subject freely to amendment by themselves alone, as, in form at least, the Canadian Constitution is not. The spirit of local independence is strong throughout the book. England, of all foreign Powers, is the only one which South Africa can at present depend upon, and she must be looked to for external protection. Germany's colonial methods render progress impossible, and the supremacy of Germany in South Africa would mean stagnation and ruin. But in all internal matters there must be complete local independence. The relation of the states to each other; the character of the state governments and the details of the general Constitution; the settling of vacant lands, the admission of new states, and the annexation of foreign territories; the treatment of the native, and the regulation of the labor market—all questions of this sort must be left entirely to the decision of the future federation. Mr. Molteno is vigorous in his assertion of the fact that the colonists alone understand and know how to deal with the conditions of the local problems. He does not spare words to make clear his belief that in numerous cases the interference of the English Government in the internal affairs of South Africa in the past has been disastrous to the best interests of the country. South Africa has certainly suffered its full share of misfortune from the officious ignorance and misunderstanding of the home Government, of which every colony has had to complain since English colonies began.

Mr. Molteno's faith is strong in the eventual formation of the union he desires. His faith goes even beyond this. He believes that such a federation may in time come into possession of the South African territories now held by Germany and Portugal. In support of this belief he calls attention to the expansion of the United States since 1783, and prints a map of our annexations, to make the case more clear. The similarity of conditions must be admitted. It is great enough to make our experience something more than an analogy for the South African. In any case, it is self-evident that the formation of such a locally independent federation would make the absorption of the foreign territories far easier than while the Cape is directly under English rule. This is a result which the whole Anglo-Saxon world ought to desire, for the strategic importance to the race of the possession of South Africa can hardly be overstated.

The extreme difficulties in the way of federation Mr. Molteno does not ignore—the great differences between the units to be combined, and the many causes of jealousy and distrust in the events of the past and in present conditions. The book was written before the Jameson raid had taken place, but it indicates clearly enough that the author's judgment must be that this event has seriously prejudiced the cause of union.

The Cruise of the Antarctic to the South Polar Regions. By H. J. Bull. London and New York: E. Arnold. 1896. 8vo, pp. viii, 243. Ills.

THE projector of the expedition to the Antarctic, Mr. Bull, has given us in this volume an account of the voyage, of which most of the incidents have been already made public through the lectures of Mr. Borchgrevink, who accompanied the expedition from Australia. The work is illustrated by a number of drawings by Mr. Burn-Murdoch, whose simultaneous experiences, 'From Edinburgh to the Antarctic,' have been already reviewed in these columns. Thus the present volume supplies little that is new, but puts in permanent form the details of the expedition. The hope of finding the right whales reported by Sir John Ross induced Capt. Svend Foyn, a wealthy Norwegian whaling-master, to equip the vessel at an expense of some thousands of pounds; and, from what we are told, it appears that an unfortunate selection of a commander and the inexperience of the crew were chiefly responsible for the financial failure of the voyage, which resulted in little more than a revisitation of and landing upon the Antarctic continent at Cape Adare, the discovery of a lichen on the rocks, and some little information about the conditions of navigation in this region. The supposed right whales were not found, and the vessel reached the sealing-grounds too late to obtain a cargo there, and also encountered several mishaps en route. As a part of the record of navigation in high southern latitudes the book has a certain usefulness. Mr. J. J. H. Teall has a petrological appendix on a lava from Possession Island, a nepheline tephrite and a quartzose pebble from Cape Adare, which forms the only contribution to science here recorded. The book is handsomely printed, but is deficient in both a map and an index.

The Nation.

NEW YORK, THURSDAY, AUGUST 13, 1896.

The Week.

THE proceedings of the conference of sound-money Democrats at Indianapolis on Friday were marked by a decorum and patriotic fervor which call to mind the Declaration of Independence. The address issued to the Democrats of the United States could not possibly be improved in point of temper or taste. Nor could the purpose of the gentlemen present be expressed in more forcible terms. The attendance was larger than had been expected, and it was composed of men of such high character and abilities and such long and distinguished service that nothing remains to be desired in the way of personal example. Instead of a "boy orator," there was Gen. Palmer, a war veteran and political associate and personal friend of Abraham Lincoln. In place of Tillman was James O. Broadhead of Missouri, and in place of Altgeld Gen. S. B. Buckner of Kentucky. These are representative men of the two wings of the Democratic party. The contrast between them is no wider than that between their creeds. The men who met on Friday appeal to their fellow-Democrats to save the party by saving its principles. They say that a party without principles is nothing to them. They believe that the party has a future of usefulness if it stands for the honor and dignity of the nation which it has so often supported and vindicated, but that if it becomes a party of repudiation and bad money, it is doomed to early extinction and is fit only to be buried.

The conference decided by unanimous vote to call a national Democratic convention to meet at Indianapolis on Wednesday, September 2, to nominate candidates for President and Vice-President, and for this purpose appointed a national committee, of which Gen. Palmer is chairman. One of the most important consequences of this action will be the publicity thus secured to the third-ticket movement. Public attention will be centred upon it as it could not be if the revolt against Bryan were sporadic and unorganized. Much of the alarm and business depression that we have witnessed during the past month has been due to the two spectacles beheld at Chicago and St. Louis, where two conventions of repudiators met and tried to unite their schemes for destroying the public credit, in one working team. These filled the public eye for the time, and naturally impaired credit and damaged trade. We shall now have an exhibition of another sort, and we may expect an entirely different effect.

Nothing could be better than the declaration of principles issued on Friday by the sound-money Democrats of Maine. They "arraign" the Chicago platform, but they do not employ the meaningless platitudes generally used in such arraignments. They think clearly and they say clearly what they think. They waste no words, but they show in most concise language just what the Chicago platform means. What it really means is the repudiation by our Government of nearly one-half of its obligations. It means that our courts are to enforce no contracts payable in anything else but what Congress shall from time to time declare to be lawful money. It means that our judges are to be appointed or elected for the purpose of giving decisions satisfactory to the party in power. It means that if the United States mails are stopped by a riotous mob, the President shall not interfere. Such doctrines, the sturdy Democrats of Maine declare, are dangerous, revolutionary, subversive of government and social order, and utterly opposed to the time-honored principles of the Democratic party. This is plain truth, expressed in plain, ringing words, and it is cheering to see the spirit with which the issue is tendered. Mercenary calculations of the gains to be made by inflating prices shrink into insignificance when our country's honor is in peril.

The honest-money Democrats of New Jersey moved too late to be represented in the Indianapolis conference, except by telegraphed sympathy, but their meeting on Friday was none the less a pronounced success. Their natural leader, Senator Smith, had turned tail and gone off to Europe, leaving behind him a message to the effect that this money business was a mighty puzzling affair, but that New Jersey Democrats ought not to hesitate as to the duty of electing him to the Senate for another term. After the vigorous gold-standard plank of the State convention, this was a piece of scandalous cowardice, which inevitably left the honest-money men of the party at a disadvantage. But they were able to secure on Friday a surprisingly large expression of sentiment in favor of a third ticket, and in no State will it be more heartily welcomed and supported. Under the circumstances, it is the opinion of the best political judges that New Jersey is just as certain as Vermont to give its electoral vote to McKinley and Hobart.

While the Democratic defection is growing daily, the Republican lines are showing a firmer front. The threatened Republican cleavage in a few Western States appears now to be entirely checked. One State convention after another walks squarely up to an endorsement of the St. Louis platform, in some cases a specific endorsement of the gold plank being made. Iowa, Minnesota, and the Dakotas, where there was much talk of Republican disaffection on the silver issue, had already fallen into line, and on Thursday Michigan and Wisconsin joined them. The Republican committeeman in Illinois who, a few weeks ago, expressed great fears for that State, now confesses that a sweeping change in public sentiment has set in, and that Illinois is safe for McKinley. All told, the drift is at present decidedly against the Democrats. Something may yet occur to make for them, but their best outlook is for an up-hill fight against increasing odds.

A travelling correspondent of the *World* telegraphs from Indianapolis that the silver wave has reached its height in the central West, and that the tide is already visibly receding in Indiana. He says that he has read letters from leaders of the Democratic party in various States of that region, and that they are unanimous in expressing this opinion as to every State except Ohio, where recovery from the craze has not yet begun. This agrees with the impression derived from a careful study of the press between the Alleghanies and the Rockies during the past fortnight. Desertions from the Republican party to Bryan on the silver issue have ceased, while not a day passes without its list of leading Democrats who repudiate the surrender of their party to Populism. The silverites have plainly lost their first confidence that they were going to "sweep the country," while the sound-money men grow daily more confident that the campaign of education which they will wage must be crowned with success.

The Bryan demonstration at Chicago has caused some uneasiness, because everything that points to his success in the campaign means business disaster, bad trade, and loss of employment; the greater the fear of his election, the more acute the suffering will be. Yet the mere presence of a crowd on the occasion of his arrival at any place does not portend anything as to the voting next November. The Chicago reception signifies nothing but the curiosity of a mixed multitude in a city of more than a million inhabitants. Mr. Bryan is a new man, an attractive man, a young man, and he is running for the Presidency. These facts are sufficient to bring a crowd together at any place, and the larger the place the larger the crowd. Still, the owners of property which is threatened by the mad attack on the standard of value which Bryan represents cannot be blamed if they become

alarmed. It is inevitable that they should be. Mr. Bryan is an *avant-courrier* of panic and crash. The longer his tour is continued the more acute will be the symptoms, and the more widespread the suffering. Already Mr. Bland has recognized the fact that the business community look upon this tour as an evil omen, and has adopted a conservative tone, but what kind of conservatism is that which begins by depreciating the currency one-half, and thereby repudiating one-half of all public and private debts? All the soothing words in the dictionary will never reconcile a man to being skinned alive. Mr. Bland's conservatism is merely the evidence that he is alarmed by the revolt of the conservative business men of the Democratic party against the Chicago platform and candidates. That revolt will increase just in proportion as the gloom in the business world deepens.

Mr. Bryan has at last chosen his rôle, and it is evidently to be that of the agitator and the demagogue. His first speeches, after two weeks of silence and meditation, make that clear. He went out of his way at Chicago to bid defiance to the conservative elements in this country, and to fling himself ostentatiously into the arms of what he calls the "toiling masses," whom he is not going, if he is elected President, to allow the merchant, the banker, the manufacturer any longer to "rob." More openly still did he make his appeal to the mob in his speech at Davenport, Iowa. The President was to be only a "hired man." He was to be put in office only to carry out the behests of the populace. As for any policy, any convictions of his own, the idea was preposterous. If he contrived to placate the mob, he would be doing his full duty. That is the note sounding clear and sharp in Mr. Bryan's speeches of Saturday. He is no doubt making a virtue of necessity in thus choosing the part of a social agitator. The revolt of the stable people of the country and of his own party against his nomination has been too pronounced not to have struck some alarm even to his complacent soul. With business and property and the law-abiding sense turning from him, the only thing left for him was to appeal boldly to the unrest, the ignorance, the passions of the mob. It is well that he has thus early declared himself, and we hope his evident conviction of his own greatness will keep him going up and down and letting the country see the manner of man he is.

A movement to revive an obsolete form of protectionism by enacting discriminating duties on imports in favor of American ships, was started at a meeting of shipbuilders held in Philadelphia on the 9th of April of the present year. Mr. Sewall, the Democratic candidate for Vice-President, was present, representing his own shipbuilding works. The official report says that the meeting was called to order by Mr. Charles H. Cramp, who nominated for President Mr. Arthur Sewall, and he was unanimously elected. The result was the organization of the "American Merchant Marine Association," with Mr. Sewall as the permanent President. The object of the association is to work up public sentiment in favor of reviving the old abandoned policy. They have sent out a circular and a begging letter to raise funds, saying:

> "At the expense of the Association, the Republican State conventions held in the following places were attended by persons authorized to urge the adoption of planks committing the party to this policy: New Jersey, Georgia, Alabama, Connecticut, Pennsylvania, North Carolina, Michigan, Indiana, Delaware, and Colorado. Success followed in every State but Indiana."

The circular recites that equal success attended their efforts at the Republican national convention. Then it adds:

> "While the Democratic platform does not contain any expression on the subject of shipping, the vice-presidential candidate nominated by that party is the President of this Association, Hon. Arthur Sewall of Bath, Maine, an earnest advocate of the policy of discriminating duties."

This is the first rational explanation we have seen of Mr. Sewall's nomination. Here was an organized body of high-tariff protectionists "working" the political conventions. They had abundant success in the Republican camp, naturally. In the Democratic party, however, they could not accomplish anything openly, but they managed to get their president nominated for the second place on the ticket. Mr. Sewall was an unknown man outside of his own State. The State of Maine was not the place exactly for any political party to go to for a candidate unless he were a man of note like Speaker Reed. Yet Sewall was nominated, to the surprise of everybody. The explanation is now easy. It was a game to commit the party to a form of protectionism which nearly all Democrats are opposed to, and Mr. Bryan most of all. To understand the significance of this project, it must be borne in mind that American shipbuilders already have prohibitory duties on their products. No American is allowed to own a foreign-built ship and sail her under our flag and under the protection of our laws. No foreign-built ship can engage in the coastwise trade. Here are two forms of monopoly absolutely secured to them. Now they want a discriminating duty of 10 per cent. on all goods not imported in American bottoms. Even McKinley never proposed this or anything so antiquated and reactionary. One of the objections to it, although not the strongest one, is that foreign nations can play the same game on us, and probably would do so. It was for this reason that we abandoned the policy in 1828. Now the Democratic party nominates for the Vice-Presidency a man whose only distinction is that he represents this protectionist scheme. Mr. John Thomson of the Neptune Meter Company, who had been solicited to contribute to the funds of the Sewall Association, declines to do so on the very proper ground that Mr. Sewall represents a financial policy which would "materially reduce if it would not effectually paralyze the transshipment of American and European products."

Watson had his way in the Georgia Populist State convention on Friday, which put up a full ticket of Bryan and Watson electors, and resolved to keep it in the field until election day unless the Democratic managers should withdraw Sewall, in which case a fusion ticket will be made up, half Democratic electors and the other half Populist. Every day, however, serves to make it more plain that the Democratic managers have no idea of withdrawing Sewall. Chairman Jones of the national committee undoubtedly expressed the general opinion among the party leaders, as well as his own, when he made his contemptuous remarks about the Southern Populists the other day. This feeling has been intensified by the result of the Alabama State election on Monday, which the Democratic managers interpret to mean that their party can carry the South again this year without being obliged to make any concession to the Populists. It is in Western States like Kansas and Nebraska that the Populist alliance is of importance to the Democrats, and the third-party men in that section appear ready to swallow Sewall. The present indications, therefore, are that Watson will be left to flock by himself.

Speaker Reed made another excellent speech on Thursday at Portland. He took up the money question in an elementary way, and answered the principal arguments of the silver men in terms at once logical and simple. He did not pretend to be very wise on the subject. He confessed to deficiencies which are not disclosed in his speech. By assuming this humble attitude he undoubtedly won the ear of his audience. At all events they could not have been better entertained for the brief time that he talked to them. He took up the so-called "crime of 1873," and demolished the fabric of falsehood founded upon the charge that the coinage act of that year was passed secretly and with fraudulent intent. He showed that an attempt to regulate prices by changing the standard of value would be mischievous and uncertain in its results, and shockingly unjust. Too little attention has been given to this phase of the question. The principal argument of the silverites is that because the prices of most articles have fallen since 1873, the debtor class (a vague and undetermined number of people) ought to have something done for them by law; and that the most feasible plan is to change the standard of value for the whole com-

munity in order to accommodate them. The number of debts contracted in 1873 and still existing is very small. It does not even include the Government debt. All of the bonds now outstanding were issued later. There may be a few railroad bonds that were issued before that time which are not payable specifically in gold, but not many. It is safe to say that not a thousandth of the existing indebtedness was contracted twenty-three years ago. And yet the silver orators, Mr. Bryan among them, talk glibly of the injustice of requiring the debtor to pay more value to-day than he would have to pay if we were on a silver basis. The bulk of the debts in the country are short-time debts, such as board bills, tradesmen's bills, wages, deposits in savings banks and other banks; in short, those relating to the daily life of the people. It is proposed by the Bryan crowd to pay all these at the rate of 53 cents on the dollar as soon as they can elect a President and muster a majority in Congress, on the pretence of correcting a supposed injustice to a handful of men who borrowed money more than twenty-three years ago and have not yet paid it. Mr. Reed has done well to unmask this intended fraud. It is to be hoped that other speakers will do the same.

Republican newspapers at the North which treat the victory of the Democratic candidate in the Alabama election on Monday as evidence of fraud can hardly have followed the course of the campaign or learned the character of the fusion candidate. Goodwyn was elected a member of the Legislature in 1892, and again in 1894. At each session he refused to vote at all on the final passage of the bill to levy taxes for the support of the State Government—a course which, if generally adopted by members of the Legislature, would have left the treasury without a cent. In the session of 1892 he was guilty of a still greater sin of commission. During the two previous years a reduction of the tax-rate had impaired the income so much that there was great danger, not only of a large future deficit in the treasury, but that the public schools would be paralyzed, and the State put to great straits to pay interest on the public debt, to maintain its great charitable institutions, to feed the prisoners, and otherwise promptly to meet the wants of good government. The Governor made an earnest appeal to the Legislature, when it met in November, to increase the tax-rate before taking a recess, so as to give confidence to lenders; and when it was found impracticable to agree upon a revenue bill in time, he asked the passage of some resolution which would show the purpose of the Legislature to uphold the credit of the State, and enable him to borrow money to tide over the emergency caused by January payments. A resolution was therefore offered declaring that "the credit of the State shall be protected at all hazards, and, if necessary, the rate of taxation will be raised." A motion was made to lay this resolution on the table, and Goodwyn voted for it with three other Populist Senators. Had the resolution been laid upon the table, no money could have been borrowed, and the vote would have inflicted a terrible blow upon the credit of the State, resulting in the stoppage of the common schools, and great suffering among the inmates of the State institutions. No sensible Republican at the North would vote to make a man with such a record as this Governor of his State. Why should Northern Republican newspapers take it for granted that there are no sensible men in the Republican party at the South?

Mr. Gamaliel Bradford, Treasurer of the Anti-Biennial League in Boston, publishes a letter containing an argument in opposition to biennial legislatures. His principal point is that the causes which produce excessive legislation are independent of the length of time or number of sessions allotted to legislation, and hence, we presume, that if a legislature is elected once in two years, the result will be the same volume of legislation as before, only compressed into one session instead of two. There is a good deal of force in this if a biennial session only is contemplated; but in those States in which the reform has been successful it has been accompanied by constitutional changes which sap the sources of legislation itself, and by this means make annual sessions unnecessary. Half the legislation in Massachusetts is "special," just as it is in New York; that is, it relates to all sorts of local and private objects, such as corporations and the local affairs of cities and towns, which may be provided for by general laws or constitutional provisions, and to deal with which it is absurd to bring some three hundred legislators, elaborately selected by the machinery of the suffrage, to Boston for five months in the year. Cut down the control of the Legislature over all this business as much as possible, and one session in two years will be ample to transact all the business which arises. Such has been the history of biennial legislation in Illinois, and, we believe, in every State where it has been fairly tried.

We have before us the Massachusetts Acts and Resolves of 1896, and it is only necessary to turn over the pages to see how few of the measures passed are laws at all in the sense of general rules affecting the conduct of the community. An act, for instance, to authorize the city of Chicopee to make a water loan of $45,000 is called a law only because it is passed by the Legislature, and the same thing is true of an act to authorize the Berkshire Cotton Manufacturing Company to increase its capital stock, and an act to authorize the First Unitarian Church in Peabody to increase its membership; all of which statutes we find at random on a single page. One object of a legislature in theory is to protect the public against misuse of governmental power, and the real reason why our legislatures are so wonderfully busy is that instead of doing this they are occupied in using governmental power to make grants, promote jobs, and interfere in local concerns in which the public at large has little or no concern; and control over which, experience shows, can advantageously be withdrawn from the Legislature altogether.

The defeat of Lord Salisbury's Government in the House of Lords, on some clauses of the Irish Land bill, is a political event of capital importance. It must be said that it has its comic aspects. The Lords appear to have taken seriously Lord Salisbury's solemn assurances, apropos of the Home-Rule bill, that they were an independent legislative body, with revisory powers which it was their bounden duty to exercise. Very well, said their lordships, we will exercise those powers on your Irish Land bill, especially as it happens to hit our own pockets pretty hard. The vote that beat the Government was really a vote of landlords against a bill designed to impair their existing legal rights and profits. Party loyalty went down before private interest. Politically, the effect cannot but be bad for the Lords. Tory voices will now be heard agreeing with Liberal that the upper house stands for but a class interest, which it always blindly and selfishly defends against the popular branch. Conservative anger with the House of Lords for its action on an Irish bill is one of the sweetest revenges for Mr. Gladstone that the whirligig of time ever brought round. It must be said for the peers, however, that the Government gave them great provocation and a first-class opening by its management of the bill. This was not only weak and vacillating, but self-stultifying. The deadly parallel was never more deadly than when applied to the position and utterances of Mr. Balfour and Lord Salisbury in 1894 and in 1896. In Mr. Morley's bill, proposals virtually identical with those finally incorporated in the Balfour bill were denounced by the men who are now ministers as little better than confiscation. This was pointed out in debate by Mr. Carson, himself a Conservative. Only two years ago Lord Salisbury said: "We cannot consent to do what is called healing a sore and conjuring danger by flinging to those evicted tenants another slice of the attenuated rights of Irish landlords." An Irish peer, writing to the London *Times*, showed the bitter feeling of his class and forecast the result which has now arrived, when he said that the Government had made terms with the home-rulers "with a slice of our own estates and the transfer of our own rights."

AN ERA OF HIGH PRICES.

NOTHING is more remarkable in the present craze for inflation that is said to prevail in the agricultural regions than the oblivion of the experience through which the country passed scarcely thirty years ago. The Western States where the desire for high prices is now most urgent, were then to a large extent unsettled, but the Southern States in the main were in their present condition of development, and very many of their inhabitants must clearly remember how things were under a régime of much higher prices than are promised by the free-silver men—higher prices, in fact, than have anywhere prevailed since the days of the old Continental currency. Why we now hear so little allusion to this era of high prices in the Southern States, where schemes for inflation are most popular, we do not understand; but it may not be unprofitable to call attention to the subject, and Mrs. Jefferson Davis's memoir of her husband will furnish unimpeachable testimony for the consideration of Southern farmers.

They should read, with longing for the good old times, that by the middle of July in 1862 the farmers of the South were selling eggs, which now bring but 10 or 12 cents a dozen, for $1; potatoes, which are now so cheap, for $6 a bushel; chickens, 57 cents to $1 apiece; butter, 75 cents to $1 a pound; and cabbages, 50 cents to 75 cents a head. By November the fortunate farmers of those days were getting $15 a barrel for their corn and $4.50 a bushel for their wheat. In February, 1863, prices had risen to a figure that must fairly make the modern farmer's mouth water. Chickens were then $12 a pair, and bacon $8—not a barrel, but a pound! But in 1864 wealth "beyond the dreams of avarice" or of the wildest advocate of free silver was pouring in on the farmer. Flour then brought $300 a barrel; a turkey would fetch $60; white beans sold for $75 a bushel, and milk $4 a quart. By 1865 the amount of money that a farmer could obtain for his products was almost incalculable. He could name his own price, and the supply of money was inexhaustible. Never before had the farmers of this or any other country had so much money in their pockets. In fact, their pockets were not large enough to hold it, and it was said that people took their money to market in their baskets, and brought home their purchases in their pockets.

For some reason, however, the farmers did not seem to be very prosperous. They are notorious grumblers, it is true, and always complaining about something, and this time it was the quality of the money. So far as quantity was concerned, nothing was left to be asked for; but when they got cheap money they found they did not like it. They began to see that money in itself was of no use to them except as they could buy things with it; and Mrs. Davis tells us what the farmers had to pay for what they bought. If they wanted coffee for breakfast, they could get it in 1862 for $4 a pound; if they fancied a good cup of tea, they could be accommodated at from $18 to $20 a pound. If they wished to sweeten these beverages, sugar could be had for $20 a pound. If a farmer drove to market, he could have his horse fed for $5, or kept for a day for $15. A few months later he could get a pair of boots for from $100 to $200 a pair; and if for any reason he wished to economize, he could get his old boots tapped for $50. If, on the other hand, he preferred to enjoy his money, he could spend it like a lord by getting a dinner at a restaurant, where a plate of soup cost $1.50, roast beef $3.50, fried oysters $5, a cup of coffee $3; whiskey, however, being only $2 a drink. But every one knows that it is cheaper to be sociable in dining, and nine Confederate soldiers had a comfortable dinner together for only $631.50.

Soldiers, however, are notorious spendthrifts, and probably it would do them little good if money were made as abundant as water. Such at least would appear to be the case from the following extract taken by Mrs. Davis from Col. Miller Owen's 'In Camp and Battle with the Washington Artillery':

Travelling expenses of an officer of artillery en route from Richmond, Va., to Augusta, Ga., March and April, 1865:

March 11th, meal on the road	$20 00
March 17th, cigars and bitters	60 00
March 20th, hair-cutting and shave	10 00
March 20th, pair of eye-glasses	135 00
March 21st, candles	50 00
March 23d, coat, vest, and pants	2,700 00
March 27th, one gallon whiskey	400 00
March 30th, one pair of pants	700 00
March 30th, one pair of cavalry boots	450 00
April 12th, six yards of linen	1,200 00
April 14th, one ounce sul. quinine	1,700 00
April 14th, two weeks' board	700 00
April 14th, bought $60 gold	6,000 00
April 24th, one dozen Catawba wine	900 00
April 24th, shad and sundries	75 00
April 24th, matches	25 00
April 24th, penknife	125 00
April 24th, package brown Windsor	50 00

Strangely enough, from the cheap-money point of view, these high prices did not induce the farmers to bring forward their crops to market. Nearly everybody seemed to be miserably poor; many came near starving; some did starve. People parched sweet potatoes and corn and rye as a substitute for coffee; women wove cotton cloth for blankets, and sewed up coverings for their feet out of old carpets. "In Gen. Lee's tent, meat was eaten twice a week. His bill of fare was a head of cabbage boiled in salt water, sweet potatoes, and a pone of corn bread. When he invited an officer to dinner, he had, to his astonishment, four inches of middling; every one refused, from politeness, and the servant excused the smallness of the piece by saying it was borrowed." And yet it was said that Virginia alone could have fed the army had the gold standard been maintained.

But there was nothing strange about it. The farmers very soon found out by experience that if they sold their produce for cheap money, they could not buy enough with this money to live on. Prices were rising all the time; if they kept their corn and pork, they would get more money for it, and yet this money would all the time buy less and less. If they tried to save the imaginary wealth which poured in on them, they found it impossible. The longer they kept it the less it was worth; and after a hundred dollars of it came to be worth less than one dollar in gold, it became practically waste paper. This is the experience which the Southern Populists are determined to repeat, and which the Southern Democrats seem disposed to aid them in repeating; for if any one supposes that the demand for inflation will stop with the free coinage of silver, he ignores all history. Let this measure pass, and such demoralization will follow as will make it a desperate struggle to avert irredeemable paper.

CREDIT INSTRUMENTS.

FEW things are better known to the limited class of students of finance than the relatively small part borne by metallic money, or by metallic and paper money together, in the business transactions of the world to-day. Yet few things are so little understood by the public. Among the letters of inquiry which we are receiving from day to day is the following:

> "I have heard it asserted, in a discussion regarding the silver question, that were the combined money of the world, meaning gold and silver, placed in one huge pile, and a pro-rata distribution made of it, the share of each inhabitant of the earth would barely be one cent. Can there be any truth in this? What is the actual proportion of real money to the earth's population?"

This is a perfectly proper question, but it happens that we cannot answer it. Nor can anybody do so, since the population of large parts of the world is not known and the amount of gold and silver money in the world is not known. Independent conjectures on both points have been made by persons of repute, based in part upon statistics, which would lead us to assume that the population of the world is about 1,200,000,000, and the amount of gold and silver money about $6,000,000,000, which would be about $5 per capita. On the other hand, we must remember that in Central Africa and in Central China the people do not use gold and silver at all, or very slightly, and consequently that the amount apportioned to them should be cast out of the reckoning, thus swelling the per-capita allowance of the remainder.

All this is more curious than instructive. We allude to it as a proper introduction to another set of facts as to which very exact statistics are attainable, going to show the comparative insignificance of the quantity of metallic money in the world provided the amount be sufficient to serve the purposes of a touchstone, or, as we commonly say, a standard. It is necessary that the paper dollar, pound sterling, franc, mark, or whatever may be the unit of value in any country, shall be immediately convertible into the metallic thing which it promises to pay. When this condition is satisfied, the mere

quantity of those metallic things is of no consequence. It may be said in a general way that the higher the state of civilization in any country, and the more perfect its banking system, the smaller will be the percentage of metallic money needed to transact its business, and the smaller also the amount of circulating cash of all kinds.

Three times has a "census" been taken in the banks of the United States, to see what proportion of this business is done by means of money, and the kinds of money, and what proportion by credit. Paper instruments of all kinds are credit instruments, but the object of the census in each case was rather to find out what proportion of the business was done without the use of anything that passes by the name of money. The first investigation was made by the Comptroller of the Currency in 1881, the second in 1890, and the third in 1892. We will confine attention to the two last mentioned. The method adopted in each case was to ask each bank to make a careful enumeration of the kinds of things that it took in as deposits on a particular day. Two days were chosen in 1890, viz., the 1st of July and the 17th of September, and the results are thus recorded in the Comptroller's report for that year:

"The total receipts of the 3,364 banks on July 1 last were $421,824,726. Of this sum $3,726,605 was in gold coin, $1,352,647 in silver coin, $6,427,973 in gold Treasury certificates, $6,442,638 in silver Treasury certificates, $7,881,786 in legal-tender Treasury notes, $5,244,967 in national banknotes, $520,000 in United States certificates of deposit for legal-tender notes, $189,408,708 in checks, drafts, certificates of deposit, and bills of exchange, $4,391,177 in clearing-house certificates, $194,290,203 in exchanges for clearing-houses, and $2,138,022 in miscellaneous items not classified.

"Of the total receipts on that day .89 per cent. was in gold coin, .32 per cent. in silver coin, 1 52 per cent. in gold certificates, 1.53 per cent. in silver certificates, 1 87 per cent. in legal-tender notes, 1.25 per cent. in national banknotes, .12 per cent. in United States certificates of deposit for legal-tender notes, 44.90 per cent. in checks, drafts, and bills of exchange, 1.04 per cent. in clearing house certificates, and 46.56 per cent. in exchanges for clearing-houses, including miscellaneous items.

"It will thus appear that of the total receipts 7.50 per cent. was in coin and paper money, and the remainder, 92.50 per cent., consisted of checks, drafts, bills of exchange, etc., in which are included exchanges for the clearing-houses, clearing-house certificates, and miscellaneous items.

"The total receipts for the 3,474 national banks on September 17 last are stated at $327,278,251. Of this amount $3,702,772 was in gold coin, $1,399,991 in silver coin, $6,159,305 in gold Treasury certificates, $5,908 714 in silver Treasury certificates, $7,665,666 in legal-tender Treasury notes, $4,371,778 in national banknotes, $105,000 in United States certificates of deposit for legal-tender notes, $168,803,756 in checks, drafts, and bills of exchange, $2,428 834 in clearing-house certificates, $126 596,873 in exchanges for clearing-houses, and $135 562 in items not classified. The relative proportions of the several items are stated thus:

"Gold coin 1.13 per cent., silver coin .43 per cent., gold certificates 1.88 per cent., silver certificates 1.81 per cent., legal-tender notes 2.34 per cent., national banknotes 1.34 per cent., United States certificates for legal-tender notes .03 per cent., checks, drafts, and bills of exchange 51.58 per cent., clearing-house certificates .74 cent., and exchanges for clearing-houses, including items not classified, 38.72 per cent.

"By consolidating the several items into two classes, we find that 8.96 per cent. was in cash and 91.04 per cent. in checks, drafts, and other substitutes for money."

The census of 1892 was taken on the 15th of September, and the result was substantially the same, viz.: Gold coin .88 per cent., silver coin .41, gold certificates 1.03, silver certificates 1.97, greenbacks 2.58, Treasury notes .81, national banknotes 1.04, United States certificates of deposit .67, bank checks 46.79, clearing-house certificates .81, exchanges for clearing-house 42.83, miscellaneous .18. "Over 90 per cent. of all business transactions," said Comptroller Hepburn in presenting these figures, "are done by means of credit. When the public lose confidence, and credit is impaired and refused, over 90 per cent. of all business transactions are directly affected. It is easy to realize how impossible it is for the remaining 10 per cent. of money to carry on the business of the country without monetary stringency and financial distress. The refusal to extend or continue credit, the demand for payment in money, leaves the actual money or currency of the country, be it $24 per capita or $50 per capita, utterly powerless to supply business needs."

At the present time one of the great political parties of the country is attacking credit by threatening to reduce the standard of value nearly one-half. Having succeeded in paralyzing industry to a large extent and producing stagnation and loss of employment to thousands of workingmen under pretence of aiding the "debtor class," they charge that the banks have made money tight, and threaten their very existence—*i. e.*, they threaten to extinguish the 90 per cent. of credit machinery which goes hand in hand with the circulating cash of the country. Can anybody fail to see what a crash would come if this party could carry out its declared intentions?

FREE-COINAGE CATECHISM.

Q. WHAT do the free-coinage advocates commonly answer when they are confronted with the facts already stated in this Catechism? A. They reply that whether the gold standard of currency has helped the wage-earner or not, it has seriously hurt the farmer.

Q. What do they allege to be the average farmer's condition? A. They declare that, as a result of the gold standard, the farmers of this country have fallen into a desperate state of poverty.

Q. Is this true? A. It is not.

Q. How can you prove that it is not true? A. By the fact that farmers have been buying more farm land under the gold standard of currency and raising more crops. By the fact that farmers in many Western States are paying off their mortgages. By the fact that in the grain country, outside of parts of Kansas and Nebraska, farm lands are selling for much more than they brought half-a-dozen years ago. Finally, by the personal testimony of experts.

Q. How do you know that the farmers are buying more land? A. By the increase in acreage planted.

Q. Give the figures. A. In 1872 the combined acreage of wheat, corn, oats, barley, and buckwheat in the United States was 65,428,119; in 1894 it was 128,428,092; increase nearly 100 per cent. This year's acreage is not greatly changed from 1894.

Q. Would this increase have been possible if farming had been a losing enterprise? A. Certainly not. When people find that they are losing money in a business, they are apt to stop that business altogether. The last thing they do is to extend the same business to double its former magnitude.

Q. How do you know that farmers are paying off their mortgages? A. By the best of authority, the statements of the loan and mortgage companies which lent the money.

Q. Can you give any instance? A. One company, the New England Loan and Trust, lately published, in an official statement to its security-holders, the fact that $198,944 in farm mortgages were paid off during last March alone. Of this amount $92,664 was paid before the principal was due.

Q. How do you know that farm lands have risen in value? A. In Iowa particularly, we base our information on numerous deeds of sale made within the last year or two, showing advances of 10 to 20 per cent., within four to ten years, in the value of land sold.

Q. Have all farm lands risen in value? A. Not all.

Q. Where are the chief exceptions? A. In parts of Kansas, where the uncertain climate has made the original purchase a bad investment; in parts of Nebraska, where the rainfall is uncertain and where the opening of Oklahoma lowered the price of all neighboring farm country. These were the unlucky experiments, such as are found in every trade.

Q. What personal testimony have you as to farming conditions generally? A. Mr. Prime, the well-known crop expert, and a thoroughly unbiassed authority, lately said, in a published interview: "The farmers in the West were never so well off as they are to-day. They never had so much to eat and drink, or better clothes to wear, or owed so little."

Q. But is it not true that almost all the farmers are heavily in debt? A. It is not.

Q. How do you know they are not? A. By the statistics of the United States census.

Q. What do those statistics show? A. By the census of 1890, there were, in the six States of Iowa, Kansas, Nebraska, Minnesota, North Dakota, and South Dakota, 720,479 families cultivating farms. Of this number, 248,750 families had mortgages on their farms, 230,728

owned their farms free, while 241,001 rented their farms, and therefore had nothing to do with mortgages.

Q. What does this signify? A. It signifies that in six representative far Western grain States hardly one-third of the cultivators of farms have on their land any mortgages whatever.

Q. But are not the farmers in the South more heavily in debt than this? A. The proportion of Southern farmers under a mortgage is wholly insignificant.

Q. Give some figures. A. By the 1890 census, families owning farms free in Kentucky numbered 118,080; families owning mortgaged farms numbered 4,991. In Tennessee, farms owned outright were 103,346; mortgaged farms, 3,431. In Alabama the proportion was 68,798 to 3,131 in Georgia it was 71,116 to 2,491; in North Carolina, 101,321 to 5,202.

Q. Would not free silver coinage help the farmers to a larger export trade? A. Not unless they sold their grain abroad for a lower price than they sell it now, because they must sell in competition with all the world.

Q. But if gold was at a premium, would it not be a profit to the farmer to sell his grain abroad for gold, and then sell his gold here for depreciated silver? A. Everything he wished to buy with the depreciated silver—clothing, carpets, furniture, farm implements—would rise exactly as much.

Q. Would not the country's export trade be helped by free silver coinage? A. Our export trade has increased since the demonetization of silver, and since our adoption of the gold standard, more rapidly than ever before.

Q. How large was this increase? A. Since 1872, the annual exports of the United States have increased 134 per cent.

Q. In what products was this export increase largest? A. In products of the farm.

Q. Comprising what? A. Grain, cotton, tobacco, meat, live cattle, sheep, and hogs.

Q. What was the increase in these products? A. In 1872 we exported $354,906,637 worth; in 1878, $515,955,203; in 1892, $754,480,843.

Q. What do you conclude from all these facts? A. That, in spite of occasional setbacks, occasional poor harvests, and occasional mistakes in farm-land investment, the farmer in the United States has prospered under the gold standard, and will prosper under its continuance, and that all the "racket" to the contrary is made by the few who have failed and by noisy demagogues.

JAMESON CONVICTED.

LIVERPOOL, July 29, 1896.

ON the 29th of December last, Dr. Jameson started on his famous expedition. Yesterday completed the seventh month since then. In the meantime, he had been a prisoner of the Boer Government and by them delivered over to the British authorities; his raid had been examined into before a magistrate and he had stood committed; a grand jury had indicted him; and now, at the end of a seven days' trial, he goes away to jail, a prisoner under sentence of the law of his own country.

The first day of his trial opened ominously for him and his companions; for (whether by coincidence or design) the report of the investigating committee of the House of Assembly of Cape Colony was, on that very day, given out, incriminating Cecil Rhodes with the raid, and throwing new light on the deliberate nature of its origin; and later in the week—before the case of the subordinate had gone into the hands of a sympathizing and reluctant jury—the House of Assembly had heard their committee's report and condemned the principal. "His aim," said Mr. Schreiner, his friend and late associate, in moving for confirmance, "was high. I wish it had been a right one." This condemnation of Rhodes by the members of the Cape Parliament was surprisingly high-minded. There was something Brutus-like in their sorrowful determination to do exact justice upon their first citizen. The trial concluded in London yesterday was of a distinction no less eminent.

At the close of the inquiry before the magistrate on June 15, and on their subsequent commitment, the prisoners, Jameson, Willoughby, Grey, Robert White, Henry White, and Coventry, were promptly indicted by the grand jury for violation of the Foreign Enlistment Act; and the Attorney-General, in view of the remarkable character of the case—the second under the Act—demanded a trial at bar before the Queen's Bench Division of the High Court of Justice, the most august tribunal in England. The motion was granted, and the court took the precaution of assigning to the trial the Lord Chief Justice and the two senior puisne judges of the Queen's Bench Division, in order to obtain an authoritative decision in the first instance on the difficult points of law certain to arise. The place of trial was laid in the court of the Lord Chief Justice himself, who lately succeeded Lord Coleridge, and is perhaps still better known to Americans than he. Lord Russell of Killowen, as he is now styled, was, till his promotion to the bench, Sir Charles Russell, the leading English advocate; the champion of Parnell; the English counsel before the Bering Sea Tribunal. Baron Pollock is probably the first living writer upon English law, and his Harvard doctorate is scarce a year old. Mr. Justice Hawkins is also a jurist of eminence, who played a distinguished part in the prosecution of the Claimant. The prosecution was conducted by the Attorney-General in person, assisted by the Solicitor-General; and the defence was sustained by the four present leaders of the English bar—Sir Edward Clarke, Sir Frank Lockwood, Mr. Carson, and Mr. Gill.

The trial opened on July 20th. Sir Edward Clarke exhausted the first day of the session with a motion to quash the indictments, on grounds so technical as to be hard to follow, but to the general effect that they did not allege matters (especially those relating to the Enlistment Act) with sufficient particularity. The Court took time for counsel, as it did with every point of law raised thereafter, and upheld the indictments. As the Chief Justice said, the objections and the cases cited in their support properly belonged "to a time when the right and justice and the substance of the thing were sacrificed to the science of artificial statement." After this decision and on the second day of the trial, the jury was empanelled and sworn. It was a "special jury"—that is, one drawn from a carefully chosen panel of talesmen—but the swiftness of its selection was in wonderful contrast to the inquisition which a jury trial of equal importance would commence with in America. A juror asked to be excused because he was a personal friend of one of the defendants. "A very proper reason why you should be excused," answered the Chief Justice. That was all. The others were accepted without a challenge for any cause, yet the case could not have been a more notorious one.

The Attorney-General's opening was long, earnest, and convincing. He recited the now well known facts in the order of their proposed proof, adding that they were practically admitted by the defence, except as to the construction to be put upon them. He showed the necessity for a statute forbidding expeditions against a friendly state, and concluded by urging that it "was all the more incumbent upon persons who, like the defendants, were in the responsible position of *de facto* governors of the country—magistrates and administrators as some of them were—that they should obey and enforce the provisions of this statute," instead of combining to violate them. He then proceeded to his proofs, which, with no obstructive interruptions by the defence, and very little cross-examination, occupied nearly three days—a part of Tuesday and Friday and all of Wednesday and Thursday. The evidence was largely documentary, and the court became almost deserted while treaties, proclamations, orders in council, and other dulnesses were being read in order to establish the somewhat elementary proposition that the South African Republic was, in 1895, a friendly state, and the more technical one that Mafeking and Pitsani were places within the scope of the Foreign Enlistment Act. Others of the documents were more entertaining, if only as a tale worth a second telling.

At the close of the case for the Crown, the defence moved to dismiss, on the ground that the prosecution had failed to prove that the Foreign Enlistment Act was in force either at Mafeking or Pitsani, the two places from which the expedition started — a motion promptly denied, on the ground that the Act had been in force at the first place, and that, as all the defendants had been concerned in the fitting out of the expedition, it was immaterial whether the Act had been actually in force in the latter place or not. (This question, whether the Act had been in force at Pitsani, was subsequently put to the jury by way of precaution and answered by them affirmatively.) Under the English law, the defendants were precluded from testifying in their own behalf; but even had it been otherwise, the facts put in evidence by the Crown were incapable of rebuttal, and almost of palliation. So the defence did not attempt to make a case, but only to modify the harshness of facts which they had to admit proven. They could have called members of the expedition not under indictment, as the Attorney-General pointed out, but they contented themselves with going to the jury on the prosecution's evidence and two very ingenious speeches of counsel, who drew a vivid picture—quite unsupported by facts—of a "peaceful expedition," marching secretly in order to avoid trouble, with benevolent and "pure motives," to the help of those "striving to be free." "Would any men of the defendants' military experience dream of starting out with but five hundred men to attack the Transvaal Repub-

lic?" This plea was made before a crowded court on the second Monday of the trial, by the ablest counsel at the English bar, and addressed to a jury anxious to believe; but the Attorney-General's crushing rejoinder was unnecessary: there was no truth behind all this sentimental eloquence.

The Lord Chief Justice contemptuously brushed it aside when, on the following day, after due reflection and consultation with his colleagues, he charged the jury, in terms remarkable not only for condensation of tedious and multitudinous detail, but for the relentless way in which he held the jury up to their duty, telling them that the Court had already accepted responsibilities still more onerous. Such a charge in such a case was worthy of the greatest traditions of the English bench. Public opinion, even as expressed by those newspapers which shrink a little from certain of its allusions, more flattering to the Boers than pleasing to Englishmen, seems unanimous in this view, for a judge less able and less masterful might have allowed the case to end in an impotent failure of decision, familiar to us in certain semi-political trials. Beginning with the observation that "in most criminal charges the consequences of the criminal offence usually end with . . . the acts that constitute the crime," but that the consequences of such an offence as this no one might foresee, the Chief Justice charged the jury that the facts of the case were as uncontroverted as they were notorious. He indignantly scouted the defence's continued plea for the raiders as rescuers (showing that quite up to the date of departure the column's destination was in doubt as between Pretoria and Johannesburg) or as peaceful evangelists of reform. The expedition was a "filibustering raid," he said, "even if it was not aimed at overthrowing the Republic, or was prompted by philanthropic and humane motives, or aimed at securing some reform of the law"; and whether it proceeded "by a show of force or by actual force." "If these things were done by the authority of the Queen . . . it would be an act of war." He then laid down the law as to the Act with the greatest strictness, making it effective to enforce a neutrality not secured by the law of any other country. So it is henceforth to be a violation of the Act to fit out on British soil an expedition against any State, no matter whether it starts or not; nor whether its promoters were on British soil while organizing it; nor whether its members took employment in it without responsibility for its organization.

At the close of this tremendous application of the law to the uncontroverted facts, there could be but one outcome to the case. Nevertheless, the Court very shrewdly put to the jury, as a preliminary to the usual demand for a verdict, three questions, which could be answered only in the affirmative: Had any of the defendants been engaged in the preparation of a military expedition against a friendly State? had any of them abetted in it? had any of them been employed by it? The foreman of the jury, shirking the inevitable, asked if the jury might be excused from answering these questions; but the Court's guarded permission left the jury no more comfortable solution, so, after an hour's deliberation, they concluded to answer the questions, and did so in the affirmative as to all the defendants, adding that "the state of affairs at Johannesburg presented great provocation." That, said the Chief Justice, is a verdict of guilty; and he directed the jury so to find. "We have answered your Lordship's questions categorically," replied the foreman evasively. The Court was repeating the direction when Sir Edward Clarke interposed—perhaps remembering the success of Erskine's famous interruption on a somewhat different occasion. "I cannot allow it, Sir Edward, I cannot allow it," said the Chief Justice, with great warmth. Then, addressing the jury: "Gentlemen, I direct you that in point of law that amounts to a verdict of guilty." The foreman said apologetically that they had answered the questions, but could not agree on a verdict. With a sternness seldom used even in English courts, the Chief Justice repeated his direction, saying that such weakness was unmanly; and after a further consultation, the jury most reluctantly obeyed him.

There was a great sensation in the court when the trial ended, for the fashionable set and the people of the music-halls had deluded themselves into expecting something better, and were deeply disappointed. The defendants for their part bore themselves like men. They directed their counsel not to contest the case further, but to ask for sentence, which was done, and the Chief Justice pronounced the sentences with much gravity. They were severe, but not the maximum provided in the Act—Dr. Jameson, fifteen months' imprisonment; Sir John Willoughby, ten months'; Hon. Robert White, seven; Col. Grey, Col. Henry White, and Major Coventry, five each. The imprisonment is to be without hard labor, but the sentence forfeits all the prisoners' royal commissions. While the commitments were being made out, the prisoners were allowed ample time to bid their admirers and friends good-bye; and in the early evening they were hurried away to Holloway Gaol, hearing with unconcealed annoyance the last demonstration of the street in their favor.

Now that treason hath not prospered, it has become all of a sudden possible to call it treason. The newspapers, which very properly did not comment on the trial until its conclusion, approve its conduct and its result unstintedly. Without withdrawing all sympathy from the raiders, the raid itself is now unsparingly condemned. "Criminal," says the *Times;* "mad," says the *Telegraph;* "disastrous blunder," says the Tory *Standard;* and all the other papers acquiesce, even taking a certain pleasure in the Roman justice meted out to men so prominent—in "our ability and willingness to lick our own dogs," as an M. P. puts it in an interview. Wonder of wonders, there is hardly a murmur against the wicked Krüger; nay, it is even suggested in some quarters that it would be like that wise and clement old man to urge the pardon of these fine fellows, now that the law has been vindicated! Such a reversal of public opinion in a space of time so short is most unusual; and without robbing Krüger of credit for bringing it about, we cannot but admire the incorruptible energy of the Government in punishing such powerful partisans of their own for a crime so popular. At a time when character and morals seem more than ever divorced from public life, such manliness revives belief in representative government. L. McK. G.

MARSHAL CASTELLANE.—III.

PARIS, July 30, 1896.

CASTELLANE spent the greater part of the end of the reign of Louis XVIII. in Spain, where he commanded a brigade of the French army of occupation. He seems to have had a good understanding with the inhabitants, and preserved the strictest discipline among his troops. He was recalled abruptly at the end of 1827, and his Journal becomes interesting as precursive of the Revolution of 1830. Castellane saw clearly how Charles X. was making himself unpopular. He entered openly the ranks of the Constitutional Opposition, and in his department voted for its candidates. He began to pay court regularly to the Duke of Orleans. The ministerial changes of that period have lost their interest for us, and Castellane is almost unreadable in this part of his work. He is bitter against what was then called the "Congregation," the priest party, which actually led Charles X. to the abyss. The King believed only in the Congregation; he worked in secret against his constitutional ministers. "The reunion of the Duke d'Havré is composed of congregationists, of bishops, of the court party; it is the assembly of the *ganaches* and the short-sighted men." Polignac's accession to power was the triumph of the Congregation; it was also the beginning of the end.

Charles X. had entered upon a phase of religiosity which blinded his eyes to realities. When Admiral Duperré took leave of him in setting out on the expedition to Algiers, he explained the difficulties of the undertaking. "I think," said he, "that I must make this explanation to your Majesty, in order, if any misfortune happens, that the commander of the fleet or the commander of the expedition may not be unjustly blamed." "Admiral," answered the King, "I keep in my heart my brave soldiers and sailors; you may be sure that if the misfortunes you speak of should happen, I would not forget my subjects in my prayers, and you, Admiral, in particular; we should meet again in a better world." The Admiral was strangely surprised; he did not expect this royal "De profundis."

Castellane was at the baths of Mont-Dore when Charles X. made the famous *ordonnances,* which caused a revolution. "The papers have brought us the deplorable ordinances of July 25, which abolish liberty of the press, dissolve the newly elected Chamber of Deputies, and convoke another chamber which will be elected according to a new electoral ordinance; in one word, the Constitution and all the laws are violated. The dynasty is putting itself in peril for the fun of the thing. . . . Everybody here is indignant." The news of the Revolution soon arrived at Mont-Dore; Castellane returned to Paris, and found at Clermont-Ferrand the National Guards organizing themselves as they did all over France. On the 7th of August he paid his first visit to the new King, Louis Philippe. "I have seen the King, who told me that he was conscious of having done nothing to arrive at power. This is in harmony with words long ago attributed to him: he did not wish to dethrone Charles X., but, if the crown fell to the ground, he would pick it up. The new Queen was joyous, the Duke de Chartres radiant; he gave his hand to all the officers of his regiment, saying, 'On a day like this, we must shake hands.'" Castellane employed himself chiefly in protecting the regulations of the army; he inspected a great region of France, and maintained wherever he went the discipline which had been somewhat shaken immediately after the Revolution. Some regiments had dismissed unpopular officers; noncommissioned officers had been appointing officers by vote. Castellane put an end to such things throughout his command.

When General Belliard announced in Vienna to the Emperor Francis the change which had taken place in France, the Emperor said to him: "I will recognize Louis Philippe, but it is bad for him not to have legitimacy on his side; it is a great support for a throne. Charles X. deserved his fate, as he was not faithful to his word. A sovereign must ponder well before making concessions to the people; once made, he must submit to them. . . . Young Napoleon is a distinguished young man; I know that I could with him do much harm to Louis Philippe, but such a thing is far from my mind. I have had him brought up as a stranger to France." We find much in the Journal about the difficulties of the new Government, about Lafayette, who was commander-in-chief of the National Guards, and who had assumed somewhat the position of a Warwick; about M. Thiers, who was at the beginning of his extraordinary career. To many people this part of the Journal will be very interesting, as it shows us the "nouvelles couches" which had come into the ascendant in society—the "couches bourgeoises," which took the place of the Legitimists of the Faubourg St.-Germain. Castellane is rather severe in his judgments on men and women, but I have never found him inaccurate as to the facts, of which I know something.

Placed at the head of the first brigade of a division of infantry at Valenciennes, Castellane was naturally called to take part in the campaign in Belgium in 1832. The French army, which had to protect the new kingdom, was placed under the command of Marshal Gérard. The frontier was crossed on November 15, 1832, and the army took the road to Antwerp, which was still in the hands of the Dutch. Castellane notes that the French troops, though they came in the character of liberators, were received with little enthusiasm. "We received the coldest possible reception passing through Brussels; the enthusiasm was limited to a few boys, who escorted us for several kilometres. We were at Malines at five o'clock in the evening. The town is beautiful. It was Sunday, and there were many people out. There was no cry of any sort." Antwerp was defended with the greatest obstinacy by General Chassé, a soldier of great experience, who had made many campaigns under the Empire. The French princes took a brilliant part in the operations of the siege, which was very protracted. "The Duke de Nemours was in the trenches, covered with the dust of a shell; he did not make a motion. The two Princes are very brave. . . . I found in the trenches the Duke of Orleans, with Generals Baudrand, Flahault, Marbot [the Marbot of the Memoirs], and several others. I asked him not to accompany me to the trenches, and told him that I knew them well; he replied that it was his duty, and that he would fulfil it. . . . The fire was hot; the Prince got on the banquettes to look at the city with his glass. The Duke of Orleans exposed himself constantly, more than was necessary." Castellane, though he scolded the Prince for his excess of intrepidity, evidently conceived a great admiration for him. The Prince had very fascinating manners, and it is evident that he became Castellane's idol; he took an extraordinary interest in whatever related to the army, especially as he believed that, sooner or later, liberal France, the France of July, would have to make war against a new coalition. Castellane, from the time of the siege of Antwerp, looked upon the Duke of Orleans as the man, the King of the future; he tied his fortunes to him. He little knew at Antwerp what the future had in store for the brilliant Prince, full of courage and of patriotic ardor.

The siege of Antwerp, in which Castellane took a very honorable part, ended in the capitulation of Gen. Chassé and his Dutch troops. He was appointed lieutenant-general on his return to Paris. Some time afterwards he was placed at the head of the Division of the Pyrenées-Orientales at Perpignan, where he reëstablished order in the town and discipline in the garrison. He remained nearly fourteen years at Perpignan, where he had hoped to stay only a few months. From time to time he revisited Paris, where he always made a collection of anecdotes. In all his journeys he relates with care his interviews with the King. In 1836 he urged the King to make an expedition into Spain and to occupy Barcelona and Catalonia, so as to have more influence in the peninsula and to defend France against revolutionary contagion. Louis Philippe answered: "Whether Don Carlos or the Republic rule in Spain, I will not meddle with it"; and he spoke of the sad situation of Spain, and the impossibility of governing with a king in the cradle and a queen on the throne. He dilated on the advantage which France had of having a governing king, saying that the Périers and the Broglies would have been nothing without him. "The King speaks with facility; he is eloquent and remarkably well informed."

It was mortifying for Castellane to form a succession of regiments in his division at Perpignan, and to see them led to Algeria. His work, he says, was that of Penelope. Changarnier, Canrobert, Forey served under him; to have served in Castellane's division was a sort of brevet. Castellane was the first who gave detailed notes every year on the officers of his division; he professed to have the faculty of picking out the best men; his notes were written in a very racy and original style. Castellane was only once sent over to Africa; he was designated to command the province of Oran, and received the submission of some Arab tribes, but he made no important expedition, returned to France, and was again sent to Perpignan. The conquest of our African colony was really made, assured, and completed without him, and he saw by degrees officers who had been under his orders rise in the army and become its pride and hope.

He was admitted to the House of Peers at the beginning of 1838, and in consequence had to remain oftener and longer in Paris. His Journal is a not uninteresting document on the state of society in France between the years 1838 and 1848, a period on which not much has been written of an anecdotical character. There are in this part of the Journal many touches which could be used to advantage by a historian, concerning the King, the members of his family, the ministers, the public men of the day, the leaders of fashion, the members of the Opposition, the generals. M. Thiers is generally treated with severity; but the same may be said of almost all the parliamentary leaders of the time.

The fourth and last volume of the Journal extends from 1847 to 1852; it abounds in anecdotes on French society; it is also interesting in a political sense, as it describes accurately the state of France after the Revolution of 1848, the rule of Cavaignac, and the Presidency of Prince Napoleon, the Coup d'État of December, and the establishment of the Second Empire. Castellane, during this troublous period, remains what he has always been: he is consistent, he does not follow any particular political doctrines, he continues faithful to *one* thing, the army, its traditions, its discipline, its regulations—I might add, its uniforms, as for him the uniform is the symbol of the army. He was fortunate enough to preserve order in the great city of Rouen, where he had been sent in 1847, during the unsettled days which followed the Revolution of 1848; he was afterwards sent to Bordeaux and to Lyons. He showed himself constantly in uniform amidst the most revolutionary quarters of Lyons; he obliged all the officers in the army of Lyons to wear their uniforms at all times; he kept his troops in constant movement, he imposed the strictest discipline on them. His pluck, his thoroughness, in the end made him quite popular in Lyons, though he was openly hostile to the revolutionists. The Prince President used this popularity for his benefit; he could find no adversary in the ancient aide-de-camp of the Emperor Napoleon. Castellane was appointed Senator in the new Senate in February, 1852; he received the baton of a Marshal of France from the hands of Napoleon III., at the time of the marriage of the Emperor with Mademoiselle de Montijo. A few weeks before, he wrote in his Journal: "This young person, who is reported to be twenty-six years old, is tall and very agreeable. They say that she has touched the heart of the Emperor. She is a grandee of Spain. She has a bad cold." And so the Journal runs on to the finish. Castellane at last became like the mere figurehead of a ship; his colleagues, Canrobert, MacMahon, fought the battles of the Empire. They also saw the last of its triumphs. Castellane was fortunate to the end; he did not see the third invasion of France.

Correspondence.

THE FARMER AND FINANCE.

To the Editor of The Nation:

Sir: The eagerness and unanimity with which the farmers of the South, the Southwest, and the West embrace the free-silver heresy is an interesting phenomenon, viewed from its historic and sociological side, as well as painful when viewed in its economic aspect. Roughly speaking, it may be said that the craze has developed chiefly in those regions which are in the borderland between the centres of civilization and the frontier. Historically, it may be said that the farming classes of the South have always lived in an atmosphere of credit, from the old colonial times down to the present. The fertility of the country, the presence of negro slaves, and inherited traits from their English landholding ancestry may help to account for this, but the fact cannot be disputed. As regards the emigrants from the Northern States who settled in the West, the conditions were different. The sterility of the New England soil produced the proverbial New England thrift, though this was true in a less marked degree of the settlers from New York and Pennsylvania. But in passing to the unoccupied West and occupying its fertile lands (had almost for the asking), the necessity for the small economies, thrift, and watchful prudence necessary in older communities, disappeared in a large degree. Those were the halcyon days for the squatter, the prospector, the speculator, the emigrant farmer. "Everything went"; it was "Take your chances" and

"Hurrah, boys!" Money was made fast and easily. Broad acres were had for a song; good crops were raised, and sold at good prices; the financial atmosphere was one of joy, hope, exuberant expectation. Farmers launched out widely and wildly, bought expensive machinery, often beyond their needs, often beyond their ability to utilize. Loans were easy, and many farmers contracted debts when, economically, considering the circumstances, there was no real need of more capital; nor were such loans always used as capital.

In the meantime the means of transportation were improving, new lands were coming into competition with those recently settled, all the old lands were taken up, while the farming lands abroad poured their produce into the world's market, till the Western farmer found his produce gave him less money, his creditors desired to realize on their loans, and, to make a long story short, the "boom" collapsed, as all booms have a way of doing. The farmer was pinched for money—for ready money. Some people had money and he had not; he was amazed, sore, envious. He could not understand that his boom was gone, and at the same time other people had ready money. Now the Western farmer generally has very little ready money on hand; unlike the dweller in cities, he is not continually handling cash, for rent, for car fare, for gas bills, for groceries, etc. He gets his money in a lump at harvest time, and runs "tick" at the country store till his produce is sold. Hence money, cold cash, is different in his eyes from what it is in the eyes of those who habitually handle cash. To the Western farmer there is something mysterious about a bank, a mint, a clearing-house, and all the machinery of exchange. Nor does he understand that the loans which he got in former years were the aggregate of small savings and scrapings of persons of thrifty and prudent dispositions. He sees only the lump sums sent out from the East in the hands of the agent of some large Eastern concern, which held this money in trust for the original savers. Hence he gets erroneous ideas about capitalists and money in general.

A mechanic or wage-worker in the towns, on the other hand, gets his pay every week or month, and he is continually learning to make both ends meet; he balances accounts every week or month; he learns that he must make his income tally with his expenses twelve or fifty-two times a year, or be ruined. The farmer balances his accounts once a year, actually does not know in advance what his income will be, and, moreover, he has his farm as an asset, which the mechanic has not. And, too, the farmer, isolated from contact with human society, is but a child in economic matters. When he gets his money he is like a child who has a dollar to spend—it burns in his pocket till it is spent. We will suppose that he annually pays up his grocery and other bills with the proceeds of his wheat, corn, and hogs; he then has a few dollars left, which do not last him through the year. And then comes the rub—he has no cash, no money. The boom times of old have gone; no one is begging him to take money, and he gets less money for his produce. "Money, money, money" is the cry. Other people, who have no land, no horses, cows, pigs, sheep, have money for current expenses, and he has none. He can't understand it: he has property but no money. On comes the silver man and says he will change all that. Money shall be plentiful again, he will restore the old boom times, and there shall be plenty of money in the country—lots of it, money to burn! The poor simple farmer "bites" at this scheme as he "bites" at windmill patents, gold-brick schemes, tin chest rackets, green goods, and in fact anything, from patent medicines to Hungarian oats. There seems no limit to his "biting."

Now the wage-earner in the towns must pay his rent or be turned into the street; he must pay his grocer or starve; and he must pay cash for his ready-made clothes. He has no farm to fall back on. His assets are a few articles of furniture and a dollar or so in a bank or coöperative association. But the point is that he is continually balancing accounts and has actually nothing to fall back on except his own savings. With the farmer (the squatter farmer) it is different. He has no rent to pay; he produces the means of subsistence and can't starve, and his wife can sell enough eggs and butter to buy salt, tea, sugar, coffee, and cloth enough to keep the family from violating the laws of decency. And, most of all, the farmer has his farm to fall back on, and that farm cost him almost nothing—a gift from the Government. That is, the Government practically donated to the farmer the means of running into debt. It would have been difficult for a government to hit upon an expedient better fitted to raise up a class of imprudent, shiftless debtors than our land system has done. Perhaps the worst feature of the whole affair is the conviction in the farmer's mind that he is as good as any other man, or a little better, and is born with the same amount of knowledge of finance and political economy that any other man has at present, by whatever means acquired. If he doesn't know, he doesn't care. That is exactly what Andrew Jackson's followers said when it was proved that their candidate was wofully ignorant of the duties and responsibilities of the office to which it was proposed to elect him. That same feeling decides half our elections.

It is easy to understand how it came about that the farmer is pinched financially, and to understand his nature and disposition; but the most discouraging feature to a believer in democracy is the farmer's utter disregard for and willing, conscious ignorance of the experience of other nations in the same field—the unwillingness to listen to the counsel of men who have devoted years of study to the very questions that the farmer is trying to solve in his own blundering way. A surprisingly large part of American voters have never heard of the experience of other nations with silver, and do not want to know; and, if told of it, would repudiate the idea that America could learn from Europe or South America. And yet our national honor, integrity, if not very existence, depend on the decision of these same agricultural classes. This is Jeffersonian Democracy with a vengeance.

E. L. C. M.

Chicago, July 31, 1896.

THE THRIFTY FARMER.

To the Editor of The Nation:

Sir: In your issue of July 30, under the heading "The Plight of the Western Farmer," you make some very rational comments upon a letter which you say was published in the *Evening Post*—which letter, I judge, must have pictured the condition of the Western farmer as deplorable.

I live at the county seat of Jackson County, Missouri, and have lived there for more than thirty years; therefore I personally know many of the farmers of the county. I believe I can assert, without any fear of contradiction by honest and competent observers, that all of them who have a fair degree of intelligence, and are industrious and economical, are prosperous. It is, or should be, a matter of common knowledge that many of the Western farmers are ignorant and thriftless, without any disposition or power to adjust themselves to the modern changed conditions of farming. Since the propaganda for free silver was begun, it is the common practice of silver cranks and demagogues to descant upon the condition of the farmer, and to draw lurid pictures representing that condition as one of steadily increasing poverty.

I recently had occasion, as a lawyer, to examine the title to forty acres of land which a farmer of this county was buying at $50 per acre, as a good investment for his surplus capital. I had the following conversation with him:

Q. You must be doing well farming to be able to buy more land? A. Yes, I am making money, and have been for the last five or six years.

Q. Make this money on your farm? A. Yes.

Q. What do you now make the most money on? A. Sheep.

Q. Why, I thought there was no money in sheep since the tariff was taken off of wool? A. That is all stuff. Wool is the smallest part of it. Make some more money when wool is high, but make plenty when it is low. Sold my last wool at 10 cents a pound, but got $2 50 each for lambs.

The man is just a plain, ordinary, hard-working farmer.

William S. Flournoy.

Independence, Mo., August 2, 1896.

HEALTHY SYMPTOMS IN CALIFORNIA.

To the Editor of The Nation:

Sir: I notice, in your issue of July 23, the opinion that the "masses of the Democratic party" have no financial convictions, and that their vote will go almost entirely to Bryan unless another Democratic candidate is set up.

In our small rural community, which is at almost the greatest possible distance from Wall Street, there have already come forward a number of Democratic farmers who have declared their intention to vote for McKinley, and some of them have joined the newly formed McKinley Club of the valley. These men formed their intention to withdraw their support from the Democratic ticket, in case of the adoption of a free-silver platform, before the Chicago convention had acted. This decision was made as the result of their private reflections, or of the influence of one on another; and, while none of them are students of financial science, they have at least the conviction that the success of the silver people would be a bad thing.

It is impossible to estimate the force and volume of the many currents of thought and feeling that may act on our people between now and election day, for the subject of contention cannot be clearly grasped by the general voter, and he is therefore much at the mercy of whatever arguments may forcibly attract his attention. The perplexity of the situation will keep a good many honest men from voting, because they cannot tell what is right. But I think that the number of quiet voters among the Democratic masses who will transfer their ballots to McKinley on account of their disapproval of the Chicago programme will amount to an important percentage, and I have strong hopes that California may be

gained by this means to the support of sound money.

Our "masses" are not homogeneous, and there is apparent this year much activity of individual opinion and of purpose to vote independently of party direction.

E. S. THACHER.

NORDHOFF, VENTURA CO., CAL., July 31, 1896.

SILVER AND THE FORCE BILL.

TO THE EDITOR OF THE NATION:

SIR: Conversation with men from Virginia and other Southern States satisfies me that many McKinley votes from Democrats can be made by proper assurance, from authorized sources, that the South need not dread a renewal of the Reconstruction and Force-bill horrors. If the attention of the McKinley managers or of McKinley himself is not called to the importance of such assurance, the absurdities of the silver heresy will not weigh with men who honestly, if gratuitously, dread the possibilities of a recovered domination by a too long disappointed party, whose history reads to them as a record of outrage upon their liberties.

As the importance of the issue demands that the question should be discussed from every point of view, with arguments addressed to every form of opposition or misgiving, I hope you will not overlook the claims implied by this aspect of the situation. Your teachings on the financial significance of the impending election are invaluable; but they need, to meet the situation in full, some patient instruction and encouragement as to the present relations of the two great parties to the various sections of the country—especially to the South.

Yours respectfully, CHRYSOSTOM.

VIRGINIA, August 7, 1896.

THE TWO CABINETS.

TO THE EDITOR OF THE NATION:

SIR: Many "Sound-Money" Democrats will, in November, vote for Mr. McKinley because of the relative positions of the Democratic and Republican parties on the money question. There is another question which, it seems to me, is an additional reason for supporting him, but which has not as yet received the attention it deserves. Mr. McKinley, if elected, will have at his command, from whom to choose his Cabinet, the ablest, safest, and most experienced men of his party. It is not to be supposed that he will ignore these men. Whatever objection, then, may be urged against him personally—and it must be admitted that he is not a strong man—one can with reason look for him to have wise counsellors, and therefore a safe administration.

Mr. Bryan, on the other hand, will have the least reliable, most unsafe, and most inexperienced men of his party from whom to choose a Cabinet. The strongest men among the Democrats are, without exception, so far as I now recall, in the "gold wing" of the party. Although some of these men are supporting the Chicago nominees, it is not for a moment to be supposed that Mr. Bryan will recognize them in making up his Cabinet or in filling important positions of any kind. The election of Mr. Bryan, then, would be to place the domestic and foreign affairs and the diplomatic service of the United States in the hands of inferior men—men whose declared belief is that "this country is old enough, big enough, and strong enough to go it alone; and we want the nations of the world—England especially—to know that we do not care a fig for what they think, say, or do; we shall do as we please."

With such a ruling spirit, Mr. Bryan's administration would be thoroughly unsafe, and it is not difficult to conceive of the complications that might arise should he be the occupant of the White House during the next four years.—Yours respectfully, G. S. W.

GREENSBORO, N. C., August 3, 1896.

CROWN POINT.

TO THE EDITOR OF THE NATION:

SIR: Mr. Ford's very interesting communication to the *Nation* of July 30, and its accompanying French account of Braddock's defeat, recalled to my mind the annexed contemporary English account of some facts connected with the more successful expedition against Canada until Montcalm checked for a time the advancing British at Forts Oswego and George. The account I send you was enclosed in a letter written by John Hardman of Liverpool, England, to the Duke of Newcastle. The original is in the British Museum (Add. MSS. 32,860 f 301), and is mentioned in the list of colonial manuscripts furnished the *Nation* last autumn by one of its London correspondents. Although the document does not contain the special information I had hoped to find in it (your correspondent having inadvertently stated that it was written at Newberry, South Carolina), still it may prove of some interest in connection with Mr. Ford's valuable material. B. J. RAMAGE.

UNIVERSITY OF THE SOUTH,
SEWANEE, TENN., August 4, 1896.

NEWBERRY Septem^{r} 1755.

We have just rec^{d} news from our friends at Crown point. The French Army consisting of five thousand French and five hundred Indians met our Army consisting of three thousand men at the great carrying place this side lake Sacrament about Sixty miles this side Crown point after a sharp and bloody engagement which lasted Six hours. We had killed one hundred and thirty men and Sixty wounded. Coll. Titcomb & fifty of his Regiment were killed and the first Cap^{t} of the Mowhawks. We have taken the french general who came from France this Summer, killed the Lieutenant General & his Aid du Camp, kill'd one thousand of the French & a great number of Indians kill'd & taken most of their Officers & entirely routed them.

We are reinforcing our Army every day & in twelve or fifteen days they will be eight thousand strong When no doubt we shall proceed to Crown Point & if a war probably to Montreal. We expect by this the Governour is at Niagara.

This account may be depended on. We have taken a french Brigantine in lake Ontario bound to Niagara.

WANTED—A NEWS CHRONICLE.

TO THE EDITOR OF THE NATION:

SIR: I find in my last number of the *Nation* reference to a number of important events of which I find no account in the other newspapers. And this is my constant experience. The *Nation* does not pretend to give the news of the day, but only to comment upon it. I take the weekly editions of two of the leading New York papers for the sake of getting the news, the facts as to what is going on in the world. But I don't get it. I had the same difficulty when I was living in New York and read the daily papers. This is partly because much of the important news comes by telegraph in scraps and fragments from day to day, and is never presented in clear and good form, but has to be picked out from a mass of unimportant matter which requires a degree of daily care and attention that a busy man cannot always give, partly because the prominent place in the paper is usually given to worthless trash, and the really important news omitted or packed away in fine print in obscure corners where it is apt to be overlooked; and partly because the political news is often garbled for partisan purposes.

Would it not pay if somebody would publish once a week a journal of contemporary history, in a form adapted for binding and preservation, containing an account of what is going on in the world, not only in American and foreign politics, but in science, art, literature, and other departments of human activity, arranged under proper heads in a clear and orderly manner, and with such explanations as might be needed to make it intelligible? It should leave out the murders, petty larcenies, elopements, and wife-beatings, and the guesses of Mr. This and Mr. That as to how the next election will go. It should be of the nature of serious history, intended to have a permanent historical and literary value. It would of course have to be written for intelligent people. Only such would care for it. Its circulation would therefore not be large; but then it need not be in order to pay. The news would cost nothing, and perhaps one man could do all the work. A few thousand subscribers would make it profitable. I for one would willingly pay for such a publication several times as much as I now pay for all the newspapers that I take put together. It seems to me that in the English-speaking world there must be enough people who feel as I do to make such an enterprise pecuniarily successful. I wish the *Nation* would undertake it.—Very truly yours,

HENRY T. TERRY.

TOKIO, JAPAN, July 12, 1896.

THE ART OF EASY MARCHING.

TO THE EDITOR OF THE NATION:

SIR: Your note in the *Nation* of July 23 on a new art of walking introduced by an officer in the French army recalls to my mind the fact that this method, which you describe as consisting "in not fully straightening up the leg at the moment when it is perpendicular to the ground, and in dragging out the leg that remains behind to its full length," is universally practised by the cargo-carriers of Central America when on a long march. I encountered this first in the Cuicuina district of Nicaragua. We had reached the head of canoe navigation, and were preparing for our journey on foot across the mountains. My wife and I started out alone upon the trail in advance of our *cargadores*, who had not yet arranged their packs. We had gone less than half a mile when we saw a half-breed advancing with a rapid gliding motion which was neither a walk nor a run. We thought he must be bearing important news from the interior, and questioned him eagerly, but he was only coming, he said, to help Don Juan, the guide of our expedition. Later in the day our men overtook us, all proceeding in the same fashion, heavily laden with luggage and provisions. Subsequently we constructed a saddle-chair in which my wife was carried on the back of one of these men, and her testimony was that the motion was absolutely free from jar, and that it was one of the easiest methods of transportation on land that she had ever experienced.

The traveller in these remote regions is com-

pelled, willy-nilly, to acquire this art of progression, or be dropped out of his party. The *cargadores* will walk no other way. It certainly is less fatiguing and more rapid. I have known one of these mountain porters to travel twenty miles in a day of twelve hours, carrying a pack weighing 100 pounds, the trail being obstructed with fallen timber every few yards, ankle-deep in soft clayey mud, and leading over mountains making an aggregate ascent of not less than 3,000 feet in the distance covered, and yet he showed no sign of fatigue, and was ready for equally arduous work on the following day.

COURTENAY DE KALB.

SCHOOL OF MINES, ROLLA, MO.

Notes.

CHARLES SCRIBNER'S SONS will be the American publishers of John Murray's new issue of Byron's works in prose and verse, edited by the poet's grandson, the Earl of Lovelace. They announce also Andrew Lang's biography of Lockhart; 'The Rogue's March,' by E. W. Hornung; and 'Mrs. Cliff's Yacht,' by Frank R. Stockton.

Houghton, Mifflin & Co. will undertake a subscription edition of Bret Harte's works in fourteen volumes.

Another volume of poems by Emily Dickinson is in preparation by Roberts Bros.

D. Appleton & Co. have nearly ready a new novel by Harold Frederic, entitled 'March Hares.'

Jessie Fothergill's 'The First Violin' has been illustrated by G. W. Brenneman of the Salmagundi Club, and will be brought out in two handsome volumes by Brentano's.

From the Typothetæ of the City of New York we are to have next month a literal reprint of Moxon's 'Mechanick Exercises, or the Doctrine of Handy-Works, applied to the Art of Printing,' in two volumes, square octavo, in a limited edition of 250 copies on Holland paper, sold only by subscription.

The Raeburn Book Company, New York, are about to publish 'The Scot in America,' by Peter Ross, LL.D.

Fall announcements of A. C. McClurg & Co., Chicago, are 'Italy in the 19th Century,' by Mrs. Elizabeth W. Latimer, and 'A Short History of Italy,' by the late Miss Elizabeth S. Kirkland.

The five volumes which make up the "required literature" of the Chautauqua Literary and Scientific Circle (Meadville, Pa.: Flood & Vincent), together mark a grade distinctly above that to which we are accustomed in this quarter. Mr. Brownell's 'French Traits' is taken over by arrangement from the Messrs. Scribner; but new are Prof. George B. Adams's compendious 'Growth of the French Nation,' Prof. Herbert A. Howe's readable 'Study of the Sky,' Prof. Tarbell's 'History of Greek Art,' and Prof. Mahaffy's 'Survey of Greek Civilization.' All these manuals except the first are illustrated, noteworthy in point of freshness being the subjects selected by Prof. Tarbell, whose text has solid as well as popular and taking qualities. Of Prof. Mahaffy's work we shall speak a little more at length.

Prof. Richard Lodge, in his 'Richelieu' (Macmillan), has given a very brief account of the career of the famous cardinal, based upon the most recent authorities. The careful and complete edition of Richelieu's letters and state papers by the Vicomte d'Avenel cleared away the innumerable legends which shrouded the real genius of the great French statesman, and made it possible to understand the services which he rendered to his country. The learned editor expressed the results of his researches in his well-known work, 'Richelieu et la Monarchie Absolue.' Owing to these labors the task of Prof Lodge has been comparatively easy. He has followed his trustworthy guide with unswerving fidelity, and his work has been mainly one of condensation. A far more brilliant writer than either D'Avenel or Lodge has been beguiled by political ambition after setting out to write what promised to be the final and conclusive history of Richelieu's career. M. Gabriel Hanotaux, the present French Minister of Foreign Affairs, before his promotion to high political office, published the first volume of a projected life of Richelieu, covering the period of his youth, which, from the beauty of its style, the justness of its historical appreciations, and its admirable use of primary authorities, promised to be a masterpiece. The completion of this book seems to be indefinitely adjourned. Under these circumstances Prof. Lodge has rightly depended for his information upon D'Avenel.

It is difficult to conjecture what class of readers Baron Ferdinand Rothschild expected to interest in his 'Personal Characteristics from French History' (Macmillan). Readers of French memoirs, whether for pleasure or profit, have no desire to see how clumsily piquant French anecdotes can be rendered into bald English. Those who read only English and desire to obtain historical information, will naturally turn to the coherent and accurate works dealing with the subjects in which they are interested, and will be inclined to shun collections of disconnected anecdotes. This is precisely what Baron Rothschild's volume is, despite its somewhat pretentious title. The author has waded through a mass of French memoirs, and selected therefrom the anecdotes and personal incidents which were in his opinion entertaining and instructive. These materials he has arranged for the most part chronologically, but without regard to historical proportion or perspective. The chief fault of the book—a fault, indeed, which it shares with all similar books—lies in the incorrect estimates of men and deeds given by anecdotes chosen with reference to their dramatic interest. This is particularly true in the chapter dealing with the Revolution. Considered merely as a contribution to general literature, however, Baron Rothschild's book has a place, and those who read for diversion will find it a decided improvement on historical novels of the Weyman type; it has the added advantage of being beautifully made up and amply illustrated.

The services of Mr. Malabari in the cause of Indian social reform, especially in promoting the passage of the Age of Consent bill, are sufficiently well known to every one interested in social progress to make the publication, by Mr. R. P. Karkaria, of 'India: Forty Years of Progress and Reform; being a Sketch of the Life and Times of Behramji M. Malabari' (London: Henry Frowde; New York: Macmillan) thoroughly acceptable. The numerous Ramabai Circles established all over the country keep alive a general interest in the condition of Hindu women and the deplorable lot of Hindu widows. Mr. Malabari has been the foremost champion of this cause in India, and his prominence in this respect is his chief title to fame beyond its borders. But his biographer shows that Mr. Malabari is more than a pioneer of social reform; he has written poems, both in English and in the vernacular, which have received high praise from competent critics; he is a philosopher who has reflected deeply and written much on philosophic and religious subjects; and he is perhaps the most accomplished journalist that India has yet produced. For all these reasons his personality deserves to be better known than it is, and Mr. Karkaria's book may be recommended as giving a readable account of the career of the distinguished thinker, reformer, and man of letters.

'Persia Revisited (1895),' by Gen. Sir T. E. Gordon (Edward Arnold), is a timely and interesting book. It is not a mere traveller's account of what he has seen and experienced, but is a series of detached sketches relating to nearly every department of Persian life, drawn from observations made not only during this visit, but also during the author's official residence as attaché to the British Embassy. He gives a more favorable account of the land than we had supposed was justified. He says, for instance, that "the peasantry and laboring classes are fairly well off," and that considerable progress is being made in the construction of roads and in the development of the natural resources of the land. In this activity the Persians themselves are sharing to an increasing extent, though it is mostly due to foreigners. Not only England and Russia, but France and Germany, are seeking to establish commercial relations and to obtain concessions. Belgian capital, even, is represented at Teheran by a tramway company, a glass manufactory, and a beet-sugar factory. The late Shah is commended for his leniency, his hatred of bloodshed, his desire for justice, and his love of peace. His successor "is of kindly disposition, and has pleasing manners," and "there have been occasions on which he showed himself to be a capable ruler," while his Prime Minister is a man of "conspicuous energy and talent." There are some excellent portraits of these men, together with others of characteristic types of the people.

Lt.-Col. Dalbiac's 'Dictionary of Quotations (English)' (London: Sonnenschein; New York: Macmillan) does not lack familiar and current lines and passages, but is predominantly an anthology which rather reflects the compiler's own taste in verse and to some extent in prose. This taste cannot be rated highly. Of books of the same class, he says, "there is scarcely one that is at the same time complete, up-to-date, and sufficiently explicit in the matter of references." How any one can be "complete" we are at a loss to imagine; Col. Dalbiac has certainly not incorporated the works of his predecessors with his own. Kipling, Birrell, J. C. Hare, Haweis, Huxley, Morley, Christina Rossetti, Jean Ingelow, William and Lewis Morris, Dobell, Sir Edwin Arnold, Swinburne, and Clough (called *E.* H. on p. 329), make the "up-to-date," we infer, but the quantity of citations from them is relatively small. The references are, indeed, so far as we have tested them, accurate, but not more so or more explicit than in Bartlett's 'Familiar Quotations,' which is more than once referred to by page alone, without mention of the edition. There are thirteen extracts from Vanbrugh, whose name is uniformly misspelled -burgh, though right in the index. In that from Lowell on p. 35, "men" should be man; and an essential hyphen is dropped from Holmes's compound epithet "low-vaulted" on p. 42. George P. Morris is disguised as "George T." on p. 352. We miss any posy from FitzGerald's 'Omar Khayyám.' The ar-

rangement is much inferior to Bartlett's (by author). A Greek and Latin volume is to follow.

The seventh volume of Mr. Charles Booth's great work on the 'Life and Labor of the People in London' (Macmillan) contains the description of the population according to their trades. While figures are necessarily a prominent feature in this industrial census, it is impossible not to be struck with the admirable manner in which the movement of human life in its manifold activities is described. Many "short and simple annals" are introduced as illustrating the condition of large numbers of the poor, and many of the details of manufacturing and mercantile processes are given. Very few governmental reports will bear comparison with this monument of private enterprise.

The 'Office Central des Oeuvres Charitables,' 175 Boulevard St.-Germain, an association of which the Marquis de Vogüé is president, has recently begun the publication of a series of departmental pamphlets, "La France Charitable et Prévoyante" (Paris: Plon, Nourrit & Cie.), which, when completed, will contain a full list of the charitable institutions, public and private, of all kinds within the limits of the Republic, with brief information concerning the nature, resources, etc., of each. This publication will aid benefactors in determining just how and where their special wishes are most likely to be realized. The nine weekly numbers now at hand sufficiently show the enormous extent and activity of beneficent organizations in France. Taking at random the Department of Sarthe (whose capital is Le Mans), we count 116 institutions for children and adolescents, 104 for adults, and 10 for aged persons. The proportion of private charities is large; of 51 *écoles maternelles*, or *salles d'asile*, for instance, 31 are private, mostly under the direction of sisterhoods. The purposes of the several beneficent foundations are so varied that we can mention only a few of the less common ones. "Des filles exposées mais non vicieuses" are kept from the thirteenth to the twenty-first year; servant girls are cared for till they find employment; a ticket good for a kilogramme of bread is delivered to a man for one hour's labor at breaking stone; released prisoners are assisted in various ways; indigent lovers are helped in complying with marriage formalities, etc., etc. It is apparent from the introductory notice to the work that the utmost care has been exercised in gathering the statistical information from all the departments, and in the presence of such evidence one will hardly cavil with the secretary of the association, M. Léon Lefébure, who, after studying the organization of private charities in England, Germany, and the United States, vindicates for his countrymen the title of "maîtres dans l'art de faire le bien."

Two novel periodicals come to us from the West in the first (August) numbers of *What to Eat*, published at Minneapolis, and *International*, published at Chicago by the Union Quoin Company. The former is an eccentric attempt to combine gastronomy with literature and art; not a few of the illustrations in the text are in color. August bills of fare compete with "Crawford's Nurse," "A Cry from a Confirmed Dyspeptic," "An Epicurean Ballad," "Hints" for the disposition and use of knife and fork, folding of napkin, etc., "The Banquet to Joseph Jefferson," and much else; besides an exposition of Ralstonism, or the new art of health and longevity. The *International* is likewise illustrated, but in a more familiar style. Its aim is, by a competent corps of translators, to glean from the "great wealth of current literature outside the English language, which is, for the most part, entirely lost to us." Subordinate to these selections are accounts of the foreign authors drawn upon (Horn, Zola, Maupassant, Johanna Ambrosius, Sonya Kovalevski), book reviews, and miscellany.

With the April number, the Library Bulletin of Cornell University was discontinued. Its annual record of publications by university officers will hereafter supplement the President's Annual Report. The General Finding-List of the miscellaneous portion of the President White Library is now in press, and a collection of the Fiske Dante collection is nearly ready for the printers. A noticeable recent acquisition for the Cornell Library is the extensive collection of books relating to South America made by the well-known naturalist Herbert H. Smith during his residence in Brazil.

The interest which the French take in the development of their African possessions, especially in the direction of Egypt, is shown by an article in *Annales de Géographie* for July, describing in detail the region forming the frontier between Tunis and Tripoli. It is accompanied by a map. This number also has an account of the Negritos of the East Indies, a race of whose extent, origin, and possible connection with the pigmies of Africa, the author, M. Lapicque, informs us there is much yet to be learned. There are numerous measurements of heads, together with several interesting photographs of individuals. A brief reference is made to the report of the committee on the proposed canal between the Atlantic and the Mediterranean. The project is absolutely rejected on account of the expense, which is estimated at from four hundred to five hundred million dollars.

In addition to the usual reports of the excavations at Jerusalem, the Quarterly Statement of the Palestine Exploration Fund contains an interesting discussion of the date of the Exodus, by Capt. Haynes and Col. Conder, in the new light shed upon the subject by Prof. Petrie's recent discovery of an inscribed tablet containing a reference to the children of Israel. Their conclusions are that if the professor's interpretation of the inscription is correct, the Exodus must have taken place nearly three centuries before the time now usually attributed to it. The alternate view, held, we believe, by Prof. Petrie, is that a part of the Hebrews may have remained in Canaan when their brethren emigrated to Egypt. Col. Conder also contributes some notes on the various places mentioned in the 'Onomasticon' of Eusebius.

The scientific world was interested some two years ago by the circumstantial account, in one of Messrs. Chambers' publications, of a landing upon Rockall, that lonely pinnacle rock in the Atlantic, 260 miles northwest of Ireland. Doubtless many vessels that have never been heard of have there met their doom. It was known to have been landed upon on but two occasions—by Basil Hall in 1813, and by a sailor from the *Porcupine* in the fifties. The second account turns out to be entirely drawn from the writer's fancy. A party of scientists in the steamer of the Irish Congested Districts Board, under Mr. Green, have made two unsuccessful attempts this summer. It was thought the island might possibly be the as yet undiscovered nesting-place of the great shearwater (*Puffinus Major*). Although a landing could not, on account of the height of the waves breaking against the seventy-foot cliffs, be effected, enough was seen to warrant the conclusion that Rockall is not the cradle of these sea birds.

—The *Atlantic* numbers among its list of contributors this month no name more distinguished than that of President Gilman, who briefly reviews some features of American colleges and universities, and forecasts the possibilities of their future. His express declaration that among the greatest gains of the period covered by the memoirs of Presidents Barnard and McCosh is "the admission of women to the advantages of higher education, either by coeducation, or by 'annexes,' or by separate foundations," will not be overlooked by the friends of that higher education, ever mindful of the practice of the Johns Hopkins University in rigorously excluding women from any of its benefits (except medical). Where President Gilman leaves off after describing the multiform intellectual activity that should make up the life of the university proper, Prof. Paul Shorey takes up the thread, in an essay on "Present Conditions of Literary Production," and shows how the influence of universities may be expected to extend beyond themselves in spreading far and wide through their graduates a competent literary criticism and a high standard of literary endeavor. While admitting that "the photographing of the present is an estimable and for the time the most flourishing branch of literary craftsmanship," Prof. Shorey asks, in regard to the final claims of veritist literature, the pertinent question, "To what can these laborious inventories of unconcerning things lead?" To this need not be sought an apter answer than is supplied in the same number of the magazine, in the form of a concrete illustration, by Mary Boardman Sheldon's short story of the wasted pains of a realistic novelist, entitled "A Literary Model." To Mrs. James T. Fields has fallen the labor of love of paying a tribute to the memory of Mrs. Stowe.

—A pronounced realist could hardly exhibit himself to better advantage as an idealist than does Mr. W. D. Howells in his article in *Harper's* on "The White Mr. Longfellow." The title of this article, with its adjective borrowed from an epithet applied by the Norsemen, in the early days of their conversion, in their expression "the White Christ," is due to Björnstjerne Björnson; the text consists of Mr. Howells's personal impressions and reminiscences, dating from the beginning of his residence in Cambridge and friendship with Mr. Longfellow, and continuing until the latter's death. As a member of the Dante Club, which met by invitation at Craigie House and included in its number Agassiz, Holmes, and Lowell, Mr. Howells, then, as now, fully sensible of the privilege he enjoyed, ought, he is inclined to think, to have guarded against lapses of memory by notes of the conversations that followed the readings and discussions of the poet's translation. There is, however, no lack of definiteness or consistency in the conception given of Mr. Longfellow's personality, and when next Mr. Howells undertakes the praise of "a perfectly socialized condition of things," he will not find it easy to undo the conviction inspired by this paper that an aristocracy is the most attractive of all forms of society that can be imagined. A serial story, "Tom Sawyer, Detective," by Mark Twain, is begun in this number of *Harper's*, and a short story by John Kendrick Bangs, "The Mayor's Lamps," will find fa-

vor with many readers on account of a political moral which is relieved by humor from any pressing demands on consideration. Both poetic and dramatic feeling of a high order are evidenced by Laurence Alma-Tadema's one-act play, "The Silent Voice," to which a graceful lyric of fateful significance forms the prologue and epilogue. Edwin A. Abbey supplies two illustrations to this vividly realized sixteenth-century episode.

—The cover of the annual fiction number of *Scribner's* is conspicuous for the success of its ornamental figure-piece, in colors, by Will H. Low. The first article, "On the Trail of Don Quixote," by August F. Jaccaci, though not yet completed, is well chosen as a preliminary recognition of the fiction that is not ephemeral in character. Whatever degree of style or individuality may be lacking in the text of this article is amply made up for in the illustrations by Vierge, which are full of delicacy and suggestiveness. George W. Cable contributes a story of melodramatic coloring, describing in some strong passages a reprobate's final rescue of himself, not by means of any of the orthodox agencies, but by a determined clinging to mother earth. In the story "Charm He Never so Wisely," Eleanor Stuart, while skilfully revolving a nebulously light central idea, has managed to throw off so many bright sayings and happy observations of people and things that her story produces, on the whole, an effect of considerable brilliancy. For the rest it is enough to mention "Mrs. Lofter's Ride" as an amusing satire on fashionable pretentiousness. Of the verse, Clinton Scollard's "In an Alcove" is pleasing in thought and accomplished in expression.

—Until six months ago, as Prof. Flinders Petrie explains in the current *Century*, no trace of the Israelites by name or object had been found in Egypt. In February last he discovered the long sought mention of them. The tablet bearing this inscription came to light in a clearance of the site of the tomb of Merenptah at Thebes, and it is a flawless block of fine-grained syenite, or granite, about ten feet high by five wide and over a foot thick. The account of his Syrian campaign, engraved on it by Merenptah, about 1203 B.C., declares that "the people of Israel is spoiled." Near the tablet was found the colored granite bust of the king himself, to whom present indications point as the Pharaoh of the Exodus. These are some of the facts. Prof. Petrie adds a lively imaginary portrait of this "Pharaoh of the Hard Heart," son of Rameses the Great, whose granite tablet, now helping to solve points of such obscurity in the Hebrew history, has been lying face downwards under stone fragments and chips since about the time of the Trojan war. Prof. Petrie's suggestion that any day a tablet or a papyrus may be turned up which will throw some further light on the later years of this monarch points to the exciting side of Egyptology. In an article on "Burnt Wood in Decoration" J. William Fosdick explains some of the improved mechanical aids to, and touches upon the history of, an artistic handicraft of which the merits and decorative possibilities are overlooked on the one hand, and threatened by vulgarization in industrial processes on the other. A number of interesting illustrations are given of Mr. Fosdick's own work, to which have regrettably been added only two from examples of English and Italian burntwood work of the sixteenth century. Gen. John W. Foster contributes a detailed biographical account of the Chinese general, statesman, and diplomatist, Li Hung Chang, best known to the world at large as the ambassador intrusted with the recent negotiations for peace with Japan, and presently to visit this country.

—There is no student of modern history who will not look eagerly to see what so great an expert as Prof. F. A. Aulard has to say on the authenticity of the Memoirs of Barras and on their value as historical evidence. M. Aulard's judgment in this cause appears in a luminous article in the *Revue Bleue* of July 4. Barras he considers one of the most important actors and one of the most clear-sighted witnesses of the Revolution. The points, then, to be chiefly looked at in respect of his book are, first, its authenticity, and, second, its truthfulness and honesty. There are three kinds of memoirs of the Revolution—those which are absolutely contemporaneous with the events they record, such as the 'Journal d'une Bourgeoise,' published by M. Lockroy; those which are nearly contemporaneous, written on the morrow of the events, like the Memoirs of Mme. Roland; and, in the third place, but at a great distance, the memoirs written long after the Revolution, when the events had become disfigured, or transfigured, in the memory of the writer. No one of these categories, in M. Aulard's opinion, includes the whole of the work of Barras. Certain parts of the Memoirs were written from day to day, others immediately after the events, others, again, much later. An attentive reader can often distinguish between these portions of Barras's book, and M. George Duruy, its editor, ought to have put it in the reader's power always so to distinguish. Where Barras gives contemporary evidence, it is of very great value.

—From another point of view memoirs may be classified as to authenticity. Some are absolutely authentic, like those of Thibaudeau; some certainly apocryphal, like those of Robespierre; others mixed, like those of Levasseur written out by Achille Roche from Levasseur's notes, and those of Talleyrand written by M. de Bacourt from notes and conversations of Talleyrand, and "candidly published as true by the good Duc de Broglie." At first sight the Memoirs of Barras seem to belong to this last category, for they were written out and embellished after the death of Barras by Alexandre Corbeau Rousselin de Saint Albin. This was done in accordance with Barras's wish, for he liked as an aristocrat to be thought illiterate, and besides had a high admiration of Rousselin's style. Still, it is a manuscript of Barras's own that forms the basis of the present book, and Barras's notes, too, exist, and are in the possession of M. George Duruy, while all the originals of Levasseur and of Talleyrand have disappeared. Then, too, it is to be remembered that Rousselin himself was a contemporary of Barras, and played a less important part on the same stage where Barras was playing a great one. We have hardly space to hint at pages of M. Aulard's article so compact of interest and value that they cannot be compressed. He concludes that M. Barras's memoirs "sont donc à lire, à commenter, à citer. C'est une des sources les plus curieuses et les plus importantes de l'histoire, surtout morale et anecdotique, de la Révolution." But he calls for the publication of Barras's notes.

—It is not clear that Mr. William Root Bliss was happily inspired in choosing the title of his book 'Quaint Nantucket' (Houghton, Mifflin & Co.). "Quaint" was a better word than it now is in the days when it had less vogue and had been less misused. In its present connection it has a slightly patronizing sound, offensive to pious ears in the Island Home, and likely enough to be resented by the faithful as savoring somewhat of "coof" insolence. For why should Nantucket be held to be more quaint than any other town of like date and like history? The first impression is only deepened when one turns the title-page, and finds that the book "relates to that quaint Nantucket which existed for two hundred years before the island was discovered by 'the summer boarder.'" Was Nantucket quainter then than other towns? Or was every town quaint two hundred and fifty years ago? Mr. Bliss has done harm to his book by this mistake, for the book is really worth reading, comprising many interesting extracts from old town and court records, original letters and account books, sea journals, and the like. Whether it would not have been a better plan to print these, and the whole of them, without more comment and explanation than could easily be given in foot-notes, is a question which we need not consider. It is pretty to think of the disappointment of the summer visitor who puts his book in his bag, supposing it mere seaside trash, when he discovers that it is really a serious book, and of a certain, greater or less, value.

—The Nicaragua Canal scheme makes everything relating to that country interesting just now—a fact which may account for the appearance of a volume 'Nicaragua: War of the Filibusters,' mainly made up of the narrative, now out of print, left behind him by the "grey-eyed man of destiny" (Richmond, Va.: B. F. Johnson Publishing Co.). The author, Judge D. B. Lucas of West Virginia, follows the steps of the "regenerator" of Nicaragua, and makes out for him a better case than one would have supposed possible. This is partly because all modern filibusters are moralists. Walker was unfortunate in his effort because it was connected with slavery, but he repudiated all idea of doing anything wrong in invading a friendly state and upsetting its government. His motive was the good of the country. So was that of Maximilian in part, when he felt compelled to upset the Mexican Government. All the Cuban filibusters enlist in the cause of freedom, and Dr. Jameson and his friends call themselves "reformers." The Boers, however, call them freebooters, just as the Spaniards call Raleigh and Drake pirates. The modern terminology is no doubt a tribute to law and morality, which forbid us any longer to talk even about the "conquest" of foreign territory. The volume also contains an article on the canal by the Hon. W. A. MacCorkle, and an essay on the Monroe Doctrine, by J. Fairfax McLaughlin, who calls attention to the surprising fact that none of the many prominent persons recently engaged in discussing the Doctrine—neither the President, nor Mr. Olney, nor Senator Lodge, nor Mr. McMaster—has mentioned the circumstance that in 1817 Pozzo di Borgo, then in the service of Russia, was in favor of *subjugating the United States*. No wonder Monroe was opposed to any change in the *status quo*. Borgo is dead, thank God, but, alas! his spirit still lives, and doubtless dictates the hidden policy of many a crafty king and emperor.

THAYER'S EVIDENCE IN JURY TRIAL.

A Preliminary Treatise on Evidence at the Common Law. Part I. Development of Trial by Jury. By James Bradley Thayer. Boston: Little, Brown & Co. 1896.

PROF. THAYER'S contributions to the *Harvard Law Review* on the subject of Evidence have for several years attracted the attention not only of students, but of lawyers engaged in practice as well; and it has been generally understood that they were designed as the groundwork of a treatise on the subject. Of this treatise the present small volume forms the introductory part. It gives us an insight into the author's view of the branch of the law to which it relates, and enables us to judge of his general plan. The completed volume is to be published within a year. These introductory chapters are published in advance, as being likely to prove interesting to general readers, and for use in universities and law schools in connection with the study of the history of institutions. Students can hardly fail to find them of value. They are to be regarded as "incidental and auxiliary studies in the course of an examination of the law of evidence in English-speaking countries."

The first question which is sure to occur to every lawyer to whose attention a new treatise on evidence is called, is why it is written at all. Our shelves are full of treatises on the subject, and very good ones. Why add another? To this question the answer given by Prof. Thayer is that his method and purpose in writing are new; that it is his intention to consider the development of the law of evidence in a way not hitherto done, a way likely to free it from much of the confusion which has hitherto surrounded it. To judge of the execution of such an attempt merely from an introduction is impossible, but these preliminary studies make it clear that the plan of the work is both sound and novel, and give promise of a treatise which will have to be tested by comparison with Greenleaf and Stephen.

To point out in a few words the essential difference between the plan of these great writers on evidence and that of Prof. Thayer, we may say that, in both Greenleaf and Stephen, the fundamental assumption is that the law of evidence in the common-law world consists of a body of natural and rational principles of proof which judges have evolved by close attention to the subject, and which is perhaps superior to the great body of substantive law which determines our personal, property, or contractual rights and duties in being more scientific. Both books treat the law of evidence as in a measure an established and final system, something like that of natural science, and endeavor to expound and rationalize it. That such a system underlies our law, and has been quietly elucidated by both Greenleaf and Stephen, cannot be doubted; but if, as Prof. Thayer says, we raise our eyes from the common-law system and look abroad, we find that our law of evidence, as such, has in other countries no existence. The reason of this is simply that we make use of a mode of trial unknown in other countries—trial by jury. Our law of evidence consists of innumerable rules framed in great measure to prevent this peculiar tribunal, unskilled in the examination of evidence or the application of rational rules of proof, from being confused and misled and governed by improper considerations. These are not to be met with in other countries, because in them trial by jury is not the ordinary means of determining questions of fact. In them the question is, mainly, Does a given piece of evidence tend to prove or disprove a certain fact? This is not a question of law, but of inference for the judge in the particular case. Its decision involves and "lays down" no rules, and hence there is no body of rules constituting a law of evidence. With us, on the other hand, the inquiry is not mainly probative; it has really been for many centuries, What, among really probative matters, "shall, nevertheless, for this or that practical reason, be excluded, and not even heard by the jury?" Add to this that the reason, instead of being avowed, was almost always assumed by the court to be attributable to some principle of "the law of evidence," that the function of the jury was originally very different from what it is now, and that the whole body of rules of evidence is a growth of centuries, and we see at once that there is room for a most interesting book, at once practical and historical, which shall separate the principles of proof and inference from technical rules forced into our system by the operation of jury trial, and discriminate these again from the multitude of rules of pleading, procedure, and substantive law which in many directions have become confounded with those of evidence. Such a work would combine the historical method with those of Stephen and Greenleaf. As equipment for the undertaking, not only has Prof. Thayer had long familiarity with common-law evidence as administered in the courts, but his foundation of practice has been supplemented by years of research. Although his book is not finished, his papers in the *Law Review* have made his name known on both sides of the Atlantic.

The treatise presupposes an inquiry into the origin and history of trial by jury, and the present part consists of three chapters on this subject, as well as one on the older modes of trial which preceded the introduction of the jury. The author is reluctant to state conclusions or make generalizations of a hypothetical character, and there is certainly no field in which this temper is safer than in law. As we are not under the same bonds, we have no hesitation in pointing out certain conclusions to which these researches seem to point, not explicitly stated by him.

One is, that the more light we get on the past of our law, the more certain it seems that its condition in any century (could we obtain a view of the whole of it) would probably show much the same jumble of contradictions overlying a substratum of system that we find to-day—heightened, however, the further back we go, by the fact that, the more remote the period, the more contending influences we find struggling with one another for the mastery of the law. In the Middle Ages, for instance, there were, besides the remains of Saxon family, tribe and land law, the Roman system, so far as it may have been preserved; the law as administered by ecclesiastics (the bishop sitting in the county court can hardly have done much for the symmetry of the law); the feudal system; and the King's law, which must have been to a great extent personal. We have to-day a comparatively uniform law, the rules of which are determined far more than in any previous age by the necessities and convenience of the actual condition of society, yet it is full of inconsistencies. What must it not have been at the time of the Conquest! The law has never been developed as a whole from century to century, nor has even any one branch of it, like evidence. We may trace the rise, progress, and decay of a particular institution or theory, but we shall often find it flourishing side by side with institutions and theories totally at variance with it, and apparently belonging by origin to a totally different period. The introduction of trial by ordeal, for instance, obviously belongs to a religious period, when the belief in the intervention of God in every-day affairs by miracle is a matter of course; in such a period what could be more natural than to call God in to reveal the truth as to a hidden fact, like guilt or innocence? To William Rufus this seemed absurd even in the eleventh century, and he declared that God had decided these matters long enough—he would do it himself now; notwithstanding which, trial by ordeal lived on for a century and a half. The Normans introduced the germ of jury trial through the inquest, but they saw nothing inconsistent with this in trial by battle, which is said to have been violently disliked by the English, not because it was irrational, but because it was expensive, and the right to trial by battle existed side by side with trial by jury for many centuries. Again, wager of law existed as a living institution as far back as we can go, and wager of law is founded on the primitive but not irrational conception that, in the absence of better proof, the oaths of a number of people who may be presumed to know something about the matter are a good way of deciding a controversy.

It is often inferred from the barbarous modes of trial common a thousand years ago that our ancestors had no conception of the nature and function of proof. This is quite a mistake. They not only knew what proof was (even a child or savage knows that a disputed statement to be believed must be corroborated by facts), but they knew how to preserve it for future use. Not having any system of records, they accompanied a sale, transfer, or other event by formal acts in the presence of witnesses, who were relied on to prove it if afterward called in question.

"Great pains, to be sure, were taken in early times to require publicity as regards matters which might be the basis of legal right, and to fix rights by connecting them with easily known facts: the endowing at the church door, the requirement, in case of curtesy, of hearing the child cry within the four walls, the sale before witnesses, and the law of hue and cry, are instances" (p. 120).

Nor was there ever a time when a plaintiff had not to produce some proof of the story told by him. The difficulty was that the defendant could produce proof too. The court had no power to sift the evidence before it or to get more. A miracle would determine it, a battle would give God an opportunity to make the right victorious; or if a number of friends came in and made oath that there was nothing in the plaintiff's story, that might be enough. What they did not understand was to try the case by means of proof, and this partly because they had no compulsory process of proof. What seems to us the most simple thing in the world—to make an inquiry into a matter of disputed fact—was exactly what they did not understand, and the name given by the Normans to their procedure shows what it was. It was a royal *inquisitio*, or inquest, to get at facts by compulsory process. In previous ages, astonishing as it may seem to us, judgment had come before trial, because the proof was introduced merely to enable the old popular judges to judge what trial should be resorted to, or whether any was necessary. Now for the first time trial precedes judgment.

What we have said seems to us to make it clear that the function which the jury was destined to perform was not that of introducing to the English the conception of proof—that they had already; but of accustoming them to seeing evidence weighed and cases decided according to a preponderance of proof, which they knew little or nothing about. The jury at first were probably simply witnesses such as the Anglo-Saxon world had long been accustomed to, who testified to facts within their knowledge, such as those of possession, birth, age, dowry, an assault, etc. What the King did was to send an officer to take their evidence, and use it in order to administer relief to suitors in his courts. That these witnesses became gradually triers of fact, and wholly lost their original functions, is, of course, undisputed. In fine, we think we shall hardly be wrong if we surmise, as we have said, that the Normans found the jurymen on the spot, and their kings taught them not what proof was, but how to try cases with it. Before the Normans came the witnesses had been the followers of the two parties, and in the last resort there was nobody but God to decide between them. The moment the Normans appear, the witnesses are selected by public authority, and the King's court takes and acts upon their testimony. This was what *inquest*, or inquiry, meant. The further we examine the matter, the more pithy and pregnant seems the remark attributed to William Rufus.

These chapters describe part of the process by which the jury has been gradually developed into a highly specialized and technical tribunal of fact. We may call attention to the account given of the history of the process of attaint, and the introduction of new trials, as particularly valuable. All this is new matter, especially in a book on evidence. We shall look with interest for the more modern portions of the book, which may be expected to throw new light upon what is one of the great feats of English jurisprudence, the sharp discrimination between law and fact. Whether we have not reached a period at which the work may be regarded as accomplished we do not know. Trial by jury has come in our day to produce greater expense and delay than did the old trial by battle. We have become familiar, through the extension of equity, with a much simpler and speedier mode of trial; so far as many ordinary matters of contract or property are concerned, a single judge is quite as good as, if not better than, a judge and jury together. On the other hand, in matters affecting life and liberty, it is such an invaluable protection against abuse of power that in the very countries where its germs were killed by despotism centuries since, it has been reintroduced in our day in special cases for the safeguard of popular rights. Judging of the future by the past, we should anticipate that, in the ages to come, this ancient form of trial, in its application to the thousand and one petty disputes which occupy the courts, would tend to fall into disuse, rising at the same time into renewed dignity and influence the more it is confined to those grand questions of human right, in the determination of which our deepest instincts incline us to resort to a popular tribunal of fact.

Moral Evolution. By George Harris, Professor in Andover Theological Seminary. Boston: Houghton, Mifflin & Co. 1896.

Prof. Harris's book is one of the many reconciliations of science and religion of which we have had hundreds and thousands during the last half century. The establishment of a new scientific theory, however startling at first, and however vigorously opposed, has always been the signal for the appearance of a body of ingenious writers panoplied with the assurance that there is no real conflict between the new science and the traditional opinion. Sometimes the reconciliation has been found easy enough between that opinion in its frank sincerity and the new science in its obvious implications, but more frequently both the traditional opinion and the new science have been shorn of something of their proper strength before the declaration of the bans. In general the approximation of the traditional theology to science has been more remarkable than that of science to the traditional theology. The concessions made from the scientific side have for the most part been made by theologians who have not consulted the scientists, and have not always had their backing. Prof. Harris's book does not err in this direction. Hardly could anything be more generous than his concessions of traditional belief. Even where he retains "the form of sound doctrine," it is only the form that he retains, never the substance. And yet it is very doubtful whether the genuinely scientific will accept his reconciliation. They will complain that his terms on both sides are too loose and vague to have the character of science, and that his method in general is theological—genial, conciliatory, liberal, but still theological. On the other hand, the conservative theologians will repudiate it root and branch. They will object that science gets everything by the compromise, theology nothing. They will insist that it is another instance of the lamb inside the lion. Those who will be most pleased are the steadily increasing multitude of persons who are willing enough to change their opinions if they may be permitted to use a venerable nomenclature and to carry themselves in the approved orthodox manner.

Prof. Harris's book, like many others of its kind, makes a more promising start than is fulfilled by what ensues. Beginning with the acceptance of evolution as "a theory of the derivation of one species from another, of the descent (?) of man from inferior animals, of the progress of man in his habits, arts, morality, and religion, in accordance with the methods which control the development of life below and around him," he finds it regarded by some as antagonistic to morality, by others as independent of it, while others regard the two as identical, and a fourth party think the two harmonious. Prof. Harris classes Huxley with the independents, but Huxley's contention that it is "the business of morality to combat the selfishness which controls the process called cosmic" would seem to place him among those who hold to the antagonism of evolution and ethics. At this point Prof. Harris brings out the diametrical difference of Buckle and Kidd in a very interesting manner. Kidd he never touches but to lay his finger on some ailing place. The identity of ethics and evolution is set aside as an inadequate theory, though having more to recommend it than the doctrines of antagonism and independence; and the doctrine of coincidence and harmony is accepted as the most satisfactory. The method of the following chapters is first to discover the true character of morality, and then consider whether its harmony with evolution is borne out by a comparison of the two orders of belief and fact. The treatment is fresh and popular, the style admirably clear and forcible, and pervading all there is a shrewd intelligence, a "saving common sense," a capacity for seeing both sides, and a homely practical wisdom, that go far to constitute the value of the book and commend it to those on either hand who are least likely to accept its ultimate conclusions.

The more purely ethical chapters, from the fourth to the eighth inclusive, have more intrinsic interest than any others. The chapter on utilitarianism is extremely fair; and if here, as elsewhere, Prof. Harris is more glad to find agreement between things that differ than to emphasize their difference, his genial disposition is so rare that it enlists our sympathy. His sixth chapter, "Self-Realization and Altruism," is evidently the one he values most. It contains what he considers most distinctive in his ethical position, "the perception that self-preservation, self-assertion, self-enjoyment, and self-perfection have a vital relation to the fundamental facts of evolution." This perception, he tells us, has been to him in the nature of a discovery, and in it he finds "the reconciliation of conflicting theories of ethics as well as the larger harmony of ethical with evolutionary doctrine." If this discovery seems to us less original than to Prof. Harris, there is still something very fresh and attractive in his use of it. It brings him into sharp collision with Huxley and Kidd, two writers whose essential unity of ethical conception underlying their apparent difference he has brought out as no one has until now.

His discussion of the relations of ethics and religion is less satisfactory. Here the thought is looser and vaguer, and the survivals of theological phraseology are more frequently met. Moreover, there is a conscious or unconscious avoidance of knotty points, which is not reassuring, and as little so is the fact that matters of first-rate importance are passed over trippingly—the matter of immortality, for example. On page 204 there is a conjunction as queer as the mixing of the bowsprit and the rudder in "The Hunting of the Snark." We read: "John Stuart Mill put feeling into mathematics when he said that if he must believe, on pain of going to hell, that two and two made five in any part of the universe, to hell he would go rather than admit it." But the most famous of Mill's philosophical heresies is his belief that two and two might make five in a different world from ours. In a very different connection he said, criticising Mansel, that he would call no being good who was not what he meant when he applied that name to his fellow-creatures, and that if God should send him to hell for not so calling him, then to hell he would go.

Prof. Harris is even less satisfactory in the application of his general conceptions to the particulars of Christian doctrine than in his application of them to the wider interests of religion. But there is very little in the way of putting new wine into old bottles. In most cases the old bottles are frankly discarded. It is difficult to see how Prof. Harris can or will sign the Andover creed the next time that crucial test is brought to bear upon the consciences of the Andover professors. In comparison with his book, that called 'Progressive Orthodoxy,' which emanated from Andover a few years ago, has decidedly a mediæval air. His own book is exceedingly progressive, but of orthodoxy it has not a shred. Particularly noticeable by its absence is that "Christocentric" Theology by which 'Progressive Orthodoxy' was so strongly marked.

The doctrines of election and reprobation and the opposition of God's justice and mercy are denounced as immoral; the damnation of the ignorant heathen is served in the same fashion, and the doctrines of the fall of man and total depravity are firmly set aside. The Trinity is passed over in silence. The Holy Spirit has a dozen lines to which no anti-Trinitarian could object.

Coming to Christology, our author's emphasis is on the recovery of the humanity of Jesus, and Strauss's 'Leben Jesu' is indicated as the happy turning-point in this regard. The deity of Jesus is ignored, and his divinity is regarded as the formula of his transcendent moral excellence, the ideal of human goodness being degraded in order to assign to him a "moral perfection" that is purely arbitrary or rhetorical. "In knowledge he was not omniscient. He gained knowledge as other men do." His miracles are reduced to the lowest terms; some of them discarded, the others minimized and declared unimportant. As for his resurrection, "There is strong presupposition against the resurrection of a human being," but if Jesus was "a unique person," this presupposition may be set aside. Thus playing fast and loose with his humanity, Prof. Harris's general position is that of the Unitarians midway of the century, when they had already abandoned their original position for one more liberal. "Sin is departure from the type. It is missing the mark." This does not sound much like Augustine and Calvin and Edwards, but Prof. Harris is not servile in his subjection to great names. "Revelation is embodiment of God in the very existence and evolution of nature." "The only idea of God to which science may properly object is the idea of a God external to nature. . . . But this is not the Christian idea." To prove this, John Fiske's quotation of Dr. A. V. G. Allen is used. But the quotation describes Greek thought, not Roman nor Biblical.

The wonder is at what rate this kind of thing is sifting down into the Congregational pulpits and societies. Of course the young Andoverians can be relied upon to better their instruction when they go out into the world. One thing is obvious, that the dogmatic system of evangelical theology vanishes utterly under this treatment, and becomes a soft, vaporous mist of speculation with so much authority as inheres in any tolerably consistent scheme of thought.

Rambles and Studies in Bosnia-Herzegovina and Dalmatia. By Robert Munro. Edinburgh: Wm. Blackwood & Sons. Illustrated. Pp. xx, 395, 8vo.

THE greater part of this volume is devoted to an account of an archæological congress held in Serayevo in August, 1894. The members, under the presidency of Prof. Rudolf Virchow, visited different parts of Bosnia-Herzegovina and the district of Salona, and found this region, which is the borderland between the West and the East, to be extremely rich, not only in historical remains, Roman, mediæval, and Turkish, but also in those of prehistoric times. Mr. Munro does not confine himself to archæology, however, but has much to say that is of general interest about the country and its inhabitants. The scenery of Bosnia impressed him with its beauty as it does every other traveller who comes from the monotonous Hungarian plain into this land of forest-clad mountains, running streams, countless waterfalls, and picturesque villages clinging to crags like clusters of swallows' nests, often with feudal or Turkish castles dominating them. Serayevo, with its hundred minarets and church spires rising from an undulating sea of quaint houses on either precipitous bank of the turbulent Milyatzka, and its framework of hills and distant Alps, excited in him an inexpressible admiration. But all this sylvan beauty is left behind when the traveller, after passing through the defile which the Narenta has cut through the mountains, enters into the Karst or limestone region of southern Herzegovina. Here are endless chains of bleak hills and barren plateaus, with luxuriant tropical-vegetation only about some pool or along the banks of the errant rivers which burst full-grown from the hillsides to disappear as mysteriously and finish underground their brief course to the Adriatic.

The provinces differ from other parts of the former Turkish Empire in that the inhabitants are divided, not by race, but by religion. They are practically all Slavs, 670,000 in round numbers belonging to the Orthodox Church, 550,000 being Mohammedans, and 330,000 Roman Catholics. Among the miscellaneous remainder are 10,000 Jews, who, driven by the Moors from Spain centuries ago, still retain the language and some of the customs of home from which they have been so long exiled.

The Mohammedans, who include the nobility, landed gentry, and a large part of the urban population, have a peculiar interest. They are largely the descendants of the heretical sect known as the Bogomiles, who, after three hundred years of bitter persecution, were converted to Mohammedanism at the Turkish conquest. Their Christian origin is shown in various ways. Their tenets, for which some writers regard them as the precursors of the Reformation, "still lurk as secret and sacred traditions among some families." The traces of an ancient Christian ritual, it is said, can be detected in some of their religious services. Christians are admitted to their mosques, and Mr. Munro describes a service attended by him at which the Emperor's birthday was commemorated. They are monogamous, and in certain places their women go unveiled. The great Bosnian lords, or begs, still live in the feudal castles built by their Christian ancestors; they have Slavic names, and can show escutcheons, rolls, and titles of nobility inherited from Christian kings. The sepulchral monuments of the Bogomiles—there are said to be 60,000 of them—on which both the crescent and the cross are often to be found sculptured, are held by all the Mohammedans in deep veneration.

Some travellers have hinted that many of these families are not unwilling to return to their former faith—with little reason, apparently, for the Bosnian Moslems are more ardent followers of the Prophet than the Osmanli, whom they detest because of their laxity in doctrine and practice. Their numbers have increased by 50,000 within the past ten years, and their progress in other directions has been marked. Up to within five or six years, for instance, they have shown little interest in education; but large numbers now enter the elementary schools, the gymnasia, the commercial academies and training college for teachers. In Serayevo there is a college for teaching Mohammedan law, which Mr. Munro found to be completely furnished with "lecture-rooms, dormitories, refectory, bath-rooms, library, council-room, chapel, etc., all constructed on the most approved sanitary principles." Another visitor to this institution saw a copy of 'Jugurtha' and other Latin classics on the rector's table.

The descriptions of the peaceful scenes, the evidences of contentment and prosperity, which met the author's eye wherever he went, make it hard to realize that from time immemorial down to as recent a date as 1878 this land was the theatre of perpetual strife. Every man's hand was literally against his neighbor. Mohammedans and Christians were deadly enemies, but there was a deeper hatred still between Orthodox and Roman Catholic. The Franciscan monk, even, when on his round of pastoral duties, went armed and in a peasant's dress. Every path (there were no roads) was beset by brigands. Outside the walls of the towns neither life nor property was safe. The landlord oppressed his serfs; the rapacious Phanariot clergy robbed their wretched flocks; and the hand of the Turk was heavy on all alike. Repeatedly they strove to throw off this yoke, and in the final struggle in 1875 three thousand villages and hamlets were destroyed, and two hundred thousand men, women, and children were driven to the inhospitable ravines of the Dalmatian Alps, where nearly half of them perished from hunger and exposure. In 1878 the whole people, including even the Spanish Jews, took up arms to resist the Austrian whose rule they dreaded no less than that of the Turk. The attempt was vain, and four pitiful years of military despotism followed. Against this they rebelled in 1882, and though the insurrection was speedily put down, it called the Emperor's attention to their condition. In a moment of inspiration Francis Joseph changed the whole method of government. Baron de Kállay, a Hungarian and the present Imperial Minister of Finance, was made sole ruler of the provinces, with practically unlimited power.

The character and success of this nobleman's administration are but too briefly indicated in Mr. Munro's concluding chapter. His ruling principle has been to substitute local self-government, as far as possible, for the military system, with religious toleration, protection of property rights, equal justice to all classes, and equitable taxation. One ancient custom, alone, has been arbitrarily suppressed, that of carrying arms. "The long guns, ornamental pistols, and damaskeened blades which formerly formed part of every man's personal attire, are now things of the past." Some of the indications of the material prosperity of the country are the great increase in the revenue—50 per cent. in the last five years—the rise in value and amount of all farm products and live stock, the revival of old industries and the creation of new ones, especially in the development of the mineral resources of the land. There are 500 miles of railway and 3,000 miles of highroads. Banks are fast taking the place of the village money-lender, and by a judicious land-purchase scheme 12,000 peasants have bought the farms which they till. Even the desert region of the Karst is being reclaimed by a system of artificial irrigation. Besides model farms in different places for instruction in scientific agriculture, there are 943 elementary schools, three gymnasia, four commercial schools, a training college for teachers, and two seminaries for orthodox and Roman Catholic priests. Apparently not included in these are the Mohammedan college before referred to, and industrial schools in several of the large towns. In Serayevo there is an establishment, with accommodations for fifty scholars, for teaching decorative metal work, and another for weaving carpets, with departments for instruction in dyeing, weaving, and spinning. The Government also supplies the women of the harems with yarns for weaving

silk and cloths. All this has been accomplished, we are given to understand, without incurring a debt, the revenues paying all the expenses of the administration with the exception of those of the Austrian garrisons.

With this industrial and intellectual development, "the principles of law and order have taken a deep hold on the people." In this land, where but recently human life and woman's honor were held in light esteem, crime is now almost unknown. "A child or a maiden," writes E. B. Lanin in the *Contemporary*, "might wander in safety from Brod to Metkovitch." And he adds, "During my first visit to Serayevo, two cases of theft in the course of a fortnight exhausted the statistics of crime in this capital." This is a city of nearly 40,000 inhabitants, and the criminals were two Austrian soldiers. So marvellous a change (which can be paralleled in India, however, as in John Nicholson's administration of Bunnoo) is not wholly due to a benevolent despotism. Serayevo, for instance, is governed by a body of twenty-four magistrates, sixteen of whom are "elected by the inhabitants qualified to vote." They are taken from the different religious creeds in proportion to their numerical strength, twelve and the mayor being Mohammedans, six Orthodox, three Catholic, and three Jews. It is difficult to add to these facts any words more appropriate than those with which Mr. Munro closes his suggestive volume. After expressing his astonishment at the "pliability of the people to fall in with the methods of Western civilization in matters of trade and business, while still retaining the purest forms of their hereditary courts of justice, and the complete change of disposition effected in the minds of all classes of the community," he says that Bosnia, a country "which but yesterday was steeped in barbarism, to-day is a model object-lesson to the civilized world."

History of the Horn-Book. By Andrew W. Tuer, F.S.A. In two volumes. London: The Leadenhall Press; New York: Charles Scribner's Sons. 1896.

IN two elaborate volumes, with a wealth of illustration, Mr. Tuer has set forth at large what he knows and does not know about the fascinating subject of the Horn-Book. With no wish to belittle the results, we are forced to conclude that the author has ventured into a field of work for which he had not the necessary equipment; and, as a consequence, the portions of the book for which he is responsible are marked by a most curious ignorance, not merely of what, on this subject, may be most properly termed the A B C of knowledge, but even of the manner of arranging the material in such a form as to make available the information the work actually contains. The book is absolutely without sequence, being put together with such a want of order as to make a task to the reader as disconnected and difficult as the horn-book alphabet ever was to youthful abecedarians. Scattered here and there are all the facts gleaned by William Hone and K. R. H. Mackenzie, in their essays on the horn-book, and Dr. Murray has contributed valuable material from the New English Dictionary, but all this is so buried in the author's dissertations on how papyrus, filigree, and rose-headed nails are made; on how the Welsh *ll* should be pronounced, on the handwriting of a correspondent, on a quarrel of the author with an anonymous writer, and other equally irrelevant matter, as to call to mind Falstaff's proportion of a halfpenny's worth of bread to an "intolerable deal of sack." So, too, in the illustrations, the valuable reproductions and "insets," and the really charming print of "Miss Campion," with her horn book, are scattered among a large number of puerile fancy engravings having neither artistic merit nor historical correctness.

The chief defect of the book, aside from this scrap-book method of treatment, is its attempt to differentiate the horn-book proper—that is, the alphabet backed by a board, and faced by a transparent sheet of horn—from all other forms of children's A B C books. Thus the earliest horn-book mentioned is dated 1450, yet a quotation from a fourteenth century MS. in the British Museum—to the effect that

> Quan a chyld to scole xal set be,
> A bok hym is browt
> Naylyd on a brede of tre
> That men callyt an abece—

shows clearly that the horn-book was practically in existence many years earlier, and the mere addition of the protective sheet of horn was too slight a change to justify a separate account of it. To write a satisfactory history of the horn-book, the whole subject of A B C books—primers, rhymed alphabets, and other elementary methods of teaching the alphabet—would have to be treated together, for no clear line of demarcation can be drawn between them.

Had Mr. Tuer but studied these cognate branches, he would not account for the occasional absence of the + at the beginning of the "criss-cross" line, and its occasional replacement by a ¶, to the vagaries, or want of "sorts," of the individual printer, but would know that in primers, horn-books, and rhymed alphabets printed for the Puritan sectaries the cross was always omitted. Thus, Morton, in his 'New English Canaan' (1632), speaks of "a silenced Minister" who came over to New England and brought "a great Bundell of Horne books with him, and careful hee was (good man) to blott out all the crosses of them for feare least the people of the land should become Idolaters." In the same manner the use of a capital U matching the lower-case form (u) is discussed at some length, when, if the subject of the alphabet had been intelligently looked into, the explanation would have appeared very simple. Originally "v" was the sole form for lower-case and (by mere enlargement) for upper-case or capital letter. Naturally, when the new form "u" came into use and the need of a capital was felt, a corresponding enlargement took place, and in its earliest uses only an enlarged "u" is to be found. It has been alleged that the Elzevirs first employed the U in its present form, but this is erroneous, for it is found in books as early as 1529, and books of theirs show both forms of capitals in the same works. So, in England, both were used in the same books till well into the eighteenth century, when the older form gradually disappeared. Had the author but realized the significance of this detail, a very valuable clue would have been given him as to the relative ages of the horn books. The introduction of a bird into the centre of the capital O is, we confess, a puzzling matter; but it was common to many other books besides the horn book, and sometimes two straight lines were used instead of the other symbol. Probably it was a relic of the early illuminators; but as the author's theory supplies a very typical example of his methods, we quote what he has to say on the subject:

"It is probable that the symbolic O in the horn-book is a play upon the word 'Drake.' In Queen Elizabeth's reign flourished Sir Francis—El Draco, the dragon—and the historian, Arthur Duck. Other Ducks and Drakes there were in plenty, amongst them a physician, author, satirist, antiquary, and poet, but they were of later broods. In what earlier form this initial O was used may yet perhaps be traced, but in the horn-book it probably conveyed no special meaning, and was intended simply as an ornament. There is, of course, the bare possibility that the printer may have meant the teacher to accept his duck as a dove, hoping that he would prove complacent because of the opportunity afforded of evolving mildly interesting discourses touching the animals which filed into the Ark. Though no English child was ever gammoned into believing that bird to be aught but a quack quack, its presence may have helped to sell the horn-book."

Yet it must be confessed that, in spite of all defects, Mr. Tuer's work contains a large amount of valuable material, and, so far as it is a record of all known horn-books, is a most meritorious labor. It has been prepared with an utter disregard of cost, and is in many ways a beautiful piece of bookmaking. Actual reproductions of several horn-books are "let in" to pockets in the covers, and are capital pieces of workmanship. Every important specimen is reproduced in half-tone, and every mention of the horn-book is included, even to the barest allusions, while Hornby's poem is reproduced entire. Had Mr. Tuer's antiquarian knowledge and literary self-restraint but equalled his evident ability to work, he would have produced an admirable compilation, instead of merely the materials for one.

Biographical Sketches of the Graduates of Yale College. With Annals of the College History. Vol. 2. May, 1745–May, 1763. By Franklin Bowditch Dexter, M.A. Henry Holt & Co. 1896.

A LONG interval of eleven years separates this volume from the first; none too long, one thinks, in view of the "other occupations" which have been the industrious author's nearest duty. The entire period falls within President Clap's incumbency, and is marked off at the beginning by the going into force of the new charter, and at the close by final successful resistance to "the attempt to subject its [the College's] constitution and management to the varying will of a popular Assembly." The graduates of these years necessarily, such as survived, had to face the Revolution, and as a pretty large proportion were Episcopalians, either clergy or laymen, their fortunes are to be traced in a Tory connection. The persecutions of this class are offset, in one instance, by the sufferings in Nova Scotia of a sympathizer with the Revolution who had been called to minister to a Congregational church in Cornwallis. Judge Thomas Jones, whose surcharged posthumous 'History of New York during the Revolutionary War' caused a rattling of the dry bones of our patriotic complacency some seventeen years ago, is one of the more prominent of the Tory graduates; Bishop Seabury perhaps the most prominent. On the patriot side there is comparatively little distinction. Ezra Stiles, future president of the college, and Silas Deane are best known; the latter receiving at Mr. Dexter's hands a vindication in accord with Franklin's tribute to his colleague. There are two signers of the Declaration. For the rest, these men of the eighteenth century (one third clergymen) are illustrious rather in their posterity than in themselves, and among them we find the ancestors of Gideon Granger,

"Peter Parley," Benjamin Silliman, Gen. Theodore Lyman, Mark Hopkins, D. Huntington, Horatio Greenough, Lyman Trumbull, and that amusing rascal Stephen Burroughs. One Buell (by an odd coincidence of name) had for his half-brother Noah Grant, great-grandfather of the General and President; and the Rev. John Cleaveland was second cousin to the Rev. Aaron Cleveland (Harvard, 1735), from whom descends our present chief magistrate. The family trait crops out in the Yale Cleaveland, who was suspended and then expelled for "violating the laws of the Colony and the College" by attending "Separatist" meetings in his home town with his parents, and refusing to acknowledge wrongdoing, and whose clerical obituarist thus commemorated him: "Tho' of a mild spirit, he was decided in his opinions; tho' gentle in his manner, he was independent in his conduct."

The brief Annals in which Mr. Dexter gives the physiognomy of each college year open with the formidable new body of laws, with their prohibition of attendance at religious meetings not appointed by the public authorities or approved by the College, and provision for expulsion for heresy, and exaction from President and tutor of open consent, "in the college hall," to the Westminster Confession before entering on office. In 1753, assent to the Westminster catechism, the Saybrook Confession and Platform was demanded, with a full examination of every occupant of the Professorship of Divinity—tests never exacted at Harvard, as Mr. Dexter points out, and wholly unprecedented in this country. All these hedges against free-thinking did not prevent the Rev. John Huntington (Y. C., 1762) from leaving behind him a 'Calvinism Improved; or, the Gospel illustrated as a System of Real Grace, issuing in the Salvation of All Men' (New London, 1796), whose publication after his death "caused consternation among the author's friends, and the greater part of the edition was destroyed by one of his daughters." Mr. Dexter, who has done more than merely transcribe the titles in his bibliography of each graduate, thinks it unmistakable that this heretic thought he could reconcile Universalism with "most of the Calvinistic doctrines." The titles, by the way, of the publications on trade and finance of Pelatiah Webster (Y. C., 1746) seem to justify our editor's opinion of their importance as a contribution to the commercial literature of the country. They might repay examination and quotation now.

Apart from the Annals, there is not much savor in this large and handsome volume. Mr. Dexter's conscientiousness in recording the facts, creditable or otherwise, regarding the subjects of his sketches, leads one to believe that he has made the most of his material. He permits us to smile at the estate of Hurlbut, merchant, class of 1757, "valued at only £79—the largest item being 'A Negro Girl Cate, £30'" He records, under Sherwin, class of 1759, the giving of a lot in Sunderland, Vt., for the support of the pastor who should be first settled. Two churches were formed in different parts of the town, and a race began to secure a prior claim to the land. Mr. Sherman's settlement was adjudged by the courts to have been two minutes ahead. The Rev. Joseph Sumner (Y. C., 1759), sermonizing in 1812, and speculating on the next fifty years, doubts if the Federal Union will last half that time, and dates the millennium from 1866, or the first full year of the new Union. Whitefield, reaching New Haven in December, 1754, "At Even . . . made a Visit to the President, who treated him much like a Gentleman," according to a contemporary account. "It is pleasant to learn," says Mr. Dexter himself (in phraseology which would distress Tolstoyan Christians), that to the public contribution to meet the extraordinary war expenses of the year, "collected in the several parishes throughout the colony on Sunday, March 20, 1759," the College congregation gave £13.

We will close with noting two errata not pointed out in the list on p. 788. On p. 586, in the second paragraph, the town of Harvard should be located northwest of Boston, not "northeast"; and in the first line on p. 724 the "of" following "measures" must certainly stand for *or*.

The Nation.

NEW YORK, THURSDAY, AUGUST 20, 1896.

The Week.

MR. ELLIOT DANFORTH, who was chosen to preside over the Bryan notification meeting on Wednesday of last week, was once Treasurer of this State and ex-officio a member of the State Board of Canvassers. While he held these offices, a contested election case in Dutchess County came before the board, consisting of two returns, the Mylod return and the Emans return. The Supreme Court and Court of Appeals successively forbade the board to canvass the former; but when Maynard made his celebrated theft of the latter, they canvassed the illegal return in defiance of the court's order, excusing themselves by saying there was no other before them. For this offence, which changed the political complexion of the State Legislature, Mr. Danforth and his associates were held guilty of a deliberate contempt of the highest court of New York, and heavily fined. As the opinion of the Court of Appeals puts it, they did "the very thing which the issuance of the writ was intended to absolutely prevent, and thus contemned and defeated the will of the court." It is singularly fitting that Mr. Danforth should have been dragged forth into conspicuousness once more, to give the sanction of his reputation for defiance of judicial authority to a meeting advocating the degradation of all courts, and the creation of a millennium where no ardent soul shall be cramped and confined by the despotism of "government by injunction."

We have now had Mr. Bryan in two characters—that of a demagogue and that of a solemn economist. If anything could make us prefer the former rôle, it would be his performance of the latter. His conception of the demagogue's part was very poor. All his undignified, slap-you-on-the-back, hired-man style of haranguing the crowds showed him very inexpert in the art. The truly great demagogues never thus vulgarly let themselves down to the level of the mob. Bryan's coarse and careless joking about the post-offices he was going to distribute next year was a fearful blunder for him to make, such as the stupidest Presidential candidate on record was never capable of making. But all these misconceptions of his rôle are as nothing compared with the gross, the incredible ignorance he displayed when he essayed the character of profound economist. His references to savings banks and life-insurance companies are alone enough to rank him in the booby class in business. United States Senators could not have displayed crasser ignorance. To meet the objection that, under free silver, life-insurance policies would be worth only half their face value, he asserts that the gold standard, on the other hand, increases the profits of "the companies" at the expense of the policy-holders. Does Mr. Bryan know, or does he not know, that nearly every life-insurance company is a mutual concern, and that all the profits go, and necessarily go, to the benefit of the policy-holders? A wise man from Nebraska delivering himself in this fashion in New York is not merely, as he says, in an "enemy's country," but in what is evidently for him an absolute *terra incognita*. His remark about the savings banks finding it increasingly difficult under the gold standard to "collect their assets," perhaps means something to his mind, but to others it must remain wholly unintelligible. In all this sad floundering Mr. Bryan shows how much out of his sphere he is as an economist. He would do much better to stick to his crown of thorns and his cross of gold.

The curious fact that the only debtors worth considering by the Popocrats are those who cannot or do not pay, had been remarked before Mr. Bryan made his Madison Square Garden speech; and he did not fail to illustrate it. "It is sometimes asserted by our opponents," he remarks, "that a bank belongs to the debtor class; *but this is not true of any solvent bank.*" Observe that in Mr. Bryan's understanding the word debtor means bankrupt. It follows that the phrase debtor class means the bankrupt class. Substitute the latter phrase for the former, and it will be seen that all the pother that has been kicked up, during all these years, is about the exceedingly small number (only a few thousand per year) who are reported by Bradstreet and Dun, Barlow & Co. as actually insolvent. Nobody can be considered a debtor if his assets exceed his liabilities.

Mr. Sewall formally accepted at the Madison Square Garden his nomination as Democratic candidate for Vice-President on the same ticket with Mr. Bryan. Mr. Watson, the Populist candidate for Vice-President on the same ticket with Mr. Bryan, has just issued another pronunciamiento, denouncing Mr. Sewall as "a millionaire national banker and corporation king, who represents nothing Populists advocate," and as "the typical Eastern plutocrat." A more curious situation has never been seen in our politics. We have had splits in parties before, notably when the Democrats in 1860 divided their votes between Douglas and Breckinridge. But in every case where a new ticket has been put in the field, it has been new as to both the Presidency and the Vice-Presidency. This year, for the first time, we have two parties nominating the same man for the Presidency and two different men for the Vice-Presidency. These two men, moreover, are as far apart as the poles in character, affiliations, and inclinations, and neither takes any pains to conceal the contempt that he feels for the other. The situation only serves to emphasize the hodge-podge nature of the Populist party. The truth is, that it is not a party in the ordinary sense of the term.

The cancelling of Bryan's engagement for a tour through "the provinces," with several performances in Maine, is a confession by his managers of the failure of his trip to the East. His withdrawal from the stump will be sad news to the Republicans, for he has been losing votes every day that he talked, and he was the most effective orator for the Republican side who could be employed. The folly of allowing him to go to Maine and make a lot of speeches which might be followed by a large Republican majority at the State election next month, was so obvious that even less wise men than those who are managing the Democratic canvass must see it. With Bryan in retirement the next feature in the campaign will be McKinley's letter of acceptance, which ought to appear during the next two or three weeks. Bryan, too, threatens to write a letter of acceptance, in addition to the frightfully long written speech which he read in this city on August 12. He has nominally been an editor, but he evidently never mastered the art of "boiling down." If he expects the people to read, or even the newspapers to print, his letter of acceptance, he must "cut it short." McKinley, by the way, should learn wisdom in this respect from Bryan's experience.

It is gratifying to see that Mr. McKinley is becoming more and more outspoken concerning the true issue before the nation. In his address on Wednesday week to the survivors of his old regiment he barely referred to the tariff, but spoke with the greatest force, and we believe with genuine conviction, concerning the maintenance of the credit of the country. He reminded his hearers that Lincoln declared that every dollar of the paper money issued during the war should be made as good as gold, and that President Hayes executed that promise in the resumption of specie payments in 1879. The "70,000,000 of people" argument, which appears to be now Mr. Bryan's sole stock in trade, Mr. McKinley turned forcibly against him, by declaring that these 70,000,000 "mean to keep this government and its honor and integrity and credit unquestioned." He might have added that they will do this without the consent of

any foreign power; but, having some respect for the intelligence of his hearers, he did not advance this consideration. We should be sincerely glad to have Mr. McKinley dwell in future speeches on those utterances of Washington which he repeated on the same occasion. Washington, he said, told us over and over again that there was nothing so important to preserve as the nation's honor; that the most important source of strength was the public credit, and that the best method of preserving it was to use it as sparingly as possible. That last proposition is a political platform in itself, and the fact that Mr. McKinley quotes it may signify a good deal. All our troubles are due to a disregard of its warning. We have used the public credit, not sparingly, but lavishly, and strained it nearly to the breaking-point. We have used it to sustain the silver dollars and the paper dollars, and if it is to be preserved hereafter we must lighten its burdens. It is hardly to be supposed that Mr. McKinley has gone so far as to formulate a policy for a more sparing use of the public credit; but if he is spending his time in studying the views of the founders of the government, we may accept the omen as a happy one.

It is very significant that no interest whatever is taken in the question whether the Chicago platform really contains a declaration that silver dollars shall not be made a legal tender in satisfaction of existing contracts for payment in gold. The official stenographer of the convention certifies that Senator Hill's amendment to this effect was adopted; Mr. Richardson of Tennessee, who was presiding at the time, declares that it was not, and nobody cares which is right. The members of the convention hooted at the idea of giving the matter any consideration whatever. It is true that the United States Supreme Court, "as at present constituted," would require debtors to pay gold dollars when they had promised to pay gold dollars. But it is the Supreme Court "as hereafter to be constituted" that the Popocrats are counting on. If they can command a majority for free silver coinage, they can command a majority for a bill increasing the number of justices of the Supreme Court; and the best evidence of this is the total indifference of the country to the question what the Chicago platform really says.

Very little sympathy will be wasted on the cabal of anti-Cleveland United States Senators whose course in the last few years is really accountable for the delivery of the Democratic organization into the hands of the silver Populists at Chicago. Nothing has been more evident for a long time than that thwarting the President was a more important object with these men than the passage of any legislation which would benefit the country—and so, necessarily, their own party—so long as this legislation was in line with the President's recommendations. Failing to "run the Administration" in the distribution of the spoils during Mr. Cleveland's first term, they got together to defeat his public aims as soon as he entered office the second time. Their failure in their efforts to thwart the repeal of the Sherman silver bill only increased the venom of their opposition, and when they put the new tariff bill through in a shape which rendered it impossible for the President to sign it, they thought that they had him "down." They imagined that their triumph was complete when their national convention trampled all Cleveland principles into the dust. But, with the campaign not yet fairly under way, these conspirators see themselves hustled over the breastworks with as little ceremony as they have shown their party opponents. Senator Jones is scoffed at by all the faithful Bryanites, berated by the stricter Populists, and not even allowed to have his say as to the place of the Bryan headquarters. Senator Gorman is put to the humiliation of seeing the headquarters set up in Chicago—for one reason so as to be as far as possible from Maryland—and is denied a place on the Bryan campaign committee. And the rest of the crowd who cried so lustily at Chicago for free silver, Bryan, and all the other outcomes of that convention—Vest, Bate, Cockrell, Harris, etc.—find their wishes and influence of equally little avail. Democratic defeat this year and all the business losses that the free-silver cloud is causing will be more than recompensed if the campaign of 1896 opens the eyes of the people to the real character of this Senate cabal, and purges that body of the men whose presence there has wrecked their party and put a check on the material progress of the whole country.

The Kansas Republicans have had a pretty hard job "getting in line" with the national platform of their party this year. All political organizations in that State have yielded to the silver craze during the last few years. In 1892 the Republican platform "urged the passage of such laws as will increase the coinage of silver, looking to the coinage of the production of our own mines as soon as it can be done without injury to the business interests of the country." In 1894 the platform declared that "the interests of the producers of the country, its farmers and its workingmen, demand that the mints be opened to the coinage of silver of the mines of the United States, and that Congress should enact a law levying a tax on importation of foreign silver sufficient to fully protect the products of our own mines." This was the next thing to a declaration in favor of free coinage, and some of the Republican candidates for Congress advocated unrestricted coinage. The silver plank in the St. Louis platform was consequently a severe shock, but the Republican State convention last week showed that the party has "braced up." Besides endorsing the national platform as a whole, the convention adopted two additional resolutions, one of which declared that the Republicans of Kansas "believe in sound money," which was defined as meaning that they "favor the use of gold and silver and paper in the largest measure possible consistent with the maintenance of the equal debt-paying and purchasing power of all our money"; while the other and more important resolution read as follows:

> "We are opposed to the free and unlimited coinage of silver at the ratio of 16 to 1 by this country alone, because it means silver monometallism, a debased currency, and the destruction of our national credit."

The first thing in the shape of a test of public sentiment will come with the State election in Vermont on the first Tuesday in September, though that will be less important than the corresponding election in Maine on the second Monday of the same month. The Republicans are at a disadvantage in each State by reason of having a candidate for Governor who is personally objectionable to many in the party, and, if the contest occurred midway in a Presidential term, the ticket would suffer from this cause. As it is, however, the personal element will not count for much, nor will considerations of State affairs. Voters will cast their ballots according to their feelings regarding the silver issue. The indications are altogether favorable to good Republican majorities in each State. Maine has long been the one weak spot on the financial question in the whole East, and the success of the Fusionists in the September election of 1880 showed that surprises are always possible, but nobody can now see any reason to expect a repetition of that experience. The Democrats are split on the silver issue this year, and the Populists are running a candidate of their own, while the Republicans seem united, and under such conditions they ought to carry the State by the 15,000 to 20,000 majority which Chairman Manley of their State committee says that they expect.

The canvass for the Republican State convention is closing amid charges and counter-charges of fraud and corruption, on the part of the various factions and of the rival candidates for Governor, which seem to be well founded. A more disgraceful prostitution of the civil service of the State to political and personal ends has never been seen than the open and shameless manner in which Superintendent Aldridge of the Public Works Department is using the canal force to elect delegates in favor of his nomination as Governor. The squabble on Saturday over the control of the convention in

Warner Miller's county was most disgraceful. As regards the State at large, the Platt machine has evidently secured an overwhelming majority of the delegates, as was to have been expected. A report is current that Miller, Mi holland, and some of their allies will nominate another Republican State ticket if the Platt men shall control the convention. But even Miller and Milholland are hardly capable of such a performance. A bolt, in order to amount to anything, must have some character and principle behind it. The fact that the bolters did not succeed in electing as many delegates as they think they ought to have had, is not enough.

The recent action of a teachers' institute in Indiana is as amusing as it is instructive. Although many of the teachers were Democrats, the institute decided without a division that it should be stipulated in all contracts made between the trustees and the teachers that the teachers' wages should be paid in gold or its equivalent. It is said that this resolution was adopted "in no partisan spirit," which seems altogether probable. But we should have been glad to have the institute make it plain whether there was anything peculiar in the situation of teachers requiring that such a stipulation should be inserted only in *their* contracts for wages. What would the institute have said, for instance, to a resolution providing that in all contracts for the erection of schoolhouses, for the supply of school-books, and for the furnishing of fuel and lights for school purposes, a gold clause should be introduced? And of course it would have been necessary to resolve that all laborers employed in building schoolhouses, or making school-books, or producing coal that might be burned in a schoolhouse stove, were also entitled to have their wages paid on a gold basis. To make matters complete, the resolution should explain why every one else has not the same claim as teachers have to be paid in money of the present value; and it might incidentally call attention to the fact that the Chicago platform proposes to forbid the making of such contracts by teachers or any one else.

A correspondent asks us the question, "what kind of money the existing public creditors purchased their bonds with." The answer is that they were purchased with gold. Every outstanding bond was issued since the act of 1873 was passed demonetizing silver, and every such bond was sold at "not less than their par value for coin." It is worth mentioning that all the bonds ever issued by the United States Government which came to maturity have been paid in gold or the equivalent of gold. Even those that were bought with greenbacks worth only 40 cents on the dollar were so paid. Why? Because the Government could not honestly pay one piece of paper with another piece of paper without the consent of the creditor. That would be simply an exchange of evidences of debt without providing for the interest — a method of "payment" which even Wilkins Micawber scorned.

It has been evident for some time that Russia was preparing to take herself out of the ruck of silver-standard countries, the only question being how and when she would plant herself squarely on the gold standard. The first step was taken some months ago with the issuing of a ukase authorizing the making of contracts in gold rubles. Up to that time the law had recognized only the silver ruble. Of course, the real currency was the depreciated paper money, the Bank of Russia having refused for more than thirty years to redeem its notes even in silver. But silver was the legal standard, and all contracts, engagements, agreements had to conform thereto. The change admitting gold contracts was officially explained as intended only to do away with some of the evils of a depreciated paper currency being a legal tender, but the steady acquisition of gold by Russia and subsequent legislation show plainly enough where she is headed. Another ukase has been promulgated (published in the *Cote Libre* of Brussels August 6), still further extending the right to make gold contracts, recognizing the paper currency as a legal tender only at its gold value on the day payment is made, and authorizing the Minister of Finance to draw up rules and regulations for the payment of taxes in gold or in paper currency at its gold value. This is practically, it will be seen, the adoption of the gold standard. What to do with the mass of depreciated paper, what place to give the silver coinage, are only matters of detail. Thus the last remaining great European power has yielded to the cosmic process, as Huxley would have called it, and dropped silver. But this, of course, will furnish Bryan a powerful argument for our taking it up and making common cause with Chinese and Dagoes.

The reply made by Mr. Balfour in the House of Commons on Friday to Sir William Harcourt in reference to the Venezuelan question is very encouraging, and will be received on this side of the water with as much satisfaction as it was in the House where it was given. He said that the Government had every reason to hope for an early settlement of the dispute. Sir William Harcourt's inquiry was whether the proposal contained in Secretary Olney's dispatch of June 12 had removed the difficulties in the way of a settlement, and whether the boundary dispute might now be submitted to arbitration. Mr. Olney's dispatch of June 12 contained a clause to meet the contention of Lord Salisbury that the territory in actual occupation of British subjects should not be submitted to arbitration. Mr. Olney's alternative proposition was that it should be stipulated that in case the arbitrators should find that territory belonging to one party was in actual occupation of the other, the fact of such occupation and settlement should be given such weight and effect as reason, justice, and international law require. It is most gratifying that this door has been availed of (if it has been), and that the dispute may be regarded as approaching an amicable settlement. It must be said, however, that the public mind is now so absorbed with more momentous questions that Venezuelan affairs receive very scant attention. The question whether we are to adopt a depreciated currency, repudiate half of our debts, and plunge trade and industry into infinite turmoil, the end of which no man can foresee, so far overtops the affairs of Venezuela that most people who ever had any knowledge of the Schomburgk line have now lost it. It cannot be said that the loss is serious.

The German Liberal party, which achieved its most notable triumphs at the beginning of the constitutional era in Austria, has succumbed to the forces now dominant in Cisleithania. As a parliamentary power the United Left has practically ceased to exist; but an attempt is being made to reunite its most prominent members in a new "German-Progressive" party, which is to be much more uncompromising in its opposition to Slavic and Clerical pretensions than its predecessor proved itself to be under Taaffe and Badeni. The new party will, however, face a Reichsrath reinforced, under the new electoral law, by seventy-two additional members, not one of whom is likely to be a Liberal, and it will certainly be numerically weaker than was the coalition of Liberal elements which made it possible for Count Badeni to carry out his various reform measures. That the United Left had outlived its usefulness was made evident by the desertion of its most eminent leaders, like Plener and Suess, who could no longer support the vacillating policy of the present Premier. Count Badeni entered office nearly a year ago with a reputation for firmness which his performances since have sadly belied. He first gained the good will of the Liberals by his opposition to anti-Semitism, but he soon made concessions to Feudalists and Clericals in order to gain their support for his electoral reform. The United Left grudgingly followed him until he summoned Dr. Lueger before the Emperor, and practically surrendered to the leader of the anti-Semites. The Socialists are likely to profit by the disintegration of the Liberal party, and to be more numerously represented in the next Reichsrath than they ever were before.

WHY BRYAN FAILED.

THAT considerable anxiety was felt about the possible effect of Mr. Bryan's Madison Square Garden speech, cannot be denied. We, for our part, thought that the anxiety was baseless, as the nature of the case did not admit of a great personal or political triumph. But whatever the nervousness was in advance among honest-money men, it is all dispelled now. The very tension they were under makes their relief all the greater. In place of vague fear, inextinguishable laughter has come. Mr. Bryan has broken his prestige, and broken it fatally, as it now appears. He has already weighted himself with the terrible political handicap of having made himself ridiculous. For a man who was going to witch the East with his oratory, to have failed so disastrously at his first appearance that his managers have had to lay violent hands on him and order him to speak no more, he has made a disheartening beginning. What was the cause of the huge fiasco?

In the first place, Mr. Bryan's undertaking was essentially theatric. It was an unprecedented thing for a candidate to journey fifteen hundred miles to be notified of his nomination. Mr. Cleveland was, indeed, notified in Madison Square Garden, but he was in his own State and city. For a Nebraskan to come to the same spot was an open and obvious appeal to the spectacular. Now in the theatrical world ambitious and much-advertised performances of this sort have to be great and instantaneous successes, or else they are tremendous failures. In attempting what he did, Mr. Bryan was bound to achieve the most brilliant success, or to lose everything. A moderate attainment would not do; recognition must be immediate and hearty, the applause uproarious, or the whole play was ruined. Whether he could have won, by other tactics, so much as a *succès d'estime*, we need not discuss, but the fact is undoubted that the piece, as given, was hopelessly damned. The claque could not save it. The managers have promptly accepted the popular verdict and withdrawn it. In reaching out for a grand triumph, Mr. Bryan has but made his failure spectacular in the last degree.

One explanation of his disaster lies undoubtedly in his sudden change of rôle. A comedian sometimes essays heavy tragedy, but he does it at enormous risk. Especially is it fatal if he leaves the audience in ignorance, and lets them think it is a comedy they are going to witness. The Madison Square audience felt not only disappointed but tricked. They had been led to expect a sort of Buffalo Bill show. The dashing cowboy they had heard such tales of, they would have laughed at for his free Western sallies and audacities; but to have him startlingly transformed into a Professor Dryasdust, prosing through two mortal hours, this was too much. No wonder that they fled before his portentous pile of manuscript with cries of "Good-night, Billy!"

Mr. Bryan's theory undoubtedly was that he would disarm Eastern prejudice and disabuse the public as to his personality. The Boy-Orator business was all very well for the Platte River or Chicago, but the conservative East, he suspected, would not go daft over that sort of exuberant rashness in a candidate for the Presidency. So he would reveal himself to the astonished gaze of New Yorkers as a profound student, a careful investigator, even as a man with the saving grace of dulness. He has let it be no secret that in this he expected to do for himself what Lincoln did for himself in his Cooper Union speech. Before Lincoln spoke in New York, many people thought of him only as a rough-and-ready Western lawyer, with a talent for story-telling. In Cooper Union he showed himself the sinewy reasoner, the well-equipped thinker, the far-seeing statesman he was. Mr. Bryan, in Madison Square Garden, would in like manner show that he was no flighty youth, but a strong and serious man.

Now the trouble with all this is that vulgar opinion in the East was wrong about Mr. Lincoln, but right about Mr. Bryan. Lincoln had to make no sudden change of character in his Cooper Union speech. It displayed his powerful intellect, his saturation with our constitutional history, and his grasp of principle, but not more so than his speeches in Illinois of two years before. He was really here the same man he was there. But Mr. Bryan had to force a sea-change upon himself. He had to give over his native style of popular haranguer and skilful performer on the instrument of vulgar prejudice, and assume virtues which he had not. How absolutely in a strange and unrealized world he was wandering appears from the merest casual reading of his dreary columns. The most glaring self-contradictions, the grossest blunders in matters of fact, the emptiest platitudes and vaguest assertions, leap out to declare their author a man not accustomed to weigh his words, impatient of study and ignorant of his subject.

But the greatest difference, after all, and the truest reason of Mr. Bryan's downfall, is the fact that Lincoln could appeal to the patriotic instinct and the sense of national honor, while his foolish young imitator has to argue for the cause of private dishonesty and public disgrace. That cause would be desperate in the hands of Webster himself, if we can conceive his piercing mind caught for an instant by the free-silver sophistries. In Mr. Bryan's hands, the case becomes not only desperate but ridiculous. It is our great salvation that the free-silver logic is such a mass of absurdities and self-contradictions. It is our great good fortune that these have all been so stupidly collected and fathered by Mr. Bryan. A giant in dialectics, the most skilful adept in making the worse appear the better reason, could not argue the free-silver cause in a way to stand secure against the battering of three months' discussion before the American people. The Boy Orator has not only uncovered its and his own nakedness, but has made it and himself an object of mirth to all the people. American humor casts an enormous vote, and Mr. Bryan's spectacular failure has arrayed it solidly against his candidacy.

SENATOR SHERMAN'S SPEECH.

SENATOR SHERMAN can make a good speech when he tries to do so. His speech at Columbus on Saturday was one of the best he has ever made. It comes at the right time to secure close attention. It carries the authority of the foremost Republican Senator, and will therefore secure the widest publicity and most careful reading. It contains some matter which, if not entirely new, is new to forensic debate, and is therefore especially attractive, and it presents the old matter appertaining to the silver controversy in a very cogent way. Coming on the heels of Bryan's dismal failure in Madison Square Garden, it will be more effective than it would be without that opportune contrast.

Mr. Sherman presents with great force the historical fact that the statesmen who framed the coinage laws of 1834 and 1853 intended to introduce the single gold standard, and supposed that they were doing so when they passed those laws. This is proved by the language they used. The first of these laws was the one which changed the mint ratio of silver and gold, which had formerly been 15 to 1, to 16 to 1. Why was so radical a change made? The French legal ratio was 15.50 and the market ratio in this country was not far from that figure. If the purpose of the statesmen of 1834 had been to keep bimetallism in force, they would assuredly have adopted the French ratio. There was every reason why they should do so. Why did they not? The answer is found in the words of the House committee that reported the bill, which Mr. Sherman quotes:

> "The committee think that the desideratum in the monetary system is a standard of uniform value; they cannot ascertain that both metals have ever circulated simultaneously, concurrently, and indiscriminately in any country where there are banks or money dealers, and they entertain the conviction that the nearest approach to an invariable standard is its establishment in one metal, which metal shall compose exclusively the currency for large payments."

If this was the intention of the statesmen of the period of Jackson, Benton, Van Buren, Webster, Clay, and Calhoun (and we have never had a brighter galaxy), why did they not put it into law once for all? The answer is that they had not yet learned how to make a token coinage of silver as we do now, and they feared that they might not have any small change. This lesson in the science of

money was very slow in impressing itself on the nations of the earth. England did not learn it till 1816. We did not learn it till 1853. France did not learn it till 1864. Our small change prior to 1853 consisted mostly of foreign coins, principally Spanish and Mexican, which circulated at their metallic value, but our statesmen did not consider it quite safe to rely on foreign coins exclusively for that purpose. Moreover, there were some private contracts in existence payable specifically in silver. For these reasons silver was not demonetized, although a law was passed which was intended to have the effect of making gold "exclusively the currency for large payments." This was effected by adopting a ratio which overvalued gold sufficiently to drive silver out of circulation, as it did. One ounce of gold was then the equivalent in the market of fifteen and five-eighths ounces of silver, and this was well known to the Congress of 1834. They adopted the ratio of sixteen expressly to force silver out of circulation. It was a bulky, inconvenient currency, and it promoted the circulation of banknotes, which the Democrats of that day, and Jackson *par éminence*, wanted to get rid of. This explains the "crime of 1834," as Mr. Sherman ironically describes it.

The crime of 1853 was very much like it. After the passage of the law of 1834 our silver coins rapidly passed out of circulation. Foreign ones came in to supply the needs of small change, because our small silver coins were of corresponding weight with the dollar. There was the same profit in melting and exporting two halves, or four quarters, or ten dimes, as a whole dollar, because they yielded the same quantity of bullion. The foreign coins, however, were much abraded from long use, and each possessor tried to pass off the lightest ones rather than the best, and this led to frequent disputes. The evil grew with the lapse of time. There was no way to control the circulation of these "smooth" foreign coins unless the public were provided with better ones. The purpose of the act of 1853, which, as Mr. Sherman says, was passed by a Congress Democratic in both branches, and signed by a Democratic President, was thus stated by the chairman of the committee which presented the bill to the House:

> "We propose, so far as those coins are concerned, to make silver subservient to the gold coin of the country. We intend to do what the best writers on political economy have approved; what experience, where the experiment has been tried, has demonstrated to be the best, and what the committee believes to be necessary and proper—to make but one standard of currency and to make all others subservient to it. *We mean to make gold the standard coin.*"

The question may be asked, Why did they not go on and complete their work and actually demonetize the silver dollar? They may have thought that the silver dollar, which was then worth 4.26 cents more than the gold dollar, would never again be so low in price that it could circulate alongside of gold, as this was the time when the great outpour of the placer mines of California and Australia was taking place. Whatever the reason may have been, their intention cannot be doubted. It was to make gold the single standard, with a subsidiary coinage of silver.

The action taken in 1834 and in 1853 was initiated and carried through by the Democratic party. Mr. Sherman is justified in saying that "from 1801, when Mr. Jefferson became President, to the close of Buchanan's Administration in 1861, the Democratic party was a gold party, opposed to silver and all forms of paper money." It was not until the chance presented itself of repudiating nearly one-half of all debts, public and private, that this party, at the instigation of the Southern Populists, reversed the policy which it had pursued for three-quarters of a century.

SOME FACTS ABOUT SHIPPING.

THE spectacle of a candidate for an office among the highest in the gift of a great people conducting a campaign for a monopoly in his own business, is not edifying. It is still less so when the reasons put forward in support of his scheme are analyzed, for they show a painful confusion of ideas. To build ships is, he claims, his object; yet that industry has been as highly protected by our tariff and navigation laws as the most ardent believer in paternal government could desire. To sail ships is another matter; and if Mr. Sewall and his associates secure their primary object, a tremendous pressure for shipping bounties may be expected. The mere possession of ships does not mean marine power; it is the employment that counts.

The relative commercial importance of the leading ports of the world may be measured by the movement of shipping in them. Certain facts are generally recognized, such as that the United Kingdom has a commercial fleet, both steam and sail, larger than that of any other nation; that Norway has a sailing fleet second in size to that of England, and is a very important factor in the carrying trade of every commercial power; that Spain is strong in steam vessels, but weak in sailing-ships; that Italy has a stronger sailing-fleet than steam; and finally that the merchant marine of the United States engaged in foreign trade is very small compared with our commercial importance. If the merchant marine of the great shipping powers be ranged according to their importance, the result is as follows:

STEAM.	Tons.	SAIL.	Tons.
United Kingdom	5,964,000	United Kingdom	2,962,000
Germany	893,046	Norway	1,452 276
France	491,972	Germany	660,856
Spain	479,746	United States	586,142
United States	252,045	Italy	571,605
Norway	237,135	France	298,567

What is less generally known is the distribution of shipping movement in the ports of the various countries and the increase in a stated period, say of ten years. A special study of the subject made in the Bureau of Statistics of the Treasury Department suggests many interesting comparisons. Some of these, based upon the aggregate of entrances and clearances of shipping, will be outlined.

No less than eight ports give a yearly movement of more than 10,000,000 tons, where only two gave such a high figure ten years ago. These ports so distinguished are:

	Year.	No. vessels.	Tons.
London	1894	18,042	14,433,580
New York	1895	8,452	13,188,085
Hamburg	1894	17,484	12,505,735
Constantinople	1893	17,876	11,638,735
Liverpool	1894	7,279	10,489,578
Hong Kong	1894	.....	10,469,182
Cardiff	1894	10,723	10,458,391
Antwerp	1894	9,512	10,075,928

In efficiency of fleet the order will be very different. New York shows the highest return, for the average tonnage of each vessel was 1,560.3 tons. Liverpool is not far below this figure, with 1,441 tons to the vessel, and Antwerp with 1,059 tons closes the list of those having averages above 1,000 tons. Even Cardiff is ahead of London, having 975 tons against London's 800, but no other of the ports named exceeds London. Thus New York, among the great ports, stands first in an organized and highly developed shipping, where the highest tonnage is concentrated in the relatively smallest number of vessels. In another respect New York proves its increasing efficiency. The average tonnage per vessel for this port in 1885 (1,006 tons) was exceeded only by that of Liverpool (1,110 tons); yet after a period of ten years New York shows the higher average, and appears to have distanced all its rivals. By another standard of measuring importance, the relative increase of tonnage in ten years, a third arrangement is developed. Hamburg leads with an increase of 70.88 per cent., Constantinople is second with 64 per cent., and Cardiff is third with 50 per cent. Liverpool gives the least advance (5 per cent.), while New York and London give nearly the same result—20.5 in the one case, and 19.8 in the other. Hong Kong and Antwerp occupy a middle ground, the former having increased 35 per cent., and the latter 48 per cent.

It is easy to explain in every case why the increased activity in shipping should be so distributed. London is the great centre of imports ($688,395,000 in 1894); and from Liverpool are exported British products and manufactures greater in value than the entire export from London. If foreign exports be added to Liverpool's credit, that port becomes the first in rank, sending out in 1894 products to the value of $431,664,243, and London $370,837,485. New York enjoys the eminence of receiving 65 per cent. of the imports and shipping 40 per cent. of the exports of the United States; a share in the foreign commerce which easily explains its high stand

in relation to other ports. Hamburg has always held a high position in shipping—a position explained upon the same grounds as that of Antwerp, both being great receiving and distributing centres. The returns for Constantinople are explained by geographical position. As the only entrance to the Black Sea, and for Russia the only outlet to the southward by water, it must reflect the rapidly increasing importance of the Russian ports—Batum, Odessa, Taganrog, Sebastopol, Nikolaiev, and Kertch, all increasingly important shipping points, and each one of which has more than doubled its entrances and clearances in the last five years. The importance in shipping of Constantinople is as much reflected greatness as is that of Malta or Gibraltar. The coal trade feeds the barge tonnage of Cardiff, about one-third of the total exports of this product being shipped from that port. The eight ports may thus be divided into three classes. In the first, where the commerce is varied and substantial, may be placed London, New York, Hamburg, and Liverpool. In the second, the importance of that trade depends upon a single commodity, and only Cardiff can be placed in this class. In the third belong points where vessels touch, but which receive a comparatively small part of their cargoes. Here may be ranged Constantinople, Hong Kong, and perhaps Antwerp.

The same comparison could be made on a second group of ports, in which the movement of shipping was greater than 5,000,000 tons, viz.: Tyne ports, Rotterdam, Odessa, Marseilles, Lisbon, and Buenos Ayres. One and all depend for commercial importance upon some factor beyond the power of Government to create, but unfortunately not beyond the power of Government to destroy. It is the possession of some great natural wealth like the wheat fields of Argentina and Russia, the iron mines of Spain, the coal of Great Britain, or the manufacturing industries of the Manchester district, that brings shipping and gives them a profitable cargo. Or it is a geographical position that offers a favorable point for first concentrating and then distributing the merchandise movement, serving as great exchanges or entrepots. In no instance, whether it be a port with a large shipping movement, or one of the smallest with nothing but a coastwise trade, can the agency of Government be pointed to as the cause of the movement, unless it has created a monopoly and so discouraged the natural development.

To encourage further than is now done the construction of ships in the United States would be a multiplication of the instruments of commerce where the supply is already sufficient. Apart from the competition with English shipping, the immense and ably handled sailing fleet of Norway must be met, as well as the excellent steam lines of Germany and France. The mere suggestion of Government indirectly engaging in shipbuilding and in ship-sailing, by bounties and discriminating duties, opens up a vista of expense that must be enormous if the policy is to be carried on. The figures quoted show that the shipping service at New York is better in material than that enjoyed by any other port in the world approaching it in volume of trade. It is ridiculous to suppose that the interference of Government can better this situation or increase the advantage now possessed, although it may add to the profits of Mr. Sewall and his associated shipbuilders at the expense of the taxpayers.

THE HONOR AND INTEGRITY CLAUSE.

THE difference between Lord Salisbury and Mr. Olney over what is called in England the "honor and integrity clause," is one which has never before arisen in the history of diplomacy, and which ought to be thoroughly discussed, because it is practically the only obstacle to a general treaty of arbitration covering the whole Anglo-Saxon world—the greatest single advance in civilization which the race now has it in its power to make. There is no serious difficulty about constituting a tribunal, nor is there any reason to suppose that the definition in advance of all probable subjects of arbitration will be insisted on. The real trouble is the idea suggested by Lord Salisbury, and apparently adopted by Mr. Olney, that it should be provided in advance that each nation should reserve the right to withdraw from arbitration any question affecting its national honor or territorial integrity. Is this a good plan, or a necessary part of any such treaty? We think not, first, because "honor" and "territorial integrity" by no means exhaust the subjects which nations may insist on fighting about; second, because the clause, no matter how drawn, is so vague that either nation could bring almost any question it pleased within its terms; third, because this fact makes the clause itself emasculate the treaty; and fourth, because a nation, forced to withdraw, will withdraw, clause or no clause. A treaty with such a clause is exactly as if two private individuals should agree to submit all differences that might arise between them to a third, expressly reserving the right to refuse to arbitrate any question which either should consider so important that he would prefer to go to law about it. Apply the proposed clause to such differences as have actually arisen in the past between England and ourselves, and these points become very clear.

The war of 1812 involved the right of search. The right to stop an American ship and take seamen out of her did not concern our territorial integrity in the ordinary acceptation of the words, but we should certainly have maintained that it affected our honor, and it also certainly affected something very important, yet different from either honor or territorial integrity, *i. e.*, our substantial interests on the ocean. Had the treaty with the clause proposed been in existence, we should have arbitrated or not as we pleased. A treaty without such a clause would have rendered war more difficult.

The Northwest boundary question involved territorial integrity on both sides. Our feeling on the subject found expression in the simple territorial war-cry, "Fifty-four forty, or fight." The dispute was settled by negotiation. Had we had a general arbitration treaty, it would have been settled by a tribunal. But if the treaty had itself provided for withdrawal, the clause would certainly not have helped matters forward. When feeling runs high is the time when arbitration is most important and the right of withdrawal most dangerous.

When the Confederate envoys, Mason and Slidell, were taken from the mail steamer *Trent* by Capt. Wilkes, England made ready for war, considering her honor and substantial interests on the sea (analogous to, but differing from, those of territorial integrity) involved. We were in the wrong, and avoided war by surrendering Mason and Slidell. Had there been a treaty with a withdrawal clause, England would probably, in the excitement then existing, have withdrawn at once. A treaty without a withdrawal clause would have furnished both sides with a way out of an awkward dilemma, and made threats of war unnecessary.

The *Alabama* claims were actually arbitrated; but after the court had assembled, England hesitated to go on, and came very near withdrawing, because we presented a case claiming damages for a number of indirect losses, such as the increased cost of the war of the Rebellion. The objection to them was that they were so large as to threaten England with excessive pecuniary liability, and also that the intention of the treaty was not to include them. Not only substantial interests, no less important than territorial integrity, but the honor of both sides, were involved. There was no withdrawal clause, but nothing is more certain than that England would have withdrawn had not the court maintained its control by ruling the claims out. The case shows that a withdrawal clause is unnecessary, because even a specific treaty without such a clause is no bar to withdrawal.

The Venezuela controversy involves the territorial integrity of the British empire through that of Guiana, and we say that it involves our honor and substantial interests in some way. A general arbitration treaty is proposed for this and all other disputes. How will a treaty with a clause enabling either side to withdraw on the very ground which has caused the trouble, advance matters?

In every one of these five great historical controversies one side or the other has found ground for alleging that its

honor, or integrity, or equally important interests were involved. In every one a cause existed which would have enabled one side or the other to nullify any general arbitration treaty containing a withdrawal clause. In every one of them a treaty without such a clause would have tended to enforce itself.

The clause would be all very well if the question of honor or integrity involved were itself to be submitted to arbitration. But this is the very point which every nation is so unwilling to submit, while its own decision that its honor or integrity is involved means nothing to its adversary. There seems no escape from the conclusion that the clause should be wholly abandoned. We are satisfied that, the more the matter is considered, the more clear it will appear that there is no half-way house for a general arbitration treaty between submitting everything to arbitration or nothing at all. At first sight the clause seems a harmless concession to natural sensibilities; but nothing would be more harmful than a general treaty, followed, on the first occasion of bad blood between the two countries, by a notice that, under the honor and integrity clause, one side or the other proposed not to arbitrate, but to kill and destroy with all the means at its command until the party of the first part yielded. To insert it is merely to profess a willingness to agree to arbitrate everything that you may not subsequently think it incompatible with your own best interests to arbitrate.

LIBERALS AND RADICALS.

THE low estate of German Liberalism just at present has led to an interesting correspondence between Prof. Lujo Brentano and Dr. Barth, editor of the Berlin *Nation*. The former contends that the trouble with the Liberal party in Germany, and Austria too, is that it has been too stiff and unyielding. It stands just about where it did in 1848. Then it was the party of progress and hope, but its principles have become hardened into a rigid dogmatism. It will not budge before the new needs and demands of the new time. Especially by comparison with English Liberalism does it show a painful want of elasticity and capacity for change and growth. If the German Liberals had only gone in for social reform, old-age pensions, workingmen's insurance, and all that sort of thing, they would not have found themselves so out of touch with the great mass of the electorate and so feebly represented in the Reichstag.

So far Prof. Brentano. To him Dr. Barth rejoins with considerable force, so far as the situation of German Liberalism is concerned. He points out that all the concessions made to Socialism have not in the slightest degree diminished the vote of the Social-Democratic party or induced it to abate one jot of its pretensions or of its determination to become the supreme power in Parliament. On the contrary, every attempt to conciliate the Socialist workingmen of Germany has but made them stand together more solidly than ever and defy other political parties with increasing bitterness. Dr. Barth asks why, if a friendlier attitude on the labor question would have meant political salvation for German Liberalism, the actual adoption of such an attitude has not helped German Conservatism? Prof. Brentano, in fact, commends to the Liberals a remedy which the Conservatives, under the lead of the omniscient William, have tried and found to be a lamentable failure.

As for the English precedent cited, like most precedents, it depends upon who is allowed to make the application of it. It is no doubt true that English Liberalism has succeeded in retaining the sympathy and support of the great body of Radicals. If this has been done without any surrender of principle, as we believe it has been in the main, then there is no disrepute in the word "elastic" as used of that party. There must necessarily be partial readjustments of party aims and declarations from time to time. But it is also true that English Radicals have shown themselves as implacable as their German brethren. Despite the famous "Newcastle programme" of the Liberals, the workingmen's party ran separate candidates for the House of Commons in as many constituencies as possible last year, thus securing the defeat of Mr. Morley and doubtless several other Liberals. Moreover, again as in Germany, the English Conservatives have gone the greatest lengths in trying to meet the Socialists and the workingmen half way, and it is Mr. Chamberlain, a Conservative minister, possibly a Conservative Premier to be, who is now the leading champion of old-age pensions and workingmen's insurance. On the whole there seems little to choose between parties on this score, and one party seems to have been little more successful than the other in conciliating and retaining the extreme Socialist vote.

The whole question involved is a most interesting one, and has its practical bearings and illustration in the present attempts of Democrats and Populists in this country mutually to swallow each other. Any party, to live or to deserve to live, must undoubtedly keep itself open to new ideas. But how is it to discriminate between a new idea which will furnish it nutrition and growth, and a dose of poison, which its system cannot tolerate? How is it to know when to yield to a "craze," and when to oppose it? What are the signs by which a successful political alliance for common ends may be marked off from a base surrender of principle, a forced action in unison of radically antagonistic elements that are sure sooner or later to get by the ears and bring both into defeat and disgrace?

So large a subject cannot be satisfactorily treated here; but one or two general considerations may be ventured. A party organization must know that it can assimilate new elements only slowly. Sudden and sweeping changes in the party creed and in party methods are almost certain to be fatal. Time must be had, and fair and free discussion, and opportunity for frequent expression of the party mind, before a great departure can be safely made. This is one of the ominous signs about the fusion of Democrats and Populists. It is a forced and unnatural union. Up till within a very few months nothing seemed more improbable than an effective union of the Democratic and Populist parties. It was brought about—so far as the present condition of angry and suspicious alliance can be called a union brought about at all—by sharp and not too scrupulous political management. But the great vice of it is its suddenness and unexpectedness. The mass of neither party was prepared for the step. Especially in the Democratic party has this startling lurch away from the old moorings aroused great indignation and rebellion, and all the signs now indicate that a Democratic party squarely fighting Populism in this campaign would have cast a larger vote than a Democratic party will in unholy alliance with it. If ever the union was to have been made, it should have come only after much more deliberation and discussion and adjustments on both sides. As it is, the swine have rushed violently down a steep place into the sea.

As for questions of party principle which may never be compromised or surrendered, it may be said, in answer to Prof. Brentano, that there is at least one principle which must be rigid, which must be held as a dogma, and never allowed to become "elastic." That principle is that a party should never commit itself to promises or aims which no party can secure, or to social changes which legislation cannot effect. That is to say, a party must be true to the law of its being as a party. It can work only by and through discussion and law. If you can show that a large class has a remediable grievance, then you may ask a party to take it up; but things opposed to what is written in the constitution of man and society, vague aspirations which cannot be put in the terms of legislation, Utopian schemes—all these a political party is bound to resist on pain of death to itself if it yields. The Populists are really uneasy dreamers, men afflicted with nightmare, whose proposals it is beyond the wit of man to so much as draft in the form of a bill. To have surrendered to them, as the Democrats have done, is to surrender not to a policy but to a mental attitude; and mental attitudes cannot be made the law of the land.

THE ANCIENT CAPITAL OF POLAND.

CRACOW, July 20, 1896.

THE story of Poland and of the Polish na-

tion is a subject of melancholy interest. In America, for the most part, we know little enough about it. We may be aware that the Poles exist, even if they are no longer the masters of their own land, but we seldom realize what are their conditions and aspirations to-day, or how splendid were many features of their history, with all its shadows. In the time of their prosperity they sinned much, and they have suffered more than accordingly. Now, although their country is dead, they are alive as a people, filled with a patriotism whose burning intensity is purified from any vulgar taint of chauvinism by the tragedy of their situation, still struggling and hoping, working for the future and looking back on the past with inextinguishable love and pride.

It is in Cracow that we find most to recall this past. For generations the capital of the country was here, until, after the union with Lithuania, the need was felt of some more central position, and in 1609 Sigismund III., of the Swedish house of Vasa, removed to Warsaw; but here are to be found the remains of the ancient royal castle, and here, until the end, the kings of Poland were crowned, and, with a few exceptions, were buried in the cathedral. Here, too, was the short-lived republic, created at the Congress of Vienna, but suppressed and annexed to Austria in 1846. Facing northward from the hills near the town one can easily see into Russia; to the west, though out of sight, the German frontier is not many leagues away. A few miles distant are the famous salt mines of Wieliczka that produce annually some 60,000 tons, and have been worked for ages. The seven stories, the lowest being more than nine hundred feet below the level of the earth, contain a labyrinth of galleries and chambers, with lakes and with halls, chapels and images, some of them centuries old, hewn from rock salt.

Cracow, supposed to have been founded by the mythical King Cracus, lies in a plain on the upper waters of the Vistula, near the eastern end of the Carpathians. There are about 80,000 inhabitants, of whom something like a quarter are Jews, the real Polish Jews, who in most cases have kept their old characteristics to an extent that is startling in these progressive times. They are distinguishable enough, not only for their Oriental features, but on account of their curious dress —the long, closely-fitting coat that almost reaches the earth and looks like a dressing-gown, in the hand an umbrella in all weathers, on the head a cap with a visor or perhaps a tall silk hat, underneath which, down the sides of the face, fall the two ringlets that give such a curious, unattractive appearance, and that are hardly to be found out of Austria, as in Russia they are forbidden by the Government. On Saturday, the Sabbath, the coat worn seems to be of satin, while the orthodox headgear is a cap with a border of sable fur, looking uncomfortably warm in midsummer. The Jews were greatly favored by Casimir III. the Great, even if not actually invited into the country by him, and the quarter of Cracow where they live, in what was once a separate town, is still called Kasimierz, although, of course, they are no longer confined to it. Their language is the well-known mixture of German and Hebrew, while they often speak Polish none too well. In time many of their peculiarities must disappear, so that they will, at least, dress and speak like the rest of the population, as indeed some of them do now; but the mass of them, for the present, are a class apart, disliked and feared.

Most of the other inhabitants of the city wear the usual commonplace garb of civilized man. Only the peasants from the country about are still a sight worth seeing, when they appear in their Sunday clothes. We notice a good deal of variety in their dress, presumably according to differences in the prevailing styles in the regions from which they come. Perhaps the most frequent complete type of costume for the men seems to be a felt hat, often with a feather, a tight-fitting jacket of purple or red, with (over it) an open coat that is either red or white with red trimmings, and striped trousers. Both sexes wear high boots, if any, and the women array themselves in bright calico dresses, embroidered bodices, heavily bespangled with coral and blue buttons or knobs, large necklaces of coral or of imitation stones, and brilliant silk or calico handkerchiefs tied about their heads. As elsewhere, modern clothes are gaining ground, nor is every peasant rich enough, even when so inclined, to own and keep in proper condition a correct elaborate attire; hence those that are faultlessly got up are in a small minority. However, there are enough of them, and enough color of all kinds, to make a fascinating picture.

In the way of regular sights, such as appeal to the most ordinary tourist, Cracow is far richer than the few meagre pages devoted to it in Baedeker would lead us to expect. Many of the Polish sovereigns and of the great nobles lived magnificently enough, frequently importing artists from Germany or from Italy to supply the deficiencies of native talent. Both influences are well represented. Thus, on the one hand, we come across not only fine examples of Gothic architecture that suggest Danzig, but also splendid specimens of the sculpture of Veit Stoss and Peter Vischer; on the other, we can see that Italian taste was prominent even before the marriage of Sigismund I. and Bona Sforza (in the early part of the sixteenth century) brought from beyond the Alps men of southern genius, who proceeded to enrich their new home with some really great works of the Renaissance. The glory of the city is the Wawel, the hill on which stands the citadel commanding the town—a castle begun by Casimir the Great, later continued in the style of the Renaissance, with a beautiful *cortile*, but afterwards neglected, plundered of its pictures by the princes of the Saxon line, who sent them to Dresden, and finally turned into a barracks and military hospital by the Austrian Government. Adjoining it is the Gothic cathedral, consecrated in 1359, where are to be found most of the tombs of the Polish kings and their families from Ladislas Lokietek (d. 1333), the father of Casimir; but the last sovereign of all, the weak and unfortunate Stanislas Poniatowski, who was deposed by Catherine the Second of Russia, lies buried in St. Petersburg. Many of these tombs rank high as works of art, forming as a whole a series nearly unequalled in the world. The most impressive are three of those in the Romanesque crypt, the oldest part of the church, the three graves of Poland's national heroes, John Sobieski, Kosciuszko, and Joseph Poniatowski, who was drowned in the Elster after the battle of Leipzig. There is another monument to Kosciusko, a mile or two away, inside a fort on a hill with an excellent view. It is a mound sixty-five feet high, built in 1820-23 by the efforts of the entire population.

Descending from the Wawel into the streets below, we found much to interest us, and not a little to regret. The old walls were torn down between 1810 and 1820, as were, with one exception, the twenty gates, in place of which we have a promenade that, pleasant as it is, is an insufficient consolation. The heart of Cracow is the great Rynek (Ring) with the brick church of St. Mary's, an imposing Gothic building, whose interior has recently been restored in a manner which, though it has provoked much criticism, has a certain effectiveness. At any rate, one can turn aside from the fresh paint to admire some splendid specimens of mediæval sculpture and stained-glass windows. In the middle of the Rynek is the Sukiennice, the Cloth Hall, a masterpiece built in the fifteenth century and very satisfactorily restored some years ago; near by it stands the clock-tower, a remnant of the ancient city hall demolished in 1820. Although fifteen churches were burned to the ground in a great fire in 1850, there are said still to be fifty left, several of them well worth a visit; but far better is the superb Gothic courtyard of the library of the University, formerly the University itself, begun by Casimir III in 1349. For good pictures, we must go to the two fine private galleries, that of Countess Potocka and the museum of Prince Czartoryski, the latter containing a Da Vinci and a Raphael, also a large collection of arms and antiquities. In the cathedral are works of Canova and Thorwaldsen. As regards native modern art there is not very much to be said. The various attempts at neo-Gothic architecture have not been uniformly successful, and in the galleries above the Sukiennice, the average visitor will find little to interest him, except Semiradski's "Living Torches of Nero," and two or three historical paintings by Mateiko.

And yet all these works have their importance, as showing that Poland lives. Cracow is not merely a great Austrian fortress, with fifteen thousand men hidden away in invisible defences round about, nor is it only an ancient capital with the Westminster Abbey of an extinct nation. Its memories and monuments not only make past ages vivid; they spur on the men of to-day. It is the seat of a university, of an academy of sciences, a centre of art and thought, of literary activity and of national life. Even in practical politics the Poles of late years have shown a marked ability. The present Austrian Prime Minister, the Minister of Finance, and the special Minister for Galicia are Poles; so is the Minister of Foreign Affairs for the whole of the Dual Empire. As a people the Poles have always been gifted, brave, and patriotic; and in this century they have, under the most disastrous conditions, shown an astonishing vitality, a persistency that hardly seemed to belong to their character. Who, then, can maintain that their part in history is over, and that the time has come when we can say with truth, "Finis Poloniæ"?

ARCHIBALD CARY COOLIDGE.

Correspondence.

SOUTHERN PERPLEXITIES.

TO THE EDITOR OF THE NATION:

SIR: Your article on "The South in the New Warfare" in one respect does more, and in another less, than justice to the South. It is hardly true to attribute the present attitude of the South wholly to the new order of politicians represented by Tillman, Watson, etc. The melancholy feature of the situation, to many of us, is that so many of the old and trusted leaders have been carried away. With

some it is probably a mere catering to the Populist element that has to be reckoned with if they are to retain their leadership. But with many more it is an honest infatuation with the free-silver idea that to thinking men is incomprehensible.

On the other hand, there are causes, for which the South is not responsible, that have combined to place her in this position. Owing to the gigantic problem thrust upon her in the sudden and wholesale enfranchisement of the negro, for a whole generation Southern politicians have had practically but one question to study—how to maintain white supremacy. Upon that depended the peace, prosperity, and progress of their country, and everything else was subordinated to it. Hence an order of young politicians has grown up who regard the carrying of elections as the one criterion of a successful politician, the one needful element in political knowledge. Is it surprising that, in a political training of this kind, education in the fundamental principles of political economy is so lacking as to make them an easy prey to political heresies, and that the political conscience has been blunted to a degree that explains its obtuseness to the moral side of this question? This, of course, is no justification; but it may furnish some food for reflection to those responsible for this state of things who now stand aghast at its consequences.

Again, the South has seen the North and East grow rich on the policy of paternalism and protection. Is it strange that in its poverty it should seek its share in the national wealth through the same means? It is only necessary to quote the eloquent warning of the late Gov. Russell to the protectionists of his own State, which was quoted by him in his Auditorium speech in Chicago. He was right. They have sown the wind, and they are in danger of reaping the whirlwind—nay, they *are* reaping it, and have been reaping it for several years, in the panic and prostration caused by the spread of this heresy.

And, I may add, this is perhaps the strongest consideration, apart from local issues, that makes the thinking Democrat in the South, who believes in sound money and free trade, hesitate about his duty. To so many, a vote for McKinley, directly or indirectly, means the maintenance of the same system of paternalism and class legislation that is responsible for the present financial heresies. And there are many of them hesitating whether it would not be better to take Bryan and free silver, in the hope that, like a dose of salts, it would quickly clear the body politic of its accumulated corruptions. It is for this large and influential class that a third ticket is most necessary. Let it be made clear to them that the hope of the ultimate triumph of true Democratic principles depends on the preservation of a nucleus free from Populism, paternalism, and protection, and they will rally to that standard, and hope for better days.

NORTH CAROLINA.

West Raleigh, N.C.

IDLE FEARS.

To the Editor of The Nation:

Sir: In your issue of yesterday, "Chrysostom" says: "Many McKinley votes from Democrats can be made by proper assurance, from authorized sources, that the South need not dread a renewal of the Reconstruction and Force-bill horrors." I am a born and bred Southern Democrat, and my father was before me. Neither of us ever voted any but the Democratic ticket. This year I expect to vote for McKinley, because I am a believer in the financial policy of the Republican party, and believe the financial question to be more important than all others combined. I have never thought that a "Force bill" would injure the South, but, on the contrary, would be of benefit to us. The only effect of a Force bill would be to make all the Southern States where the negroes are in a large majority hold their State and county elections on a different date from the national elections. If this were the case, a very large number of Southerners who have always voted the Democratic ticket only because of the negro question, would, while still voting the "white man's ticket" at the State and county elections, vote for Republican electors and congressmen. The number and standing of the Southerners who would vote the Republican ticket at the national election would be so great and influential that even the bitterest Republican Administration would no more dare to use troops at the polls in the South than in the North or West. And, with a "Force bill," there would be no "horrors."

Very respectfully, A Mugwump.

Charlotte, N. C., August 14, 1896.

ENCORE DE L'AUDACE!

To the Editor of The Nation:

Sir: I quote from the circular of Secretary Carlisle, issued from the Treasury August 2, 1896: "Neither silver dollars nor silver certificates are redeemed in gold." Publish this if you dare. Roger Sprague.

Denver, Col., August 10, 1896.

[Apparently this should be addressed to somebody who has said that they were so redeemed. Let the galled jade wince! —Ed. Nation.]

A DEPRESSION OF THE CURRENCY.

To the Editor of The Nation:

Sir: One would hardly expect to find in the votes of the Harvard Corporation a hundred and seventy-five years ago any teaching concerning the financial problems of to-day, but here is a vote that should be of interest to every teacher about to accept an engagement on a fixed salary for the academic year 1896–7:

"At a Meeting of the Presid[t] and Fellows of Harvard College in the Library Nov[r] 16: 1719.

"Voted,

"1. That the Salary for the Ensuing Year to the Sen[r] Fellow be £80, to the Second, £70, and to the third £60. . . .

"2. That as an Addition to the Fellows Salary for this Year the Treasurer shall pay £10. out of the College Treasury to Each of the Fellows by reason of the Depression of the Value of the Bills of Credit."

The "depression" continuing, similar allowances were made in 1821, in 1822, and for a number of years afterwards. Nor was the paper money the only form of currency in Colonial New England that varied disastrously in value. All sorts of laws attempting to regulate the value of specie were essayed. Their results were such that Mr. Weeden, in his 'Economic History of New England,' exclaims, in reference to these experiments, "Alas for the knowledge of Newtons and the administrative skill of Dudleys in the artificial regulation of standards of value!"

The sense of justice of the Harvard Corporation led to the relief of their employees, but could the salaried employees of corporations of our own day—corporations of the genuine soulless sort—expect such treatment?

William G. Brown.

Harvard College Library,
Cambridge, Mass., August 14, 1896.

THE "BYRON SCANDAL."

To the Editor of The Nation:

Sir: Your correspondent ("C. E. Stowe"), in the *Nation* of July 16, has anticipated me with his remarks on the "Byron Scandal." He speaks, no doubt, with greater authority than any one else could; but no one who had read Mrs. Stowe's article on the subject could be at a loss for her motive in the exposure of Lord Byron's guilt as affirmed by Lady Byron. I wish to add another fact, equally recorded in that article, but quite lost sight of, even at the time, by the crowd of furious assailants who fell upon her for speaking what she believed to be the truth, and a truth that ought to be known. They alleged (the *Quarterly Review* leading the way) that Mrs. Stowe had rushed into print in an indecent hurry to blight a great man's memory.

Thirteen years had elapsed since Lady Byron made her this disclosure before the article appeared (dates, 1856 and 1869). Lady Byron, believing her death to be imminent, had begun by consulting her as to whether she ought to break her lifelong silence on the causes of the separation, for which she had been the object of so many calumnious falsehoods. Mrs. Stowe, having heard her whole story, and fearing the effect of such a step on her fragile health, told her that she thought she "would be entirely justifiable in leaving the truth to be disclosed after her death, and recommended that all the facts necessary should be put in the hands of some persons, to be so published."

Nine years had passed after Lady Byron's death, and Mrs. Stowe waited in vain for some friendly hand to write a justificatory memoir of this noble, much-maligned woman. None such appeared, and Mrs. Stowe broke her silence at last, only on the publication, the wide circulation, and eager reception of the Countess Guiccioli's calumnies.

It is not very gratifying to one's pride in one's country to have to avow a belief that this virulent attack on Mrs. Stowe by the leaders of English public opinion was mainly attributable to three causes: firstly, that Lady Bryon was disliked as a cold, correct, virtuous woman, while her husband was an interesting sinner; secondly, that the person she chose to confide her secret to was *an American!* (this nationalist prejudice being distinctly avowed and seasoned with expressions of contempt by several reviews, though the inoffensive reason for this preference was very simply given in Mrs. Stowe's statement); thirdly, that the person preferred was Mrs. Stowe, whose anti-slavery action made her unacceptable to the then Tory upholders of the "domestic institution."

I hope we have long outgrown the two latter prejudices.—I am, etc.,

An Englishwoman.

August 5, 1896.

MORAL EVOLUTION.

To the Editor of The Nation:

Sir: The incorrect reference to John Stuart Mill which is pointed out in the discriminating notice of 'Moral Evolution' in your issue

of August 13, I discovered a few days before the book was published, but too late even for an *erratum*. The needed correction is made in the second edition, which appeared in May. So entire a reversal of an author's meaning re-emphasizes the necessity of verifying references. The mistake has been overlooked in the other notices I have seen.

Theology, which is only incidental to the purpose of the book, is considered briefly in view of certain ethical modifications of doctrine, and in answer to the objection that evolution invalidates essential Christian beliefs. The recovery of the ethical value of Christianity is going on more or less rapidly in all Protestant denominations. The transcendence of Jesus is seen to consist in moral perfection rather than in omnipotence and omniscience. But this is not Unitarianism, the Unitarians themselves being judges, for, with cordial approval of my ethical positions, they have expressed decided dissent from my opinions on the person of Christ and the supernatural. Orthodoxy is a shifting term. The heterodox of to-day are the orthodox of to-morrow. Greek Christianity has as good title as Latin Christianity to be called orthodox. The ethical significance of Christian beliefs, the immanence of God, and the moral transcendence of Jesus are in harmony with the views of the Greek fathers, and, as I think, of the writers of the New Testament. I say this, not in defence of "old bottles," which there is good authority for not refilling, but only to suggest that the disappearance of a mechanical supernaturalism is not a reduction of essential truths, but rather a restoration of the real value of Christianity.

Yours respectfully, GEORGE HARRIS.

BAR HARBOR, MAINE, August 15, 1896.

Notes.

HOUGHTON, MIFFLIN & CO.'S fall announcements include, besides the Centenary (*de luxe*) Edition of Burns's works, in four volumes prepared by William E. Henley and T. F. Henderson, and besides the uniform edition of Bret Harte's works, already mentioned, the following: 'Christianity and Social Problems,' by Lyman Abbott, D.D.; 'The Spiritual Sense of Dante's Divina Commedia,' by William T. Harris; 'A Phrase-Book from the Poetic and Dramatic Works of Robert Browning,' by Miss Marie Ada Molineux, A.M., Ph.D.; 'Letters of Victor Hugo,' edited by Paul Meurice, in two volumes; 'Some Memories of Hawthorne,' by Mrs. Rose Hawthorne Lathrop; Lowell's Complete Poetical Works, in one volume, uniform with the Cambridge Edition of Longfellow, Whittier, Holmes, and Browning; 'Whitman: A Study,' by John Burroughs, and 'A Year in the Fields,' by the same writer, with illustrations by Clifton Johnson; 'Authors and Friends,' by Mrs. James T. Fields; 'Talks about Autographs,' by Dr. George Birkbeck Hill; 'George Fox,' by Thomas Hodgkin; 'William H. Seward,' by Thornton K. Lothrop; 'The Life of John Wellborn Root,' memorable for his share in the architectural planning of the World's Fair at Chicago, by Miss Harriet Monroe; 'Chapters from a Life,' by Elizabeth Stuart Phelps; a translation of Tsountas's 'Mycenæan Age,' with numerous illustrations; 'Talks on Writing English,' by Prof. Arlo Bates; 'Mere Literature, and Other Essays,' by Prof. Woodrow Wilson; 'Governments and Parties of Continental Europe,' in two volumes, by A. Lawrence Lowell; an illustrated edition of John Fiske's 'American Revolution'; 'A-Birding on a Bronco,' by Miss Florence A. Merriam; and 'Sister Jane, her Friends and Neighbors,' by Joel Chandler Harris.

The Century Co. will publish in October 'The Cat and the Cherub, and Other Stories,' by Chester Bailey Fernald.

Brentano's have nearly ready 'Short-Suit Whist,' by Val. W. Starnes.

Mrs. Burton Harrison has edited for A. S. Barnes & Co. a new edition of the late Mrs. Lamb's 'History of New York,' now in the press. She will add a chapter on the externals of the modern city, with fresh illustrations; and this will also be printed separately in a form to match the original work.

Herbert S. Stone & Co., Chicago, announce 'The Land of the Castanet,' chapters on Spain by H. C. Chatfield-Taylor which have been appearing in the *Cosmopolitan*.

Dickens's stories from the Christmas numbers of *Household Words* and *All the Year Round* (1852–1867) form another and perhaps the last of the Macmillan reprints edited by the younger Dickens. Since it reached our shelves the editor himself has passed away, and has done with the pious writing of bibliographical introductions altogether. He had here strung together "Mugby Junction," "No Thoroughfare," "Mrs. Lirriper's Lodgings," "The Holly-Tree Inn," and many less-known tales from those annual issues which Dickens abandoned because of imitators. From the same house we have another Balzac volume in Clara Bell's translation and Dent's ever tasteful dress, 'Pierrette and the Abbé Birotteau,' and Daudet's 'Artists' Wives,' translated by Laura Ensor for Dent's series; together with 'Macbeth' and 'Antony and Cleopatra,' in the Dent "Temple Shakspere." An etched copy of a so-called Cleopatra in the British Museum, and a view of the interior of the old Swan Theatre, are the frontispieces of these dainty booklets. Not much bigger is Macmillan's 'Guide to English Literature,' compounded of Matthew Arnold's review of Stopford Brooke's Primer, the same critic's notice of Gray in Ward's 'English Poets,' and John Morley's address (in 1887) on the study of literature. This will be found a wholesome pocket companion by any one bent on the discriminating pursuit of reading and letters. Finally, Prof. Monro's compact edition of all the attributed works of Homer (Oxford: Clarendon Press; New York: Macmillan) challenges attention alike for its beauty and its convenience. A thin paper saves from bulkiness the more than one thousand pages. There are no novelties in the text, which follows the respective best authorities, and there are no notes. The Greek font is bold.

In the uniform Mark Twain of Messrs. Harper have lately appeared 'The Prince and the Pauper,' and the collection of scraps entitled 'Life on the Mississippi.' We mean nothing depreciatory by the word scraps; on the contrary, these short chapters are highly profitable reading. Noticeable is Mark Twain's testimony in favor of Capt. Basil Hall and Mrs. Trollope. We should have liked references from as well as to the appendices; and the work was worth an index.

Scotland and The Orient determine the contents of the two latest volumes of Messrs. Scribner's short "Stories by English Authors," with a range of selection from Scott and Miss Mitford to Kipling and Ian Maclaren.

G. P. Putnam's Sons have usefully united, under the title 'America and Europe: A Study of International Relations,' a *North American* paper, "The United States and Great Britain," by David A. Wells, ex-Minister Phelps's sound Brooklyn address on the Monroe Doctrine, and Carl Schurz's address at the Washington Arbitration Conference, on "Arbitration in International Disputes." These form a peace document deserving a circulation commensurate with Jingoism and pseudo-patriotism. The same firm have begun a reissue and enlargement of the late Alexander Johnston's 'American Orations,' under the editorship of Prof. James Albert Woodburn of Indiana University. The first volume shows the plan of omission, abridgment, insertion, and annotation in the interest of further study. There will be three more, the last being new to the series. At a time when Boy Orators are in vogue, it is well worth while to go back to these landmarks in our political debate.

The Boston city fathers from time to time embark in book-making, and can now point to a goodly number of "Memorials" of eminent fellow-citizens. Some of these have been the stoned prophets of the anti-slavery agitation, and with them has been associated the late Frederick Douglass, whom the city authorities publicly commemorated in December of last year. Mr. Albion W. Tourgée's oration and Mr. Richard T. Greener's personal reminiscences form the substance of the volume, which is a sign of the times that we fear our Southern brethren can hardly read aright. Douglass was one of America's greatest orators, and he was often heard in Boston, where, after the passage of the Fugitive Slave Law and before he was ransomed, he might at any time have been seized for reduction to chatteldom. Perhaps this latter circumstance explains as logically as anything the municipal honors paid to him. The Memorial contains a portrait of this remarkable man.

A sumptuous leather-bound volume forms the First Year Book of the Society of Mayflower Descendants incorporated last year in this city. It contains, with many pictorial embellishments, a list of the *Mayflower's* passengers, with brief biographical items rather than sketches, the *Mayflower* compact, the proceedings at the first annual dinner of the Society, and membership lists (*a*) alphabetical, (*b*) by maiden name of married women, and (*c*) by descent from the respective Pilgrim fathers. It appears from the Constitution that any lineal descendant, over eighteen years of age, wherever resident, is eligible for admission.

To the frequent inquiry, Where can I find a list of works representing both sides of the currency question? the Baker & Taylor Co., 5 E. 16th St., New York, furnish a convenient response in a bulletin of such works, with price affixed and an indication of the side espoused.

Georg Herwegh was the poet laureate of the German revolutionary party which finally came to grief in the movement of 1848. He was in exile for several years before that movement broke out, and his only connection with it was as head of the German colony of Paris which undertook an expedition in aid of the insurrection in Baden. The letters published by Marcel Herwegh ('Briefe von und an Georg Herwegh,' Munich: Albert Langen) have but little bearing on the matter. The most interesting pages of the book are those which contain a lively account of the expedition, written by Herwegh's wife, a woman of great courage and intellectual gifts, who half a century ago had as thoroughly emancipated her-

self from conventional restraints as the most advanced "new woman" of our day. The description she furnishes of the ludicrous incompetence of the men who undertook to found a German Democratic Republic, only confirms the impression produced by almost everything that has been published by those who took part in that foredoomed failure. That so impotent an attempt should have thrown the governments of Germany into such paroxysms of fear, is a striking commentary on the cowardice of officialism.

The French Revolution of 1848 is lightly touched upon in M. Denormandie's 'Notes et Souvenirs' (Paris: Léon Chailley). He was at that time a young man, and confines himself to describing scenes that passed under his eyes; what little he does say is in direct support of the view that the expulsion of Louis Philippe was an offence against good government and civilization. The greater portion of his book, however, M. Denormandie fills with an account of the siege of Paris in 1870 and of the doings of the Commune. His important official position as *maire* of the Eighth Arrondissement during the period in question invests his narrative with peculiar interest, although he gives us little or nothing actually new. He describes with some minuteness the detailed methods adopted in the distribution of bread and meat in order to stave off famine as long as possible, and throws some side-lights on the social life of Paris during its period of greatest trial. What he has to say about the Commune can only deepen the detestation of right-minded men for the nameless atrocities of those desolate days.

The Baron d'Haussez is remembered in French history chiefly because he directed the expedition against Algiers in 1829 in his capacity of Minister of the Marine. The ministry of which he formed a part was that presided over by Polignac, and its arbitrary measures, which were heartily sanctioned, if not suggested, by Charles X. himself, led to the overthrow of the Government of the Restoration by the Revolution of July, 1830. D'Haussez escaped to England and occupied the leisure of exile in writing the Memoirs of his political and administrative life. The first volume of these has just been published ('Mémoires du Baron d'Haussez,' Paris: Calmann Levy; New York: Brentano's), and extends from the Restoration in 1814 to the death of Louis XVIII. in 1824. During this period D'Haussez was a member of the first Chamber of Deputies, the "Chambre introuvable," and Prefect in turn of the Departments of the Landes, the Gard, and the Isère. He here deals comparatively briefly with events, and indulges almost entirely in brilliant, though somewhat malicious, portraits of the men of the Restoration with whom he came in contact. A curious mixture they were: many of them had served every government in succession from the *ancien régime* to the Empire; some were returned *émigrés* who failed to understand the changes that had taken place during their absence, and expected offices and pensions for their fidelity to the Bourbons; a few were men who had waited patiently at home for the Restoration, obeying but not serving the previous administrations. The pen portraits would be interesting rather than valuable for historical purposes, had the volume not been most carefully edited by two well-known students of the period, the late Comte de Circourt and the Comte de Puymaigre, who have supplied excellent biographical notes rectifying the malignant wit of the author. They have also prefaced the volume with an admirable general introduction, dealing with D'Haussez himself and the principles of the Government of the Restoration. Students will look forward to the publication of the succeeding volume or volumes in which D'Haussez has to do with his political life, covering generally the policy and proceedings of the Polignac ministry, and more especially the dispatch of the expedition to Algiers.

M. Pierre Coubertin passes from athletics and education to contemporary history in his 'Évolution Française sous la Troisième République' (Paris: Plon, Nourrit & Cie.). His chronicle is more valuable for record of fact, of parliamentary votes, of rapidly changing ministries, than for large grasp or philosophic insight. Indeed, he frankly condenses his chronicle from contemporary newspaper or periodical comment. This fact sufficiently indicates the defects as well as the usefulness of the book.

Two numbers of the *Boletin de la Sociedad Geográfica de Lima* (Peru), corresponding to the proceedings of the second and third trimesters of 1895, have come to hand. The publication of Antonio Raimondi's itinerary continues, the ground covered in the present instalments being the old mule routes from Lima to Huancayo, Tarma, and Cerro de Pasco. There is also an interesting record of travel in 1866 from Huanta to Lima by way of the famous old mercury-mining town of Huancavelica. John Ball's valuable "Contributions to the Study of the Flora of the Peruvian Cordilleras" takes up the composite plants, asclepias, gentians, heliotropes, and other less numerous groups, in the present issue. Another botanical paper, which would prove of value to the traveller in those parts, is a list of the common names of the principal Peruvian plants, followed by the scientific names, prepared by Manuel García y Merino. The paper of widest interest in the two numbers of the *Boletin* is that on the languages of the central Andean region co-existent with the Keshua ("Quichua" of some writers), by Dr. Leonardo Villar. The discussion touches the Aymará, Cauqui, Yunca, and Puquina dialects, and ends with a consideration of the antiquity of the Keshua and of the question whether it may be a primitive language. Dr. Villar answers this question in the affirmative. Nothing new is adduced in support of this contention, but the argument is presented fully, and is accompanied with references to all the important works bearing upon this interesting and most remarkable American language. A new feature in the *Boletin* is the commencement of a series of Peruvian views, beautifully reproduced by the heliograph process.

We have received the prospectus of a new quarterly *Magazine of Americana*, to be published by George Watkins at Indianapolis; bibliographical in its nature, "containing a register of new, and notes on and extracts from old, books and pamphlets relating to America, the West Indies, and the South Sea." The first number is to appear in October.

Harvard has had a professor of music for about a quarter of a century, and Prof. Paine's pupils include some of the best-known composers and critics in the country. A few years ago Yale followed Harvard's example by appointing Mr. Parker professor of music, and with the opening of the college year Mr. E. A. MacDowell will take his place as professor at Columbia. He will have the assistance of several New York and Boston critics, who will lecture on historic and æsthetic topics. There has been much discussion, especially on the part of disappointed candidates for the new chair at Columbia, as to the propriety of appointing a mere composer for this important position, when such a sublimely important being as a musical critic and analytic lecturer might have been had for the asking. The only real question was: Are Profs. Paine, Parker, and MacDowell composers only, or are they men of general culture and special erudition, who can teach and lecture as well as compose? Every one who knows these three men is aware that the alternate inquiry must be answered decidedly in the affirmative. New York music-lovers will have special reason to congratulate themselves that Mr. MacDowell, who has no superior among the living composers of Europe, will now be brought back to his native city, after his many years of residence in Germany and Boston. He is of the same age as Paderewski, and these are the two young composers of whom the best things may be expected in the future.

Harvard, Yale, and Columbia are by no means the only American colleges that have a musical department. Most if not all of the large female colleges have one, and of other colleges we have before us documents showing that good work is done at them. At the University of Wisconsin instruction is given in vocal and instrumental music, history, harmony, and most of the other branches, the only unacademic thing in the catalogue being the mention of guitar, banjo, "mandolin, and other orchestral instruments." Oberlin is peculiarly fortunate in having among its instructors so learned and interesting a writer as Prof. Edward Dickinson. Under his guidance a musical library has been amassed which has few equals in this country, and he has published several little books which will be found extremely useful by all who wish to study the history and literature of music. They are a 'Guide to Musical History' and a syllabus of 'The History of Church Music,' and are published at Oberlin, O., by Pearce & Randolph.

We have received from the Berlin Photographic Company, No. 14 East Twenty-third Street, New York, a sample of their reproductions from the precious art collection of the Hermitage at St. Petersburg, just undertaken. There will be eighty-four of these heliogravure plates, of which the average size will be 14x19 inches, and more than a quarter of the whole will be Rembrandts; Van Dyck, Murillo, Rubens, Raphael, and Ruysdael ranking next numerically. Three Titians, two Da Vincis, two Lucas Cranachs, and a Botticelli may also be named. The whole series will be issued in seven parts, at $300.

The library of the late Prof. Ernst Curtius is to be sold. The value of such a possession to some of our younger American universities is obvious, and it is to be hoped that our educational benefactors will not neglect this rare opportunity. In the opinion of Dr. Weyl, chief librarian of the Royal Library of Berlin, the Curtius collection is the most important of its kind that has been offered to the public since the death of Otto Jahn. It consists of about 3,500 bound volumes, and of at least as many more rare and valuable treatises in pamphlet form. Classical philology is represented in both old and new editions, and these volumes derive an incalculable value from the fact that many of them contain innumerable marginal comments and conjectures from the hand of the great scholar. There

are also the monumental publications from original sources, like the 'Corpus Inscriptionum Latinarum et Græcarum,' as well as sets of all the more important periodicals relating to archæology, epigraphy, and numismatics. Further information may be had upon application to Mr. Charles H. Genung, Nutley, N. J., or by communicating directly with Prof. Herman Grimm, Matthaeikirchplatz 5, Berlin, W.

—Of high interest is the tenth part of the Fourteenth Report of the English Historical Manuscripts Commission, containing a calendar of the American papers in the Dartmouth collection. As Secretary of State for the American Department and Privy Seal from 1772 to 1782, the Earl of Dartmouth was the centre of American correspondence. The calendar amply proves the value of this; and the mere summary of the trade reports, intercepted letters, suggestions for peace and union, from loyalists and philanthropists as well as from statesmen, and the political correspondence passing through his hands, leads one to regret that the Commission did not give Mr. B. F. Stevens liberty to print in full the rich material found. Some of it has been reproduced in his Facsimiles, but the larger part is new. From the Stamp Act excitement to the end of the war, letters and reports of every description poured in upon Lord Dartmouth. It was not from a want of information that the Cabinet failed to appreciate the gravity of the rising spirit of opposition in the colonies, for merchants, officials, and military officers presented memorials and schemes sufficient in number to have determined any and every difference between mother country and colony. The non-importation agreements of 1765 and 1770 and the tea episode naturally became unimportant by the side of actual hostilities in 1775; yet there is hardly a paper noted in this calendar which is not precious as history and as personal expression of political opinion.

—The publication of the Hutchinson letters, and Franklin's agency in the matter, are mentioned. The visit to America of the mysterious French agent, Bonvouloir, is also incidentally brought in, and, under the influence of wine, the agent seems to have told more of his mission to the British than was judicious. He described Putnam as "a good-natured, civil, and brave soldier, but a headstrong, ignorant, and stupid general." Ward was held "very cheap," and the American officers were "perfectly ignorant of their business," and of moderate, or rather "mean parts." They had no settled or well-digested plan, and more jealousy than unanimity existed among their chiefs. This was before the appointment of Washington. Putnam sends to Major Moncrief his daughter, and writes: "If he does not like her he can send her back, and she will be taken care of and provided with a Whig husband." Ambrose Serle, a regular correspondent of the minister, in 1776 says of Charles Lee: "There is something so eccentric in the man's temper, and such a Vacancy of Principle, that it is impossible for all his Talents to support a Reputation here or anywhere." Joseph Reed is "an able man, but full of chicane, intrigue, and duplicity." As early as 1774 Carleton proposes to reinforce Gage with some Indians. On the other hand, there are some interesting letters from Eleazer Wheelock about his Indian school at Lebanon; and not a little on colonial land companies, churches, and colonial appointments. Mr. Douglas Brymner has calendared the Canadian papers, and it is reasonable to say that two men better fitted for preparing this volume could hardly have been found. The index is very full and satisfactory.

—In the *Revue Bleue* of July 25 M. Jean Le Pelletier describes a curious experiment in coeducation at the French court in the sixteenth century. The innovation, which sharply contrasts with French ideas in the Middle Ages as well as in modern times, seems to have been due to Catherine de Medici, who, says M. Le Pelletier somewhat surprisingly, was an admirable mother and devoted to all her children. The King, Henry II, coöperated heartily in the scheme, moved by his tender solicitude for the Dauphin, the future Francis II. At the time of the marriage of Anthony of Bourbon and Jeanne d'Albret, Henry withdrew from the wedding festivities, and, with scarcely any following, hurried to Saint-Germain, where the royal school was placed, "pour veoir," for so he wrote to M. d'Humières, governor of the Dauphin, "Messeigneurs ses enfants et pour en avoir tout seul la bonne chère." Besides the children of the King there were the little Queen of Scots, the young Duke of Lorraine, and more than forty others from the noblest families in France. Over 300 officers, teachers, and attendants were assigned to the service of this school. The course of study included not only Latin, but the vernacular and Italian, history, geography, astronomy, and mathematics; and while the boys were instructed in the arts of chivalry, the girls were initiated into quite commonplace household duties. But M. Le Pelletier thinks the experiment a failure. Indeed, he attributes to it the effeminateness of the later Valois kings, and a certain undesirable boldness in Mary Stuart and Marguerite of Valois. He declares with Talleyrand that the empire of woman is founded upon her "adorable faiblesse et sa divine douceur."

—The most interesting feature of the current number of the *Bulletin de Correspondance Hellénique* is M. Louis Couve's description of certain private houses excavated at Delos in 1894. They belong to the second and the first century B. C., when Delos, under Roman patronage, attained its highest commercial importance, and was filled with magnificent arcades and with the homes of wealthy merchants. The structures here figured give evidence of the wealth and refinement of their owners, resembling in decorative luxury the most elegant houses of Pompeii. Their plan approaches the classical Athenian arrangement of the fifth century rather than the Roman, and is characterized by the peristyle and the open court, entered directly by a long passage from the front door. Around the court the rooms are disposed in such a manner as to secure the open-air life of a warm climate, and at the same time complete seclusion from the street. Hence they are lighted from the inner court, and windows which open on the street admit the light from a height of ten feet or more. In one case only a window gives directly on the "Street of the Theatre," at the usual modern height; but this exception is due to the architect's intention to make the window, with its marble frame and bronze grill, an effective feature of the façade. In some respects these houses agree with the ideal plan of Vitruvius, while in others there is a wide departure, necessitated by the peculiarities of the site. The cistern, vaulted and strongly built, is an important provision in all, as might be expected when the rainfall is the chief source of supply, yet not a drop falls for three months in the summer. As many as three cisterns are found in the best appointed houses, communicating with each other, as Vitruvius describes, and by this communication filtering the water for drinking purposes.

—The domestic life which is here disclosed had luxuries and refinements, while it dispensed with certain comforts and even decencies. The sleeping-rooms and the slaves' quarters are cramped, ill-ventilated, and destitute of ornament. But the decoration of the larger apartments, the salon, the dining-room, and the *exedra*, is charming in taste and artistic effect, and in some instances is preserved in unimpaired brilliancy. The floors of such rooms and of the central court are paved in mosaic of novel and pleasing patterns; the walls are painted according to a decorative system at once sober and elegant, which recalls the best Pompeian style—that of the House of Sallust and of the Faun. Along the most graceful of the friezes runs a garland of flowers and bouquets of gay colors, amid which flits a Cupid with sky-blue wings and scarlet mantle, picking flowers or playing with a dog. Others, less conventional, contained masks of warriors, and Medusas, painted with great delicacy of color and design. The refinements of life were lavished on these reception rooms, whose shelves and niches indicate the provision made for statues and figurines and other bibelots. These have, in fact, been found in such excellence and number as to encourage high expectations. A "Diadumenos," perfectly preserved and superior in style to all known replicas of the famous work of Polyclitus, is the pearl of these discoveries, which warrant a general exploration of Delos as the most promising field of operations for the French School of Archæology after the completion of their labors at Delphi.

—Mr. Theodore Bacon's recent address on "What the Lawyer Owes to Society," delivered before the graduating class of the Yale Law School, has been issued in the form of a pamphlet by the university. He urges upon his hearers that they owe to society something more than the mere discharge of professional obligations. These he sums up in the three commands: "Thou shalt not rob thy client"; "Thou shalt not impose on the court"; and "Thou shalt not befoul or play tricks upon thy professional adversary." Yet the lawyer who can say, "All these have I kept from my admission to the bar up," will not have satisfied the larger and loftier requirements of the profession. "Unless you have done something, as your powers and your opportunities shall have served you, toward the formation of a just opinion in aiding the growth of jurisprudence and social advance through law—still better, toward the restraint and confusion of crude, unwise, and mischievous intermeddling with existing laws—you will have fallen short of satisfying the full scope of the obligations you assume to-day." Mr. Bacon gives several illustrations of the sort of effort which he would have lawyers make for the amelioration of things in general, and instances of what great lawyers have done in the past. While admitting to its widest extent the scope of the obligation contended for by Mr. Bacon, we are inclined to think that the class in this community which stands most in need of being reminded of it are not the fledglings of the law. According to our experience, there is

more generous enthusiasm for improvement in the junior than in the senior bar, while a judge who remembers that he owes anything to society in the way intended by Mr. Bacon is a rare bird. In the movements in this city either for law reform or against corruption in the high places of the law, the impetus has generally been given by the younger members of the profession; when any attempt is made in these directions, it is not the judges who rush forward to help it. In fact, were we called upon to get together an audience signally in need of being reminded of what the lawyer owes to society, we should feel no hesitation in distributing tickets generally among the judiciary and the leaders of the bar; to deliver the lecture, we should retain the services of a junior who still remembered what he owed to himself.

—One duty which bench and bar owe to society, and which is not mentioned by Mr. Bacon, is to do whatever is in their power to make the road to professional honors and emoluments such that dishonorable practices shall not be the readiest means of advancement. "The road to power"—and, we may add, to wealth—"will be trod"; but if to get forward on it requires base arts, honorable men will look for other paths to preferment, and the rewards of the law will more and more fall to charlatans and rogues. We have not only made the judiciary elective, but our system of nomination makes it necessary for the candidate for a judgeship in most cases either to buy his place outright, or to flatter and curry favor with a "boss," who always expects, and generally gets, favors of some sort in return. What is to be expected of judges who get on to the bench in this way? They live in an atmosphere of abuses, to which they have long been accustomed and have grown callous. One of these is the open and almost avowed solicitation of business. This is one of the essential marks of a trade as distinguished from a profession. An honorable lawyer cannot solicit business, any more than he can advertise. But unless solicitation is punished, it will certainly be practised, and the consequence is that the soliciting lawyer will get the clients, while the scrupulous one waits for them.

THACHER'S DISCOVERY OF AMERICA.

The Continent of America: Its Discovery and Its Baptism. An Essay on the Nomenclature of the Old Continents; a Critical and Bibliographical Inquiry into the Naming of America and into the Growth of the Cosmography of the New World, etc. By John Boyd Thacher. New York: W. E. Benjamin. 1896. 4to, xviii, 270 pp.

THERE is something rather startling in the opening averment of this book, that "its chief purpose is to establish the time and place of the naming of America." Such language would seem to indicate that there had been some unsettling of such well-rooted convictions as were long ago fixed by Humboldt, and since fortified by Major, to say nothing of living scholars. It would seem to signify that the unbalanced judgments of Hurlbut, De Bris, Marcou, and a few others were become rampant realities. Inasmuch as these inconstant vagaries have not disturbed anybody, and since our author himself acknowledges that the circumstances of the "baptism" of the continent had been "understood for fifty years," there seemed hardly occasion to "establish" the facts, unless there was new material to bring forth and fresh arrangements of old material to present. The book in fact presents neither alternative; and, so far as the naming of the continent goes, it is the old story as told by a score of others. Even so important a monograph on the subject as the Waldseemüller of Davezac, Mr. Thacher quotes at second hand, though he is at pains to prove that critic wrong in regard to the priority of the unique copy of the 'Cosmographiæ Introductio' now in the Lenox Library, which the late Henry C. Murphy five-and-twenty years ago pronounced a made-up copy.

As to the very act of naming the continent, Mr. Thacher fails to comprehend the alternative of names which Waldseemüller offered, namely, Amerige (*i. e.*, the land of Americus) or America (the feminine form of the explorer's name). This distinction was equally disregarded by Mr. Mason, in an article in *Harper's Monthly*, October, 1892—from which Mr. Thacher borrows some points—as was pointed out at the time in these columns by Prof. Edward G. Bourne. Mr. Thacher, however, makes, in his translation, a blunder which Mr. Mason avoided. The sentence in the original text requires these alternative names to be in the accusative case, Amerigen (or Amerigem, as sometimes copied) and Americam. To English the sentence requires them to be given in the nominative form Amerige and America; the last Mr. Thacher gives correctly, but he keeps the other Amerigen. And this he does in every instance where he repeats his version of the Latin.

Mr. Thacher found it necessary to make a part of his subject the discovery by Columbus of the Antilles, and by Vespucius of the mainland. This leads him to a discussion of Columbus's landfall, which he rightly enough identifies with Watling's Island, in accordance with the present general opinion of scholars; but though he enumerates the principal critics upon this point, he seems not aware of the hydrographical deductions of Alexander Agassiz, nor of the nautical reasoning of Markham.

His other point is, that it was owing to the prior acquaintance of Vespucius with the northern continent that the little coterie at St.-Dié selected his name for the New World. In this he is not content with the fact, which Humboldt long ago emphasized, that it was not this uncertain voyage of 1497, but the surprising developments on the coast of South America, and Vespucius's description of them, which brought his fame into the ascendant while that of Columbus was declining. This is furthermore abundantly made manifest by the fact that the name "America" was applied to South America, and it was more than a lifetime before it was extended to North America in the Mercator map of 1538.

In following the arguments and representations of Varnhagen and Fiske—without, however, mentioning the latter—Mr. Thacher seeks to make it appear that Harrisse joins with these scholars in accrediting Vespucius with this undertaking of 1497. The fact is, however, that, with all his concessions—and he makes them fairly enough and with some necessity—Harrisse reaches no stronger conclusion than that the voyage is "not improbable"; and that is certainly about as far as sound and circumspect critics can go. With the arguments pro and con respecting this contested voyage of 1497, the English-reading public have of late been amply informed by the works of Markham and Fiske. Markham supports, without the best grounds, the old theory of an alibi for Vespucius. He identifies the incidents enumerated by Vespucius with those which characterized the voyage of Pinzon and Solis which took place after 1506. He appeals to the contemporary knowledge of Las Casas, and avers that those who discredit Herrera throw doubt on Las Casas, whose very language Herrera copies. Fiske has for the most part reiterated the arguments of Varnhagen, and they are now in a briefer way repeated by Mr. Thacher, who, to assist the student, reprints the original mongrel Italian of 1505, the Latin version of 1507, and the English rendering published by Quaritch in 1893. While there are some considerations which lead one to hesitate before wholly rejecting the voyage, the case is not helped by that reckless criticism which either ignores what is in the way, or by forced interpretation turns such obstacles about. The evidence of the Cantino and Canerio maps is of course additional to what Varnhagen employed, but this and that of the Peter Martyr map of 1511 by no means indicate that such a Vespucian voyage could but have induced their configuration of a coast northwest of Cuba. That such a coast did not result exclusively from this voyage of 1497 is clearly indicated by the gap in the coast line, where Vespucius says there was none. Again, it is an entire assumption on the part of the advocates of the voyage that Vespucius's own narrative called the country of his landfall Lariab and not Paria; the former name never appears again in accounts of that region, and the Latin corrected version is just as likely to be right as the careless mongrel Italian, and even more so.

It is somewhat amusing to find Mr. Thacher taking "comfort in following the lead" of Harrisse, when he apparently knows that *maestrale* means northwest, and not northerly, as Harrisse translates it, and for the reason that Harrisse's interpretation carries Vespucius, not to the California coast, where a northwest course (overland) would have taken him, but to the Carolina coast, by a track which in rounding Florida really boxed the compass, whence it was possible to return by an eastward course to Europe. It is always much better in historical problems to be left in doubt than to seek consistency by perverting evidence.

It is a pity that Mr. Thacher had not applied to this Vespucian voyage some of the caution with which he discusses the claim for the Apian map of 1520 to be the earliest "engraved chart and authentic map to bear the name of America." It certainly is the first map with that characteristic which bears a positive date; but to contend for its having that honor dogmatically is to discredit the views of such scholars as Davezac and Harrisse, who by analysis place the undated Hauslab gores before it; and the Nordenskiöld gores have the same priority allowed them. Mr. Thacher leaves out of consideration the Tross or Boulengier gores, for which a similar claim is also made. Scholars also generally credit what is known as the 1515 globe of Schöner, though Mr. Thacher treats that with the same distrust. In discrediting the Hauslab gores as marking a state of geographical knowledge anterior to the Apian map of 1520, he gives no recognition to the belief which Varnhagen and Davezac entertained, that those gores were the work of Waldseemüller; nor does he seem to understand that the gores are a production distinct from the Hauslab mounted globe, which Harrisse associates with

the Schöner globe of 1515, and which Gallois in 1890 strove to identify with the globe (which Waldseemüller often mentions) on which he said he was obliged to omit much that he put on his lost map, and which he intended to "conform to the descriptions of Vespucius."

With all his dependence upon Harrisse, it is apparent that Mr. Thacher has not studied him carefully. He says that "Harrisse has so effectually disposed of the claims of the Cabots that no scholar of to-day seriously contends for English priority" in discovering the mainland of North America. Harrisse really undertakes to prove that the date of the Cabot landfall as given on the Cabot mappemonde, June 24, 1497, is too late by two or three weeks, which would bring it early in that month; while by Mr. Thacher's own statements of the length of Vespucius's outward voyage, whether we take the Italian or Latin text of the narrative—and they do not agree—the Cabot landfall was a month earlier than the imagined sighting of the Honduras coast by Vespucius. If Mr. Thacher had said instead that Markham had disposed of the Cabot claim by reason of his denying that Cabot, in sighting Cape Breton, saw the mainland at all, there might be more question; but he appeals to Harrisse, who makes Cabot's landfall on the main of Labrador.

Mr. Thacher goes over the early maps largely for the purpose of showing that the geographers of that time very soon, or within four or five years of the discovery by Columbus, began to play fast and loose—as they certainly did—with the notion that the new lands constituted an independent continent beyond the Antilles. In this belief he would place Vespucius in the forefront, as he perhaps was, though the claim of Columbus to have reached India was denied by Peter Martyr even earlier. In all this Mr. Thacher seems not to have heard, while deploring the loss of all of Christopher Columbus's cartographical handiwork, of what is really the most important development of the last few years, the discovery, by Prof. Wieser, of a map which Bartholomew Columbus, doubtless with the privity of his brother, carried to Rome, after the last voyage, in which the two brothers were companions. This sketch-map shows that they had reached the conclusion that a sea lay beyond the Isthmus of Panama, which one must track if one would reach the Ganges and return to Europe by the Cape of Good Hope.

In his treatment of the early maps to establish identifications of landmarks Mr. Thacher is certainly not alone in the failure to understand that the most important factor in the problem is not longitude, or latitude, or even distance, but the course which they pursued in dependence upon the compass or the north star, since this is really the only element which is constant and immutable. A recognition of this principle would throw out more than one of his conclusions.

When he speaks of the La Cosa map as "the first map of the world ever made," it is hard to divine what Mr. Thacher means. If he intended to restrict that description to those which show any part of the New World, how would he class the Ptolemy maps of 1482, which show Greenland? Again, when he assumes that the continental coast trending north in the Cantino map was the result of Vespucius's exploration, he ignores the second voyage of Cabot, and sundry references to others than Spanish ships on the coast at an earlier date. Besides, there are a multitude of other interpretations to be disposed of—perhaps easily—like Stevens's theory of a "bogus Cuba," and Markham's belief that what is usually supposed to be the point of Florida was in reality the northern cape at the mouth of Chesapeake Bay. Once more, when Mr. Thacher speaks of the possibility of the student chancing upon the facsimile of the Stobnicza map made at Amsterdam (by Muller, not Müller, as he prints it) to gain knowledge of it, before his own facsimile became known, he seems to ignore the reproduction of it which Mr. John Russell Bartlett introduced into the Carter-Brown Catalogue twenty years ago, and the numerous reproductions which have since been laid before American scholars.

Instances of misconception like these—and if we had more space we could multiply them—show that Mr. Thacher, while in his convenient series of maps he puts us under obligation, really has added nothing to our existing facilities beyond giving another resort for the student. It is well enough to have this series of maps at the end of his books, fourteen in all, ending with Ortelius, in the exact size of the originals, but this precision does not help scholarship. Mr. Thacher's book has evidently—as, indeed, he acknowledges—grown in his hands beyond his original purpose, and a profuse appropriation of paper has made it additionally larger. The features which mark the author's particular propensities are the attention which he gives to water-marks and binder's folds, the passion of a collector.

RECENT EDUCATIONAL WORKS.

The Common-School System of Germany and its Lessons to America. By Levi Seelye, Ph.D. New York: E. L. Kellogg & Co.

Horace Mann, the Educator. By Albert E. Winship. Boston: New England Publishing Co. 1896.

Froebel's Gifts. By Kate Douglas Wiggin and Nora Archibald Smith. Boston: Houghton Mifflin & Co. 1896.

Child Observations. First Series: Imitation and Allied Activities. Edited by Miss Ellen M. Haskell. Boston: D. C. Heath & Co. 1896.

A New Manual of Method. By A. H. Garlick, B.A., Head-Master of the Woolwich P. T. School. Longmans, Green & Co. 1896.

Second Year-Book of the National Herbart Society. Edited by Charles A. McMurry, Secretary, Normal, Illinois. Bloomington, Illinois: Pantagraph Printing and Stationery Co. 1896.

Hegel as Educator. By Frederic Ludlow Luqueer, Ph.D., Sometime Fellow in Education in Columbia University. Macmillan Co. 1896.

Dr. Seelye has spent four years in Germany, and now seeks to depict the Prussian school system and draw therefrom lessons applicable to American schools. He has read widely the current pedagogical literature and diligently visited German schools of all kinds. The kindergarten, he well reminds us, in Germany is not regarded as a school so much as a place where the children of poor parents can be left for the day. The women in charge of it have little training, and teachers generally regard its educational value as but slight. A rescript of the Minister of Education in 1884 forbids teaching even the rudiments of reading and number, and every other specific preparation for the work of the elementary schools. The author is greatly impressed with the contrast between this status of the kindergarten in the land of Froebel and its position in this country, where many of the brightest women are engaged in the work, and where it is constantly pressing upon the work of the public schools. His comparisons are carried up step by step through primary and secondary education. Chapters are also devoted to administration, buildings, school money, pensions, education of girls, examinations, courses, etc. The two needs in this country most urged are professional training of teachers and compulsory education for seven years. Here the author wants superintendents with large powers appointed for ten years; teachers' positions to be made permanent, and pensions provided. Best of all the thirty-seven chapters are those that deal with the training of teachers and the history of the Prussian school system. The merit of the book is extremely uneven, but, on the whole, it is one of the best of the many studies of German schools recently published in this country.

Mr. Winship's study of Horace Mann came just in time for the celebration of the one hundredth anniversary of his birth, May 4. The leading features of his life and his salient opinions are concisely stated, and bring home to our minds, what we were in danger of forgetting, the great work which his enthusiasm and devotion accomplished. The development of the public high school in place of the old endowed academy, the organization of teachers' associations, the establishment of normal schools and of school supervision, to say nothing of the great improvements in methods and the vast interest in public education which he aroused throughout the country—perhaps no one man in modern times has achieved more in this field. Like Fichte, Mann believed that education was the one holy cause of the world, devotion to which should measure the merit of men and states. That a member of Congress and President of the State Senate should resign his career to serve this cause, showed a sincerity which is no less manifest in the fourteen volumes of his life and works. If Lotze was right in saying that the supreme happiness of man is to get himself fully expressed, surely Horace Mann, with his passion for utterance in diaries, confidential personal letters, speeches, and controversies, must have been happy. The modern critic would call him neurotic. His enemies say that his statue in front of the Boston State House beside that of Daniel Webster, whom he prominently withstood, was erected by partisan zeal; and Mr. Winship's book shows, by its halting timidity in dealing with the great controversy with the forty-one Boston schoolmasters, which his biographer had almost omitted, how strong yet among the pedagogues of that city is the animus against reform. To our mind, Col. Parker's view is truer in this respect than that of Commissioner Harris.

'Froebel's Gifts,' really the work of the second of the two authors named in the title, is the first of three volumes to appear on the theory and practice of the kindergarten. As the last of so many books on this topic we think it may be regarded, as indeed it should be, as also the best. The author has had mature experience as a kindergartener, and is well up in kindergarten metaphysics. She evidently does not know German, but there is almost nothing good on that subject now which is not in English. Her mind is candidly open to results from the new field of child-study which is so fruitful of transforming suggestions in this field, and it is to be hoped that the later volumes will more fully utilize re-

sults in these lines. No two parties in the whole range of education are perhaps more widely apart than the old orthodox metaphysical Froebelians on the one hand and the progressives on the other. Miss Smith stands well between, but with a leaning towards the old. The stultifying effect of the worship of sphere, cube, and cylinder and the other mathematical and mechanical gifts upon school drawing, and the possibility of radical reconstructions here, do not occur to Miss Smith. Still, on the whole, we must cordially admit her book to be the best in any language in its limited sphere.

Miss Haskell has selected from 35,000 incidents illustrating the nature of children, which Principal Russell of the State Normal School at Worcester has taught his pupils to record, 1,207 cases of imitation which are typical, and which are divided into eleven groups or chapters, by the ages three, four, five, six, seven, eight, nine, ten, eleven, twelve, and sixteen. These charming records are printed baldly, without a word of comment or theory; but in a thirty-page introduction by Principal Russell we are reminded, on the authority of Darwin and Huxley, that there is no wall of circumvallation that separates science from common sense; that observation must be superficial before it can be deep; that the mind grows somewhat like the skull, from centres of ossification that are at first independent and grow together later; that the child is not an homunculus, but a radically different being from the adult; that the irresistible fascination of these records suggests a more or less prolonged stage of silent education by imitation. On the whole, this book should be ranked with the works of Burroughs, Thoreau, and Jefferies as a brilliant and suggestive bit of nature-study directed towards nature's consummate flower, the child—of all things in the world the object most worthy of love, reverence, study, and service.

Mr. Garlick attempts to give in one small volume an epitome of school hygiene, discipline, classification, teaching, object-lessons, and each of the chief branches of school work, based on ten years' experience as headmaster of the Woolwich P. T. School. From its nature the book does not lend itself to description. It is copiously illustrated with cuts of apparatus, object-lessons, etc., and the author has carefully studied the English literature of his subject, so that he speaks in a broad, comparative way. It is the best manual of its scope and size in English, but its chief fault of overcrowding and of too much fine type is rather grave.

The fourteen articles of the Second Year-Book of the Herbartian Society are chiefly devoted to culture-epochs, or the differences and likenesses between the stages of development in the race and the child. Professors Hinsdale, White, and Galbraith see but little fruitfulness in comparing philogeny and ontogeny. Professor Dewey urges that in these comparisons the child and not the race should lead. Dr. McMurry vigorously champions his own very ingenious application of the "epoch" method to American schools against the above attacks, and against the five-fold courses recommended by the Committee of Fifteen. The best article by far is that of Dr. Lukens, who makes a clear case against many theories of muscle-training, and would have all children pass through a prolonged period of receptivity—all the cortex being sensory and only one-third being motor—before active education should begin. A play stage must precede every successful direction of education by work. Drill cannot come till the motor has overtaken the sensory development. He would begin handwriting two or three years later, put its chief strain on the fifth school year, and then stop it, and advises that a long period of free and spontaneous drawing precede the grammar and rhetoric of the pencil. In fine, the Herbartian Society has made here a very important contribution towards the clearing up of many of the most obscure practical problems of education.

Dr. Luqueer has gathered, translated, or condensed Hegel's most important contributions to pedagogy, preceding them by a valuable account of Hegel's educational life. Although this great idealist himself wrote no treatise on pedagogics, his disciple Rosenkranz has evolved from his system a philosophy of education widely read in this country. With the aid of this and of Thaulow's work the author has given us a very serviceable picture of Hegel's conceptions in a more concrete form than they have hitherto had either in English or in German.

THREE NOVELS.

The Governor's Garden: A Relation of Some Passages in the Life of His Excellency, Thomas Hutchinson, sometime Captain-General and Governor-in-Chief of His Majesty's Province of Massachusetts Bay. By George R. R. Rivers. Boston: Joseph Knight. 1896.

A Bad Penny. By John T. Wheelwright, author of 'A Child of the Century,' 'Rollo's Journey to Cambridge,' etc. With illustrations by F. G. Attwood. [Papyrus Series.] Boston: Lamson, Wolffe & Co. 1896.

Will o' the Wasp: A Sea Yarn of the War of '12. Edited by Henry Lawrence, U. S. N., and now brought before the public for the first time. By Robert Cameron Rogers. G. P. Putnam's Sons. 1896.

THE tremendous accession of "patriotism" which our country experienced last winter has operated to produce several new stories turning on critical periods in American history. Mr. George R. R. Rivers gives us one, founded on the garden of Gov. Hutchinson. He tells us that he has spent most of his life on this estate in Milton, and has long had the design of writing such a story and exhibiting the Governor in his true character. Notoriously the character of Hutchinson has given rise to very bitter discussion, and no doubt the favorable view of him lately produced by Prof. Hosmer will come nearer the final verdict of history than the traditional conception of a dark and designing minion of tyranny. But no one before Mr. Rivers ever pictured him as an amiable old twaddler, whose time in 1774 was wholly occupied in gush over the beauties of the "pleached" walks of his garden on Milton Hill, surrounded exclusively by domestic society, and seeing nothing of such friends and enemies as Andrew Oliver or Samuel Adams. Mr. Rivers's Hutchinson may be Thomas, but he is no Governor at all, good or bad. He is surrounded by a mass of melodramatic characters, impossible Indians and extinct pirates, liberal Tories, and bigoted Whigs, lovers and villains, who career in a wild dance at all seasons of the year from Nantasket Roads by Summer Street and the Neponset River to Blue Hill (of which Mr. Rivers asserts the ancient name to have been *Massawachusett*, a form not common with our historians) and Ponkapoag; all these spots being, of course, perfectly clear in the mind's eye of a life-long Miltonite, but far otherwise even to the average Bostonian. When they have exhausted these unhappy hunting-grounds, it is a trifle to go marooning in the Caribbean Sea, or robbing travellers not far from Gadshill. It is not pleasant to speak harshly of what is a labor of love; but when one thinks of the 'Heart of Midlothian,' one is amazed that a cultivated New Englander should imagine that he is honoring his historic home by such soulless puppets traversing such unreal ground. The story appears in a kind of imitation antique style, the proper names being all in italics, and is illustrated by several black profiles, which the author tells us are chiefly fictitious.

We have also two stories apparently intended to support the thesis that the war of 1812 was a source of unmitigated glory to the United States, and especially to New England. Mr. John T. Wheelwright, who gained considerable reputation some years ago for reckless comicalities, has had the courage to bring into the fiercest light the only naval contest of that war which is remembered in England—the battle of the *Chesapeake* and the *Shannon*—as if, after all, it redounded to America's credit. His hero is a runaway boy from "Oldbury" (Newbury), selected on the "wild-oats" theory—namely, that if you wish to find a thoroughly intelligent, honorable, and right-feeling young man, who will prove entirely trustworthy in ordinary times and heroic in a crisis, you must look for him in the family plague, who steadily resists all attempts to train him according to the accepted standards of his time; it being understood that a boy of fifteen is sure to know what is worth while for him to do better than anybody three or four times his age. The story is lively and carries one on easily to the dénouement; the good people being mostly bad, and the bad people mostly good. There are some clever descriptions of places and manners in the first decade of this century. But, surely, such a word as "gripsack" was unknown in those days; would it were now! Mr. Wheelwright twice makes one of his characters play with a "fob," which he evidently imagines to be a kind of outside appendage to an antique watch; if he will read over the first scene of Gulliver's life in Lilliput and the inventory of his property, he will find out what a fob is. He has probably one on his own person at this moment.

A much better story of this period is 'Will o' the Wasp,' by Robert Cameron Rogers. Readers of the 'Autocrat' will remember how Dr. Holmes speaks of the intense interest attaching in his boyhood to the gallant *Wasp*, which disappeared towards the end of the war, and was never heard of. This "yarn" purports to be the adventures of an old sailor who saw her sink, was taken prisoner and paroled in England, but, being affected in the head by an old wound, never thoroughly realized his position, and lived to extreme old age in the delusion that the countries were still at war. It is an extremely spirited and carefully written narrative of the imaginary triumphs and escapes of an ancient corvette, and may be cordially commended to all those who love stories of naval adventure, especially if, like the Hon. Theodore Roosevelt, they are all on fire to have some more fighting at sea with somebody.

Introduction to the Study of Latin Inscriptions. By James C. Egbert, jr., Ph.D., Ad-

junct Professor of Latin, Columbia College. American Book Co. 1896.

WORDSWORTH'S 'Fragments and Specimens' and Allen's small but most scholarly and compendious 'Remnants of Early Latin' have hitherto been the only books in English which served as an introduction to the study of Latin inscriptions. In neither of them is the matter confined to inscriptions alone, for it includes also the remains of archaic literature. There has long been a call for a work of some size which should be devoted solely to the teaching of what the classical student is constantly wanting to know about Latin epigraphy, and such a work Prof. Egbert has provided.

The volume is a small quarto of 468 pages, printed in clear and sometimes in inscriptional type, with numerous process reproductions from the stones themselves. The introduction contains a general bibliography of the subject, including periodical literature, and an account of the contents of the 'Corpus Inscriptionum Latinarum,' with useful explanations of the means of presentation employed in these volumes and of their general economy. Then follows the first part, consisting of three chapters—the first and second on the Latin alphabet, historical and morphological, the third on numerals. In the second chapter we note a particularly good account of the methods of Roman stonecutters—a topic too often neglected, yet, in its details, often of the first importance in determining the weight to be attached to the documents under consideration. The chapter on numerals, too, will be welcomed by many who have wrestled with this delicate matter, whether in studying the stones or in composing modern Latin inscriptions after the ancient pattern. Each chapter in this and in the two other parts concludes with a special bibliography.

The personal name plays a most important part in inscriptions. The student must understand the nature of Roman names in order to comprehend inscriptions, and, on the other hand, inscriptions are our chief source of information about the nature of names, since, as Prof. Egbert remarks, in them "the Roman name has its fullest use and most complete form." The first chapter of the second part is, therefore, devoted to this subject, and deals in a clear and trustworthy manner with the appellations of men, women, freedmen, naturalized citizens, and slaves. The names and titles of the emperors are treated in the second, and official titles in general in the third chapter of this part. Here, and calling for special praise, is a chronological list of the emperors, with their various titles and the dates when these titles were assumed, calculated even to months and days. For this valuable contribution the author thanks Mr. George Olcott, a Fellow of Columbia College.

In the first chapter of the third part we pass from public to private life, and are shown dedicatory, sepulchral, and honorary inscriptions, together with a wide selection from inscriptions cut upon comparatively small and movable objects. To show how deeply the author goes, we need only refer to his quotation of several examples of oculists' stamps—tablets intended to be placed upon eye-salves and the like, giving the name of the physician, the disease, the remedy, and the method of its application. The next chapter is devoted to public documents, such as laws, decrees, and diplomas, to private documents, such as wax tablets, and to graffiti. The last chapter tells how inscriptions are restored and dated, and concludes with a table of Latin abbreviations, covering over forty pages.

Prof. Egbert is thoroughly at home in his subject, and all English-speaking students must be grateful to him for his clear and simple presentation of it. His book should be in the revolving bookcase of every classical scholar, while college teachers will find it admirably adapted to the needs of classes in epigraphy, since many of its pages are given up to inscriptions for practice, provided with brief explanatory notes. The author's style is interesting, and the publishers have done all in their power to add to the attractiveness of the work. We venture to prophesy that it has before it a long and useful future.

A Primer of Evolution. By Edward Clodd. Longmans, Green & Co. 12mo, pp. 186. Illustrated.

INJUSTICE is done to this excellent little work by calling it a primer. It is an abridgment rather than an elementary first book, and it is suited to educated readers or advanced students rather than beginners. The story of creation is admirably told; it is the story of the changes of matter, ethereal, gaseous, liquid, solid, and living. The beginning is beyond us. Matter, force, and energy may possibly be one; the transition between inorganic and organic energies may be possibly found in the electric group; having the same ingredients, the difference between the inorganic and the organic must lie in the mixing, the greater complexities of the organic constituting difference in degree but not in kind.

"The organism has—(1) infinite complexity of structure; (2) inherited tendencies; (3) mobility and continuous motion, therefore capacity to vary. (4) Variations are induced by the surroundings on which, as vehicles of energy, life depends; (5) when the surroundings change, the organism adapts itself or not to the change; (6) such as fail to adapt themselves perish; (7) such as adapt themselves vary in greater or lesser degree; (8) these variations, being transmitted, are stages in the development of different life-forms. To put the matter briefly, likenesses are inherited, variations are acquired."

Concerning intellectual functions, our author states that there is no break in the series which, starting in reflex movements in amœbæ and carnivorous plants, advances along the line of animal instinct and intelligence, and ends in the complex movements of the brain of civilized man with its infinite modes of response to infinite stimuli; that there is fundamental correspondence between the nervous systems of the lowest and the highest; that there is not a faculty of the human mind which is not possessed in lesser or greater degree by the animals nearer to man; that instinct is a higher form of reflex action, and that the distinction which man has set up between instinct and reason is unreal.

That portion of the book relating to the causes of the diversity in living forms is the least satisfactory. The explanation is very familiar and very inadequate, namely: the modifications which exist have been developed through the potent agency of natural and sexual selection acting upon variations induced by diverse conditions; more organisms are born than survive; the race is to the swift, and the battle to the strong—the weaker, be it in brain or body, going to the wall, the vast majority never reaching maturity, or, if they do arrive at it, attaining it only to be starved or slain; victory is assured to that form which has some advantage, etc. "The vast majority" makes an impressive showing in figures, but it was destroyed by accidents before strength and swiftness were developed, and there is no reason why the survival of the remainder in great part may not also have been due to accidents. The slower or the weaker may have withdrawn from competition, through intelligence or reason, selecting a dwelling in the rocks or the thickets, to establish new tendencies in variation, and finally a new race, without any other form of selection.

Spiritual matters are passed over by our author with scant consideration: the duty of theology, he says, is to readjust itself to what science proves to be true, otherwise it is doomed; in the end, when it is seen that theories about gods and all other spiritual beings have nothing whatever to do with man's duty to his fellows, he will occupy himself with that duty alone.

The Astronomy of Milton's 'Paradise Lost.' By Thomas N. Orchard. Longmans, Green & Co.

MR. ORCHARD has by no means confined himself to the strict limits which his title-page suggests, but has used his subject rather as a peg whereon to hang a discourse which enters deeply into general historical and descriptive astronomy. Indeed, one who takes up the volume through interest in Milton may reasonably feel somewhat disappointed that there is so much astronomy and comparatively so little Milton. Our author's method is a logical one, for he outlines the story of astronomy up to Milton's time, describes the changes which the previous century had wrought in scientific and popular belief, notes the acquaintance of the poet with Galileo and other leaders of thought, describes the objects which are mentioned in the poem, including, of course, everything in the heavens that is noteworthy, and, incidentally to this description, brings forward the quotations which have reference to all these objects.

One cannot help praising the literary work of Mr. Orchard, for his English is good, and he gives an excellent review of 'Paradise Lost,' which evidences much thought and study. The astronomy, too, is of pretty good quality. It is true that it is of the picturesque rather than the precise, for the author has apparently a better acquaintance with what has been written about astronomy than with the opinions and practices of the working astronomer of the day. He has therefore perpetuated some minor errors, and has occasionally missed the real point of interest respecting the object described. For example, the universality of the law of gravitation is stated to have been proved by observations of the motions of the double stars. The thoughtful astronomer of to-day cannot quite agree with Mr. Orchard, albeit he is repeating what has been said before. The computer of the double-star orbit *assumes* the law and bases his deductions upon this assumption. Lacking proof as yet, he begs the whole question, and hopes by reasoning backwards from effect to establish the cause. Then, again, it is an inexact statement to say that some of the orbits of the double stars "approach in form that of a comet." The comparison might be of value in conveying an idea to children or to those who are inexpert; but when one understands such technical terms as eccentric, apastron, and the like (as one must who reads the book), and can appreciate a parallax of 1-20 of a second, and can realize that a globe subtending an angle of 5′ must have a real diameter 1-687 of its distance from the eye, etc., one is above the kindergarten illustra-

tion, and can learn that ellipses may be of very different forms, and that the orbits of the double stars form a well defined group which is perhaps midway between the almost circular orbits of the planets and the very elongated ellipses of the periodical comets. The presentation of an account of the variable star, Mira Ceti, which makes no mention of the fact that its vagaries have fairly driven the patient observers wild, is lacking in completeness, for this extreme irregularity of light-variation is the most interesting feature of Mira "the wonderful."

It is unfortunate that some of the statements put forth by Mr. Orchard have been superseded by scientific activity during the preparation of his book. Thus, Gore's orbit of 70 Ophiuchi, which is figured in the volume, has been replaced by See's orbit of the same double star, and the latter, with its introduction of a third body into the system, is quite different from Gore's. The periodical time of Mira Ceti is no longer given as 334 days, which are Mr. Orchard's figures, but for thirty years certainly has been known to be 331 days, and the most rapid in period of the double stars is no longer Mr. Orchard's Delta Equulei, but Kappa Pegasi, while there are indications that still a third star will halve the diminished periodic time. These matters are all minor ones, it is true, and have little to do with Milton, but they do affect the character of the book.

The historical portion of the volume is quite as minute as is the descriptive astronomy, and serves to show Milton's relation to the science. It presents in concise form the beginnings of astronomy, passes to the consideration of the work of the old philosophers and students, Thales, Pythagorus, Hipparchus, and Ptolemy, then the more modern masters, Copernicus, Tycho Brahe, Keppler, and Galileo, most of whom have biographical notices several pages in length. Then there is outlined the astronomy of the seventeenth century, to show the environment of the poet. Copernicus had been dead half a century when Milton was born, but the celestial system which he originated was not generally accepted in England even when Milton had reached man's estate. The early education of the poet, therefore, gave him the idea of the Ptolemaic scheme, a central earth, with the sun and planets (each in its own sphere) revolving about it. In his earlier poems he is quite committed to this idea, but there is reason to think that before he died he believed with Copernicus. Some passages in 'Paradise Lost' give evidence of this, but, for other reasons, the general idea which prevails in the great poem is the Ptolemaic. The literature and models which Milton studied were addicted to the older cosmography, and the scheme of Ptolemy afforded picturesque and poetical features that are lacking in the Copernican. To a remarkable extent Milton embodied in his poem the science, philosophy, and theology of his times, and in astronomy the accuracy of his facts fairly divides the honors with the beauty of his language. His astronomy was most remarkable, and Mr. Orchard has brought abundant proof as to its quality and fulness.

Poems of Uhland. Selected and Edited by Waterman T. Hewett, Ph.D., Professor of the German Language and Literature in Cornell University. Macmillan. 1896.

THE first collection of Uhland's poems appeared in 1815, and in 1875 they reached their sixtieth edition; since then this average of one edition annually has been greatly increased. His poetry has become an essential part of the culture of the German people, and the innumerable translations and musical settings it has received have made it an international possession. The modesty which distinguished the poet's character still attaches to our estimate of him. We involuntarily think of Uhland as one of "the humbler poets," and yet, if we except Goethe, there is none among the lyric poets of Germany that surpasses him. An excellent test of a poet's lyric quality is an appeal to the composers. Beethoven and Weber and, strangest of all, Franz, have never set Uhland to music, but we have the authority of Dr. Max Friedlaender for the statement that, after Goethe, Uhland is equalled only by Eichendorff and Heine in the estimation of composers. It is with a disapproving side-glance at Heine that Prof. Hewett writes of Uhland: "He never utters a sentiment and then scoffs at himself, because he has trusted and loved." On this genuineness rests Uhland's best title to his lofty place.

This handsome edition includes more than two hundred out of a total of about three hundred and fifty poems. Prof. Hewett's judicious annotations and carefully prepared critical apparatus are a credit to American scholarship. An excellent biographical introduction contains all the essential facts in the story of the poet's busy life. The bibliography is far from complete, but all the more important publications are recorded. The list of English translations and translators is apparently all-inclusive, and it is so valuable a feature that no edition of the works of a foreign writer should ever be published without it. When we add that besides the initial index there is also a chronological list of the poems and an index to first lines, it will be seen that everything has been done for the convenience of the student. For the quality of paper and typography the publishers' name is a guarantee. There are several misprints, but we have noticed only two that are at all likely to mislead: on p. xxi the date of "Des Knaben Wunderhorn" should be, not 1805, but 1806–1808; and on p. 342, Fraenkel's edition is dated 1839—a half-century too early.

Aux États-Unis. Par Dr. Auguste Lutaud. New York: Brentano's. 1896.

DR. LUTAUD saw a good deal of the United States, and his general impressions were those of a fair-minded observer. There is nothing very original in his volume; even his remarks on the "drug-store," in which he has called attention to one of the most fundamental differences between European and American civilization, yet one which has been generally overlooked, seem to be in part taken from another writer. Nevertheless they deserve notice. What the English call a chemist and we an apothecary occupies on the Continent a position entirely different from that which he holds generally in the United States. In France, for instance, his business is not regarded as purely commercial. It partakes of a solemn and professional character; the druggist is an educated man, must invariably have a diploma, and, when he "fills a prescription," officiates responsibly, almost as one holding a public office. In this country, speaking in general, he is a merchant, a vender not merely of drugs, but of a dozen other things which, to a European, have no sort of connection with his calling. He sells not only certain things which are connected with the care of the body—*e. g.*, tooth powder, hair brushes and hair tonics, and perfumes—but he has a soda-fountain, behind which he establishes a bar-tender, who serves out not merely soda-water and syrups, as in the earlier and purer days of the republic, but all sorts of beverages, many of them of a highly alcoholic character; he has also a stock of cigars and cigarettes, and he not infrequently has a supply of stationery, liquors, candy, canes, and umbrellas, pocket-books, razors, knives, and "notions" generally. If he is a benevolent man, he always has on hand not only a city directory for free consultation, but a few postage stamps. Dr. Lutaud would have us believe that he is also a florist; this, however, is an inaccuracy which may be pardoned in a foreign observer.

It must be confessed that for accurate observation we do not go with absolute security to French writers of "impressions de voyage." When Dr. Lutaud says that one does not spend any more in travelling here than in Europe (p. 5), he contradicts not only Baedeker, but common experience, and makes a statement which is certainly not supported by that made on p. 98, that one may in New York be asked a dollar for washing a shirt. Surely error must lurk somewhere here. He is perfectly right in remarking that a railroad crossing in the United States makes the traveller understand in how free a country he is; but the warning addressed to the public is not usually, "Take care; the railroad is crossing here" (p. 40). The worthy doctor is mistaken in thinking that "pride alone can explain the existence" of buildings twenty-five stories high; and no statue, so far as we are aware, has been put up in Madison Square to the memory of any one named William Stewart (p. 88). Central Park was not, as some one seems to have told him, laid out by a French engineer (p. 90), nor do the gigantic boats which ply on the Hudson carry travellers "from New York to Buffalo" (p. 92).

The advice given for ocean voyages (p. 31) is only in part good. "If seasick, remain in your cabin" will do only for the Latin race. The Anglo-Saxon rule is the reverse of this. On the other hand, "Don't try to comfort persons who are seasick; you will only increase their shame and wretchedness" is excellent, as is also, "Don't tell stories of shipwreck to your neighbors at table"; "Don't forget that the steward is an important person"; "Don't ask when you will arrive; not even the captain can tell you." One of the most amusing things in the book is the account, given in the chapter on the Mormons, of the steps taken by the Cannon household to conform to the law suppressing polygamy.

BOOKS OF THE WEEK.

Allen, L. W. Abraham Lincoln: A Poem. Putnams. $1.
A Story of the Heavenly Camp-Fires. Harpers. $1.25.
Bayne, S. G. The Pith of Astronomy. Harpers. $1.
Beebe, Katherine. Home Occupations for Little Children. Chicago: The Werner Co. 75c.

HENRY HOLT & CO., NEW YORK,

Have published since June, 1895:

HISTORY AND ENGLISH.

Francke's Social Forces in German Literature. Large 12mo, $2.00.

Outlook: A real contribution to the literature about literature. . . . Exhibits insight, comprehension, and carefulness.

The Churchman: A work of profound learning, of great interest, and of undoubted usefulness. . . . Every important writer is dealt with in a manner concise, searching, and with true literary insight and enthusiasm. The quotations are numerous and judicious.

H. C. G. Brandt, *Professor in Hamilton College, N. Y.:* It is a fine work, in many respects it is a really great work. The part on the Romantic School is especially good and will open the eyes of all English readers. I also admire the sober and well-balanced estimates of Luther, Klopstock, and Lessing.

Specimens of Prose Composition.

Baldwin's Specimens of Prose Description. 16mo, 50 cents.

Brewster's Specimens of Prose Narration. 16mo, 50 cents.

J. F. Genung, *Professor in Amherst College:* I am glad to see the literary forms made the subject of something like scientific study. So far as my courses will permit I shall take pleasure in using the volumes in my work.

G. J. Smith, *Columbian University, Washington, D. C.:* Admirably practical helps to the work of the teacher of rhetoric. . . . The great merit of this series seems to be not merely that the selections are in themselves interesting and valuable, but that the introductions are well adapted to guide the student in his own efforts.

Earlier volumes:

Baker's Specimens of Argumentation. 16mo, 50 cents.

Lamont's Specimens of Exposition. 16mo, 50 cents.

Robert W. Herrick, *Professor in the University of Chicago:* This book and Mr. Baker's Specimens of Argumentation are the two most useful books for the teacher of composition recently published.

Emerson's Johnson's Rasselas. 16mo (buckram, 70c.), cloth, 50c.

Fyffe's History of Modern Europe. (New Edition in one vol.), $2.75.

Hale's Constructive Rhetoric. 12mo, $1.00.

A. G. Newcomer, *Professor in Leland Stanford University:* I like in particular the vigorous logical method that everywhere underlies the intentionally familiar and almost colloquial manner which Mr. Hale has assumed.

G. J. Smith, *Columbian University, Washington, D. C.:* It is one of the most stimulating and original treatments of the subject of rhetoric that I have ever seen. The plan is unique and practical, and even the style and modes of presentation entertaining.

W. T. Brewster, *Instructor in Columbia University, N. Y. City:* I find it a great pleasure to read a rhetoric done in so pleasant a vein and free from all the repellent pedantry which one occasionally finds in text-books.

W. E. Simonds, *Professor in Knox College, Ill.:* The brief review that I have been able to give to it as yet impresses me with the originality and freshness of the book both in material and in method.

Sophie C. Hart, *Professor in Wellesley College, Mass.:* The book is a radical and refreshing departure from the cut-and-dried method of presenting the problems of rhetoric and composition in the average text-book. This originality of treatment makes the book of peculiar and suggestive value.

Lounsbury's History of the English Language. Part I. 12mo, 90 cents.

FOREIGN LANGUAGES.

Brandt's Lessing's Nathan der Weise. (*New Edition.*) 16mo, 60c.

Bronson's Coppee's On rend l'Argent. Narrow 16mo, 60c.

Bronson's German Prose and Poetry. 16mo, $1.25.

Carla Wenckebach, *Professor in Wellesley College, Mass.:* A charming addition to your readers. To have the best tales of Grimm, Andersen, and Hauff in one volume is in itself a welcome fact. These Märchen belong to the best prose a beginner can read.

Gustav Gruener, *Professor in Yale College:* I like its get-up and contents very much. I hope I shall be able to use it alternately with Whitney's Reader for first-year book. It seems well adapted for that purpose and very sensibly put together.

George T. Files, *Professor in Bowdoin College:* The best that I have seen. It offers unlimited material for careful study and sight reading, combined under one cover.

W. R. Newton, *Instructor in Phillips Academy, Andover:* The author's plan is excellent, and he has carried it out successfully. I intend to give this book a trial another year.

Bronson's French Verb Blanks. 8vo, 50c.

Carruth's Scheffel's Ekkehard. 16mo, $1.25.

Faust's Zschokke's Das Abenteuer der Neujahrsnacht. 16mo, boards, 25c.

Frost's Heyse's L'Arrabbiata. 16mo, boards, 25c.

Harris's German Reader. 12mo, $1.00.

C. H. Grandgent, *Professor in Harvard College:* I read the proofs of the book, and consider it an excellent piece of work. I hope we may at some future time be able to use it in the Boston schools.

Lewis A. Rhoades, *Instructor in Cornell University:* It is a distinct advance over any Reader of its kind.

Richard M. Jones, *Head Master in William Penn Charter School:* We regard Harris's German Reader as the best we have seen, and we shall introduce it at the first opportunity.

Charles E. Fay, *Professor in Tufts College:* In general I have been averse to Readers. I am so pleased, however, with the make up of this that I have ordered it for my class.

Schrakamp's Beruhmte Deutsche. 16mo, 85 cents.

Schrakamp's Sagen und Mythen. 16mo, 75 cents.

Schoenfeld's German Historical Prose. 12mo, 80 cents.

Stern's Studien und Plaudereien. First Series (New Edition). 12mo, $1.10.

O. B. Super, *Professor in Dickinson College:* I have been using the book almost constantly for about fifteen years.

T. B. Bronson, *Lawrenceville (N. J.) School:* As a reader for beginners from the age of ten to thirteen, I have used it in preference to any other.

Thomas's German Grammar. 12mo, $1.12.

H. Starr Cutting, *Professor in University of Chicago:* This work is in my opinion an *easy first* in the line of guides for elementary instruction in German.

Marie F. Kapp, *Professor in Smith College:* The best working grammar I have had in my department.

W. H. Perkinson, *Professor in University of Virginia:* By far the best German Grammar that has appeared in this country.

L. E. Horning, *Professor in Victoria University:* It is the best up-to-date grammar in English in both the theoretical and the practical part. The latter especially is entirely without an equal in English.

Charles B. Wilson, *Professor in University of Iowa, in the School Review:* The best working German Grammar in the English language.

Wilson's Eckstein's Preisgekront. 16mo, boards, 30 cents.

FOR SPEEDY ISSUE:

Brandt and Day's Reader in Scientific German.
Bevier's French Grammar.
Cameron's Tales from Coppee and De Maupassant.
Goodrich's Goethe's Goetz von Berlichingen
Harper's Selections from Sainte-Beuve.
Jagemann's Goethe's Dichtung und Wahrheit.
Kuhns's Amicis Cuore.
Perry's Selections from Burke.
Wenckebach's Deutsche Sprachlehre.

The above prices are NET prices. New Educational Catalogue and List of Books in General Literature free on application.

GOLDEN SCEPTRE.

PERFECTION FOR THE PIPE.

The Nation.

NEW YORK, THURSDAY, AUGUST 27, 1896.

The Week.

THE meeting at Madison Square Garden on Tuesday night of last week was immense in every way, and its effect upon the country as a contrast to the Bryan demonstration of the previous week must have been great. It is hard to speak of such a meeting without falling into the language of hyperbole. It is sufficient to say that more people came than there was room for in the vast building, that they came to listen and to learn, that they gave eager attention for an hour and a quarter to a closely reasoned argument, and that they applauded enthusiastically and repeatedly every sentiment that coupled the American name with honest dealing and honest money. The meeting was a great tribute to Mr. Bourke Cockran as an orator, but it was a far greater one to the cause which he advocated. The call for an honest-money Democratic convention in this State came as a fitting echo to the meeting. It would have been strange indeed if there were no Democratic leaders here who were capable of assuming direction of the party indignation which was revealed at that meeting. Every allusion which Mr. Cockran made to party honor and principle as being more worthy of preservation than party regularity, was greeted with prolonged shouts of approval. Nothing in his speech commanded more hearty commendation from an assemblage obviously composed very largely of Democrats than the following declaration:

"A Democratic convention may renounce the Democratic faith, but the Democracy remains faithful to Democratic principles. Democratic leaders may betray a convention to the Populists, but they cannot seduce the footsteps of Democratic voters from the pathway of honor and of justice. A candidate bearing the mandate of a Democratic convention may in this hall open a canvass levelled against the foundations of social order, and he beholds the Democratic masses confronting him, organized for the defence."

It has been plain since the nomination of Mr. Bryan that he commands no support in this city or State from the most eminent men of the Democratic party, or from the great mass of the party's rank and file. At the same time it has been revealed that he does have the support of a majority of the regular party machine, and that if the machine has its own way in the matter, the regular Democratic convention will approve his candidacy, and nominate Bryan and Sewall electors as the only regular Democratic Presidential ticket in the field. In view of this situation it was inevitable that self-respecting Democrats should take formal action to show that there was still some moral purpose left in their party. They have called a State convention to meet at Syracuse on August 31 to elect delegates to the Indianapolis convention, and they ask the coöperation of all Democrats in the State "who reject the Chicago platform and nominees, and who believe that labor should be paid in honest dollars, and that debts, public and private, should not be repudiated, but should be scrupulously paid; of all Democrats who would defeat the attack now sacrilegiously made in the name of Democracy upon industry and thrift, and would protect from attack savings-bank depositors, pensioners of the war, beneficiaries of life insurance, and earners of honest wages in every form, and of all Democrats who have been and are loyal to the principles and policy to which the Democratic party has steadfastly adhered during more than a century." If they cannot assemble an impressive convention on that platform, then their party is fitly represented by Sheehan, the defaulter, and Danforth, the canvasser of illegal election returns; and the sooner the fact is made known the better.

The part of Bryan's New York speech which is going to prove most effective against him is that in which he contended that the passage of a free-coinage law would raise the price of silver so that a silver dollar would be worth as much as a gold one. "We contend," he said, "that free and unlimited coinage by the United States alone will raise the bullion value of silver to its coinage value, and thus make silver bullion worth $1.29 per ounce in gold throughout the world." As a contention this is, of course, ridiculous. It not only flies in the face of reason, but also in that of our recent national experience. Senator Stewart and the other silverites "contended" in 1890 that "four and a half millions a month would certainly put silver to par," and yet under the Sherman law providing for purchases to that amount the price of silver in the market fell from $1.06 per ounce at the time of its enactment to 73 cents when it was repealed. If the country had never tried this experiment of booming the price of silver by legislation, its advocates might stand some chance of making people believe that there is something in the theory that it can be done. So, too, if the experiment had been made long ago and under entirely different conditions. But the trial has occurred within the past six years, and everybody is so familiar with the result that it seems like an affront to intelligence to bring out the disproved theory now.

However, Bryan has committed himself in this claim to the idea that the silver dollar ought to be worth 100 cents in gold. Of course he had to do this in order to escape the accusation that the policy which he advocates would enable people to repudiate half their debts by paying them with silver dollars that would be worth only about 50 cents in gold. But the free-coinage men have no wish for honest silver dollars, and they are plainly telling their candidate that he is altogether wrong in suggesting the possibility that there will be silver dollars of this sort. The Detroit *Tribune*, which is perhaps the most earnest advocate of free coinage in the Western press, took Bryan up on this claim at once, and is publishing articles every day to show that he is altogether wrong. Here is a sample of what it says:

"It is the contention of rational defenders of free coinage that it would not raise silver to a parity at the existing ratio, and upon that fact they base chiefly their claim that free coinage will bring relief. We insist that free coinage is a good thing, because under it the dollar as at present expressed by 23.2 grains of gold metal will disappear at once and never return to oppress us."

It is a great thing for the sound-money cause to get the advocates of free coinage out openly on this platform, because it shows that their policy, by their own confession, means repudiation.

One of the commonest sayings of the supporters of Bryan is that there is no silver in Europe that could be spared to come to this country, and consequently that all the talk about our being inundated with that metal in the event that we adopt free coinage at the ratio of 16 to 1 is nonsensical. If this were true, it would still be necessary to account for the silver of Asia, which is a much larger quantity. But the *Nachrichten* of Bremen of August 6 furnishes a conclusive answer to the statement that there is no silver to spare in Europe. In an editorial on "The Presidential Election in the United States," it says:

"What, then, would the victory of the American silver party mean? In the first place, it would furnish us a magnificent opportunity to get rid of our old thalers. In a similar manner, other nations, too, especially France and Belgium, would dump their superabundance of silver, which gives them so much trouble, upon the American market, and—like other nations, too—would use American free silver coinage to carry out the unavoidable transition to the gold standard. Furthermore it would be very profitable for the refining works and arbitrage houses to ship their silver, and to exchange for it American products at half the price which American consumers have to pay. Even if the United States should wish to exclude foreign silver, or, to speak more accurately, if they could, the director of the mint would soon see further billions of silver [marks] accumulate in addition to the two billions [marks] of silver which he has already in his vaults. What dangers to industrial life are implied in this accumulation of fictitious values, has been clearly shown by the outflow of gold, as well as by the crisis of 1893, the panic on the Exchange on December 26, 1895, and July 16, 1896."

The explanation of this matter is that the German Government is pledged to retire

all the old silver thalers at some time, and is only awaiting a convenient opportunity to do so. Such an opportunity would be furnished by a free-coinage law in the United States, and would be immediately availed of. A large lot of these old thalers are lying in the vaults of the Reichsbank, and these would be immediately available. Probably all the rest could be gathered up before Mr. Bryan could bring Congress together in extra session to enact such a law.

Bryan's candidacy bears some striking resemblances to Greeley's as his campaign advances. There is the same wrangling between two separate campaign committees. Greeley had his Liberal Republicans, who were at war with the Democrats, each being suspicious of the other, and each anxiously in search of the campaign funds which never came. Bryan has his Populist and his Democratic committees, who are agitated by like distrust and anxiety, and every day brings the two into more irreconcilable positions. Then he has what Greeley did not have, two candidates for Vice-President on his ticket with him, both of whom insist upon running, and one of whom persists in assailing not only his rival at the tail of the ticket, but also the head of the ticket. Greeley was able to accept both nominations which were made of himself, the Liberal Republican and the Democratic, but Bryan has as yet been able to accept only one of the two offered him, and it is clear that the longer he waits about the second the more difficult will acceptance be. All these conflicting and confusing influences are combining daily to create a popular distrust of his candidacy, and to make it certain that when election day arrives he will receive, as Greeley did, a vote of lack of confidence from the country.

The Popocratic appeal for campaign funds puts the Bryan campaign on the Altgeld-Tillman level. There is not a word in it about Democratic principles. It is a frantic effort to array the "plain people" against the "favored classes," and it is expressed in the language which has been familiar to us in the Ocala platform and in the speeches of all the Populist and Anarchist orators for the past dozen years or more. We must be "big enough and strong enough to have our own financial policy; if not, then we are the serfs of the money-changers of Europe, and are doomed to a vassalage more ignominious and more degrading than that against which our fathers fought a century ago." "We have allied against us in this contest not only the financial forces of Europe, but the subsidized press and all the monopolies and Trusts here at home." "To the overflowing treasury of the money powers we will oppose the accumulated offerings of the masses fighting to be free, and ask the Ruler of the Universe for his blessing." These are the ravings of despair as well as of pure Populism. The writer of the address has clearly given up all hope of any assistance from the respectable and intelligent section of the Democratic party, and is placing all his hopes of success upon the ragtag and bobtail of all parties. His address will add force to the third-ticket movement by showing the importance of having some candidate in the field for whom self-respecting Democrats, who cannot bring themselves to abandon their party, may cast their votes.

That is an excellent example which the sound-money men of both parties are setting in the Raleigh district of North Carolina. The present Representative is a Populist, who is of course a silver man, and who owed his success two years ago to the support of the Republicans. He has been renominated by the Populists. The Democrats have nominated a candidate, who is also for free coinage. Under these circumstances the Republicans have put up a man who is a pronounced advocate of the gold standard, and he will be supported also by those Democrats who believe in sound money. Democrats of this school communicated with the leaders of the Republican party in the district before the latter made its nomination, and asked that a man be selected whom they could accept because he was right on the burning issue.

We have heard accounts from time to time of the strength of the Democratic revolt against Bryan in the State of Kentucky. All these accounts were more than confirmed by the convention of sound-money Democrats held at Louisville on Thursday, at which 4,000 men assembled from all parts of the State to form an organization and send delegates to the Indianapolis convention. A full electoral ticket was nominated and a full delegation to the National convention appointed. The name of Gen. S. B. Buckner was proposed as a candidate for Vice-President on the National ticket. A telegram from Senator Lindsay was read saying that he was prevented by illness from attending the convention, and expressing his hearty sympathy with the objects of the convention. Senator Lindsay had previously been claimed as a supporter of the Bryan ticket. As there is no defection whatever in the Republican ranks in Kentucky, there is very little doubt that that State will cast its electoral vote for McKinley and Hobart. The plurality for Bradley, the Republican candidate for Governor last year, was 8,912. At this election 16,911 votes were cast by the Populists. With such leaders as Buckner, Lindsay, Breckinridge, Watterson, and the sound-money Democratic press of the State opposing the Bryan ticket, it is pretty safe to put Kentucky in the Republican column.

A new Secretary of the Interior has been appointed to fill the place of Hoke Smith, who is forced out by his own sense of propriety. The appointment, in his place, of ex-Gov. Francis of Missouri as Secretary of the Interior is a clear indication of President Cleveland's preferences in the present campaign. Gov. Francis has been from first to last an uncompromising opponent of the free coinage of silver. With him there has been no variableness or shadow of turning. He has been as sound as any member of Mr. Cleveland's cabinet or as Mr. Cleveland himself. The cabinet will now be a unit, and it is very probable that some of its members will be heard from in a more public way after the meeting of the Indianapolis convention. There is a great desire to hear from Mr. Carlisle, whose voice would be most potent in all sections of the country, and especially in Kentucky. Mr. Carlisle could do more than any other man, perhaps more than all others, to make the probability that that State will vote against Bryan a certainty.

The method adopted by ex-Gov. Flower of showing a Watertown audience that the collapse and ruin which have overtaken the country in the last twenty-five years are a mere figment of the silverite fancy, is very effective. This fancy is based upon and appeals to the universal human tendency to think of the remote past as "good old times," and to long for a return to them. The only way to dissipate it is to appeal to the actual facts. To the Watertownians, just beginning, under the spell of silver, to dream of the good old times of 1870, when they were all so rich and happy, Mr. Flower, in the clarion voice of Truth, speaks as follows: You now have 800 men employed in the manufacture of wagons. Did you have a single wagon factory here in 1870? No. You have now 300 men engaged in manufacturing car-brakes. Did you have a brake company then? No. You then had two paper mills. How many have you now? Twenty-seven. At that time your population was 10,000; it is now 20,000. Were your wages higher? Not so high. Were your streets paved and sewered? No. And the audience, recognizing the voice of Truth, became convinced that the demonetization of silver had not brought them to ruin.

Mr. Lucius B. Swift of Indianapolis has been making a collection of the prices of farm products in Indiana from 1873 to 1892 in order to test the assertion of the silverites that there has been a steady decline of such prices, and that it has been due to the demonetization of silver. These are the prices nearest to the farm. They show approximately what the farmer realized. The prices during the suspension of specie payments

are reduced to gold values, and the results are the following:

	1873–1877.	1878–1882.	1883–1887.	1888–1892.
Corn, per bushel.....	35.6	41.8	37	39.8
Oats, per bushel.....	29.6	31.6	28.8	35.2
Wheat, per bushel...	95	102.6	79	87.2
Rye, per bushel.....	62.8	70.4	57.6	68
Potatoes, per bushel.	53	60.6	50.8	59.4
Hay, per ton.....	9.31	9.47	8 21	9.54

Of the six crops, there was only one on which the Indiana farmer did not realize more in the last-named period than in the first. That one was wheat, as to which there were peculiar influences at work in the increased cultivation and better means of transportation of that cereal in other parts of the world, especially in India, Argentina, Southern Russia, and Asia Minor. "How," asks Mr. Swift, "are Coin and Teller and Tillman and Altgeld going to explain to the Indiana farmer why the disuse of silver struck down one crop and raised up five? If the whole are reduced to tons, it will be found that corn outweighs all the rest. What kind of a man is Coin to omit notice of such a crop, or to take for comparison the one crop which had fallen in price and omit the five crops which had advanced?" The conclusion he comes to is that Coin and his crowd are given to lying.

Mr. Swift pursues the subject to the panic of 1893, and shows that the hard times that followed the period of 1888-'92 were due to a fruitless attempt to furnish a market for our silver-mine owners. The Bland-Allison act of 1878, under which we paid them $308,279,261 gold in twelve years, did not satisfy them. So in 1890 "we again allowed ourselves to be bullied by the silver-mine owners, and agreed to nearly double our purchases of silver in order to help their market. Under this law, up to 1893, we purchased of them $155,981,002 worth of silver, out of which we coined $36,000,000, and stored the rest as one would store hay or oats. We have it on hand now to the extent of 4,800 wagon-loads, counting a ton to a load." This measure of greed and folly caused the panic of 1893, from which the farmers as well as all other classes and trades have suffered. We were just beginning to recover from that disaster when a new agitation was started to upset the gold standard altogether by the free coinage of silver at the ratio of 16 to 1. This is what we are suffering from now. Here is where the farmer's misery comes in. Mr. Swift is the editor of the *Civil-Service Chronicle*. He was not specially interested in the money question until the present campaign began. He then took it up and made his studies in his own field for his own instruction, and has embodied his findings in a little pamphlet of eight pages which ought to be widely circulated.

The San Francisco *Argonaut*, a silver Republican paper, says that there is a small premium on gold in California, and that it has had a disturbing effect on business. It is an open secret that there has been a premium on gold in this city of about three-quarters per cent. ever since Bryan was nominated. Nor has it been confined to New York. We have seen circulars from brokers in Cincinnati and elsewhere offering one-half per cent. premium for gold and also for legal-tender notes. One of these circulars was published in a Memphis silverite newspaper, with sarcastic comments on the Shylocks and the Rothschilds and the whole race of money-brokers and money-lenders. This premium is merely an omen of what would take place if there were a general belief that there was danger of Bryan's election. It is a premium of gold and gold notes over silver and silver certificates. One of the commonest assertions of the silverites in the South is that silver would remain at par with gold under free coinage because the silver dollar is now at par with gold. They scout the idea that it is kept at par by being limited in quantity and being receivable for Government dues. But in point of fact it is not at par with gold. Anybody possessing any gold has been able to get a premium for it at any time during the past thirty days, although the banks have done everything in their power to discountenance and discourage it. The idea that the United States, which is scarcely able to maintain the redemption of its legal-tender notes, can, by its mere fiat, double the value of all the silver in the world and of all that is to be produced hereafter, is too childish for description. Yet that is what is meant when it is affirmed that our silver dollar of 412½ grains would be at par with the gold dollar under free coinage.

The following letter from Senator Sherman is published in a morning paper in reply to an inquiry touching the policy of the Republican party in regard to means for increasing the revenue:

"MANSFIELD, O., August 22, 1896.

"DEAR SIR: The only way in which a Republican administration can correct the evils of the past is by increasing the revenue by a new tariff law, and this, I fear, is not practicable."

It is said that an attempt was made by Republicans in Ohio to suppress this letter as though it contained something of a damaging character. It is difficult to see why it should be damaging to mention the notorious fact that the Democratic-Populist-Silver-Republican combine controls the Senate, and is almost certain to control it for two years from next March, and that this combine will vote for no tariff bill which does not include the free coinage of silver. The union of these three elements was not nearly so firm at the last session of Congress as it will be in the next one. Its cohesiveness has been greatly increased by the joint nominations made at St. Louis, so that the question to be determined in the coming election as regards the tariff is not whether McKinley is to be elected or not, but whether a sufficient number of States can be carried by the Republicans to wrest from the tripartite alliance the control which it now holds in the Senate. It is evidently Senator Sherman's opinion that that is not to be expected at the coming election. In this opinion most good judges will agree with him.

On the 15th of the present month the *Evening Post* published a special telegram from London saying that the *Financial News* of that city had branded as a forgery a certain article, widely circulated by the silverites in this country, purporting to be an extract from that paper of March 10. The *Financial News* itself of August 13 has now come to hand. At the head of the editorial page is the following paragraph:

"We have received numerous letters from American correspondents containing what purport to be editorials from the *Financial News*, and which have been reprinted in various Western papers as 'campaign literature.' One Omaha paper prints an article stating that it is 'from the London *Financial News* of March 10.' No such article was ever printed by us, and its whole tenor is directly opposed to the view we have taken of the effect of free silver in the United States. So far from advocating free silver coinage, we have persistently pointed out that it spells repudiation and the withdrawal of all European capital."

Since the publication of this denial a new edition of the forgery has been issued and circulated. At the bottom of the article are the words: "London papers have since been cautioned not to discuss American politics under date August 13." This date is evidently a reference to the *Financial News's* exposure of the forgery. Of course the forger gives no clue to his own identity.

The chemists have been holding an international congress of applied chemistry, at which M. Berthelot has declared that chemistry was creating "a new man and a new earth." What he means is, that we may look forward to a time when by chemical processes we shall not only greatly reduce the cost of production, but actually produce wheat, meat, etc., at such a very moderate expense that the cost of living will be reduced to almost nothing. Chemistry will render wholly unnecessary nine-tenths of the toil which is now wasted in enabling the earth to produce. This may seem all very well to chemists, but there is one person whom it will never deceive. The philosophical bimetallist knows that what the world is suffering from now is low prices of food, shelter, and clothing. They are ruining the poor man as it is; and yet the chemists would reduce prices to nothing if they could. Imagine an earth on which man could get everything he needs to sustain life for nothing at all! Where would prices be then? There would be no getting back to "where we were in '73." Even free coinage of copper would not save us.

LORD RUSSELL'S ADDRESS.

NOTHING could be finer than the spirit that pervaded the address delivered by the Lord Chief Justice of England before the American Bar Association last week, and the address, according to all accounts, was received with unparalleled enthusiasm. Lord Russell spoke in the main as a lawyer to lawyers, considering the development of international law, its fundamental conceptions, and the possibility of extending its scope in certain important respects. But it was as a representative Englishman speaking to representatives of a people largely English by descent, and even more largely English in institutions, that he was most attentively and sympathetically listened to. It is but a few months since the Venezuelan dispute subjected the relations between the new country and the old to a terrible strain, and the thought of this could not have been absent from the mind of the audience or of the orator. With excellent taste, however, Lord Russell avoided all direct reference to this painful episode, while indicating, by the almost pathetic earnestness of his utterances, the supreme importance to the happiness of mankind of the subject which he was presenting.

It is hard to say whether Lord Russell was more graceful in his complimentary mention of the contributions to international law made by American lawyers and statesmen, or in his references to the deficiencies in the practical application of the principles of morality, which have been a reproach to this nation as well as to others. We may take pride in the names of Story, Kent, Marshall, Wheaton, Dana, Woolsey, and Wharton. We may feel satisfaction in the thought that our Government has defended the rights of neutrals, and that by its action these rights have come to be at once defined and enlarged. We may accept as not exaggerated Lord Russell's statement that "to the United States—to its judges, writers, and statesmen—we largely owe the existing rules which relate to a state of peace, and which affect the rights and obligations of powers which, during a state of war, are themselves at peace." We may accept as an excuse for our refusal to agree to the prohibition of privateering our profession of willingness to abandon the practice if more complete immunity of private property in time of war were secured. And we may especially take pleasure in the reflection that, of the sixty instances of effective international arbitration since 1815, the United States has been a party to thirty-two. Yet when we think of our Mexican and Indian wars we must admit that we need not be too boastful of our civilization.

For, as Lord Russell eloquently declared, civilization is not dominion, wealth, luxury; not even a great literature and widespread education:

"Its true signs are thought for the poor and suffering, chivalrous regard and respect for woman, the frank recognition of human brotherhood, irrespective of race or color or nation or religion, the narrowing of the domain of mere force as a governing factor in the world, the love of ordered freedom, abhorrence of what is mean and cruel and vile, ceaseless devotion to the claims of justice. Civilization in that, its true, its highest, sense must make for peace."

For the extension of civilization in this sense surely the two great divisions of the English-speaking world can work together. "No cause they espouse can fail; no cause they oppose can triumph. The future is in large part theirs. The greatest calamity that could befall would be strife which should divide them."

Lord Russell's review of the progress that has been made towards international arbitration is very impressive. Although there have been attempts in this direction almost from the beginning of history, it is hardly a quarter of a century since these attempts have attained significant proportions. Within that period a number of influential organizations have been formed, whose members, as Lord Russell reminds us, are not vain idealists, but men of the world. They do not claim to be regenerators of mankind, nor do they promise the millennium, "but they are doing honest and useful work in making straighter and less difficult the path of intelligent progress." It has already become a common practice to introduce arbitration clauses into treaties, and in a number of cases the principle has been carried so far as to extend the agreement for arbitration to all questions in difference whatsoever.

It is true, as the Chief Justice points out, that there are limits to the application of the principle of arbitration. Theoretically every state is sovereign—otherwise it is not a state. But practically nothing is more common than the coercion of one state by a number of others; not by violence, but by diplomatic pressure. Indeed, when we consider it, why should not the principle of arbitration be as valid as any existing rule of international law? No nation ventures to defy the public opinion of mankind as expressed in what we call the law of nations; if this public opinion were to insist that the principle of arbitration should be incorporated in the law of nations, it would unquestionably be respected. Lord Russell maintains that arbitration will not cover the whole field of international controversy; "men do not arbitrate where character is at stake, nor will any self-respecting nation readily arbitrate on questions touching its national independence or affecting its honor." But do not men arbitrate where their honor is involved? Will litigation help them to save their characters any better than arbitration? And what nation whose independence is in danger would not be safer in invoking the justice of mankind than in calling on the god of battles? We may say flatly that the independence of no great nation now existing is in danger, and that it can be in danger only at the close of an exhausting war, when arbitration would be to its advantage and in the interest of the peace of mankind. No state, not of the front rank, but would find its honor and independence better protected by the public opinion of the great family of states than by its own military levies. What preserves the autonomy, the sovereignty of Holland, of Belgium, of Greece, of Switzerland, of Denmark, of Rumania, even of Italy? Not its own material force in any case, but the moral force of the public sentiment of Europe. As Lord Russell suggests, there may yet be a formal league of the great powers to coerce recalcitrant members of the family of nations, and meanwhile the silent forces operating in favor of peace and justice are growing and multiplying throughout the world.

THE MAIN QUESTION.

THE editors of newspapers are overwhelmed with inquiries concerning this, that, and the other aspect of our present financial problems, and concerning economic history in general. It would be ungracious to deny that many of these inquiries are made by intelligent men, and show an intelligent comprehension of the nature of the crisis through which we are passing. Nor ought any one to deprecate the acquisition of knowledge in this way, whether it be monetary science concerning which curiosity is aroused or any other subject. Especially in political matters, we are all necessarily being educated, and our form of government is such as to make the proper exercise of the suffrage a matter of conscience. Hence our journals generally welcome discussion, and cheerfully undertake to satisfy every correspondent who sincerely asks for information.

Nevertheless it is quite evident that a great many people are spending their time in inquiries that are practically irrelevant. We are confronted with a comparatively simple problem, the question whether this Government shall permit any one that owns any silver to take it to the mint and have that quantity of it which the owner can now sell for only 53 cents in the market stamped with the dollar mark. Of course, there are a thousand collateral inquiries bearing more or less directly on this main question. Some persons do not understand the difference between the effects of free coinage and restricted coinage. Some do not know that we have at present the gold standard. Some wish to be assured that the demonetization of silver in 1873 was a just measure. Some require proof that silver has depreciated and that gold has not appreciated. Some question whether we are not suffering from a lack of money. Some wish to know whether a rise of prices does not stimulate industry, and whether the increased use of money fol-

lowing increased trade would not bring silver dollars to a par with gold. Many are perplexed by the inconsistencies, real or fancied, in the arguments on both sides, and the question, How do you explain this? or, How will you answer that? may be heard on every side.

But, as we have urged and must continue to urge, what we are confronted with is a practical measure with very pronounced moral and economical bearings. We may concede, for the purposes of argument, that gold has appreciated in value, and that a mistake, or even a crime, was committed in demonetizing silver in 1873. We may admit that rising prices stimulate trade, with its corollary that prices must be kept rising perpetually or trade will collapse. We may even go so far as to grant that laborers get better wages when prices are high, although we know of no facts to prove it and many to disprove it. We may go to the extreme length of admitting that an act of Congress can raise the value of an ounce of silver the world over from 70 cents to 129 cents in gold. Or we may even allow that our Congressmen can put up the value of silver here, by free coinage, while it remains the same as it is now in India and China, if any one chooses to advance that proposition. But, having made all these concessions, the true issue would remain unaffected. For no one can deny that the possibility of free silver coinage has already occasioned very great losses to many poor people who are innocent of the crime of 1873, or of any responsibility for the gold standard. They had been earning wages before the present agitation began, and now their wages have ceased. They had been doing business, and now find there is no business to do. Others had owned securities, and they have been forced or frightened into selling them at a loss. No one in his senses can honestly maintain that employers are discharging workmen because they are afraid the present standard of value will be maintained. They are doing it because they fear it will not be maintained. That is what they all say, and that is what the facts prove. Nor can any one assert that he knows any creditor, rich or poor, who wants to be paid in the future silver dollars instead of dollars of the present standard. And this being so, it appears to us that people who know nothing at all about standards of value, or prices, or monetary science in general, are perfectly competent to determine what is their present duty.

Men are often heard to say that the more they read and talk about this silver controversy the less they understand it. Then let them cease worrying about it and reading about it. Let them ask themselves whether, leaving silver out of consideration, it has an honest look for Congress to ordain that any article that now sells for 50 cents shall sell for a dollar. We know that they will be assured that the fiat of Congress can make the article worth a dollar, but there is nothing but assertion offered to support this claim; and, on the other hand, a very large number of our people, very probably a majority of them, feel that they would be defrauded by such a legislative fiat. If it is not probable, is it not at least possible, that their fears are well grounded and that they will be defrauded? Does it recommend itself as just and wise and honorable to any fair-minded man to vote for legislation that will probably, or even possibly, defraud a very large number of people of a particularly defenceless class? Can he imagine any way in which the losses suffered by these people can be repaired in case the claims of the free-coinage advocates are mistaken? And is he ready to take the responsibility, the awful responsibility, of doing what is in his power to commit our Government to an experiment which may possibly, and which it is believed by a very large proportion of the best-educated and most conscientious members of the community will certainly, bring shame on our country, create panic among the wealthy, and spread poverty among the poor?

There was a time in New England when eternal salvation was made to depend on the correct answer to a number of difficult if not incomprehensible metaphysical propositions. Many of these have been since generally abandoned as erroneous, and we have come now to believe that a man who sincerely tries to live a pure and upright life may safely trust his salvation to the grace of the Almighty, even if he cannot understand the Westminster catechism. The common sense that has come to prevail concerning eternal salvation may properly be called on to display itself in the solution of our financial problems. Instead of puzzling over ratios and values and appreciation and depreciation, let people ask themselves and ask others which side in the present contest stands most clearly for national honor and good faith, and for honest and just dealing between man and man. There is plenty of sophistry to be heard on both sides, we admit; but with this simple touchstone the voter who sincerely desires to do what is right will not find it difficult to select the true course.

THE FALL IN PRICES.

Mr. Bryan made a speech on Saturday at a small town in Dutchess County in the course of which he said:

> "If two men speak against our position, one of them will probably say that there has been no fall in prices, and he will denounce the people who are complaining that gold has risen in price; and after he has proven that to the satisfaction of every man who does not think, then his colleague will tell you that not only have prices fallen, but that it is the greatest blessing in the world to have prices fall. Now, these two are not consistent, but it follows all the way through. Why is it?"

That is a dishonest statement, as Mr. Bryan knows very well. It has not been denied that the prices of some things have fallen since 1873. It has not been denied that more have fallen than have risen or remained stationary. It is denied that all prices have fallen, and it is affirmed that the decline of those which have fallen can in every single instance be traced to and explained by known conditions affecting the production and transportation of those particular articles.

For example, the price of white paper has fallen. Why? Because formerly it was made exclusively from cotton and linen rags, of which the supply was limited. Somebody discovered a process of converting rye straw into paper pulp, thus enlarging the supply of raw material. Then somebody invented a process of converting wood into paper pulp by machinery. Then somebody else found a chemical process for doing the same thing. Then improvements of these processes were made from time to time, constantly cheapening the production. All the steps which have lessened the cost of paper can be pointed out seriatim and have been pointed out repeatedly. But philosophers of the Bryan school tell us that it is all due to a scarcity of gold. They do not single out paper, or steel rails, or any other specified articles, but they lump them all together and discountenance any particular examination of particular things.

Returning for a moment to Mr. Bryan's Dutchess County speech, he says that of any two men opposed to his view of this question, one will probably say that "there has been no fall of prices," and the other will say that they have fallen and that the fall of prices is the greatest blessing in the world. We have kept a pretty close watch on this debate during the past fifteen or twenty years, and we have never seen or heard of one speech, or newspaper article, or publication of any kind, that has affirmed that "there has been no fall of prices." We defy Mr. Bryan to point out one such speech, article, or publication. What has been said and proved frequently is, that there has been no fall in prices that cannot be explained independently of the annual production of gold or the existing supply of gold. This is perfectly well known to Mr. Bryan. Consequently the statement which he made on Saturday was a dishonest statement.

We have frequently adverted to Mr. Wells's book published in 1890 entitled 'Recent Economic Changes,' in which the causes of the decline of all the leading staples of commerce which have declined are set forth with great exactness. This examination included the statistics of the area of land devoted to the cultivation of wheat and cotton, and the quantities produced in all the countries from which statistics could be obtained, together with the progress of railway building and other means of cheap transportation that have been introduced since

1873. All the silverites fight shy of Wells's details. Lately Gen. Walker has deigned to pronounce his (Wells's) argument "monstrous and absurd." Prof. Farnam, in the last number of the *Yale Review*, says and shows that "those epithets would apply more appropriately to the arguments by which Gen. Walker justifies them." As Mr. Wells's book is easily accessible, we need not go into details.

A year or two before Mr. Wells's book was written, Prof. J. Laurence Laughlin, then of Harvard, now of Chicago University, published a very searching review of the same question. He first collected all the tables of average prices then available that had any repute among statisticians, including those of Jevons, Soetbeer, Sauerbeck, Palgrave, Mulhall, and the London *Economist*, and, after subjecting them to a critical examination, he gave his reasons for thinking that the Hamburg tables of Soetbeer were the best and most trustworthy. Well, these tables showed that, taking the year 1850 for a starting-point represented by the figure 100, prices had risen in 1873 to 138 and had declined in 1885 to 108. Now the year 1850 was a bimetallic year. It was more than twenty years before "the crime of 1873" was committed. All the virtues of silver money were in full force at that time. Yet prices were higher by 8 per cent. in 1885 than they were in 1850.

Another fact brought out by Prof. Laughlin has been generally overlooked, viz., that the year 1873 was the culmination of a speculative period of almost world-wide extent. All such periods are marked by a general eagerness to buy property of every kind with the expectation of selling it at a higher price. The competition of buyers in the market is what puts up prices. This competition was going on at a furious rate from the close of the civil war to 1873. It was especially active from 1870 to 1873. The price-figure in Soetbeer's tables for 1870 was 122. It was pushed up by the speculative movement to 138 in 1873. Then the bubble burst, there was a competition among sellers, and prices fell to 117 in 1879. Then there was a recovery and a rise to 122 in 1883, when another reaction came, not so disastrous or widespread as that of 1873, but sufficiently marked to leave its impress on business. Prices fell to 108 in 1885.

Another thing shown by the Hamburg tables was that prices were not all moving in the same direction. "I have collected twenty-one articles," says Prof. Laughlin, "out of the one hundred quoted at Hamburg which show an upward tendency by comparing the average prices of 1881-'5 with those of 1871-'5." These articles were malt, buckwheat, hops, veal, mutton, pork, butter, bristles, buffalo horns, herring, dried fish, almonds, wine, champagne, cocoa, pepper, allspice, rum, ivory, flax, and India rubber. Mulhall's tables of London prices showed an additional list of articles which had either risen in price or remained stationary, including barley, beef, beer, brandy, cigars, cheese, currants, eggs, gloves, leather, oats, oxen, raisins, and silk. Some of these articles may have risen and some may have fallen since these tables were prepared. It has been proved that corn, the chief agricultural product of this country, has not declined in price since 1873, if we consider its price at the place of production. It has fallen at the seaboard markets by reason of the decline in the cost of transportation and in proportion to that decline. That is the reason why "Coin" and the other falsifiers of his financial school always take the seaboard prices for the purpose of comparison. The article of most importance, however, that has not declined in price since 1873 is labor. The man who works with his hands gets more value, more commodities, now than he did then or ever before in this country.

MR. BRYAN AND FIAT MONEY.

DOUBTLESS there are many sincere believers in bimetallism who think that the free coinage of silver by our Government would not cause prices to rise, but only prevent them from falling. Some probably reconcile it with their consciences to hold that free coinage would cause a rise of prices, but that, after rising to a certain unknown height, they would remain permanently at that level. Such persons object to being classed with the Populists and feel aggrieved at being charged with favoring inflation. But if they are supporting Mr. Bryan with any idea that his views are the same as their own, they are committing a very serious mistake. Mr. Bryan favors the free coinage of silver, but he favors it only incidentally. He believes that the Government should issue all money, and that when the people demand it, it should issue irredeemable paper money. He is not proclaiming this belief openly, now and here. It would not be well received in this part of the country, and he has told us here that a free-coinage act passed by our Congress would double the value of silver all over the world. But he has professed this belief publicly and deliberately, and has suggested particular measures for its practical application. In order that his position may be clearly understood by those who are disposed to vote for him, we shall present that position as he has himself defined it.

In the first place, he has emphatically declared that he favors irredeemable paper rather than our present money. He, of course, after the manner of his kind, assumes that he stands for "the people," but as the people may take a different view of the assumption, we shall assume that when Mr. Bryan says the people demand a certain thing, he means that he believes in it. He admits that he hesitates "to see any legislative body exercise the power to issue irredeemable paper and fix the volume thereof." But he hesitates because he remembers "how the creditor has overreached the debtor in the financial legislation of the last thirty years," and "how great moneyed interests, acting as a unit, have secured legislation against the unorganized masses." Hence he will not insist on irredeemable paper "unless the pretended friends of a 'sound currency' make it necessary by the complete demonetization of silver as a standard money." But as silver has long been demonetized as a standard money, this being the chief complaint of the free-silver party, Mr. Bryan must be now ready for fiat money. He says "the choice may be avoided for the present [*sic*] by the full and immediate restoration of silver to its place as a coördinate part of the money of the world." But if the time comes "that the people must choose between a constantly appreciating metallic money and an irredeemable paper money which gives a hope of relief, they will choose the latter system, with all its defects and dangers." Mr. Bryan says that we have now a constantly appreciating metallic money in gold. He tells us that if we coin silver freely it will appreciate to $1.29 an ounce. Our readers can draw their own inferences from these statements.

Holding these views concerning fiat money, Mr. Bryan would, of course, have "the people" forbid the making of contracts payable in any "particular kind of money." He holds that the Government has an undoubted right "to prohibit special contracts in money." He rejects the notion of the "right of private contract," because it enables the creditor to oppress the debtor. The debtor being under duress, "it is not freedom of contract, but freedom to extort." This restraint of the cupidity of men that possess capital by legal-tender acts and stay-laws Mr. Bryan compares with inserting rings in the snouts of hogs. The people, therefore, are to issue irredeemable paper as money, and to forbid any one to contract to receive or pay out anything else. The greenback, Mr. Bryan admits, was at a discount during the war, but that was because the Government would not receive it in the payment of duties. By driving gold and silver out of use among mankind, fiat money could be maintained, we suppose, at a parity with itself.

Having shown that the people should issue all money and prohibit the use of anything except what they issue as money, Mr. Bryan proceeds to explain how this money is to be distributed. We venture to say that if he would now repeat in his speeches what he said on the floor of Congress, he would gratify a very deep and anxious curiosity on the part of many of his hearers. He cannot quite adopt the "sub-treasury plan" of the Farmers' Alliance, but he thinks it is quite as good a plan as our national-bank system. "If

it is safe to issue on bonds at par or up to 90 per cent. of their face, it would certainly be safe to issue on other kinds of property up to 50 per cent., or 25 per cent., or at least to 10 per cent. of their market value." Mr. Bryan does not really condemn the Populist scheme of having the Government issue money "based" on land or wheat to the owners thereof. Of course, if "the people" demand it, Mr. Bryan is not the man to refuse them; but he assures them that there are better ways of getting the money into their pockets, "plans more just and equitable than that of loaning." This "loaning" has an offensive sound; it suggests the disagreeable thought of repayment, and Mr. Bryan's more just and equitable plan connotes nothing so repulsive. Every Populist should welcome it with delight as an improvement on any plan yet proposed.

For what Mr. Bryan offers as a financial system to be adopted by a great commercial country is simply the undertaking of vast public works by the general Government for the purpose of distributing irredeemable paper money among the people. "Government paper can be issued to pay for special improvements which Congress may deem desirable. Harbors can be deepened and rivers can be improved in this way." Mr. Bryan himself introduced a bill to issue $70,000,000 in greenbacks to be used in constructing the Nicaragua Canal. This he regarded as much better than issuing bonds, because the people have to pay interest on bonds; and as to any trouble about redeeming the greenbacks—pshaw! Let the Government exercise its option of paying coin obligations in silver, and we shall have no more trouble with the reserve. The remainder of this "more just and equitable plan" we give in Mr. Bryan's words:

> "We can, by the issue of a few millions a year, construct a ship canal from Buffalo to the Hudson River, and thus give to the grain of the Northwest ocean rates from Chicago and Duluth to Liverpool, not to speak of the military advantage of such a canal. We might, by the issue of a few millions a year, connect the Mississippi River with Lake Michigan, and thereby increase the commerce between the Northwest and the South."
>
> "Money could be issued in another way. We can use any available coin on hand to take up matured bonds and replace the coin so used with paper money. I have introduced a bill during this Congress to provide in this way for the payment of the two per cent. bonds now outstanding, payable at the option of the Government and amounting to about $25,000,000. These methods are suggested as legitimate means of distributing Government issues without resorting to money-loaning or to the use of banks. Government paper should be issued in the place of national banknotes as they are retired."

All the foregoing quotations from Mr. Bryan are taken from his speech in the House June 5, 1894, beginning at page 5,808 of the *Congressional Record*.

JOHANNA AMBROSIUS: A LYRIC SUDERMANN.

CAMBRIDGE, August 18, 1896.

UNTIL within a year and a half ago the name of Johanna Ambrosius was not known outside of the little East Prussian village where she herself, as the wife of a poor peasant, led a humble and monotonous existence. To-day her poems have passed through the twenty-seventh edition,* and she is hailed throughout Germany as a lyric genius destined to play an important part in the literary revival which has been so brilliantly initiated by the dramatic achievements of Sudermann and his associates. What is it that has given this simple peasant woman, whose intellectual resources until very recently were confined to a few back volumes of the *Gartenlaube*, such an extraordinary hold on the national heart? What is it that has raised her at one stroke far above the host of clever and refined singers who, during the last thirty years, have re-echoed the melodies of the great masters?

The secret, I think, lies in this, that in Johanna Ambrosius there has arisen a new voice in the struggle for the emancipation of the German woman. Whatever one may think of this movement, it would be folly to deny either its volume or its strength. It is naturally strongest in socialistic circles; indeed, the Social-Democratic party is thus far the only political organization which has allowed women a considerable share in its meetings and deliberations. But the influence of the woman movement is by no means confined to Socialist gatherings. It pervades the air, it is felt in the family, it agitates the universities, it has entered the drawing-rooms, it has deeply affected the novel and the drama; everywhere we notice as one of the leading forces of the day the striving of woman for a fuller and more complete individuality. If this were not so, such a figure as Sudermann's *Magda* could not have been created.

There is a good deal of family likeness between the heroine of "Heimat" and Johanna Ambrosius. The circumstances are different, the abiding traits of character are the same: in Sudermann's drama, an impetuous, unruly girl, who, craving for a fuller life than that afforded by "respectable" society, falls a prey to sin, and through sin rises to the level of her true self; in the East-Prussian peasant home which has been and still is the scene of Johanna Ambrosius's life, the agonies and struggles of a woman who, harboring in herself a world of passion, longing, and ideal striving, is smothered by the hard facts of actual starvation, degrading toil, and absolute intellectual loneliness—until at last the long repressed despair breaks forth with volcanic power, shakes the very foundations of this life, and lifts it into a higher sphere.

Of Johanna's mental development her sister, who, it seems, has been the only one to stand faithfully by her in all these gloomy struggles, has given a sympathetic sketch, from which a passage relating to the years of girlish maturity and early married life may here be quoted:

> "Even in those early days," she says, "we both felt how alone we stood in our village surroundings. Our souls began to retire within themselves; the longing for freedom, for light, for life became irresistible. Johanna had outgrown the obedience demanded by her parents, but oppressive to body and soul; her own will often manifested itself; and, half following her will, half submitting to the force of circumstances, she entered service in the house of strangers. Perhaps she hoped to find outside of her family what her soul craved. She soon returned home, and, in order to find freedom, as she thought, she accepted the hand of a simple, but good and honest, peasant lad. By the side of the man of her choice Johanna went with eyes open into poverty and hardest toil. Proud and uncomplaining, she bore the self-chosen fate until she lay broken on the ground. The whole misery of a life wrestling in vain for food had seized upon her. Out of the night of these boundless sufferings there rose—the poet."

It would be indelicate to pry into the details of the family tragedy which these words half disclose and half conceal. Some German literary periodicals have already given too much publicity to them. From the merely personal point of view, it might even seem as though too much sympathy had been accorded to Johanna herself, and too little to the "simple but good and honest peasant" whose fate, by the side of this fiery, soaring idealist, appears pathetic in the extreme. What makes Johanna Ambrosius such a remarkable, nay, inspiring, figure in the modern woman movement, is the fact that her own sufferings, instead of embittering her, have opened her heart to the woe of all her fellow-sufferers, that her own struggles have made her a leader in the universal struggle for a fuller humanity.

The most striking note of her poetry, to be sure, is one of passionate longing for a happiness which she knows can never be hers. She fairly revels in the maddening consciousness of being for ever shut out from life's best gifts—peace of soul and intellectual companionship. She consumes herself in the thought of what might have been. There was a time when her heart swelled with hope, when the *fata morgana* of love conjured up before her a world of bliss and beauty. But all that is now for ever destroyed, and all is dark. "Ah, bind my hands with iron chains, lest they draw a beloved head to my bosom! Wall in my heart and close it fast, lest the flames of love blaze forth from its windows! Make me deaf, make me blind, lest I see happiness! Oh miserable, God-forsaken child that I am!" She sits at dusk by the hearth, and gazes into the flickering fire as it dances up and down before her eyes, for a moment bringing back the color of youth to her cheeks, awakening in her the glow of long-suppressed passion and desire, and then quickly dying away—oh that the raging fire within might consume itself as quickly! She consecrates her songs to Pain, her best and inseparable friend. He stands before her threshold with drawn sword, and wards off whoever might disturb them; only his sister Sorrow he at times invites to keep them company:

> "Nur manchmal ladet er zu Gaste
> Sich seine Schwester Leid,
> Die bleibt dann lang bei uns zu Raste,
> Und nänt für mich ein Kleid."

She cries out to God to make an end of it; to deliver her at last from ever pressing the wounded breast against the rocks, from lying bound without being allowed to rest her head; to take from her the glowing chains which with hellish fire are burning deep into her heart.

Whatever she sees about her assumes the melancholy hue of her own darkened existence. She tells of how "Mariechen, süsses Mariechen mein," the fairest girl in the village, is plunged into misery by the old witch Care; how the happiness of her young married life is poisoned by want; how, embittered and hardened by his and his children's hunger, the same man who had loved her so fervently turns away from her, and at last raises his arm to strike her:

> "Der Schlag traf gut, nun noch ein Hieb:
> Ade, Du Glück, gebaut auf Lieb!
> Die alte Hex' Sorg' in die Faust sich lacht,
> Und schleicht sich weiter durch Nebel und Nacht.
> Was wimmert so schmerzlich im Sternenschein?
> Ach Mariechen, süsses Mariechen mein!"

*An English translation, by Mary J. Safford, is announced by Roberts Bros., Boston.

She describes a peaceful farmhouse enclosed by wheat-fields. Its white gable blinks cheerfully through a cluster of hemlocks; like a column of frankincense, the smoke rises from the thatched roof and loses itself in the evening red; the spring water gently trickles over the mossy stones of the well; the doves are cooing in their cotes, swallows are chasing through the air, a cat lies sleepy on the threshold. But where is the housewife, where the farm hands? From the fields she comes, with her child. Cold as marble is her face, her forehead overshadowed with grief. Shyly she gathers the broken pots and glasses strewn about in the yard. Has a storm raged here? Has some evil spirit entered? In the arbor lies the husband by the side of his bottle.

With all this gloom, the poetry of Johanna Ambrosius as a whole is far from having a discouraging or depressing effect. There is nothing enervating, nothing disintegrating in it. While often reminding us of Heine's truthfulness and simplicity, this woman has nothing of Heine's scepticism. Even in her saddest moods we recognize a bravely struggling soul, a character faithful to itself, a heart embracing all mankind. Her woes have sanctified her; they have strengthened her trust in the final victory of goodness and right; they have fanned in her a burning desire to help, to comfort, to inspire. And although the range of her thought is narrow, she compensates us for this by a freshness of feeling which gives even the oldest truths the stamp of a new acquisition. It is indeed touching to hear this daughter of the people speak of the exalted mission of the poet: "Through sleepless nights in the throes of creation he moans for the lost Paradise; he weeps for all men, he bears the burden of all mankind; he dyes the roses with his heart's blood, he bleaches the lilies with his tears; his poems are sighs, they are prayers offered up to God from the depth of his soul for the sake of a suffering world.—Oh bear them lovingly in your hearts, like your own children! You know not from what pains they have been born." And who could help being moved by that "Last Song" which this peasant woman would fain sing, a song which shall be wafted through the world like a gentle breeze of May, which shall bring refreshment to the dying, which shall calm all pain and encourage all good fighters, and which at last shall swell into a raging gale and drive the serpent Sin back into the sea? When this song shall be accomplished, the singer herself will break her lyre and sing no more; in the forest would she be buried, and none should know who conceived the song:

"Im Wald müsst ihr verscharren
Mich heimlich unterm Tann,
Und Niemand sollt' erfahren
Wer dieses Lied ersann."

It will be of interest to see how Johanna Ambrosius will bear the popularity which has so suddenly come to her and the honors which have been so profusely showered upon her. She seems great enough to justify the hope that recognition will bring out in her the joyous rather than the commonplace.

KUNO FRANCKE.

SIR JOHN EVERETT MILLAIS.

LONDON, August 14, 1896.

WITH Sir John E. Millais the Royal Academy has lost the only President of distinction as an artist whom it has had the honor to claim since the days of Sir Joshua Reynolds, its founder. When there was question of Millais's election, but little more than half a year ago, many feared his health might hinder him from accepting the new dignity, for it was known then that the disease from which he suffered was fatal, and that his active services must be limited to several months at the utmost. But there were few, within or without the Academical ranks, to regret the choice or his acceptance. It was felt that so long as he still was living, no one could well be chosen before the man who was at once the most distinguished and most popular among English painters.

Perhaps with his fellow-Academicians his popularity was his chief recommendation. But by all those whose interest is in a man's art rather than his social virtues it could not be forgotten that he was a great artist, even though in later years he had produced a mass of work which appealed mainly to the British public. It is curious, now every Academical reward has been heaped upon him, to remember that he began his career as a rebel to the very Academy over which he was afterward to preside. But this rebellion was, in a way, a forecast of the prosperity which was to follow. For that matter, Millais may be said to have been prosperous from the beginning. Two inevitable anecdotes told of him record his first success, at the age of five (he was born in 1829), with some French officers stationed at Dinard, he startling them with the cleverness of his childish sketches; and his second, at the age of nine, when Sir Martin Archer Shee, at the time President of the Academy, gave his official approval to the boy's training, not as the sweep he had at first suggested, but as an artist. Good luck went with Millais to the schools, both private and Academical: it seemed as if he had but to stretch out his hands for all possible prizes to fall into them. And he was as yet merely a youth, barely twenty, when he suddenly sprang into notoriety, and his name became a by-word in the mouth of English artists and critics and students; for it was then that he and Rossetti and Holman Hunt joined together to form the Pre-Raphaelite Brotherhood, and create a greater excitement than had ever startled English schools and studios. Of that much-discussed association it is not my intention to give the story here. The main facts are too well known and have been the inspiration of too much "copy" to be in need of repetition. The Pre-Raphaelites were rebels — rebels against Academic convention and tradition; and rebels, moreover, as eager to make their disaffection public as those youths of the Cénacle who, twenty years before, had led the famous fight in the Théâtre-Français. For the Brotherhood, rebellion had that element of worldly success which Millais seems ever to have carried with him through life. Most students could have their pictures rejected or skied at the Academy, and never a soul the wiser for their disappointment. But whatever neglect or insult was offered to the work of the Pre-Raphaelites was always sure in the end to prove the kindest of advertisements. Better, after all, to have one's painting called an atrocity, or abomination, or any other hard name, than to have absolutely nothing said about it.

I do not mean by this to pretend that the three youths who dared public opinion by venturing to paint in their own fashion rather than after Academic formulas were merely posing, in the fashion of the little groups of would-be innovators who have posed since. They were immensely in earnest, as, indeed, all young men who have anything in them must be. But, nevertheless, if their admirers were awed chiefly by the nobility of their principles, the chances are that they themselves were not indifferent to the fact that, thanks to their own independence and Mr. Ruskin's gallant championship, they had become three of the most talked-about men in England. Millais had made a name when most painters are still struggling through the schools.

That he threw in his fortunes with Rossetti and Holman Hunt is not as strange as may appear now in the light of later events. He was essentially an artist, and, differ as they might on many points, he still had far more in common with them, willing as they were at all hazards to assert their individuality, than with the fashionable Elmores and Pickersgills, Creswicks and Lees, who kept on turning out the old exhausted banalities according to the most respectable official recipes. Indeed, art had sunk to such a depth that to have painted as an artist paints, even if one had not called it Pre-Raphaelitism, must then have meant to inaugurate a revolution. Of the three, Millais was the only one who had really mastered his trade, and he had nothing to learn from the Brotherhood. The others influenced him in the choice of subjects, no doubt; it was Rossetti, the poet, who found for him his "Isabella," his "Mariana"; it was Holman Hunt, the preacher, who sent him into the "Carpenter's Shop" to paint the Child Christ. In another way, however, they were more useful to him. Had he not identified himself with them, he would have missed the severe and excellent training his few years as a Pre-Raphaelite gave him. For part of the Pre-Raphaelite creed was inexorable respect for detail—a respect which eventually was to permit the freedom held to be a crime at the first stage of their apprenticeship. Millais was endowed naturally with a facility that proved fatal enough when he began to care more for the quantity than the quality of his work. Nothing, therefore, could have served him to better purpose than the restraint put upon him by the creed he had accepted. He was kept within bounds, his habit of observation was developed, his knowledge of form cultivated. And he was too much an artist to sacrifice beauty to detail with Holman Hunt, or drawing to symbolism with Rossetti. The little "Mariana" is a picture jewel-like in the splendor of color, though worked out with a minuteness that would not have discredited a Mabuse or a Van Eyck. The "Isabella" has a certain decorative harmony for all its naïve conscientiousness in the presentment of every trivial fact; while in the "Ophelia," his masterpiece, the infinite intricacy of the foliage along the banks, of the ripples on the water, of the flowers trailing from the hands and hair of the floating figure, are so well subordinated that you see only the solemn beauty of the landscape and of the white, upturned face, lovely in death. The poetry is not only in the subject and its associations, but in the painter's treatment. This really is the supreme achievement of Pre-Raphaelitism. Millais himself in his Pre-Raphaelite days painted other memorable pictures—"The Huguenots," "The Order of Release," "The Proscribed Royalist"—but none that could surpass the "Ophelia," one of the few canvases that should reconcile the nation to Mr. Tate's gift of his collection and the gallery which is soon to play the part of English Luxembourg.

That, in the course of time, the Pre-Raphaelites should separate was inevitable. The

three leaders of the movement had little but that first outburst of youthful enthusiasm to hold them together, and, soon enough, each went his way: Rossetti into the retirement that became a mystic; Holman Hunt to the Holy Land to study Scriptural color on the spot; Millais straight, one might say, into the arms of the Academy, to which he was elected an Associate (1853), as if he had never painted his protest against it. However, there could have been no escape for him. In youth, as in maturity, he was the "genial good fellow" all the papers are now busy calling him, unfitted by temperament for the rôle either of rebel or recluse. In other centuries, a painter as great, as prosperous, as active would have been invited to court—like Holbein, like Titian, like a host of others; or sent on embassies—like Rubens; or made a dignitary of state—like Velasquez; and the honors conferred upon him would have been so many incentives to further effort and finer accomplishment. But in the England of this century the artist who would achieve social success, who would continue in evidence, has but one alternative, and that is, to cater to a public notorious for caring and knowing less about art than any public elsewhere, and, in thus catering, to coarsen and degrade his art. This is why so few painters hitherto have been able, once in the Academy, to fulfil whatever promise their talent held out before election. Millais, strong as he was, could not but be affected by the demands that his new position made upon him. Not that his work showed the results immediately. He painted many good pictures after his election—"The Vale of Rest," "Sir Isumbras," for instance; many good portraits—"Hearts are Trumps," in which he was not afraid to challenge comparison with Reynolds; "Mrs. Bischoffsheim," with a somewhat chastened Pre-Raphaelitic love of detail in the rendering of the elaborate gown. Besides, it was in the sixties, or thereabouts, that he produced some of those wonderful illustrations which alone would insure his fame.

Millais was not the least among the men who contributed to the pages of *Once a Week* and the *Cornhill*. He could lend loveliness to the hideous crinoline of the day, as you may see in his drawings for Trollope's 'Framley Parsonage'; he could add dignity and solemnity to the Scriptures, as his designs for the Parables will show: his Sower, an impressive figure, high on the rocky hillside, a dramatic silhouette against the sky; his Foolish Virgins in the wide voluminous skirts which, for him, were full of subtle grace; his Enemy Sowing Tares, vague, shadowy, awful, as he passes through the darkness of the night. These illustrations should be better known—probably will be before long, for already the collector has an eye on the books that contain them, and that have ceased to be sold for a song. And yet, it should be added, the very next drawing to his most masterly design, as likely as not, is found to be rubbish, for he could do as bad and as careless illustration as anybody.

Of his black-and-white work, good or bad, there is not overmuch. Paint was far more profitable, and the commercial instinct, as I think Mr. Holman Hunt has pointed out, had never been dormant in Millais; not even when, as a boy (in another familiar anecdote), he, the bursar of his class, collected so many pence for buns that the confectioner threw in an extra one for himself, and his lunch cost him nothing. What artist, so far as that goes, has not been commercial? Read Dürer's Journal, or Vasari's Lives, or Rossetti's Letters, if you are still burdened with superfluous illusions on this score. But the trouble was that Millais, to make his pictures sell, had to paint them to suit the patrons who came to the Academy to buy, and, gradually, he fell away from his own high standard. When an exhibition of his work was held in the Grosvenor Gallery, in 1885, it was almost tragic to trace the steady deterioration where one had the right to look for progress. "Bubbles," "Cherry Ripe," "Sweetest Eyes Were Ever Seen"—these were the things he produced in maturity; he who had painted the "Mariana" and "Ophelia" in his youth. The fault with a picture like "Bubbles" is not that it was appropriate to advertisement, as the stolid British critic seems to think; what artists objected to was that it was such a cheap, trashy piece of painting.

It will be kinder to his memory to forget the commonplace, the triviality, the sham prettiness to which he stooped. The worst of it was, his popularity increased in proportion as his art suffered. Honors and distinctions were poured upon him, and he was a man who revelled in honors and distinctions. He was made a full Academician (1863), a Trustee of the National Portrait Gallery (1881), a Baronet (1885). Recognition came as well from abroad. He was appointed Knight of the Legion of Honor (1878), an Associate of the Académie des Beaux-Arts (1882). And while Rossetti was allowed to die, neglected to the last by the Academy, while that institution remains blind to the existence of Holman Hunt, Millais, as crowning touch to a long and prosperous career, was elected its President, with the gratification of knowing that his election gave universal satisfaction—the multitude exulting in his prosperity, for which his title, his big house, his skill as sportsman, seemed so many securities; the few bearing in mind the great artist he had once been. Fortunately, posterity judges an artist by his strength, not his weakness; and certain it is that, though his later pictures might to his advantage perish with him, there are others which will stand the test of time triumphantly. N. N.

THE DISPUTED TIARA IN THE LOUVRE.

ST.-GERMAIN-EN-LAYE, August 8, 1896.

SELDOM has public attention been roused as it is just now by a question of archæological criticism. The tiara of Saïtapharnes and the gorgeous necklace purchased together with it—for the large sum of 200,000 francs—have become a favorite topic of conversation. People talk about them, and judge them, who had never heard of the existence of Olbia, nor of the extension of Greek civilization to the northern shores of the Black Sea. Of course, as the daily papers have taken the matter in hand, much nonsense has already been printed about the tiara, and it is probable, the debate having only just begun, that we shall hear a great deal more of it.

I do not intend to enter now on a scientific discussion of the subject, which is going to be treated at length, in answer to M. Furtwaengler's article in *Cosmopolis* for August, by M. Héron de Villefosse in the same magazine, and by my brother Théodore in the *Gazette des Beaux-Arts* for September. Many arguments, both pro and con, are scarcely to be understood without the help of illustrations. My aim is to state briefly the origin and history of the dispute, and to collate for the first time some information, derived from private sources, on the forgeries which are being manufactured in southern Russia. But, to avoid any misunderstanding, I wish to declare at the outset that I consider the tiara and necklace as perfectly genuine antiques. The contrary opinion, expressed by a man of such high achievements as M. Furtwaengler, is nothing but a colossal mistake, which is traceable to two causes: (1.) The German professor is well acquainted with the *fact* that forged antiquities are being made in Russia, but he has never *seen* any one of them, so that he entertains no precise idea as to the ability and scientific training of the forgers. (2.) He believes, and has made many people believe, that the greater number of the golden objects found in southern Russia belong to the fourth and fifth century B. C., so that he cannot admit the authenticity of an analogous find which betrays distinctly a much later date. The fact is, that the discovery of the tiara of Saïtapharnes gives the death-blow to much that has been written by M. Furtwaengler in his famous 'Winckelmannsprogramm' on the golden fish found at Vettersfelde. The chronology of the discoveries made in southern Russia, and probably also that of the local fabrications of pottery, bronze, etc., must now be entirely revised. M. Furtwaengler had better set to work on that important subject than lose his time in arguing the falsity of the tiara. But now to our own *historique* of the debate.

In the spring of 1893, being at Odessa, I was much surprised to find that the little museum of that town, as well as some private collections, contained a large number of jewels, golden vases, etc., which were evident forgeries by unskilled hands. A dealer in antiquities, M. Lemmé, told me that there existed, in the hamlets near the site of Olbia, a whole manufacture of forgeries, not only in gold and in terra-cotta, but in marble. I had already noted, in the Museum of Odessa, some Greek inscriptions, engraved on marble slabs, wherein the ordinary formulas of epigraphy were absurdly blundered; M. Lemmé and Prof. Uspenski showed me a few others, in their possession, the falsity of which was beyond question. I learned that an inscription numbering about 600 letters had been sold to a gentleman named Surutchan, who was making a collection at Kishinev. That inscription has happily remained inedited, but in the pamphlet on the Surutchan collection recently published by Prof. Latysheff there are a good many suspicious inscriptions, similar in character to those I saw in Odessa. On returning home, I published a note on the subject in the *Chronique des Arts* (1894, p. 53) and also mentioned it in the *Revue Archéologique*.

Almost at the same time the late Aug. Geffroy, then director of the French School in Rome, wrote to the French Academy, announcing that Count Tyskievitch, a well-known Russian amateur living in Italy, had bought a magnificent collection of gold and silver objects discovered in a tumulus near Olbia. The most important piece was a large silver dish, with reliefs *en repoussé*, relating to the Eleusinian mysteries (*Comptes Rendus de l'Académie des Inscriptions*, 1894, pp. 30–32). In fact, Count Tyskievitch had really purchased these things from a Russian gentleman who had just arrived in Rome, and letters from archæologists, asking for information about them, were already pouring in at his address. One day he received a visit from his friend Count Gregory Stroganoff, the possessor of a marvellous collection of antique jewelry, who came from Odessa to Rome, where he usually passes the winter. On seeing the "treasure" at the house of Count Tyskievitch

he exclaimed, "Musica! musica!" which is the euphemism adopted, among Roman collectors, for denouncing a forgery. Count Stroganoff said he had seen in Odessa several works by the same hand, which was then busy at Kertch, the ancient Panticapæum, and that the Museum of the Hermitage in St. Petersburg had lately acquired in Odessa a large collection comprising many forgeries in the same style. Count Tyskievitch soon acknowledged his mistake, and returned the "treasure" to the Russian gentleman, who, it appears, contrived to sell it to Germany. The reliefs on the silver dish were nothing but slavish copies of the paintings on a Greek vase discovered years ago at Panticapæum, and abundantly illustrated by Stephani. Very few people are aware of these particulars, for which I am indebted to Count Tyskievitch. As Geffroy's letter was printed in the *Comptes Rendus*, the "treasure" continues to be quoted from time to time; I find a mention of it in the *Revue des Études Grecques* for 1895 (p. 444), whence it may find its way into other periodicals.

M. Furtwaengler has told me that, in 1895, a golden object with an inscription, said to have been discovered in Olbia, was offered to the Berlin Museum and rejected, its authenticity having been questioned by M. Dressel. M. Furtwaengler had not seen it, but thought it must have been a clever forgery, as Prof. Curtius had at first considered it genuine. I do not remember exactly if the object in question was a crown or a vase, but rather believe that it was a crown.

The tiara of Saïtapharnes first belonged to a dealer at Otchakoff, a place between Odessa and Kherson. It was offered, but not shown, to Count Tyskievitch, who refused to go to see it, its provenance from Olbia having immediately raised his suspicions on account of the painful experience he had had the year before. I believe the tiara went to Lemberg and was offered there for sale before it was carried to Vienna, where it still was at the beginning of the current year. For several weeks it remained at the Museum in Vienna, where nobody questioned its authenticity, but where the funds for such a costly purchase were not obtainable. From Vienna, a dealer named Vogel took the tiara and the necklace to Paris (March, 1896), together with a red-figured vase of very late style said to have been discovered with the tiara. They were submitted to the appreciation not only of the keepers of the Museum, but of the members of a committee to which is intrusted the care of the large sum derived from the sale of the *diamants de la Couronne* (about 400,000 francs a year). I had the honor of assisting, in the Louvre, at the memorable sitting at which the acquisition of the tiara and necklace were decided upon. The sitting lasted several hours; we were perfectly aware of the existence of forgeries from Southern Russia, and examined every detail with the utmost care. Men like MM. Heuzey, de Villefosse, and Pottier felt no uneasiness in the presence of such astonishing works of art; but we were conscious that the question of authenticity was some day or other to be raised, on account of the exceptional and mysterious character of the discovery. So we quietly waited for our fate.

The first person to attack the genuineness of the tiara was, I believe, the keeper of a French provincial museum; but as he wrote nothing on the subject, I think it unnecessary to give his name. Most people accepted the statement of the authorities in the Louvre, attributing the tiara to the fourth or third century B. C.;* a few amateurs declared it was Roman, and a correspondent of the *Indépendance Belge* went so far as to assign it to the Byzantine period. It is useless to dwell on such assertions, which betray more than ordinary ignorance of archæology and epigraphy.

About the middle of April, Prof. Furtwaengler arrived in Paris. He went to see the tiara and examined it at first through the glass case. His opinion was formed immediately: the tiara and the necklace were both forgeries. When he told me so, I advised him to take the tiara in his hands and look at the inside, which he did the next day, but very cursorily. His verdict was that the whole tiara was modern, with the exception of *two small bronze nails* inside the rim, and that the only antique parts of the necklace were a few beads and tablets of iridescent glass. Hours of discussion ensued, in which I naturally learned much from my opponent, but could not prevail upon him to withdraw or to modify his judgment. I must say, to the honor of Prof. Furtwaengler, that he sincerely lamented what he called the Louvre's misfortune, and deliberated what he should do to alleviate it without giving offence or annoyance to the keepers. He finally decided on going to see two of them, with whom he spoke very frankly, suggesting that the Louvre should immediately take steps to prosecute the dealers and get the money back. His opinion was listened to with respect, but convinced nobody. Prof. Furtwaengler left Paris with the impression that our blindness could be cured only by means of a printed demonstration, which he accordingly prepared to write. But others were hurrying to grasp from his hands what Renan has called "la priorité dans l'erreur!"

Some days before M. Furtwaengler's departure, Count Gregory Stroganoff came to Paris. He had heard from St. Petersburg—where nobody had yet seen the tiara—that it was a forgery, and went straight to the celebrated dealer, M. Feuardent, deploring the Louvre's credulity, etc. Feuardent advised the Count to go and see the things himself, which he had hitherto neglected to do. An hour later Count Stroganoff returned to M. Feuardent's office; he declared that a man must be raving (*enragé*) to question the genuineness of the tiara. He wrote in consequence to several of his Russian friends, in particular to Count Tyskievitch, who had asked information from M. Fröhner and received the assurance that the tiara was authentic, which he accepted reluctantly.

During M. Furtwaengler's stay in Paris, I had written to a friend of mine in Odessa, begging him to go to M. Lemmé and try to get information from him. M. Lemmé had not seen the tiara, not even a photograph of it (the first decent publication appeared on the 1st of May in the *Gazette des Beaux-Arts*, with a good article by M. Michon); but he did not hesitate to say that it was a forgery, originating at the factory in Otchakoff. He spoke to my friend about several forgeries of the same kind which he had recently come across, one of the most interesting being a golden crown, with an inscription, which had been purchased by the German Consul in Odessa; others had been bought by a banker in Frankfort-on-the-Main, etc. The rumor that the Louvre had been sorely deceived was spreading at that time (end of April) from Odessa to Moscow and St. Petersburg.

* I believe it is somewhat later than 150 B. C.

One of the most decided opponents of the tiara in St. Petersburg was M. G. Kieseritzky, the successor of Stephani as curator of the antiquities in the Hermitage. He had not seen it either, but judged that it *must* be a fraud—and said so. A professor of Byzantine and Turkish history in the University, M. Vesselovsky, caught up his words, and perhaps thought he would make himself immortal by being the first to print an onslaught on the tiara. So he published a short and smart note, under his name, in the *Novoe Vremya* of the 19th (31st) of May. Early in June I received a visit from Count Stroganoff, who showed me a translation of the note. He continued to believe in the tiara, but nevertheless felt uneasy. "Prof. Vesselovsky is not an urchin," he said. "He cannot have written such a note, in which he asserts that the tiara was made quite recently in Otchakoff, without having serious reasons to give." The Count insisted that I should write immediately to Prof. Vesselovsky, asking him to give me his reasons. I did so, but never received an answer. Another Russian savant, Prof. Kondakoff, passed through Paris some days later. He, too, had condemned the tiara before seeing it, and maintained his opinion afterwards. But he gave no arguments, and, as far as I know, discussed the matter with nobody. This certainly does credit to his modesty, Prof. Kondakoff being a Byzantine scholar and not an archæologist.

Meanwhile the *Petit Journal* and the *Revue Encyclopédique* had reproduced a translation of Prof. Vesselovsky's letter. The public at large believed in the Russian's assertion; first, because a Russian, in contemporary France, is something more than an ordinary mortal, and, secondly, because our public is always ready to believe that the officials of its own country are lazy or ignorant. The height of the ridiculous was reached by M. Arsène Alexandre, who, writing in the *Figaro* (July 8), expressed the hope that the stupid authorities in the Louvre would profit by the hard lesson they had received! The following is a typical phrase extracted from that sensational article to show the author's competence in the matter of antiquities:

"D'abord, on devrait se convaincre une bonne fois que nulle part il n'existe plus un objet d'art ancien de quelque valeur qui soit inconnu. Il faut être naïf comme un conservateur de musée, ou ignorant comme un directeur des beaux-arts, pour croire que le trésor artistique de l'humanité n'est pas catalogué et mis au jour jusqu'au moindre tesson."

Is it possible that M. Alexandre never heard about English country-seats?

When the article in the *Figaro* appeared, M. Kieseritzky had just arrived in Paris. He brought photographs of the forged golden objects in St. Petersburg and in Odessa, with the idea that the tiara, when examined by himself, would betray the same crude workmanship. But . . . *longe aliter res se habuit*. M. Kieseritzky soon asserted that both tiara and necklace were authentic and indisputable, and he authorized M. Kaempfen, the director of the Louvre, to state his opinion as such in an answer to M. Alexandre's article (*Figaro*, July 18, 1896).

We have had occasion to examine, by the side of the tiara, not only the photographs and some *original forgeries* brought by M. Kieseritzky, but a number of golden things, said to have been found in Olbia, which a Polish dealer recently offered to the Louvre. The latter were a winged sandal, a crown with glass jewelry, a mask with a long Greek in-

scription, all in *repoussé* gold and of bad workmanship. The Greek inscription was stupid—a dedication ending with the word Χαῖρε! Here, then, we had some *genuine* antiquities from the factory at Otchakoff. Among M. Kieseritzky's photographs was that of the crown with a Greek inscription which M. Lemmé had mentioned to my friend in Odessa. Although the falsity of the whole is quite apparent, I remarked that the inscription and many details of the decorations so closely recalled the tiara in the Louvre as to render a mere coincidence most unlikely. So I believe that the tiara must have been at Otchakoff *for a long time*—some years, perhaps—and been imitated there by forgers, until the forger-in-chief, whoever he may be, decided upon parting with his original treasure, because the imitations had become suspicious and would sell no longer.

Between the best of the Otchakoff forgeries and the weakest part in the tiara, there is such an immense difference of technique and of style that if Prof. Furtwaengler had been able to compare them, as I did, I am certain he would never have published his deplorable article in *Cosmopolis* (August 1). I call it deplorable because it is a real misfortune for archæology when a man like M. Furtwaengler exposes himself and the science he so gloriously represents to the ironical sarcasms of lookers-on. There is not one argument in his article that will bear being tested, and several assertions in it are (*mirabile dictu*) serious blunders, which will have been duly exposed by the time this article appears. The *Journal des Débats* of August 3 having published a résumé of M. Furtwaengler's paper, M. de Villefosse answered in the same daily (August 6), and, though his letter is short, it contains enough overwhelming evidence to upset the whole romance constructed by M. Furtwaengler's scepticism.

The good result of the controversy will be to attract to the tiara the full attention of all archæologists. It is well worthy of being widely known and deeply studied, not because it is a masterpiece of art—the excellence of the *technique* is counterbalanced by the provincial vulgarity of the style—but because it is a storehouse of genuine information. Here I pause, it not being my purpose to describe the tiara and show what a quantity of new facts it may teach us. I, for my part, think that the question of authenticity is settled, but it still remains to discover *when* and *where* the tiara was found. It may transpire that, instead of being a recent find, it is a very old one—readers of the *Antiquités de la Russie Méridionale* will perhaps guess what I mean; if they do not, I refer them to the conclusion of the article which is going to appear in the September number of the *Gazette des Beaux-Arts*.

SALOMON REINACH.

Correspondence.

ASSURANCE FOR THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: To "A Mugwump," writing on "Idle Fears" in your last issue, it is sufficient answer to say that some of the Southern States already hold their State and county elections on a different date from the national elections, Virginia being one of them. Yet in these States, not less than elsewhere, there exists great apprehension that Republican government will mean an attempt at negro domination. Like "A Mugwump," "I am a born and bred Southern Democrat, and my father was before me," and I am going to vote for McKinley for his own reasons. More than that, I want as many as possible of my compatriots to be enabled to do the same thing by having their minds made easy in essential sentiments. CHRYSOSTOM.

VIRGINIA, August 24, 1896.

THE CART BEFORE THE HORSE.

TO THE EDITOR OF THE NATION:

SIR: Apropos of a recent comment in your Notes on President Gilman's endorsement, in the August *Atlantic Monthly*, of "the admission of women to the advantages of higher education, either by coeducation, or by 'annexes,' or by separate foundations," as "one of the greatest gains" of the past half-century of educational development, may I call your attention to the following item from the London *Athenæum* of August 1?

"*Autres pays autres mœurs.* The *University Circular* of Johns Hopkins University, Baltimore, states that the 'medical department is open to women: the other departments are not.' This is the converse of the rule observed in most of the British universities."

Evidently the British critic is as much at sea as the American observer of social phenomena, to explain why Dr. Gilman and his colleagues continue to occupy, alone among the authorities of leading American universities, a persistent attitude of exclusion towards women who seek the advantages of higher education. Their friends can only hope that the unexpectedly explicit declaration of the able head of the Johns Hopkins University may be accepted as an intimation that a change of heart is to be looked for in the near future on the part of those who control the policy of the University. C. M.

BALTIMORE, August 17, 1896.

Notes.

MR. BRYCE'S recent articles in the *Century Magazine* will form part of a work, 'Impressions of South Africa,' which the Century Company has in preparation. They announce also 'Rhymes of the States,' by Garrett Newkirk, a help for little pupils in national geography, and a new edition of Joel Chandler Harris's 'Daddy Jake, the Runaway.'

Scott, Foresman & Co., Chicago, have in press 'Primitive Buddhism, its Origin and Teachings,' by Mrs. Elizabeth A. Reed.

Dr. George E. Post, professor in the Syrian Protestant College at Beirut, has just published a 'Flora of Syria, Palestine and Sinai,' the work of thirty years. Profit, in the nature of the case, is hardly to be looked for, but reimbursement for the cost of publication will be furthered by any one disposed to send for a copy of the book (to the above address), at the price of a pound sterling. Transmission of the volume will be by registered mail.

We are glad to observe not only that M. Hanotaux has not dropped his Life of Richelieu, as we feared, but that the second volume, covering the years 1614-1617, has just appeared under the sub-title of "Le Premier Ministère."

Those who are interested in the criticism of art and who can read French (and all who are interested in art-criticism should be able to read French), may find much to interest them in André Michel's 'Notes sur l'Art Moderne (Peinture)' published by Armand Colin & Cie., Paris. M. Michel touches upon many artists and many "movements," from the romantic revolution of the thirties to Impressionism and those still later phases of French art which are, though our painters are hardly yet aware of it, displacing Impressionism in France; and he touches nothing on which he does not throw some light. The notes on Corot, Ingres, and Delacroix are especially interesting, and those on Impressionism and "on some methods of painting" give a clear and, we think, a just notion of what will be for the painter of the future, "who will not be an Impressionist," the permanent acquisition from the modern analysis of light. Even in those articles that have less value, M. Michel drops by the way many pregnant observations. In speaking of Raffet, for instance, whom, with the Frenchman's love for *la peinture militaire*, he vastly overrates, he says: "Is it that a picture, unless it is intended for some monumental decoration, is always large enough? This is a disquieting thought at the moment when the Salons are about to spread before our discouraged eyes so many paintings of a useless acreage." This sentence is the condemnation of much that passes for modern art, and it is, unfortunately, not only the painters of France that need a warning against the "useless acreage" of the Salon picture.

The appearance of a fourth edition of J. Fitzgerald Molloy's 'Most Gorgeous Lady Blessington' (Scribners) attests the popularity of a most entertaining book. It combines all the features of a memoir of a curious, sad, and interesting life, a picture of a literary society of recent date, yet wholly vanished, and a collection of anecdotes about its members. The style is perhaps rather conversational, but not slangy, and the literary skill of the book in presenting vivid character-sketches in a few touches is remarkable. Byron, Dickens, Disraeli, Bulwer, Landor, D'Orsay, N. P. Willis, Lord and Lady Blessington, the Countess Guiccioli and each member of her family, Lady Blessington's violent father and insane first husband, even De Boissy, who finally marries "la Guiccioli," and is proud to introduce her as "ma femme, ci-devant maîtresse de Lord Byron"—all are as clear and distinct as if we had known them. Lord Byron, especially, is a wonderful portrait in a few pages, and signed, as one may say, by himself, for much of it is taken down from his own lips. It is curious to contrast a sympathetic account, such as this, of the literary circle for which Gore House was a sort of salon, with that given by Carlyle of literary London, and to see that the affectations which irritated him so much, and drove him to the extreme of a semi-savage, semi-humorous unconventionality, were bone of its bone and flesh of its flesh. Poor Lady Blessington is throughout more natural than any of her courtiers; she remains the beautiful, charming, sensitive, clever, good-natured, unaffected, and unlucky Margaret Power to the end.

Mr. Edmund G. Ross's 'History of the Impeachment of Andrew Johnson,' published by the author at Santa Fé, forms a thin volume of 180 pages, giving all the leading facts of the trial and of the controversy which produced it. Mr. Ross was one of the Republican Senators whose votes prevented conviction. The account is clear and to the point, and, owing to the fact that it is a report and criticism of

the proceedings by one of the judges, possesses historical value.

Littell's Living Age is to take on a monthly supplement, free to its subscribers, containing readings from American magazines and new books, and a list of books of the month. Occasional translations from articles in foreign reviews and magazines will form a still more decided departure.

The "Summer Number" of *Modern Art* (Boston: E. Prang & Co.) resembles its predecessors in being better in appearance than in substance. Its printing is so handsome, its paper so good, and its decoration so sumptuous that one is disappointed to find its letterpress so indifferent. The principal illustrations of the present number are a chromolithographic reproduction of a color print from wood blocks by Arthur W. Dow, a heliotype from the painting "Lullaby" by Miss Wally Moes, and several reproductions of book-bindings by the Club Bindery. Mr. Dow gives some account of his experiments in color-printing after Japanese methods, and Mr. William Loring Andrews writes of the Club Bindery, while Mr. Prang contributes an article on lithography. Mr. Philip Hale, not the well-known musical critic but a young painter, writes somewhat flippantly of "Artists' Little Games," his serious conclusion being that Claude Monet is the only artist who is "wholly and absolutely sincere"; and there are notes on the Kelmscott Press, on the German *Pan*, and on "The New Movement in Dutch Art." The "Table of Art Reading" is an excellent idea and may be of use to students, but one must protest against the inclusion in it of articles, illustrated by photographs of models, of which some of the cheaper magazines are making a specialty. The printing in red ink of several of Mahomet's denunciations of all art and all artists is a curious freak of the editor's.

In the annual review of Continental literature published by the *Athenæum*, in its issue for July 4, reports are given from thirteen countries; Sweden, Portugal, the Balkan States, and Turkey being unrepresented. Judging simply from the amount of space given to historical works, one must infer that history is the most important sphere of literary activity in France and Spain, while the drama and fiction occupy a similar position in Germany and Norway. The general impression left by the record as a whole is, that while the last twelve months have been a season of great productiveness, there has not been a single work of commanding originality or power. No writer of the first rank in his own country, with the possible exception of Björnson, who has published a work, has sustained his reputation. This is especially the case with the dramatists and novelists. Works on socialism are still numerous, particularly in Belgium, but their number and their importance are less than in previous years. The most earnest and in some respects the most encouraging report is from Russia. Here the future of the peasant, in view of the probable abolition of the communal system, is the subject of keenest interest to many writers, both radical and conservative.

The most interesting paper in the *Geographical Journal* for August is Dr. Donaldson Smith's account of his adventurous journey from Berbera on the Gulf of Aden through Somaliland to Lake Rudolf. He narrates with great simplicity, but very effectively, his numerous adventures with the Abyssinians, Gallas, who are being rapidly exterminated or enslaved by their powerful neighbors, and the Borans. These last are an interior tribe, and the richest and most powerful natives whom he met with. They are superior even to the Mohammedan blacks, which is very unusual in Central Africa. The Right Hon. Geo. N. Curzon gives in detail an account of the various lakes and passes in the Pamirs, and Mr. O. H. Howarth describes scientifically Popocatepetl and the volcanoes of the valley of Mexico. In a brief paper upon the great seawaves which destroyed 27,000 lives in Japan last June, Prof. J. Milne gives it as his opinion that the disaster was "of a seismic rather than volcanic origin," and that off the eastern coast of Japan "a submarine range of mountains may be slowly growing upward." There is also a summary of the remarkable explorations of two Russians in Central Asia during the past two years, in which 10,600 miles were surveyed, and numerous rich collections of natural history, including 30,000 insects and 25,000 specimens of plants, were made.

Just in time for the Bayreuth Festival, Schottländer of Breslau (New York: G. E. Stechert) issues H. T. Finck's 'Wagner and his Works' in a German translation by George von Skal, which is so fluent and idiomatic that the reader would hardly suspect that it was not written in that language. The pages on the Dresden Revolution, on the relations between Franz and Wagner and others, have been rewritten and the work in all respects brought up to date. The new preface calls attention to the fact that the accusations of extreme partisanship are refuted by the censures of Wagner in the chapters on the Revolution, Judaism in Music, the silly comic libretto 'A Capitulation,' the neglect of the chorus, and the tiresome philosophical and political prose writings. An interesting footnote has been added (ii., 420) giving the opinions of Hanslick and Billroth (two extreme anti-Wagnerites) on the renegade Nietszche. 'Wagner und seine Werke' is neatly printed and bound, in a form convenient for the pocket.

The second number of the serial publication *Bausteine zur Elsass-Lothringischen Geschichts- und Landeskunde* (Zahn: Fuchs) is a pamphlet of 28 pages entitled 'Ein Hexenprozess in Elsass vom Jahre 1616,' by J. Dennler. It gives a full account of the trial for witchcraft of two women—Apollonia, widow of Michael Spener, and her daughter Dorothea, widow of Jacob Pfister. The materials are derived from the archives of Lower Alsatia, and now printed for the first time.

The *Historische Zeitschrift* (Munich: Oldenburg), founded by Heinrich von Sybel, and after his death edited by the recently deceased Heinrich von Treitschke, will be henceforth conducted by the sub-editor, Friedrich Meinecke, with the aid of an editorial committee composed of eight scholars. In connection with the review there will also be published an "Historische Bibliothek," consisting of biographical and historical essays issued at irregular intervals as supplements to the periodical, and sold separately at a moderate price. The first of these supplements, a sketch of the early intellectual development and character of Heinrich von Treitschke, will appear in the autumn of the present year.

The number of the *Deutsche Medicinische Wochenschrift* for July 23 contains an interesting report, by Dr. Marcuse of Berlin, recording his observations on the effect of the Röntgen rays on the human body. On July 1 he began to take photographs (or shadowgraphs) of a young man seventeen years of age. The sittings were frequent, and lasted as a rule from five to ten minutes, and considerably longer in photographing the internal organs of the chest. The tube was brought very close to the body and sometimes into actual contact with it, but the degree of heat developed by the current was quite moderate, and the young man was dressed and felt no inconvenience from it. After a time it was noticed that the skin of the parts towards which the tube had been directed had grown intensely red with a brownish tinge, and showed a tendency to peel off, and, when washed with vinegar, hung down in shreds. On the head the scalp turned pale and became bald in spots as big as a dollar; what hair remained was short, brittle, and thin, and dropped out easily. On the back the skin came off in places as large as an ordinary dinner-plate, and the tissue thus exposed was slightly bloodshot. The surrounding skin for the breadth of two fingers was brownish-red. The young man felt no discomfort during the process of photographing; what the after-effects may be remains to be seen.

We have already predicted that, when the Germans had once been convinced of the undesirableness of existing restrictions upon the activity of women, they would, such is their thoroughness, introduce changed conditions of a far-reaching nature so quickly as to leave other nations distinctly behind. The Hon. Mrs. Bertrand Russell, in an interesting article on Women in Germany in the *Nineteenth Century*, points out that, in spite of appearances, the millennium which women look forward to is likely to come to them sooner than in any other country. The party of the Social Democrats is the only strong political party in the world which demands the full equality of the sexes. When German working-women make up their minds to demand any particular measure of relief, they have an organized body of forty-seven members of the Reichstag ready to enforce their claim. Liebknecht has already expressed himself in favor of the "most thorough and complete emancipation that they can possibly desire."

Skirmishing over the question of degrees for women, at the Universities of Oxford and Cambridge, still continues. At Cambridge a "syndicate," carefully selected so as to display no preponderance of known opinion in favor of or in opposition to degrees, has been selected, and two memorials from members of the Senate have been extensively signed; the one against the proposal to admit women to membership of the University has received over 2,000 signatures, and the other, suggesting that women should receive some title not implying membership, has received nearly 1,400 signatures, of which more than 1,100 are common to both memorials—a fresh illustration of the universal instinct to "hedge." At Oxford, the "Association for the Education of Women at Oxford," pending the ultimate victory of its cause, has decided to give three kinds of certificates to those of its students who comply with certain conditions of residence and examinations, including a class in an Oxford honor examination. The first certificate will be given for the strict B.A. course, with full residence, as prescribed for men; the second will be given for a course approved by the Council of the Association, as an alternative to the degree course, and for this three examinations and twelve terms' residence will be obligatory, but there will be no limits of standing; for the third, eight terms' residence, without an intermediate examination, will be sufficient. These certificates will record the nature of examinations passed, together with the college or hall at which the

student has resided, and will doubtless be akin in value to the Harvard Annex certificates, which are now replaced by Radcliffe College degrees.

We have received the first circular of the American Woman's Sound-Money League, whose headquarters are at Boston, Mass., and officers, Mrs. Marion A. McBride, President and Manager; Mrs. Sarah Joy White, Vice-President; Miss Helen M. Winslow, Treasurer. This organization intends primarily to spread practical information regarding the currency question among American women, whose influence and intelligent zeal, if properly directed, can materially assist in the righteous settlement of the money question in November. The members are women who "sympathize" with sound money, and who "believe that a definite and an unquestioned standard of values, . . . known as the *gold standard*, . . . is indispensable to help relieve the industrial situation." It is proposed, in the principal cities and towns, to form branches of the League, which will distribute carefully prepared printed matter, and speakers for public meetings of women will be provided. Short, clear, practical statements, selected from the writings of acknowledged authorities on finance, will be sent to any part of the United States. Detailed information will be supplied by Mrs. Marion A. McBride, Arlington Heights, Mass.

—At this time of the year, when so many city families go to the country for a change of air, it is of interest to take note of a recent utterance of Prof. Leyden of Berlin, which has aroused much discussion in the German press. Having been asked whether the air of Berlin was specially injurious to those suffering from diseases of the lungs, he said that Berlin air was unjustly maligned; that it was mainly a question of dust, and that there was plenty of dust in the cities of the Riviera, where consumptives are sent for cure. He further intimated that the therapeutic overvaluation of air came from England, and dated back to the time when epidemic diseases were erroneously traced to the air as their source, whereas we now know that water is the chief medium for the conveyance of disease germs. When these utterances reached Vienna, the *Neue Freie Presse* interviewed several professors at the university, who unanimously protested against Dr. Leyden's notion that air is not a remedial agent. Prof. Oser conceded that air is not a direct remedial agent, but that its indirect effect on the healing of disease is of the utmost importance. The cool, dust-free air of the seashore and mountains gives a sound sleep, improves the appetite, and thus makes it much easier to conquer disease there than in the city. Prof. Chiari would consider air as a direct remedial agent, on the ground that pure country air, free from dust and too sudden contrasts of temperature, healed catarrhs which in the city were chronic. Prof. Gruber was disposed to think Berlin a better place for consumptives than Vienna, because the latter city is more exposed to draughts and sudden gusts of wind; while Dr. Kammerer thought that the principal trouble in Vienna was not so much the presence of dust or the quality of the air as the stagnation produced by the way in which the houses are built, whereby two sides of them are insufficiently ventilated. In some parts of Vienna only eight per cent. of the building space is left free.

—Another Goethe mystery has been solved. The "schoene Maylaenderin," with the light brown hair and almost blue eyes, whom Goethe met in Rome in 1787, and who flits unnamed with such poetic grace through the closing pages of the 'Italian Journey,' has been identified. For more than a century this fair Milanese has been known by no other name. M. Valeri, of the Victor Emmanuel Library in Rome, an ardent student of Goethe, has now discovered in the records of San Lorenzo in Lucina that in the house, unmistakably designated by the poet, there lived in 1788 "Carlo Ricci, business man; Maddalena, his sister, spinster, aged 20." As this coincides perfectly with all the known details, M. Valeri's point seems to be established. The name of Maddalena Ricci was not, however, unfamiliar to Goethe students, although she has not before been identified with the fair Milanese. It will be remembered that, just as Werther was in despair upon learning of Lotte's engagement, so Goethe, at the very inception of his love-making, grieved at the news that his fair one was already affianced. The engagement was broken off, however—why, does not appear—but in less than three months after Goethe's departure from Rome, in April, 1788, Maddalena had married another. Two letters in the Goethe archives refer to this event. One from Angelica Kauffmann, dated Rome, November 1, 1788, and published in volume v. of the "Schriften der Goethe-Gesellschaft," announces to Goethe "dass die Signora Maddalena Riggi sich nun Volpato schreibt." This Volpato was the son of the famous engraver. The other letter (as yet, we believe, unpublished) is from Maddalena's brother Carlo to Goethe, under date of January 20, 1789: "Vous êtes aussi obligeant que vous vous souvenez de moi et de ma sœur. Elle est mariée depuis Juillet passé au fils de Mons. Volpato. Elle a reçu avec reconnaissance votre souvenir." The poet had sent her a box of flower-seeds. After their tender parting, described in the chapter on the Second Sojourn in Rome, these half-confessed lovers never met. Unlike Frederica of Sesenheim, Maddalena of Milan remained heart-whole. But those who delight in the poetic charm with which Goethe invested all his relations with women will continue to think of that bright and gracious figure at Castel Gandolfo as the "schoene Maylaenderin," and forget that she was Maddalena Ricci, who married twice and died in 1825, leaving eight children. She is buried in the vault of the Volpato family in the Church of Santa Pudenziana at Rome, and with her is now buried a once fascinating theme for the doctor dissertations of ardent undergraduates.

—The French papers abound in tributes paid to the memory of the late Edmond de Goncourt by his literary friends, and in criticism (much of it of the obituary sort) of the work of the two brothers. M. Émile Faguet's finding in the *Revue Bleue* is brief and pointed: the Goncourts had, he says, the curiosity of genius, but not its intelligence. This is a rough-and-ready summing up, as he himself admits, and will require some attenuation and adaptation to make it fit quite smoothly. The two statements which oftenest recur in all these notices are that the Goncourts were artists, and that they were the founders of Naturalism. They certainly preceded Daudet and Zola, but, if Naturalism means Realism, one is forced to remember that even in French literature there was plenty of realism long before their day. The brothers Goncourt seem to have been radically unlike in many regards, as Edmond himself said; though he adds that, unlike as they were, they both received absolutely identical impressions from life and from the world. Probably no one will ever be able to distinguish the work of Edmond from the work of Jules, and while it is possible that some hints about this, or even a plain statement about it, may be contained in the fuller journals that are to see the light twenty years hence, nothing is known now.

—The reading of the will of Edmond de Goncourt satisfied to the full the curiosity of Paris on the point about which it was widest awake. As compared with the average man of letters, the Goncourts were rich men, and their fortune was at their own disposal. It was well known that they intended to use it in founding a new and purely literary Academy, in deliberate rivalry of the Académie Française, and much speculation has been indulged in as to whom M. E. de Goncourt would appoint as its first members. No one can fairly complain of the substantial justice of Goncourt's list. He did not fill it up from the "Grenier," but chose men who best represented, in his judgment, the literary movement in France, and it may be said that most of the men of his choice compare favorably with some recent accessions to the greater Academy. Above all things he seems to have valued originality and individuality of literary temperament. As was expected, M. Alphonse Daudet heads the list. Then follow the names of MM. Léon Hennique, J. K. Huysmans, Octave Mirbeau, Gustave Geoffroy, Paul Margueritte, and the two brothers J. H. Rosny. Two vacancies are left which will be filled by the Academy in session. It is said, and probably with truth, that Zola was excluded on account of his offering himself as a candidate at the French Academy, and Coppée and Loti because they had been received there. Each member of the new Academy will receive an annual income of six thousand francs. M. de Goncourt also founds a yearly prize of five thousand francs, to be awarded by his Academy to the author of the best novel, or of the best book of history, æsthetics, or erudition, or of the best collection of short stories. The manuscript of the "Journal des Goncourts" in its complete form will be deposited at the Bibliothèque Nationale, to be published only when twenty years have passed by.

—The *Korean Repository*, founded and supported chiefly by the American missionaries in a land which seems destined to become a Russian protectorate, keeps steadily on its way. Vol. ii., for 1895, shows in its table of contents a commendable variety both in contributors and in subjects treated. Furthermore, there is encouraging proof that the resident foreigners are mastering the language. The six numbers of vol. iii., for 1896, now before us, are well filled with excellent papers and essays, the substance of which comes from the native literature. Besides the standard linguistic and missionary themes are some illuminating chapters from the Korean historiographers and on native poetry. The renderings of Korean verse, while making us acquainted with the stock of native ideas and revealing the passion of the Korean for the beauties of nature, yet seem to invite the presence of a genuine poet who can explore further depths. Prof. Homer B. Hulbert, the managing editor, in the June number, continues his researches into the origin of the Korean alphabet. For the first time, we believe, he gives us documentary authority for the statement made by Japanese writers,

by Mr. W. G. Aston, and by the French scholar M. Courant, that King Se Jong, near the beginning of the present dynasty (founded A. D. 1392), invented the *en mun* or Korean alphabet of twenty-five letters (at first twenty-eight) which are purely phonetic signs. The passage, which shows that the King called in the aid of scholars to revise and criticise his work, occurs in one of the three or more private manuscript histories of the present dynasty, all of which agree essentially in their account of the origin of this remarkable instrument for the expression of thought. In the same number of the *Repository* is a review of the book 'Se-Quo-Yah, the American Cadmus and Modern Moses,' by Mr. George E. Foster of Ithaca, New York. There is also a very interesting article on a visit to the city and battle-field of Ping Yang, where, on September 15, 1894, was fought the decisive battle which emptied Korea of Chinese and decided the future of the peninsula. The city was nearly ruined, and has regained only partial prosperity. We note that the Korean *Independent*, published by a native Korean who is an American citizen, and issued thrice a week in Seul, in both Korean and English, seems to be flourishing, though small enough as yet to suggest leaven and mustard-seed. It is apparently potent as an educator.

MISS EDGEWORTH.

Castle Rackrent. The Absentee. Ormond. Popular Tales. By Maria Edgeworth. 3 vols. Macmillan.

THE republication of Miss Edgeworth's works suggests two questions each of which is worth consideration. And first: Will her writings find many readers at the present day? To this inquiry, an honest critic, however keen his admiration for Miss Edgeworth, must return a doubtful answer. No discriminating reader can indeed fail to recognize the talent or the wit of the author of 'Castle Rackrent' or of 'Ormond,' but keen appreciation of Miss Edgeworth's gifts is consistent with the admission that her writings reveal defects or characteristics which militate in 1896 against her popularity. Her most interesting tales are marred, and her inferior stories are completely spoilt, by the spirit of didacticism. She has not written a novel or a story which might not be called a moral tale. The moral she points is generally, to modern readers at least, obvious enough; she never omits to draw it out and emphasize it at tedious length. The ethical conclusions which she enforces are always sound and are often important. To keep out of debt is to keep out of danger; the procrastinator who puts off till to-morrow what he ought to do to-day is likely (though not, as Miss Edgeworth holds, certain) to come to ruin; constant ill-luck is generally the sign of incurable incompetence. These conclusions and the like are summed up in copy-book maxims and are generally true, but they are hardly interesting. A perusal of Miss Edgeworth's tales makes us admire and perhaps envy the simplicity of a generation with whom trite truisms still passed for profound paradoxes. But it is difficult not to feel that the truths, say of 1800, have sunk into the platitudes of 1896, and the propounder of platitudes will never long command the ear of a busy and restless world.

Miss Edgeworth, again, lacks the kind of literary skill which is now the common property of scribblers who do not possess a tenth of her talents. Never was there an age which, in the world of letters, displayed less originality than the present day. The English people on both sides the Atlantic cannot at this moment point to a living historian, poet, or man of letters of nearly first-rate genius. In no field of intellectual activity is this sterility more noticeable than in the province of romance. Novel-readers abound; novelists of genius hardly exist. Anthony Trollope would never have claimed a place among the great novelists of England, yet, since Trollope's death, there is no story-teller who has occupied anything like his position. But the disappearance of originality from the field of literature has been accompanied by a wide diffusion of literary skill. For one lady who in Miss Edgeworth's day could write passable and accurate English, we may now find a score who can express themselves in print with ease and (to use language which has now gone out of date) with elegance. Our ordinary story-tellers know how to tell a story. The dullest of writers would now hesitate to produce the cumbersome introductions which were written by a man of genius like Scott for the amusement and the admiration of one generation and for the weariness and astonishment of the next. Scott, Miss Austen, and Miss Edgeworth are now suffering from their own success. They taught their countrymen and their countrywomen the art of story-telling, and in the mechanism of narration they have been surpassed by their pupils and imitators.

Miss Edgeworth, lastly, is not an author who anticipated the current sentiment of to-day. In this matter she falls short of writers so different from each other and so unlike modern novelists as Richardson and Madame de Staël. Each of them belongs to another time than ours, but the sentiment of 'Clarissa' still excites interest and tears, and appeals to some modern vein of feeling. In the pages of 'Delphine' you may find raised the questions which still torment or excite European society. Miss Edgeworth belongs to her own age; she speaks a language which, plain and simple as it is, or because perhaps it is plain and simple, is hardly intelligible to readers entranced by vague ideals and supremely interested in the study of morbid and exceptional characters.

No one can guarantee that Miss Edgeworth's novels will, as things now stand, obtain many readers. Are Miss Edgeworth's novels worth reading? This is a question which may be answered without any hesitation whatever. There are few writers whose works better repay thoughtful perusal. Miss Edgeworth's writings are above all things noteworthy for the immense effect they have produced in two different directions. Her 'Parent's Assistant' and her 'Moral Tales' set the example of stories for children—which, by the way, are quite a different thing from the tales about children with which we are now inundated. Of the girlish sentimentality of such books as 'Little Lord Fauntleroy,' of the spurious pathos to be found in 'Misunderstood,' or of the humorous delight felt by the author of 'A Golden Age' in the dreams and escapades of childhood, not a trace is to be found in a single line written by Miss Edgeworth. She does not tell tales about children for the amusement of their elders, but succeeds in the far more difficult feat of telling tales to children which a child can read with interest and delight. Her sentiment, it is true, is a trifle out of date. We are afraid there are many little boys, and even some little girls, who might laugh at the melodramatic rescue of simple Susan's pet lamb. Who is the elderly gentleman who can now say, as Scott seems to have said, "When you come to the return of the pet lamb you have nothing to do for it but to put your head down on your hands and cry"? But if the sentiment of the eighteenth century is more or less obsolete, the essential merits of Miss Edgeworth's tales will permanently commend them to children. She has always a real story to tell; it is invariably definite and intelligible; it is marked by that detail and precision in which children delight, and (what is no small matter) it never fails to satisfy poetical justice. The good boy at last gets the cake or the prize; the bad boy, the sluggard, or the liar is brought to deserved disgrace. Even where, as in 'The Contrast,' the excellent Franklins are ruined and the worthless Bettesworths come into a fortune, everything turns out right in the end. The transitory misfortunes of the worthy Franklins prove the sterling character of their virtues, and are compensated for by a restoration to permanent prosperity. The accidental luck of the vile Bettesworths reveals their wickedness and conducts them to final ruin. This accurate distribution of reward and punishment may not quite correspond with the realities of life, though the doctrine that good sense and good conduct lead to prosperity contains far more truth than sentimentalists care to admit. But, however this may be, to children poetical justice is poetry, and gives unalloyed pleasure; and were it granted that Miss Edgeworth does not always hit the taste of modern children, they owe to her an untold debt of gratitude. She is the inventor of stories for children. To have created a whole department of literature is, it must be added, no mean intellectual achievement.

Miss Edgeworth's writings, again, afford the earliest example of novels written to illustrate national character. In this matter she displayed the highest originality. 'Waverley' and 'Old Mortality' have rightly enough overshadowed 'The Absentee' and 'Ormond.' It would be idle to compare the talent of Maria Edgeworth with the genius of Sir Walter Scott; but it must never be forgotten that she was not the disciple but the teacher of Sir Walter. With characteristic generosity he proclaimed to the world, in the last chapter of 'Waverley,' and afterwards in the preface to his collected novels, that her descriptions of Irish character had encouraged him to make a similar experiment upon Scottish character in the Waverley Novels; in other words, Miss Edgeworth planned and carried out in her pictures of Irish life a new kind of literary work, of which she was in strictness the inventor. A glance at Fielding, or Richardson, or Smollett, or Miss Burney will show any one who reflects upon what he reads, how great was the innovation of which Miss Edgeworth was the author. In the works of all these writers there are admirable descriptions of personal character, and Smollett, at any rate, was well aware of the dislike in his day of Englishmen for Scotchmen. But no one of the authors we have mentioned attempts to describe national characteristics. To portray the peculiarities of a nation was a new idea, nor can it be said that Miss Edgeworth failed in the execution of her own conception. Had she not been surpassed by Scott, she might still claim to be the most successful of what we may term "nationalist novel-writers." The truth is, that a critic may fairly regret that she did not confine herself to sketches of Irish life. 'Castle Rackrent,' 'The

Absentee,' 'Ormond,' or 'Ennui,' is worth a hundred 'Harringtons' and 'Helens.' In 'The Absentee' she is a novelist of first-rate powers who is a little too apt to moralize; in 'Harrington' she is a moralist of a somewhat dull type, who, after all, wraps up her moral in a passable story. She rises to the height of her power in 'Castle Rackrent.'

This tale is Irish, and nothing but Irish; it is the serio-comedy or comic tragedy of the fall of a great Irish family. The humorous element is not absent from a single page, yet the oftener the tale be read, the more one is impressed with its essential melancholy. It is the tragedy of the Irish gentry. As the owners of Castle Rackrent succeed each other, generation by generation, they display the characteristics of a doomed race. The glorious spendthrift, the litigious niggard, the careless, good-natured inheritor of a great name and a ruined estate—all and each, by some strange fatality, hurry on the destruction of the family. When the last of the Rackrent family dies in a drinking bout, and the grasping agent, the son of a devoted dependent, has robbed his former masters of their land and wealth, the tragedy is complete and the story ends, and, as with so many other stories of Irish misery and failure, the reader feels that somehow or other each man has played his natural part. The Rackrent family kept persistently along a road which led to destruction, but the road was the broad path which most of us in their case would have followed; the men had their virtues no less than their vices, and there is no reason to suppose that the owners of Rackrent Castle were essentially worse than English squires. They were overpowered by the force of circumstances, and the great charm as well as the great originality of Miss Edgeworth lies in this, that she saw all the humors and follies of Irish life, and yet felt its tragic side and sympathized with the virtues of the Irish people. At first sight Miss Edgeworth's insight and sympathy seem a little paradoxical, for her own character was that of a staid, very sensible Englishwoman, who, whenever she displayed her feelings, exhibited the sentiment of the eighteenth century. She did not belong to Ireland as Scott belongs to Scotland; and in truth it is just because she stood a little outside the people whom she loved and whom she painted, that her pictures of Ireland as she saw it are so good.

Here we come across another characteristic of Miss Edgeworth's works which may detract from their popularity, but adds to their essential interest. They embody in its best form the feeling and the faith of the eighteenth century. The defects of that age have been more than sufficiently noted; it is well worth while to study the books of a writer who is the incarnation of its virtues. Few better women than Miss Edgeworth have ever lived, but her goodness is of an essentially different type from the goodness which has been admired in England during the greater part of the nineteenth century. She lived during a great religious movement. She was but eight years younger than Charles Simeon, and she died four years after Newman had seceded to Rome. She witnessed the predominance of Evangelicalism and the rise of Tractarianism. She shows no sign of being consciously out of harmony with the tone of what in her day would have been called the religious world. No one more cordially admired the philanthropy of Wilberforce or the benevolence of Mrs. Fry. Yet, for all this, religion as distinguished from benevolence played no part in Miss Edgeworth's philosophy of life. On all matters theological or ecclesiastical she keeps silence. The clergy are in her novels non-existent. If you struck out of them every allusion to a clergyman, not more than two or three pages of her writings would be lost, and these pages would never be missed. Whoever wants to see the change which the world has undergone, and how different was Miss Edgeworth's sentiment from that of the generation which followed her, should compare her not with Miss Yonge, who writes in the interest of an ecclesiastical party, but with an author of such a thoroughly lay and secular type as Anthony Trollope. He had less enthusiasm about him than Maria Edgeworth, but he knew the world in which he lived, and in every page which he has written may be traced the influence, by way either of repulsion or of attraction, of the ecclesiastical movements which have moulded or distracted social life in England. Take away from his novels the Proudies, the Grantleys, the Arrobins, and the Crawleys, and you destroy the best part of his work. With him the clergy form the centre of English society; with Miss Edgeworth they are, at their worst, disreputable parsons who, in hopes of preferment, toady to insolent patrons; and, at their best, philanthropists whose clerical garb does not prevent them from preaching such maxims of toleration and general good-will as might be gathered from the maxims of Benjamin Franklin or the poems of Erasmus Darwin.

Yet let no one fancy for a moment that because Miss Edgeworth is careless or ignorant of theology and uninterested in ecclesiastical controversy, she had not a faith or a religion of her own. She is an enthusiast for fairness, for truthfulness, and for common sense; her zeal in inculcating the practice of these homely but essential virtues is excessive, and has injured her reputation in the world of letters. She is only too much of a preacher. Fortunately or unfortunately, the texts of her sermons are not the texts which have commended themselves to ecclesiastical leaders such as Newman or Manning. This, however, does not show that the lessons she inculcated were not of importance. It is not quite certain that the nineteenth century may not end more nearly than one would have expected at the point where it began. The religious zeal, fervor, or emotion which characterized the earlier stages of the evangelical or of the High-Church movement are not now the marked characteristics of English society. It may be doubted whether Miss Yonge represents the average religious sentiment of English youth any more truly than does Mrs. Sherwood or Hannah More. The age is an age rather of sentimental philanthropy than of religious zeal. The youthful world of England might do much worse than recur to the teaching of Miss Edgeworth, and imbibe something of her enthusiasm for common sense and fanaticism for common justice. The phase of feeling through which the generations which succeeded her have passed has, we have frankly admitted, made her a stranger in the modern England. But the woman who first taught Englishmen and Englishwomen the art of writing stories for children, who first perceived how literature might be enriched by pictures of national character, and who succeeded in impressing upon the world the best lessons of a great era, must of necessity occupy a high place in the English world of letters.

TWO TEXT-BOOKS.

A History of American Literature. By Fred Lewis Pattee, Professor of English and Rhetoric in the Pennsylvania State College. Boston: Silver, Burdett & Co. 1896.

An Introduction to the Study of American Literature. By Brander Matthews, Professor of Literature, Columbia College. American Book Company.

SCHOOL-BOOK literature is usually so arid that we hesitate to call these superior school-books by their proper name of manual. Prof. Pattee writes avowedly for schools and colleges. Prof. Matthews seems to write for schools alone. The one book is a history; the other, an introduction. The methods of treatment are dissimilar, and we should be beside the mark if we undertook to compare and contrast the volumes step by step. They are alike only in seeking to furnish independent criticism along with the indispensable biographies.

Prof. Pattee sets out to be scientific in his treatment of American literature. He covers the whole ground, from Smith's 'True Relation' to the last novel of Marion Crawford, assigning each author his place in an extensive scheme. "To follow the development of the American spirit and of American thought under the agencies of race, environment, epoch, and nationality" is to propose a severe test of one's own fitness. Prof. Pattee comes out of the ordeal well. He knows his subject, and he knows how to write a book bristling with points of attachment. The boy who cannot seize much of what he offers must be devoid of tentacles. Prof. Pattee's plan involves the grouping of authors into schools, either local or intellectual. In not more than four cases is a chapter devoted to one single figure. Franklin, Irving, Poe, and Hawthorne form exceptions to the general rule of aggregation. Out of thirty chapters the Colonial Period gets two, the Transcendentalists three, and the Cambridge poets three. Novelists, orators, historians, anti-slavery leaders, women, humorists, Southern and Western poets are all swept together into classes. This arrangement might lead to diffuseness of disquisition—it is so delightfully easy to run out into general statement, forgetting that your school-boy must be taught the facts first, and that the extreme of nebulosity is worse than the extreme of baldness. Prof. Pattee is always on his guard here. He aims at making his book more than a biographical skeleton, yet he never blurs the outlines. Each individual author in a group is articulated and criticised. His contemporaries are made to speak about him, and their words are supplemented by excerpts from the best modern critics. Positive aspects are kept prominent. The writer's strong points are emphasized and his limitations very often left to look after themselves. We should object to the generosity of Prof. Pattee's praise in certain cases were the book addressed to adults, but with school-boys considerable optimism may be allowed. We refer now to dead authors. We admit that we are not quite so well pleased with Prof. Pattee's notices of authors still living. His phrases more than once cloy with their Hybla sweetness, and when it comes to prophecy of what a man is *going* to do we draw the line, *e. g.*, "As he is yet in the prime of his powers, much work of no uncertain quality may be confidently expected from his pen."

One of the most attractive features of Prof. Pattee's writing is his readiness and aptness of illustration. He shows familiarity with the entire extent of American literature, and uses

his knowledge to the best advantage. In the collateral fields of European history and literature he is sometimes at fault, and we shall venture to point out a few slips. In his own field he is both minute and exact. His judgments have enough freshness and independence to give them literary interest, and if he inclines to praise neglected authors profusely, he can put limits to the worship of a popular favorite. (To select one notable instance, we hardly think that he gives Holmes his due.) Withal, he is not dogmatic, though clear in his views. Even the school-boy may differ from him and live. We wish that this was the rule. The ordinary school critic of literature writes with the certainty of arithmetic.

Prof. Pattee treats of so many writers—there are nearly 500 names in the index—that we feel we have a right to complain of omissions. We shall take the liberty of mentioning two. Col. Higginson and Frank Bolles are both referred to, but deserve fuller notice than they get. With regard to Col. Higginson the index is at fault, for on p. 434 he is bracketed with Trowbridge and receives a few words. Bolles is disposed of in a phrase along with four others. Slips are not numerous, in consideration of the mass of facts marshalled. One or two are a little singular and should be corrected. Prof. Pattee gives 1401 as the date of the first execution for heresy, evidently having the statute *De hæretico comburendo* in mind; but the statement is unlimited. Xylography seems to be confounded with printing from movable types in the statement, "1440, Printing from movable types made public by Guttenberg." The initial date of the Wars of the Roses is wrong, 1460 for 1455. Edmund Spenser's surname is spelt Spencer. 1646–1660 are the dates which Prof. Pattee fixes for the Commonwealth. On p. 76 we learn that, "in 1787, while in France he [Paine] published in reply to Burke's *Reflections on the French Revolution*, *The Rights of Man*, a book which so delighted the French people that he was at once granted citizenship and given a seat in the National Convention." The speech of Webster against Hayne is assigned to 1829. There are also a few general statements to which exception might fairly be taken. For example, apropos of the series of wars, 1689–1763, Prof. Pattee says, "England had gratified her vanity by waging her wars with France and Spain, but she had unconsciously taught her colonies two great secrets," etc. A larger motive than vanity lay behind these wars. And on p. 313, after insisting on Bancroft's "perfect accuracy" and "defects of style," Prof. Pattee institutes a comparison between him and Froude. "Taken for all in all, Bancroft is to be compared with no modern British historian save Froude." Froude is not often praised for accuracy nor decried for bad style.

Prof. Matthews's plan of treatment is topical. He fixes the student's eye on the best, and the best alone. Seeking to centre attention, he rigorously omits "all dates and all proper names and all titles of books not absolutely essential." Interest is thus concentrated "on the literary career of each of these great writers and on their practice of the literary art, in the hope and expectation that the student will be encouraged and stimulated to read their works for his own pleasure." Portraits, views, and facsimiles of manuscripts are used to heighten the graphic effect. Thirteen of the eighteen chapters are essays on authors whose claim to such recognition no one would deny. Another chapter goes to Halleck and Drake; the rest are on general subjects, namely, The Colonial Period, Other Writers, and The End of the Nineteenth Century. Prof. Matthews's system has the great merit of doing away with the idea that literature is written for the torment of children in the elementary schools. The classics have long been regarded in this light, much to the disadvantage of Julius Cæsar. Prof. Matthews treats *jeunes gens* rationally. He says: "Here is an entertaining essay. If you like it, remember that the masterpieces are better still. Go to them." We heartily agree with his conception of the teacher's office and commend the manner in which he has bodied it forth. He is an independent critic throughout, and his remarks are often original and suggestive. The contrast between Franklin and Emerson is quite above the average level of school criticism, and the book abounds in bright sayings. Prof. Matthews seems to be unimpeachable in his statement of facts, and gives a critic little to pounce upon in other respects. The following sentence, however, in his sketch of Thoreau is rather in the nature of a bull: "He developed consumption, and long before the end came at last, he knew that it would come soon." A strict censorship might also exclude some of the pieces mentioned in the "Brief Chronology of American Literature" which is appended.

We have taken up these treatises separately because they differ in scope and method. It may be as well in conclusion to touch upon certain features of contact. Both Prof. Pattee and Prof. Matthews seek to uphold the view that since the end of the colonial period a national American literature, independent of European tradition and treatment, has come into being. They both emphasize the national note and exalt the ideal of literary independence. No scholar will ever go away from either of them with the notion that he can become a creditable author by imitating European masterpieces. He may strike his roots through an indefinite number of strata, but he must assimilate if he wishes to live. This is their common doctrine. But Prof. Matthews seems to us to see American literature in better scale. Prof. Pattee uses the word "immortal" till it becomes almost a trick of style. When, for instance, he says that Freneau, "an unpretentious scribbler of newspaper verse, . . . has become immortal because he forgot once or twice the lifeless rules and models of his age and sang spontaneously of nature," we feel that he is abusing language by falling back on the idiom of the daily papers. Prof. Matthews, the most national of critics in sentiment, sees things more nearly as they are. While he repudiates feudalism to the length of styling Margaret Fuller's husband "an Italian named Ossoli," he does not go to the length of applying "eternal" and "immortal" to invisible poets. Both writers are lucid and entertaining. Prof. Matthews, in his attempt to be perfectly clear, sometimes becomes didactic, and speaks as though he were addressing children of five instead of fifteen years old. His tone may prove a little exasperating to forward boys with Cooper, Scott, and Dickens at their fingers' ends. Both authors have supplied full bibliographical information, and the suggested questions will be useful. Prof. Pattee requires too much collateral reading if the literature master is to keep his present place behind the classical and mathematical masters. He will be accused, in hackneyed school phrase, of "robbing Peter to pay Paul." To sum up in a word, we are glad that the teachers of the country are reinforced with two such excellent text-books.

A Survey of Greek Civilization. By Prof. J. P. Mahaffy. Meadville: Flood & Vincent. 1896.

In this his latest book, of some 350 pages, Mr. Mahaffy presents the Chautauqua Reading Circle with a general view of those conceptions of Greek civilization with which his earlier works have familiarized us. While his writings are always suggestive to the special student, his best known work has been in a somewhat popular vein, so that one naturally finds a good deal of self quotation in a volume specially designed for the unlearned reader. About a tenth of the 'Survey' is in fact composed of citations from the earlier works. Mr. Mahaffy prides himself on the cosmopolitanism of his attitude towards life and literature; and his scorn of English conservative scholarship, compared with the progressiveness of the Germans, is freely expressed. To the American ear, however, he sometimes strikes a false note; one wonders how such a phrase as the "vain notion of universal suffrage" (p. 98) will be taken by the average Chautauqua reader.

The writer's resolve not to lapse into hackneyed enthusiasms may account for some rather unusual estimates. Mr. Mahaffy has shown elsewhere his personal indifference to Pindar—whom Chautauquans will probably associate henceforth with Mr. George Meredith—but there is some inconsistency in condemning his elaboration of form, which Mr. Mahaffy considers the lesser side of literary art, in a work that puts Aristotle outside the pale of Greek culture on the score of his neglect of style. One would be fair enough in calling Pindar the "Gray of Greek poetry" if one's readers were likely to adjust the parallel for themselves by reading the "bold electric" Theban in the original.

With abstract thought Mr. Mahaffy is not greatly in sympathy; hence Plato's position as the foremost philosopher of Greece, and the debt of all later philosophers to him, are barely indicated. One can only hope that a study of Jowett, which is recommended, will remove the impression that the Attic Moses was a querulous moralist who wrote prose that Bishop Berkeley barely rivalled. The Demosthenes cult is attacked with the author's usual vigor; among the moral shortcomings of the man and the politician for which brilliant oratory cannot be allowed to atone, Mr. Mahaffy quaintly places his "ingratitude to Alexander." Thucydides is condemned for obscurity, though we are told that there are in him "occasional flashes of felicitous phrase, as there are even in Mr. Meredith's novels"—for Mr. Meredith's awful example serves more than once to point a moral. Is there any risk that Chautauqua will take Mr. Mahaffy seriously when he sorrows over the "want of moral earnestness" in the comedies of Aristophanes, and the immorality of his "gross misrepresentation of Socrates" in the "Clouds"?

The modernness of Greek civilization has always been an *idée fixe* with Mr. Mahaffy, and we were prepared for some startling analogies by the parallel, in the 'Empire of the Ptolemies,' between Ptolemy Philadelphus and Mr. Walter Pater. The collocation of Æschylus, Shakspere, Scott, and the Gospel narratives need not take one's breath, and the analogy between the aristocratic aloofness of the Platonic circle and the reluctance of the best American society to enter politics is worthy of attention. But to call Elis the Epsom of Greece, and Horace the Roman Tom Moore, is heartlessly to mislead, not to illumine, "the American public who want to appreciate such things" (p. 88) and "the Ame-

rican reader who insists that he should have some far-off inkling of their nature" (p. 89). Mr. Mahaffy has done much in his earlier works to interest the reader in the renaissance of Greek literature under the Romans; Plutarch and Dio receive a full share of attention in the present work. The interesting and vivid style of the whole makes us condone occasional lapses into inelegance, among which we may note the following (p. 111): "From the times of the Persian wars, when Herodotus describes them [the Persian nobles] with sympathy in their home life—or else jumping overboard when asked by their king to lighten his ship in a dangerous storm—we feel ourselves in the society like that of the French *noblesse*"; or (p. 227), "Style was perhaps the only corner of culture to which we may suppose Aristotle indifferent and therefore no zealous teacher thereof"; or (p. 293), "The great philosophies which were its glory are only preserved to us in fragments, and we know positively that they scorned the art of composition." A contrast of the culture of intellect without moral forces to balance it, and of the culture of intellect with the support of Christianity—which might have been looked for, considering the aim of the book and its audience—Mr. Mahaffy, perhaps wisely, declines to give.

The Writings in Prose and Verse of Eugene Field. Charles Scribner's Sons. 1896.

Mr. Field's works have been published in a handsome edition of ten volumes, the last two of which are entirely new. Each volume has an introduction of its own, furnished by a friend and admirer. Of these Mr. Stedman's is the most critical, but all unite in dwelling on the paraphrases of Horace and the poems for children as constituting the author's special claim to fame. We may, however, point out that they rather slur over the journalistic character of Mr. Field's work, which was perhaps its distinguishing "note." A born humorist, writing verse and prose for a newspaper in a community as yet too entirely devoted to money-getting to be even provincial, Mr. Field began by writing some very amusing caricatures of Chicago life and manners. "Culture's Garland" is very broad humor, but we defy any one to read the account of the literary folding-bedstead or the poems of Sappho without laughing, and for ourselves we are inclined to think that laughter, and not solemn laudation, would be to Mr. Field's shade the most refreshing tribute. When critics enter Journalia, the true divisional line between which country and Bohemia is often difficult to trace, they should remember that it is a land, as Mr. Field would have said, "to mirth devote," and that to the author of "Casey's Tabble dote" the more tragic life was, the more of a ridiculous jumble it became. The idea of a subscription edition of one of his books amused him so much that he proposed to the friend who undertook it that each of them should keep a copy and destroy all the rest; and when Mr. Stedman came to Chicago on a literary pilgrimage, he heralded the poet's approach with "scare" head-lines.

He evidently never regarded himself altogether seriously, and it bored him to be so regarded. He wrote, day by day, whatever came into his head, and his more ambitious attempts, of which the Horatian paraphrases are by far the best, are often marred by an indifference of taste which no doubt was heightened by his occupation. The paraphrase of "Exegi monumentum" strikes us as the best, but none of them are as good as Thackeray's "Dear Lucy, I hate your made dishes." In fact, Mr. Field's Horace will never seem tolerable to those who know what others have done in the same vein. Mr. Field's talent was distinctly imitative; he is a literary mimic, as dozens of poems show, a caricaturist, as others prove (some of his caricature Chaucerian verse is often laughable), and does not object on occasion to lower flights, when, if the humor strikes him, he will cheerfully grin at his audience through a horse-collar. He was a great practical joker, as the true journalist often is. His pathos, which is as genuine as his humor, is also quite as loose. It is good, bad, and indifferent. On the other hand, one or two of the allegories are quite as good as many of Hans Andersen's. His children's poems reek of the nursery, and often drop into genuine baby talk. Many of them are just the sort of doggerel which a gifted nurse might be able to compose. Whether they can hold their place as literature may be doubted, but then we are not sure that we know exactly what literature is, or will be. To make Mr. Field a solemn classic is a pious effort on the part of his publishers, to which every one who loves a joke will wish godspeed.

A First Fleet Family. By Louis Becke and Walter Jeffery. Macmillan. 1896.

Old Melbourne Memories. By Rolf Boldrewood. Second edition. Macmillan. 1896.

In the first of these books we have, under the guise of "a hitherto unpublished narrative of certain remarkable adventures compiled from the papers of Sergeant William Dew of the Marines," a thinly veiled romance based upon the history of the first convict fleet sent out to colonize New South Wales. The story is well told and interesting, and historical accuracy is maintained. The reader who has not already perused Governor Phillip's narrative of those early days will derive a fair impression thereof. The loves of two men for one woman are woven into the relation; and although both could not gain her, two happy marriages bring the story to a close. In a certain sense this book is meant as an antidote to Marcus Clarke's 'For the Term of his Natural Life,' which the authors believe to throw an undue glamour over the characters of too many convicts. Perhaps so; but no one can have upon the spot studied the past convict history of Tasmania without coming to the conclusion that some such book as Marcus Clarke's was necessary properly to bring home to the present generation the horrors and brutalities of that system. We can be just to Governor Phillip and many other men who sought to do their best under difficult circumstances, without forgetting the inevitable excesses due to arbitrary power in the hands of men removed from the influences of a wholesome public opinion, and in times less humane than the present.

The illustrations of this volume are, upon the whole, admirable; but at page 12 we have a frigate sailing up channel, where the context describes it as sailing down, and at page 107 Governor Phillip reads his commission under a flag that was not then in existence—that of the United Kingdom.

We have also a second edition of one of Mr. Browne's stirring Australian books, of which much relates to the founding of the Victorian Western District north of Warnambool and Port Fairy, portions of which we knew well in times shortly after those about which he writes. The descriptions of scenery are good. There is perhaps a little too much *laudatio temporis acti*; and even the San Franciscan may be prepared to excuse much of the enthusiasm of the early colonist in his description of Melbourne as "the most highly civilized, the most prosperous city in the world, for the years of its existence." Real names being given, we naturally find tolerably unstinted praise all round. It is for us, however, impossible to be led to regard with affection times when "clearing off the blacks" appeared a necessary concomitant of settling the country. This book, while interesting to old colonists and to Victorians generally, is not so likely to appeal to the outer world as Rolf Boldrewood's 'Robbery under Arms' and 'A Modern Buccaneer.'

More Hawarden Horace. By Charles L. Graves. London: Smith, Elder & Co. 1896.

Mr. Graves's 'Hawarden Horace,' reviewed by us last year, was received with such hearty applause that he was amply warranted in giving us more. This second volume is preceded by a bright and scholarly essay by Mr. T. E. Page, one of the best classical students of England, vindicating the ancient estimate of Horace against some of the fantastic criticisms of the day, and likewise Mr. Graves's right to employ him as the basis for these *jeux d'esprit*. It is a good essay; but one wonders why it was called for. Perhaps some of Mr. Gladstone's Scotch friends were pained by the writings that treated him in any but a serious manner, and needed the joke explained.

It is impossible within our limits to do justice, or anything like it, to Mr. Graves's delicious fooling. The poem in imitation of "Pindarum quisquis" (Carm. iv., 2), addressed to the new laureate and warning him against rivalry with the late one, may be specially commended, as likely to meet a wide appreciation in America. Forced to select the shortest ode as a specimen, we are glad to give the version of "Persicos odi" (Carm. i., 38)—of which Thackeray's adaptation is familiar—addressed to Lord Warkworth, the youthful heir of the house of Percy:

Though the pomp and parade of the Percys I never could wholly abide,
Nor those strawberry leaves—rarely sported, alas! on the Liberal side—
Still it pains me acutely to see you, a youth of such promise and power,
Given o'er to the cult of the primrose, an utterly obsolete flower.

Now, if you're in search of an emblem sufficiently simple and neat,
With the dear little delicate shamrock there's nothing on earth to compete;
I've a clump of it growing at Hawarden, so come any day that you're free.
P. S.—If it's fine, in the garden you'll find us at five o'clock tea.

There is appended to Mr. Graves's poems a very witty adaptation of Epode ii, by Mr. E. V. Lucas.

Introduction to Elementary Practical Biology: A Laboratory Guide for High-School and College Students. By Charles Wright Dodge, M.S. Harper & Bros. 8vo, pp. xxiii, 422.

The pages of this volume bristle with interrogation-marks. Pupils are expected to find the answers to the questions in specimens of different typical forms of plants or animals. Explanations in regard to securing the object and preparing it, to reagents, implements, and methods of examination, are supplied in the text; but the student is required to find, note, and sketch from the specimen, as if conduct-

ing an original investigation. The questions lead the attention in proper directions, they prevent waste of time over less important detail in comparative studies, and they include enough to make up a comprehensive knowledge of the groups from which the types are chosen. The matter is divided into three parts: part first relates to the biology of the cell, and includes the morphology and physiology in unicellular and multicellular plants and animals; part second treats of the biology of the animal, the types chosen being the sponge, polyp, hydroid, starfish, earthworm, lobster or crayfish, locust, mussel, and the frog; and part third contains the biology of the plant, with types from greenfelts, stoneworts, rockweeds, moulds, mushrooms, liverworts, ferns, and flowering plants. The order of procedure is the following: Morphology—naked-eye characters, microscopic characters; Physiology—growth, movements of protoplasm; General questions. The terms defined are in bold-face type. Lists of reagents and of helpful books are appended. In general the subjects are well arranged, the questions are evidently chosen by experience in teaching, and the explanations are full enough for sufficient aid to instructors and students without inducing carelessness or laziness. The volume is one that must prove helpful to instructors of all grades, and it is one that can be used with great advantage in study without a teacher. A student able to answer its questions cannot fail to possess an excellent knowledge in the morphology and physiology of plants and animals.

BOOKS OF THE WEEK.

Allport, Dr. F. The Eye and its Care. Philadelphia: Lippincott. $1.
Bray, C. The King's Revenge. D. Appleton & Co. $1.
Cheshire, H. F. The Hastings Chess Tournament, 1895 G. P. Putnam's Sons. $1.75.
Dijkstra, W., and Hettema, F. B. Friesch Woordenboek (Frisian Dictionary) Part I. Leeuwarden: Meijer & Schaafsma; Oxford: James Parker & Co.
Edgar Fairfax. G. W. Dillingham. 50c.
Frederic, H. March Parres. D. Appleton & Co. $1.25.
Gordon, Rev. A. J. The Ministry of the Spirit. How Christ Came to Church. Philadelphia: Baptist Publication Society. Each 25c.
Hans Glouck vs. William McKinley and Others. Buffalo: Peter Paul Book Co. 25c.
Keeler, B. C. History of Demonetization. American News Co.
Lea, H C. History of Auricular Confession and Indulgences in the Latin Church. Vol. III. Indulgences. Philadelphia: Lea Bros. $3.
Meade, Mrs. L. T. Jill, a London Flower Girl. American Publishers Corporation 50c.
Needham, Geo C. Shadow and Substance. Philadelphia: Baptist Publication Society. 75c.
Parmelee, Mary P. Evolution of an Empire: The United States. New York: William Beverly Harrison. 50c.
Robinson, Edward, Museum of Fine Arts. Boston. Catalogue of Casts. Part III. Greek and Roman Sculpture. Revised ed. 1896. Boston: Houghton, Mifflin & Co.
Silver; or, Gold Bug's Financial Kindergarten. New York: Kindergarten Publishing Co. 25c.
Smith, F. C. A Lover in Homespun, and Other Stories. Philadelphia: Henry Altemus.
Smith, J. Payne. A Compendious Syriac Dictionary. Part I. Oxford: Clarendon Press; New York: Macmillan.
The Oxford Homer. Oxford: Clarendon Press; New York: Macmillan.
Transactions of the Colonial Society of Massachusetts, 1892-1894. Boston: Published by the Society.

HENRY HOLT & CO., N. Y.

Have published since June, 1895, the following educational books in

SCIENCE AND MATHEMATICS:

Bessey's Essentials of Botany (*New Edition*).....$1.12 *net*
Gillet's Elementary Algebra..... 1.35 *net*
Gillet's Euclidean Geometry..... 1.25 *net*
Kerner & Oliver's Natural History of Plants (2 vols., each bound in two parts); the set.....15.00 *net*
McMurrich's Invertebrate Morphology (*New and Cheaper Edition*)..... 3.00 *net*
Remsen & Randall's Chemical Experiments..... .50 *net*
Sedgwick & Wilson's General Biology (*New Edition*)..... 1.75 *net*
Williams's Geological Biology..... 2.80 *net*

In the same departments they have nearly ready:

Cairns's Quantitative Chemical Analysis (*New Edition*).
Field's Hertwig's General Principles of Zoology.
Keigwin's Class-Book of Plane Geometry.
Martin's The Human Body. Advanced Course (*New Edition from new plates*).
Perkins's Outlines of Electricity and Magnetism.
Pierce's Problems in Elementary Physics.
Price's The Fern Collector's Handbook. (With seventy-two plates.)

New Educational Catalogue and List of Books in General Literature free on application

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers.
NO. 59 WALL STREET, NEW YORK.

The Speaker of the House of Representatives.

By M. P. FOLLETT. With an Introduction by ALBERT BUSHNELL HART, Ph D. Crown 8vo, with Appendices and Index. 404 pages, $1.75.

"Miss Follett takes up a special line of technical political study, seemingly exhausting all the material that is to be had in connection with it, and giving us a book complete, well rounded, exact, painstaking in every detail, laborious in historical research, judicial in method, and independent in motive, . . . An admirable work."—*Commercial Advertiser, New York.*

LONGMANS, GREEN, & CO.,
PUBLISHERS,
91 and 93 Fifth Avenue, New York

New England Historical and Genealogical Register.

Devoted to the History, Biography, Genealogy, and Antiquities of America Edited by JOHN WARD DEAN, A M. Established in 1847. Vol. 50 began January, 1896. Published quarterly at $3.00 a year, by the

New England Historic Genealogical Society,

NO. 18 SOMERSET ST., BOSTON, MASS.

Each number contains not less than 96 pages and an engraving on steel.

From the Western Christian Advocate (Cincinnati): "It is the oldest work of the kind in the world, and yet is ever fresh and valuable. It is also one of the very few publications that increase in pecuniary value as they grow in age, every successful volume having a value for permanent preservation greater than the subscription price."

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 3, 1896.

The Week.

EX-PRESIDENT HARRISON'S speech in Carnegie Hall on Thursday evening was addressed primarily to Republicans, and its effectiveness consisted mainly but not wholly in putting Republicans on their mettle and spurring them to their utmost efforts. At the same time it was more than a merely Republican speech. It rose to a higher plane than partisan speeches usually go. It contained some ideas that have not heretofore been met with in the campaign, and it enforced at length some others that have not been sufficiently dwelt upon by other speakers. Mr. Harrison's comment on the split in the Democratic party was very happy. "A party that cannot be split," he said, "is a public menace. When the leaders of a party assembled in convention depart from its traditional principle and advocate doctrines that threaten the integrity of the Government, the social order of our community, and the security and soundness of our finance, it ought to split, and it dignifies itself when it does split." That is a maxim not bounded by time nor limited to any country. The Republican party has had experience of its truth in one Presidential election, the Democratic in more than one, and when it ceases to be a truth the republic will cease to exist. When the time comes that a party can be led with impunity hither and thither regardless of the moral character of its acts, not only is there a public menace, but a sure sign of internal rot and decay. The Democratic revolt against the Bryan ticket is the best possible evidence that American institutions are still sound.

Although Mr. Harrison's argument on the money question brought out no new points—and indeed none can be looked for after the discussion of the past fifteen years—the old ones were extremely well treated. He made a decided hit in saying that "the first dirty errand that a dirty dollar does is to cheat the workingman." How true this is, every history of depreciated currency tells. Another felicitous saying of Mr. Harrison's was that Mr. Bryan, or any other person in the Presidential chair holding his views, could put the country on the silver basis within a week's time without any new legislation by Congress. All that it would be necessary to do would be to pay silver at the Treasury to holders of the Government's obligations who demand gold. Not only is this true, but he might have added that if Mr. Bryan were elected the country would go to the silver basis, or at all events would go off the gold basis, without waiting even for his inauguration. It would go there as soon as the votes were counted. All in all, Mr. Harrison made a notable contribution to the literature of the campaign, and not the least satisfactory part of his speech was his tribute to the faithfulness of President Cleveland to the principles of sound finance, and courage in facing the defection of his own party.

Three large and enthusiastic conventions of sound-money Democrats in the great States of Massachusetts, Pennsylvania, and Illinois on August 25, constitutted an ominous day's work for Mr. Bryan's candidacy. He and his Populistic principles were indignantly repudiated by all three assemblages, and delegates were sent to the Indianapolis convention to aid in the nomination of a sound-money Democratic Presidential ticket. The quantity of the attendance, as well as its quality, left no doubt that in the three States the intelligence and character of the Democratic party will refuse to support Mr. Bryan. It becomes more and more plain daily that this is the case in all parts of the country. Senator Blackburn is forced to admit that in Kentucky there is a "big Democratic bolt and a dangerous one," and if the truth were to be confessed by the Bryanites about other States in the Union, similar reports would be heard. Where is Bryan going to get the recruits to make good these Democratic losses? No candidate, not even Horace Greeley, has been obliged to face such a party defection as Bryan faces to-day, the full dimensions of which the Indianapolis convention will make manifest. He is becoming more and more each day a Populist candidate pure and simple, and if the present Democratic tide away from him be not checked, the Indianapolis ticket is likely to poll a larger Democratic vote in many States than he will.

The platform adopted by the sound-money Democrats at Syracuse on Monday is perhaps the most striking deliverance of a political body that has been put forth this year. Its strongest and best plank is the one on the money question, but it is not confined to that. It embraces nearly all the subjects that are now attracting public attention, and it deals with all of them in a calm, decisive tone which must command the admiration of thoughtful men, even those who do not subscribe to all of its doctrines. Its most impressive feature is the tone in which it recites the underlying principles of the Democratic party and affirms the intention of maintaining them. The opinion has prevailed rather widely since the close of the war and reconstruction that the Democratic party has no distinctive principles; that what it calls its principles are the rags and tatters of the ante-war period, of various hues, mixed up with the cast-off garments of the Republican party. Probably the masses of the Democratic party itself could not define their beliefs to their own satisfaction except by saying that they are for the cause of the poor man, whatever that may be. This leaves considerable room for doubt as to how poor a man must be in order to have his cause supported by a political party, and also in what manner his interests can be best promoted. It is also unsatisfactory as a definition, since the Republican party claims to be the supporter of the poor man's interests also by protective tariffs. The Syracuse platform declares that "the maintenance of the Constitution in its integrity, the preservation of the national credit unimpaired and the national honor unsullied, the freedom of the individual to engage in all the pursuits of life unhampered by the interference of paternal government, and the right of every citizen to receive the reward of his labor undiminished by a debasement of the standard of value, are fundamental and essential principles of the Democratic party." Of the four parties now in the field, all except the Populists declare themselves in favor of maintaining the Constitution. Two of the remaining three declare themselves in favor of preserving the national credit unimpaired and the national honor unsullied. The Bryan party omits any declaration of this kind, for obvious reasons. The National Democrats represented at Syracuse declare that they are in favor of giving the individual citizen the widest freedom to earn his living unhampered by a paternal government. The distinctive difference between them and the Republican party is found here.

The Democratic situation in Connecticut is unique. In the other States which sent sound-money delegations to the Chicago convention the control of the party machinery has been surrendered to or seized by the silver men. But in Connecticut the gold men on the Democratic State committee, numbering twenty out of the membership of twenty-four, stand upon the gold platform of the State convention, and refuse to acknowledge the right of the Chicago convention to change their party creed. More than this, they angered the Bryan Democrats beyond measure by neglecting, at a recent meeting, to endorse the Chicago nominees, even by so much as naming them in the call for the State convention, September 16. They were careful, too, in their choice of words in that call, addressing it to the electors of the State "who favor the principles of the Democratic party."

As a result of this manœuvring, a struggle is going on all over the State between the gold and the silver factions for the control of the State convention; this issue so monopolizing attention that no mention is made of candidates for State offices, and the pet State issue of constitutional reform has sunk into temporary obscurity. With a few unimportant exceptions, the Democratic press of the State supports the gold cause, and this, with the possession of the party machinery, gives the gold Democrats hope of success. Their hardest fight is against the inertia of "party regularity," and against the spoils-loving class in the cities to whom party victory is everything and principle nothing. That the contest is an uncertain one is attested by the fact that both sides have appointed provisional State committees. If the gold men win, it is their intention to nominate electors pledged, in the improbability of election, to vote only for a gold-standard man for President.

The final failure of efforts for a fusion between the Bryan Democrats and the Populists in Kentucky seems to assure McKinley the electoral votes of that State. In 1892 the Democrats polled 175,461 votes, the Republicans 135,441, and the Populists 23,500, with 6,442 for the Prohibition ticket. The election for Governor last year called out a still larger vote, and showed a great change in the attitude of men. Hardin, the Democratic candidate, was so strongly for free coinage that he drew to his support more than a quarter of the Populists, cutting down their vote to 16 911, but he lost so many sound-money Democrats to the Republicans that he received only 163,524 votes, while Bradley secured 172,436 and a plurality of 8,912. A fusion of the Democrats and Populists last year would have defeated the Republicans by 8,000 votes, and such a fusion has appeared essential this year to the defeat of McKinley, as the revolt among the Democrats against Bryan is far more serious than the disaffection towards the Democratic candidate for Governor last year. But the Bryan managers have rejected all advances from the Populists, and the chairman of the Populist committee now declares that they "will make a bitter fight against the Democrats in this campaign, and let the State go as it will."

We are assured by persons familiar with the most intelligent sentiment of the South that there is great anxiety there about the position which Southern States are likely to be put into by the election. Southern men who have been doing the most to develop the new South and bring it more nearly abreast with the North, are greatly troubled by the disastrous possibilities of having their States put themselves on record in favor of repudiation. They think the consequences to their credit in the financial centres of the world will be very bad. They say that every Southern State which can be brought to vote against Bryan will be certain to profit greatly by thus showing that it is an exception, and many of them are working earnestly to bring voters to a realization of this fact. Undoubtedly this would be the case. If Kentucky, or Virginia, or Alabama, or Tennessee votes against Bryan, such action will be the most convincing notification which could be made to capital everywhere that, however it may be with other Southern States, one or each of these, as the case may be, offers a safe field for investment and enterprise.

Watson continues to make trouble for the managers who are trying to effect a fusion of the Bryan Democracy and the Populists upon a Presidential ticket which will carry Sewall for the second place. These managers thought they had found a way out of their embarrassment by refusing to notify either Bryan or Watson of his nomination by the Populist convention, on the ground that the precedents of the party were against such action. But Watson shows from the record that, four years ago, Weaver and Field, the Populist nominees for President and Vice-President, were both notified of their nominations and made speeches of acceptance. If nominees are not notified, and do not respond, he asks, how is the party to know whether they accept the nomination and endorse the platform? If the St. Louis convention did not mean that Bryan and Watson should be notified, why was a committee appointed to notify them? Continuing his disagreeable questioning, he asks whether Senator Allen, chairman of that committee, refuses to do his duty because he is afraid Bryan will repudiate the support of the Populists. He concludes in a way which shows that he "means business":

> "If Mr. Bryan is ashamed of the votes which are necessary to elect him, we ought to know it. He cannot carry his own State without our help, and if he is ashamed of our help he is not the man our people have taken him to be. Let's have no dodging. Let the committee do its duty and notify Mr. Bryan. It is humiliating both to the party and to its other nominee, Mr. Watson, to let the campaign go on in this unheard-of manner."

The tone of Mr. Bryan's speeches continues to fall steadily as his journeyings advance. He appeals more and more directly to the discontented, and seeks more openly to aggravate their unrest. His entire speech at Syracuse on Wednesday week, and it was a long one, was an insidious effort in this direction, the most reckless one of the kind he has yet made. It was filled with such utterances as these addressed to the farmers: "Have your taxes fallen in the last twenty years? My observation is that they are higher than they were twenty years ago. If it requires twice as much of the products of the farm to pay your taxes now as it required twenty years ago, then in effect your taxes are twice as high. If it takes twice as much of your products to pay the interest upon your mortgages, then that interest is in effect twice as high." What was the object of this kind of talk except to get the idea into the farmer's head that it would be a just and proper thing for him to repudiate half his debt by voting for a 50-cent dollar? Side by side with this insidious misrepresentation was a continuous flood of denunciation of "money-grabbers," "financiers," "syndicates," and "bankers," and an endless repetition of the regulation Bryan assurance that it is the right of every man in our 70,000,000 of people who has a ballot to say with it what kind of money we shall have. His Buffalo speech the next night was one long rant about our being great enough as a nation to select our money standard without asking the consent of Europe, interspersed at intervals with the usual stirring but now somewhat trite assertion that no party in this country has ever dared to declare in favor of the gold standard. Can this style of campaigning stand the strain of two months' more daily use?

Mr. Bryan was as fitly introduced in Buffalo as he was when he spoke in this city. Elliot Danforth of the Maynard State Canvassing Board presided at the meeting here, and another member of the same board, Charles F. Tabor, presided at the Buffalo meeting. Mr. Tabor, at the time the board canvassed the illegal return in defiance of the order of the court, was Attorney-General of the State. As the law officer of the State, his offence was far more heinous than that of his associates. He knew the laws, and he was the paid servant of the State whose sworn duty it was to see that they were obeyed. He should not only have refused as a member of the Canvassing Board to canvass the illegal return, but should have advised his associates, who had less opportunity to know the law than he had, that they were committing a grave offence in canvassing it. He did neither, and was obliged later to appear before the bar of the highest court of the State, hear himself rebuked sharply for contempt of its order, and pay a heavy fine for his conduct. The judgment carried with it conviction also of complicity in a crime against the ballot-box by which a seat in the State Senate was stolen. Since this humiliating experience Mr. Tabor has not figured at all in the public gaze. He comes forward now as an ardent Bryan advocate, willingly performing a service which "Blue-eyed Billy" Sheehan, the official leader of the Democratic organization in Buffalo, did not feel able to discharge. During the more than a fortnight that Mr. Bryan has spent in New York State the only conspicuous Democrats whom he has been able to rally to his cause are Danforth, Tabor, and Sulzer—

for Senator Hill was not able to preside for him at Albany.

Senator Hill's performances with Mr. Bryan last week were eminently characteristic. He entertained him at luncheon in his private house, which is most appropriately called a "Roost," considering the Senator's present attitude, and afterwards allowed him to go alone to a political meeting in Albany. Thus he was for Bryan socially, but not committed to him politically. All the journalistic wiseacres are speculating as to what the Senator said to the candidate at luncheon, and one newspaper publishes a life-like "cut" of the feast, which represents the whole party as sitting in the depths of gloom with faces turned away from one another. The great mystery whether or not Mr. Hill will support Bryan remains nearly as dense as ever, with wide opportunity for speculation and bogus reports. This doubtless strikes him as shrewd politics, but it only furnishes new evidence of his inability to grasp the spirit of the present campaign. The people are not looking now for dodgers and trimmers, but for men of courage and convictions, and the Democratic party is dividing very cleanly between the two classes. Boss McLaughlin and his "gang" in Brooklyn took sides last week with Sheehan and Tammany, and came out for Bryan, Populism, and repudiation, emphasizing more clearly than ever the line of division in this State. The longer Mr. Hill remains perched upon his roost, the more difficult will it be for him to descend on either side without disastrous consequences to himself.

The outcome of the Saratoga convention is a most welcome surprise. It can even be called a merciful deliverance from what seemed to be a serious peril. We were threatened first with Aldridge, then with Platt, then with Odell, then with Fish as the candidate for Governor. Instead of any one of these we have Mr. Black, who, whatever else may be said of him, possesses none of the defects which would have made the candidacy of any of the four persons named an injury to the Republican Presidential ticket and a menace to the public well-being of the State. Mr. Black, as his speeches show, is a narrowly partisan Republican, but when that is said of him, the most serious objection which independent and Democratic voters can make to him has been recorded. He is a man of undoubted personal integrity, of much force of character, and, instead of being a "dealer" and "dickerer" with political rascals in his own and other parties, has been a persistent fighter of them. So far as his record gives assurance of his future conduct, he is likely to be a partisan in office, but not a partisan who will seek to disobey or get around the laws, or to advance party interest at the expense of the public welfare. Nor did the convention limit its wise action to the head of the ticket. The nominations of Mr. Woodruff for Lieutenant-Governor and of Judge Vann for the Court of Appeals are to be commended without reservation, both gentlemen being eminently well fitted for the positions for which they are named. It matters little now what action the supporters of Bryan and Sewall may take in regard to either national or State nominations. Every voter who makes up his mind to vote for the McKinley electors can with clear conscience vote the "straight" Republican State ticket at the same time, reserving his independent action for congressional and legislative nominations.

The import of gold from Europe to this country, which began week before last and has already reached a volume of $20,000,000, is chiefly remarkable as our first gold importation, on a genuine commercial basis, since the winter of 1891. It is true that we have received since that time some large amounts of foreign gold. But the importations of last spring and of 1895 were purely a matter of barter against new Government issues sold abroad, and were made with sterling exchange either at or near our actual gold-export point. In 1893, again, the large gold imports of the autumn simply responded to the panic premium on currency, and were thoroughly abnormal. There is a perfectly apparent reason why the sterling market now, for the first time in nearly half a decade, has returned to rates which warrant these gold imports. It is well enough known that, prior to 1892, import of gold from Europe to New York was a regular incident of the autumn season. During the spring and summer, when our merchandise exports were light and our imports heavy, exchange advanced and gold went out from here to Europe. In the fall and winter season, when our produce export trade was heaviest, the gold came back again. So confidently did bankers count on this automatic ebb and flow that gold for export was invariably supplied from the New York banks, and no gold-shipper thought of resorting to the Treasury. The banks were satisfied to supply the foreign trade in March with the gold which they were well aware would return in August and September.

How completely all this proper adjustment of the international market was upset by the reckless law of July 14, 1890, every intelligent reader is aware. At the very moment when a general movement of trade reaction had set in, and when, therefore, the domestic need for circulating medium was light, the Government was driven into the money market with a compulsory annual issue of something like $50,000,000 of paper. What followed is a matter of recent history. The channels of currency were glutted within two years; the West, instead of taking currency from New York at the harvest season, sent idle legal tenders East, and, by the opening of 1892, an expulsion of gold from our markets began which has since been almost continuous. In the middle of 1892 the city banks were compelled, in self-defence, to protect their own gold holdings; as a consequence, remitters to Europe, under the continuous high rate of exchange, were forced to the redemption of legal-tender notes in gold at the sub-treasury. If we are asked what has brought about the present wholesome change, the simple answer is, contraction of the currency. Withdrawal of idle money into the Treasury as a result of the bond issues is a sufficiently clumsy recourse—it has been doubly hampered by the deficit in revenue; but it has at last proved effective in restoring the money market to natural conditions. Even a year ago last month, the total currency circulating in the United States was nearly $13,000,000 greater than in August, 1892. Last month it was nearly $100,000,000 less than in August, 1895. The autumn trade begins, demand for money grows to keenness, and at once, for the first time since 1891, foreign exchange declines to the import point and foreign gold flows freely to our markets.

Now that we are on speaking terms with the protectionists, some of whom cannot refrain from "talking tariff," it seems proper to call attention to what has taken place in New South Wales. This colony, which for many years had a "tariff for revenue only," fell recently into the hands of the protectionists, who at once applied their principles. The results not meeting popular approval, a free-trade policy was once more adopted, of course amid violent outcries against the ruin of industries, which in this case had some claim to be in their infancy. But so far ruin has been averted. A dock company which was to go out of business, is building a new and larger graving dock. The intercolonial fleet is growing "by leaps and bounds." It was predicted that if the duty on wheat was removed, land would go out of tillage; but the number of acres under wheat has increased this year by 156,000. The indications are that this year, for the first time, New South Wales will produce all the wheat it consumes. The farmers who have taken up the new lands are immigrants from the high-protection colony of Victoria. It is even true, according to the correspondent of the London *Times*, that no factory of any kind has closed its works or reduced its output. It should be added that this free-trade experiment has resulted, not in a deficiency of revenue, but in a surplus. As they have no silver legislation to contend with in New South Wales, and the cost of administering the government has been materially reduced, this does not seem to us surprising.

McKINLEY'S LETTER OF ACCEPTANCE.

MR. MCKINLEY'S letter of acceptance had been awaited with some feeling of apprehension by those of his supporters in the present campaign who are not members of the Republican party. If we may judge from communications which have reached us from Republican sources, there was fear also in that quarter lest he should say something which might turn away a part of the non-Republican support that he has thus far received. The letter is now in print. It is better than we had anticipated, and is not likely to repel any substantial support that the writer of it had already gained through the gigantic folly of the Chicago convention. On the money question the argument is very lucid and very sound. Although we "take no stock" in international bimetallism, looking upon it as a vain effort to grasp at moonbeams in a pool of water, we are aware that both parties have been committed to it and that the Republican party is still committed to it. In the very worst aspect it is harmless, and there is no reason for quarrelling with anything Mr. McKinley says on this branch of the subject.

The acknowledgment is tacitly made that the money question is the chief issue of the campaign by giving it the foremost place and the largest amount of space in the discussion. The arguments are simple and well arranged and well presented. The silver dollar under free coinage, the letter says, "seeks to introduce a new measure of value, but would add no value to the thing measured." After recounting the manufacture of the silver dollars now outstanding, and their sale by the Government at 100 cents gold for each of them, and the Government's promise to keep them at par with gold, it points out the dishonoring fraud of a measure whose effect must be to reduce the value of every one of these dollars to 53 cents gold. The Government could not take up and redeem these dollars in gold while the mint was pouring out an unlimited quantity of others, of the same kind, for private parties, which were passing at once into circulation. Of course no such redemption of the present silver currency is intended by the silverites themselves, even it were possible. What they demand is the instant repudiation of the promise made by the Government to keep the two metals at a parity. Mr. Bryan may express an opinion that a free-coinage act passed by our Congress would have the miraculous effect of doubling the value of all the silver in Europe, Asia, Africa, and America. It is hardly possible that he can believe this, but let us be charitable and suppose that he really does believe it. Then suppose he is mistaken. Suppose that a free-coinage act is passed and that silver does not advance to par with gold at the ratio of 16 to 1. Then neither Mr. Bryan nor anybody else proposes to redeem these old dollars. The loss must fall on everybody who has them in his pocket, and it will be found when the time comes that they are all in the pockets of the laboring men, the farmers, the "plain people." The banks will have none of them. The rich people will have none. So it will turn out, as regards this particular part of the public obligations, that the Government has repudiated its own silver currency, and that the first ones cheated have been the poorer and more helpless classes of the community.

The tariff part of Mr. McKinley's letter is, of course, not to our taste. Nothing that he could say on that subject consistent with his own previous record or with the platform of his party would be. We differ from him on this subject in toto. Probably all the Democrats and Independents who are now supporting him differ from him. They support him not for his tariff views, but in spite of them. They believe that the election of Bryan would be an overwhelming calamity. They think that national repudiation, however brought about, whether through ignorance or through design, would leave the American republic a wreck and derelict among nations, and that, as compared with this issue, the tariff is of trivial consequence. They know that there will be time enough to fight that battle hereafter. They feel as Stephen A. Douglas did at the beginning of the civil war when he said: "Give me a country where my children can live in peace, and then we can have room to settle our political differences." They recognize the fact, too, that Bryan must be beaten for the most part by Republican votes, and that whatever is requisite to hold Republicans in line and prevent them from catching the silver craze must be said and done. But if any Democrats cannot abide what Mr. McKinley says on this subject, they have a sure refuge in a third ticket which, as we go to press, is being nominated at Indianapolis.

The clause of Mr. McKinley's letter touching the conditions of business at the close of Mr. Harrison's Administration and the beginning of Mr. Cleveland's second term is likely to cost him some votes and was quite unnecessary. He pictures a happy condition of things in December, 1892, and a gloomy condition in August, 1893. The testimony as to the latter is derived from President Cleveland's message, sent in at the extra session of Congress called to repeal the Sherman act. The quotation made by Mr. McKinley closes thus:

> "With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurances to business enterprises, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business."

Here the quotation stops. The next words used by President Cleveland are these:

> "I believe these things are principally chargeable to congressional legislation touching the purchase and coinage of silver by the general Government."

Mr. McKinley omitted this sentence because he wanted it to appear that the distress was caused by the change of administration. He might think so—everybody is privileged to have his opinion on that subject; but it would have been more consistent with fairness of discussion if he had quoted one more sentence from the document before him.

The closing passage in Mr. McKinley's letter of acceptance is a proper quietus to the apprehension that the election of the Republican candidate may mean a renewal of the attempt to enact sectional legislation. It is as complete a committal of himself against any favor to such a policy as could be asked. Mr. McKinley was leader of the House when that body passed the Force bill of 1890, but he will never advocate as President another such measure. He has learned wisdom on this subject himself. Even if he had not, irresistible forces have been at work since 1890, and are still operating, which would prevent a return to that policy. The federal election laws have been repealed, the Republican party recognizes the wisdom of such repeal, and the Republicans of the South would be the first to oppose any attempt to restore those statutes. These things will make it hard for the Bryan men in the South to use the sectional issue with effect. At the same time the Republicans will pay the penalty of having clung to the Force-bill policy too long, by failing to carry some States in the South this year which might otherwise have been debatable ground.

THE NATIONAL DEMOCRACY.

A REMARKABLE apathy characterized the more independent and intelligent members of the Democratic party during the spring and early summer. To tell the truth, they had been paralyzed by the astounding performance of President Cleveland in connection with the Venezuelan affair and had not fully recovered from the shock. They were like troops whose general goes crazy in the presence of the enemy, and who cannot improvise leaders. Add to this that they had been sickened by the proceedings of Congress in connection with the passage of the tariff act, and by its subsequent folly in making lavish appropriations that could be met only by reissuing greenbacks which, as soon as reissued, would be exchanged for gold, and it must be admitted that apathy was natural, if not excusable. This, however, gave the silver faction their opportunity. Seething with hatred of Cleve-

land, they saw with delight that his supporters were disheartened and demoralized, and that the time had come when every element hostile to the policy of the Administration could be united in a compact body and committed to free silver and Populism in general. The result was awaited by the conservative Democrats with resignation, almost with despair.

When the result of the Chicago convention was known, however, it was so much worse, both in principles and in candidate, than had been expected, that the conservative element was for a while stunned. It seemed in vain to struggle, undignified to protest. But very soon the wrath of men outraged in their party feeling, in their honor, and in their patriotism, flamed up, and ringing protests were heard on every hand. For a time it seemed that these protests might grow fainter and less numerous, but as the true extent and danger of the calamity that had befallen the country were realized, protests were succeeded by defiant action. Meetings began to be held, and then organization was proposed. It was to be an organization for moral effect alone; but organizations with a strong moral principle in their constitution often attain a sudden development that surprises those who form them. The movement to rescue the party name from anarchists and repudiators was at first "a little cloud like a man's hand"; but the political heaven has suddenly grown black with clouds and wind, and Mr. Bryan, like Ahab, may well listen to the warning—"Prepare my chariot, and get thee down, that the rain stop thee not."

The platform to be adopted by the National Democrats must consist largely of denials and protests. The abominations contained in the Chicago platform are so many and so varied as to require denunciation both complicated and voluminous. That convention must be cursed both in its downsitting and in its uprising, in its coming in and in its going out. But the country expects something more than this from the Indianapolis convention. It is time for the assertion of a definite and positive policy concerning the currency. The Republican party is now committed against free silver coinage, but that is not enough. We should not now be in trouble with the silver craze had it not been for the everlasting greenbacks and the deplorable legal-tender decisions. No one can compute the losses which the country has suffered from its persistence in the miserable fallacy that the Government's promises to pay money are really money, and that when a note has been paid it must be reissued. The losses that the people have suffered during the last three years from this cause we verily believe are greater than our whole national debt. We could maintain a currency consisting exclusively of gold, or gold certificates of deposit, at one-tenth of the charge for interest that the greenbacks cost us in our efforts to keep them afloat.

It is hardly necessary to say that nothing can be more in accordance with the original doctrines of the Democratic party than the assertion that the whole theory of the legal-tender acts is wrong, and that the legal-tender decisions were disastrous and should be corrected by constitutional amendment. The Democratic party was always known as a "hard-money" party, and it is enough to make the statesmen who gave the party its prestige rise from their graves to have a national convention of Democrats declaring in favor of paper money issued by the Federal Government as legal-tender. Both in Illinois and in New Jersey the platforms adopted by the true Democrats call emphatically for the repeal of all laws authorizing the issue or reissue of legal tender or Treasury notes by the Government, and demand that it shall retire from the banking business. Beyond question this is to be the next great national issue. We can never be secure so long as this pestilent heresy prevails that the Government's promises to pay money are money. The greenbacks are at the bottom of all our troubles, and they will rise up to plague us whenever revenue falls off or the business of the country is bad. Sooner or later they must be cancelled, and the sooner the better. And the sooner this is made a political issue the better; for the country will hardly be again so thoroughly informed concerning the elements of monetary science as it will be when the present campaign is closed.

On every account, therefore, it is to be hoped that the Indianapolis convention will make a clear and unmistakable declaration of the only sound and the only Democratic doctrine on this vital matter. But there is another subject of no less importance. From every quarter we hear talk of "insufficient revenue." Insufficient for what? Why, to equal the wicked, the shameless extravagance of Congress. The talk of insufficient revenue means the reality of increased taxes. The taxes paid by the people are sufficient for good economical government now. They have increased, they are increasing, and they ought to be diminished; and the Indianapolis convention ought to say so. In 1885 the Treasury disbursements were $260,000,000, in 1895 they were $366,000,000; and these figures do not indicate the whole burden that falls on the people.

No doubt we are a wealthy people, but our wealth is not increasing at any such rate as the extravagance of our Congressmen. An eminent Republican once laughed at the idea that a tax of three cents a day could be a burden for any one. But there are millions of men, even millions of families, in this rich land, whose income is not a dollar a day. Multiply three cents by five, as the number in a family, and who can say that the poor of this country are not robbed by their representatives? No Congressman in private conversation ever defends the river and harbor bill. He laughs and says it is a "steal," but that it can't be helped. No one defends the printing bill, or the seed-distribution bill, or a hundred other flourishing iniquities. It is high time for the hypocritical talk about "the needs of the Government economically administered" to cease, and for some party to tell the people that the appropriations of Congress have increased outrageously and shall be reduced. We do not want more revenue, but less expenditure, and it is much to be desired that the Indianapolis convention should say so.

THE FARMER'S INTEREST IN SOUND CURRENCY.

PERHAPS there is no class in the community concerning whose attitude towards the free coinage of silver so much doubt is felt as in the case of the farmers. It would be idle to deny that many of them are honest in their belief that something ought to be done to check the fall in the prices of agricultural products. So many writers of repute have argued in favor of bimetallism upon this ground that it is hard to blame intelligent farmers for following them. Many of the farmers have fixed charges to meet, and with corn and oats and horses and butter and potatoes selling at their present prices, they do not see how they can do it. Such men are really desperate; they may not clearly see how the free coinage of silver will benefit them, but they do not believe that their condition can be worse than it is now, and they are ready to try any expedient that promises to improve it. The Bryanites assure them that free coinage will do this by raising prices; Gov. Boies of Iowa, a man whom we should be sorry to believe dishonest, and whom we are sorry to class as a Bryanite, tells the farmers that "cheaper money, money which they call, if you please, 'depreciated currency,' is the best for the people, because it tends to raise the prices of products." On the other hand, the sound-money men are in the difficult position of having to admit that free coinage will raise prices, and at the same time of having to maintain that this will not help the farmers.

As we have heretofore pointed out, the most effective way of putting the matter in the true light is by showing that it is not the amount of money that is received from the sale of goods, but its purchasing power, that is important. Were the great mass of farmers brought to realize that they would have to pay twice as many dollars for everything they buy, they would not be tempted by the possibility of getting twice as many dollars for what they sell. Gov. Boies maintains that it costs 28 cents a bushel to raise corn in Iowa, while corn is selling there for 14 cents. He therefore recommends that Congress raise the selling price of corn to 28 cents, but he does not explain how this can be done without raising the

cost of production to 56 cents; and if he cannot explain this his argument fails.

But there are some other considerations in favor of a stable currency that should appeal with especial force to the farming class. These considerations are not often presented to them, as they involve some acquaintance with economic science; but they are by no means so recondite as to be beyond their comprehension.

As was long ago observed by Adam Smith, agriculture does not admit of the application of large capitals to the same extent as other branches of industry. No doubt larger capitals are now employed in farming than when Adam Smith wrote, but his proposition is on the whole quite as true now as then. We cannot here give the reasons why this is so, but we may refer to a single fact that is quite conclusive on the point. Every one knows that the great industries of transportation and mining and manufacturing are to a very large extent carried on by corporations, individual enterprises being exceptional. But how many people have ever heard of a farming corporation? Some such corporations, we believe, do exist, but they are altogether exceptional. Moreover, the individuals or firms that carry on manufacturing or mining or transportation are generally of great wealth, but there are few farmers of great wealth. The immense majority of them work with their own hands; sometimes not so hard as their hired help, but often a good deal harder.

Another consideration of importance is that the farmer has most of his capital in the shape of land, and employs a very small proportion in the purchase of materials and a comparatively small proportion in the purchase of labor. The industry of mining resembles agriculture in the former of these particulars, but it differs very much in the latter, and the difference is vital. And it is to be added that, in this country, farming is to a great extent carried on in competition with the farming of other countries. We export very large quantities of the products of our farms, less of the products of our mills, while transportation of course is not an exportable commodity. Thus the price of the great staples of agriculture is more or less regulated by the price that can be obtained for such part of these products as is exported, while the price of manufactured goods is much less affected in this way.

Bearing these conditions in mind, it is evident that farmers as a class are quite unable to adapt the supply of their commodities to the demand for them. They cannot see how large a wheat crop will be produced next year in France or Russia or even in this country. They have to go ahead and sow their wheat at a venture. Even if they were able to foretell the weather, they are quite unable as individuals to foretell one another's actions. There were great crops of corn and potatoes last year, which brought unremunerative prices. Some farmers reasoned from this that the others would not plant so much corn and potatoes this year, that the supply would therefore be short and the prices high. But the trouble was that nearly all farmers seem to have reasoned in this way, and the result is that we are likely to have more corn and potatoes than ever, and the prices will be lower than ever. Sometimes farmers talk of combining to limit the acreage planted to cotton and other crops. But the idea is chimerical. No such combination could possibly be formed, or, if formed, maintained. There is but one course for the ordinary farmer to pursue, and that is to raise the largest crops that he can, trusting that the demand will be such as to give him compensation.

While the difficulties encountered by manufacturers in combining to restrict their production are very great, they are by no means insuperable. The Arkwright Club in New England is composed of a few score, perhaps a few hundred, men, who control many millions of spindles. A meeting of this club was called last June to consider the proposition that all these spindles should stop, with the result that many millions have stopped. These gentlemen foresaw that the demand for their goods was likely to be small, and they therefore curtailed their production. They ceased to employ their circulating capital in the purchase of raw materials and in the payment of wages. They of course lose the interest on their fixed capital; but a sound concern is always prepared to face this loss for a period, whereas a farmer, as we have said, can do none of these things. He must use his land. He may try to vary his crops, but if the business of the country is demoralized that will not help him. The action of the manufacturers in curtailing production reduces the demand for agricultural products. Workmen who are getting no wages cannot buy much; people who are getting no dividends try to reduce their living expenses. The result is that the farmer has in panic times almost to give away his crops. Any price is better than no price, and the farmer has to take what he can get. We have been informed by a gentleman who was engaged in manufacturing flour in 1857 that, after that panic, the flour that he produced did not sell for enough to pay the charges on it. It is undeniable that business men in general anticipate a crash in the event of Mr. Bryan's election. Of course, Mr. Bryan will say that this would be the work of the money-lenders, but that circumstance would be no particular consolation to farmers who found the demand for their products extinguished in the destruction of the purchasing power of their customers.

We can hardly believe that the missionaries in the cause of sound money will fail in convincing farmers who are at all open to conviction that the prices (the real prices, not the nominal ones) of their products depend on a steady and natural demand. Normally there should be a steady flow of immigrants and of capital into this country, which, added to the ordinary increase of our own population and capital, would produce that sound and healthy state of business when the selling prices of all products equal the cost of production plus a reasonable profit. But, owing almost entirely to our silver legislation, the course of capital has been turned back, immigration has been arrested, and failures and cessation of production have diminished our own capital. It may be very wrong of bankers and capitalists at home and abroad to pursue the course that they have pursued, but that is not the question. It may be wicked for manufacturers and miners to cease production and discharge their workmen, but that is irrelevant. What the farmer wants is to get a fair price for his products, and this he can do only when the doubt concerning the currency is removed.

TURKEY IN EXTREMIS.

THE Cretan trouble was growing in gravity so rapidly that it alone threatened the Turkish Empire when the recent riots occurred in Constantinople. The Cretans have been in insurrection for a year, owing to the total breakdown of the Cretan constitution accorded in 1867 by the Porte, which included a "General Assembly," composed of both Christians and Mussulmans, but which has never met, or not more than once or twice, owing to the fixed belief of all parties that its resolves would have no effect. In fact, the indefinite retention of Crete by the Porte has been impossible since the Treaty of Berlin. The success of the Servians, Bulgarians, and Rumelians in securing complete or partial independence, and of the Montenegrins and Greeks in getting an extension of their territory at that time, has rendered peace impossible in European Turkey, for it has produced among all classes of the Turkish population the conviction that the end is near.

The Cretans are being powerfully assisted by their brother Greeks of the mainland, with both arms and men, and the Turkish navy is quite unable to prevent these accessions of force. It has been so evident for some time that it would be impossible to suppress the insurrection as long as this went on, that some of the Powers which are engaged in upholding Turkey, foremost among which is Germany, some weeks ago proposed to blockade the island; but Lord Salisbury, to his honor, refused to concur. It was bad enough not to interfere on behalf of the Cretans, but to interfere against them would have been worse. Accordingly there is now no danger of it. Remonstrances addressed to the Greek Government have proved equally useless. It cannot, if it would, prevent the dispatch

of aid to the Cretans. The population is thoroughly aroused, and the islands are so numerous and the coasts so extensive that effective surveillance is out of the question. Moreover, in these Turkish wars regulars are not necessary. Both sides fight through massacre and pillage and from behind walls and ditches, and the Greek volunteers, though nothing but armed peasants and fishermen, gave a good account of both the Mussulman inhabitants and soldiery. The longer the disturbances last, the more difficult their suppression becomes. The whole mainland is in a state of excitement, particularly Macedonia, and the Montenegrins are straining in the leash. They killed Turks manfully and successfully for three hundred years as a condition of their existence, but for the last twenty years their occupation has been gone. The young men find it hard to grow up under the new conditions, and long to seek out their ancient enemy.

The supporters of Turkey were, therefore, at their wits' ends about Crete alone when the troubles in Constantinople began. But they are inevitable. Contempt for the Sultan's authority has at last reached the centre, after having so long prevailed in the provinces. The Christians have been made furious by the Armenian massacres and by the hopes raised by the trouble in Crete and Macedonia, and the Mussulmans are enraged with the Sultan for not killing more Christians. This readiness of the Turkish Government to make massacre the penalty of all sorts of sedition is difficult to comprehend if one does not remember that, by the Mussulman law, Christians live by sufferance under all Mussulman rule. The Sacred Law gives them their lives and property solely on condition of their remaining quiet and not complaining. Death is to the Mussulman the natural and proper punishment for a Christian who makes a disturbance. Therefore, when there is a rising anywhere, it seems as natural to the Mussulman that all the Christian men, women, and children in the neighborhood of the trouble should be killed as it would seem to us that the ringleaders should be arrested. Never since the Turks took Constantinople has a Christian rising been suppressed except by massacre, and, as a rule, no massacre has stopped until Christian Powers intervened. The Turks, therefore, look on the slaughter of Christian families in disturbed districts much as we looked on the arrest and trial of the Chicago rioters—that is, as an act of vigor on the part of the authorities.

The riots in Constantinople are at last likely to bring matters to a head. The Powers cannot allow that city to be given over to anarchy, however unconcernedly they may look on Armenia or Crete. They must maintain order there, owing to the size and wealth of the European population and the importance of the city to the civilized world. But if they interfere to maintain order, they virtually dethrone the Sultan. The protection of a sovereign by foreign force in his own capital means that his rule is, to all intents and purposes, at an end. To this complexion it has come at last, and to this complexion it was certain to come within a year when the massacres were going on in Armenia. They were largely intended to act *in terrorem*, nearer home. For these shocking scenes of pillage and bloodshed which have disgraced our civilization during the past year, the European Powers are as much responsible as the Porte. It committed them, but they could have stopped them. For this disgrace we are largely indebted to the good understanding between Germany and Russia, and above all to Germany. Lord Salisbury probably would have interfered if he could. He probably might have interfered had he been the strong man people supposed he was, but small obstacles cowed him and drove him into subterfuge.

Nothing in modern politics is stranger than the changed attitude of Christian Europe towards the Turks. When they were really a strong power and able to set Europe an example in both civil and military virtue and administration, it was considered a pious duty in Western Europe to fight them. Now that they have lagged behind the civilized world, and descended to the lowest depths of barbarism and incompetence, it has become the fashion among a certain class of politicians to preach the possibility of their regeneration and the danger to peace and good order of interfering with any brutalities that may seem good to them.

THE KELMSCOTT CHAUCER.

LONDON, August 12, 1896.

MR. WILLIAM MORRIS has at last published his long-promised edition of Chaucer. It is, as every one knew it would be, quite the most ambitious work issued from the Kelmscott Press, and the chances are that Mr. Morris, in the future, will make no attempt to rival it. Doubtless the book is destined to remain his most important, even if not his finest, achievement as a printer; a fact which gives it a special interest. Judged by his standard, absolutely nothing has been left undone to secure perfection in every detail. It is printed on paper made of linen for the express purpose, and in type—the "Chaucer type"—designed for it. The illustrations, eighty-six in number, are after original drawings by Sir Edward Burne-Jones, and are engraved by Mr. W. H. Hooper, unquestionably the most accomplished wood-engraver in England. Mr. Morris has contributed new borders and initial letters. Almost nine months were devoted to the printing of the four hundred and twenty-five paper copies and the thirteen vellum. Nor has attention been confined solely to the get-up of the book. Care has been taken to make it an authentic Chaucer, doubtful poems, such as "The Flower and the Leaf" and "The Cuckoo and the Nightingale," having been omitted—reserved, it is announced, for a separate volume to appear later on.

Now in these days of cheap hurry a book upon which so much time and labor has been lavished commands respect, no matter what may be the actual merit of the results. On the other hand, perhaps the very fact that it has been the object of so much devotion leads one to consider it more critically, or rather from a far higher point of view than the ordinary volume produced according to the ordinary methods of the trade. The modern printer who can afford to linger over his work, lovingly and intelligently, has the opportunity to combine the advantages of the old makers of beautiful books with the innumerable improvements which, since their time, have been introduced into the arts of printing and reproduction. But in saying this we touch at once upon what we think is the chief defect of almost all Mr. Morris's publications. For it seems to us that he is not as ready to appreciate the old hindrances as the old advantages, that he is unwilling to adapt himself to the new conditions. The Kelmscott Chaucer is a curiosity, a *tour de force*. One turns over its pages as one might those of an early black-letter book. It is curious, it is well done of its kind, it is pleasant to look at; and, moreover, the modern work has the additional virtue—if it be a virtue—of the unexpected, since it is all but incredible that in our nineteenth century should have been found the leisure to produce it. We cannot imagine, however, that it ever would occur to any one to sit down to read and enjoy this Chaucer; and, after all, the chief end of a book is that it should be read, not merely put away on the bibliophile's well-ventilated, well-dusted shelf of treasures.

In the first place, the new volume has a serious drawback from which the other Kelmscott books, even the 'Troye' and the 'Golden Legend' by comparison, have escaped: it is bulky and heavy beyond endurance; by its proportions better adapted to be chained to the reading-desk, in the old fashion, than held in the hand in the new. This is the more provoking because the Constables have shown so successfully that a book may be well printed on good paper, and yet not offend by oppressive weight. In the second place, the Chaucer is printed in Gothic type, which it is a task rather than a pleasure to try to read. Mr. Morris's Roman type is not only more beautiful, but more legible, and we wish he had used it here, as he has for the Shakspere Sonnets and so many other volumes, though it might have seemed less in character.

But since we are forced to accept the fact that the Chaucer is meant only to be looked at, the great point to consider is the degree of Mr. Morris's success in making it a beautiful book. For the printing we have but praise. He has never done anything so good before, never got so clear and strong a black, never managed to obtain such richness and quality in his illustrations. In this respect his triumph is complete, and, as an example of fine printing, the Chaucer will be for ever memorable. But, for all this, he has failed to produce a very satisfactory page. Where there is no ornament, the proportions are not so well balanced as they might be, because of the margin left at the bottom for the sake of the border used on the decorated page; while the little leaf or scroll used as a period, and scattered with unavoidable irregularity through the text, breaks the harmony as sadly as if ink had been sprinkled or insects were crawling across it. Where there is ornament, the page is overloaded. Mr. Morris has been much commended because he has designed fourteen new borders. But we fancy the old

printer, working on the same generous lines, would not have limited himself to a number which necessitates constant repetition. The illustrations are printed within these borders, and each one is enclosed in a still smaller border, or frame, of its own; the page, to our eyes, suffering from such excess of decoration.

As for the illustrations themselves, they are eminently characteristic of Sir Edward Burne-Jones. The weary maiden who, in her time, has figured as the Virgin and Aurora and the Beggar Maid, the wan youth whom we have known as Perseus and King Cophetua and Pygmalion, reappear as the hero and heroine of more than one "Canterbury Tale," of the "Romaunt of the Rose," of the "House of Fame"; and we can but wonder what Chaucer would have thought of so sad a company. Sir Edward Burne-Jones in an illustration, as on his canvas, can fill space to fine decorative purpose, and arrange his mystic, morbid, and often, it must be confessed, ill-drawn figures with dignity and rhythmical effect. But we think Chaucer might have found a more sympathetic illustrator. Imagine, if you can, the wife of Bath according to Burne Jones—fortunately he has made no endeavor to depict her—and you will realize how little fitted he is by temperament for the work. We saw some of his original drawings last spring in an exhibition of his studies and sketches held in a London gallery. They were mostly slight pencil sketches, suggestions to be carried out rather than designs to be actually copied, and they have gained strength and vitality in the engraving. We must confess, however, that Mr. Morris and Sir Edward Burne-Jones have had such a host of cheap imitators, cheapness culminating in the work of the Birmingham School, that the archaic style which they have deliberately adopted in illustration has lost whatever charm it may once have had for us. We are glad that Mr. Hooper has received due credit, not always accorded in previous volumes, for his engraving; indeed, we think that all who had their share in the making of the book might have been as fully acknowledged.

When all is said, it must be admitted that Mr. Morris has surpassed the old work which he has set up as his model; whether he has also surpassed the best contemporary work, however, is quite a different question. Already he is announcing 'Sigurd the Volsung,' to be illustrated and decorated elaborately. It would be an interesting experiment if, for once, he would forget the past, and, profiting by modern improvements, produce a book more in accord with present conditions. We fear, though we hope we may be mistaken, that until he does the true masterpiece will not be forthcoming from the Kelmscott Press.

THE ABBE PRÉVOST.—I.

PARIS, August 13, 1896.

WHY do we still read some of the minor poems of Ronsard, and are we unable to read his ponderous epic poem, the "Franciade"? Why are the tragedies of Racine still read and the tragedies of Voltaire, so successful at the time when they appeared, now utterly unreadable? Why can we no longer read the 'Nouvelle Héloïse' of Jean Jacques Rousseau, and can we still read the 'Manon Lescaut' of the Abbé Prévost? The editions of Rousseau's 'Nouvelle Héloïse' can be counted on your fingers; the editions of 'Manon Lescaut' are numberless. I was making these reflections in going over a book on the Abbé Prévost, recently written, with the help of new documents, by M. Henry Harrisse, a writer who has gained some notoriety by his studies on the early history of America and the first discoveries made on the American continent.

M. Harrisse is a bibliophilist, not a critic. He began to be interested in the Abbé Prévost when making a bibliographical study of his works, and trying to discover what was really the original edition of the famous 'Manon Lescaut.' To continue the series of questions I have just put, it might be asked why, of the numerous works of the Abbé Prévost, 'Manon Lescaut,' a small volume, is the only one which is now known. I have never in my lifetime met with anybody who had read the 'Mémoires et Aventures d'un Homme de Qualité qui s'est retiré du monde,' a long series, of which 'Manon Lescaut' forms only the last part and can fortunately be completely detached from the rest, having no relation to it. The works which survive their authors and are not dependent upon the fashions and passions of a particular time or state of society are those only which have their foundations in the immortal instincts of mankind. As long as civilization lasts, the first part of Goethe's 'Faust' will be read with as much emotion as it was read when it appeared. The natural man will always feel compassion for the unfortunate *Gretchen;* the natural man finds in Racine's tragedies what is not found in Voltaire's—a real, a deep emotion, a genuine passion, independent of time and space; and it is because 'Manon Lescaut' shows us the natural man and the natural woman that we cannot help being carried away by the tragedy of their mutual and unconquerable love.

'Manon Lescaut,' besides having the merit of dealing with what may be called the elementary instincts, has also the merit of a sincerity, a reality, which is derived from the fact that the story of the hero is to a certain extent the story of the author himself. This would explain the great charm of its style. "Cela coule de source" is a French saying which well describes the agility, the simplicity, the grace of a style equal to that of Voltaire in some respects and superior to it in others, as there runs under the surface a current of emotion and of ardor which is never found in Voltaire. The life of Prévost has never been very truly told. "Nobody," says M. Harrisse, "has been more calumniated than the immortal author of 'Manon Lescaut.'" M. Harrisse has taken infinite trouble in seeking all the documents which could help him make a real biography of Prévost; he tries to present him to us as he really was, and not as he has been oftentimes represented by the *nouvellistes*, the newsmongers of Holland and of France—a class very similar to our modern newspaper reporters, and not more exact or conscientious.

Prévost belonged to a family established near Hesdin, in the province of Artois; his family was not noble but bourgeois. He was born the 1st of April, 1697, lost his mother in 1711, and pursued his studies at the College of Jesuits at Hesdin. When he was sixteen years old he entered the novitiate of the Father Jesuits in Paris, and remained in it for two years; in 1715 he was sent by the Jesuits to the Collège Henri IV. at La Flèche to follow a course in philosophy which lasted three years for all the students; but he left this college after one year and abandoned the Company. He was nineteen years old. He entered the army as a private soldier, but soon became disgusted with the service and asked permission to reënter the Company of the Jesuits. He was at first refused, undertook to go to Rome to see the General of the Jesuits, and fell ill on the road. "His money being spent, he goes to the hospital and receives some help from an officer who pretends to have given it for his enlistment. Indignant at this, he deserts and flies to Holland. Peace having been made, and the King being dead, and the Duke of Orleans having become regent, he writes begging to be included in the general amnesty and be reconciled with the Jesuits. He obtains all he asks for, comes back to Paris, reënters the society, and begins his novitiate." There remains over this part of the life of Prévost a sort of cloud, but M. Harrisse judges that the account which we have just given, and which is extracted from the *Journal de la Cour et de Paris*, comes nearer the truth than some others given by various writers.

What is certain is that Prévost entered upon his novitiate with the Benedictines in 1720, and made profession November 9, 1721, in the congregation of Benedictines of Saint-Maur, at the Abbey of Saint-Pierre at Jumièges. We have the act of profession, written in Latin in his own hand. Prévost, at the end of his novitiate, was sent to Rouen, to the Abbey of Saint-Ouen, then to the Abbey of Notre Dame du Bec; he was sent as professor to the College of Saint-Germer, and ordained priest in 1726 by the Bishop of Amiens. It was there, probably, that he began to write his first novel, the 'Mémoires et Aventures.' His taste for letters was well known, and he became a collaborator of the 'Gallia Christiana,' a great publication of the Benedictines. After several other peregrinations, we find him working at it in the famous Abbey of Saint-Germain-des-Prés, in Paris. He withdrew after a few months, and in his 'Mémoires et Aventures' we find satirical portraits of several Fathers whom he had known in this establishment.

It was on the 16th of April, 1728, that Delaulne, printer and publisher in Paris, obtained the privilege of printing the 'Mémoires et Aventures.' We arrive now at the most critical period in the life of Prévost. He clearly was not fit for a monastic life; he said of himself, afterwards, in a periodical called *Le Pour et le Contre:* "I recognized that this ardent heart was still burning under the embers. The loss of my liberty affected me even to tears. It was too late; for five or six years I looked for consolation in the charms of study. My books were my faithful friends, but they were dead like myself. At last I took occasion of a little misunderstanding, and I retired."

After his flight from the monastery of Saint-Germain-des-Prés, he remained in Paris. The Benedictine Fathers tried to bring him back, but, failing in their attempt, they obtained an order for his arrest. Prévost was advised of it, and fled to England, where he became the governor of a young gentleman. He afterwards went to Holland, and, in the spring of 1731, the *Literary Journal* of La Haye announced the publication of a novel of his: 'The English Gentleman, or the History of Master Cleveland, Son of Cromwell.' I pass over a translation of the 'Historia sui temporis' of De Thou, which Prévost began and never finished, for the sake of more details on the 'Mémoires et Aventures,' which have 'Manon Lescaut' at their end. M. Harrisse, by comparing dates and editions, comes to the conclusion that Prévost already had the manuscript of 'L'Histoire du Chevalier des Grieux et de Manon Lescaut' in

his valise when he left London, and that, in order to procure some means for himself, he offered it to the Dutch publishers on his arrival in Holland. They preferred not to bring it out in a separate form, but as a sequel to the 'Mémoires et Aventures,' which had already conquered the favor of the public, though 'Manon Lescaut' forms a complete whole, and has no necessary connection with the Memoirs. I will not enter here into a minute bibliographical study of this publication; the French edition which was for a long time considered the original, has now been proved to have been printed after the original Dutch edition. A more interesting question is this: Is Manon Lescaut's story a work of pure imagination, or did Prévost find its chief elements in his personal experience?

In his introduction, M. Harrisse seems to admit that Prévost, as a young man, being once in the company of a friend (the Tiberge of the novel), saw accidentally the arrival of the Arras diligence. He admits it, to be sure, only as a *probable* hypothesis. "Out of curiosity, they followed the coach to the inn where it stopped. . . . Some women came out, who went away at once; one only remained in the court, a very young one." Here we have the famous scene of the beginning, the scene in which Des Grieux feels, in the presence of Manon, what we call the *coup de foudre*, when he is struck by love as by the arrow of Cupid, and feels in a moment in love even to madness. Was Des Grieux the real Prévost? Was Manon a woman with whom his fortune was bound up at that period of his youth which still remains shady? Readers of 'Manon Lescaut' must all have been struck by the intense realism of its passion, and it may not be unreasonable to admit that there was a real Manon in the life of Prévost, and that, after having lost her, he returned to a religious life in the hope of finding consolation in it. Not long after having taken his vows, he wrote in a letter to a friend: "I know the weakness of my heart. . . . I see only too well every day what I should be capable of if I lost sight for a moment of the great rule, or even if I looked with the slightest complacency on images which recur only too often to my mind, and which would have still too much power to seduce me, though they are half effaced." This avowal of weakness, this reverberation of a smouldering passion, is very instructive. Prévost probably always kept in his mind those images of the unknown Manon who had conquered his young heart.

This Manon was certainly not the person whom he knew at The Hague in 1733, and who followed him to England. Prévost tells us, in an article written in London and published in 1734 in *Le Pour et le Contre*, that, "during my stay at The Hague, chance caused me to make the acquaintance of a damsel of merit and of quality, whose fortune had been deranged by various accidents which are not to the point. A man of honor, who lived in Amsterdam, paid her regularly a small pension, from no other motive than generosity. She lived honestly with his help, when her benefactor was constrained by the state of his own affairs to retrench something of his liberality." Prévost, hearing of this change, became a benefactor himself, and when he left for England she followed him. He left some debts unpaid at The Hague. He has been accused by some *nouvellistes* of having committed forgeries in England; M. Harrisse proves conclusively that this accusation must be reduced to the fact that he thought himself authorized to draw for a certain sum on his publisher for a novel which had not yet been finished. The bill was negotiated and protested; the accusation of forgery must certainly be dismissed. Prévost had never occasion to be subjected to the terrible rigor of the English law.

In 1733, Prévost became a contributor to *Le Pour et le Contre*, a periodical which professed to furnish "free explanations on all that can interest the curiosity of the public, in the matters of science, art, books, authors, etc., without taking any side and without offending anybody." The publisher announced that it was written by "the author of the 'Memoirs of a Man of Quality.'" The royal privilege, necessary at the time, was given to the paper, and this favor drew forth the following protest written by Marais to President Bouhier on July 11, 1733: "I wonder how a monk who has cast off his frock and eloped with women can have the credit to obtain the privilege of printing such things in Paris when this is refused to learned and useful works."

Correspondence.

CLASS AGAINST CLASS.

To the Editor of The Nation:

Sir: While the question to be decided by the people of this country at the impending election is, as you repeatedly urge, a financial one, it should not be forgotten that in the minds of a deplorably large body of voters the financial question resolves itself into or stands for the class question. It is well to face this unpleasant fact squarely; for, aside from its painful significance for every thoughtful lover of our institutions, it is plainly one to be seriously reckoned with by the active supporters of sound money in the present campaign.

What is it, briefly, that invests the free-coinage proposal with its peculiarly popular and emotional character, and rallies to its support and fills with a quasi-religious or crusading enthusiasm thousands to whom the expression "16 to 1" is the merest unmeaning abracadabra, and who could no more explain or even satisfactorily state the measure they shout for, and mean to vote for, and would probably fight for, than they could calculate an eclipse? Clearly the notion, industriously spread and unscrupulously played upon by those who hope to profit by it (not excluding Mr. Bryan), that voting for free silver means voting against the rich. "Gold is the rich man's money, silver the poor man's money"; that is the case in a nutshell, as it shapes itself in the minds of probably two-thirds of those who now mean to vote for Mr. Bryan next autumn. Just why the less valuable dollar should be the more desirable dollar for the class who get fewest of them, must seem somewhat paradoxical to the most convinced "Silverite"; but the rank and file of the party are fixed in the faith that voting for the white metal means fighting the battle of labor against capital. Question the average silverman, and you will find this amazing *Credo* responsible for half his resolution and all his enthusiasm.

In the survival of this delusion lies the chance of Bryan's success; and it should be the prime concern of those who have assumed the duty of upholding the cause of honest money to dispel it, and to show that those who are spreading and exploiting it are (while posing as the special champions of 'Americanism") in reality engaged in the devil's work of exciting in this country Old World class hatreds and class cupidities. The important thing is to make clear betimes to the class heretofore swayed by the silver agitators the demonstrable fact that the blows they are cheerfully preparing to aim at the "monopolists" are certain to fall first and with a frightful 16 to-1 ratio of severity on their own backs; and that the proposal for free coinage actually emanates from the camp of the enemy, and is on the face of it the most shameless scheme yet broached for legislating money out of lean into plethoric pockets. It is the inflammatory parts of Mr. Bryan's speeches that tell; and these should be squarely met. E. G. J.

Milwaukee, Wis., August 26, 1896.

TRANSMUTATION,

To the Editor of The Nation:

Sir: There is one phase of the discussions which are taking place at this time of the year that interests and puzzles me; and that is the survival of a half-conscious belief that Government possesses some miraculous powers which enables it to set at defiance the ordinary rules of business and commerce. Apparently, Government can take fifty-three cents and by some sleight-of-hand performance can make a hundred-cent dollar out of it. Government can take a lump of clay and, by breathing on it, make a man out of it. Government can "pass a law," and the supply of gold and silver will regulate itself in conformity to that law. Economically speaking, Government can make the sun stand still and the sea open for us to pass through. Plain Tom, Dick, or Harry, whose opinion on the value of real estate, steel rails, or elevated-railroad stock would be received with due caution by his neighbors, becomes, when elected to manage vastly larger affairs, vested with supernatural wisdom—becomes transmuted into an altogether superior being. The incarnation apparently takes place when he assumes his seat in the "halls of Congress." Yet if Tom, Dick, or Harry were elected a committee by indignant property-holders to protest against an unjust assessment before the City Council, no such halo of sanctity, infallibility, and almighty power would surround his acts.

Whence arises this belief in the miraculous powers of Government? Is it a survival of Biblical traditions of the unlimited powers of the Most High? Is it a remnant of the old doctrine of the Divine Right of kings? By what process does a man elected by his peers become, by virtue of that election, possessed of the keys of an economic heaven and an economic hell? And yet, in popular discussions of money questions, there is almost invariably a tinge of the old doctrine of the superhuman, supernatural, almighty powers of Government. In a democracy that in many respects out-Jeffersons Jefferson, you will hear a conception of sovereignty that out-Bourbons the Bourbons. The jumble strikes me as odd.

E. L. C. M.

Chicago, August 25, 1896.

CO-EDUCATION AT JOHNS HOPKINS.

To the Editor of The Nation:

Sir: You have given a very happy title to the letter in the *Nation* of August 27 on the exclusion of women from the other departments of the Johns Hopkins University, while they are given absolutely identical facilities with men for study in its School of Medicine,

in calling it "The Cart before the Horse." Of course the explanation for this strange freak in harnessing is that Miss Garrett has collected and given (chiefly given) five hundred thousand dollars in order to persuade the trustees of the Medical School to allow women to become trained healers of the sick, but she has not yet offered that incentive to virtue as regards the other departments of learning.

I should like to know whether there has been any discussion of this attitude of the trustees from the point of view of a high standard of morality. Trustees of a great university are a marked body of men, and they owe the community an example of conduct that shall not be open to criticism. But it seems to me that these trustees have here placed themselves in an awkward dilemma. Either there is something wrong about men and women studying together, and in this case it ought not to be permitted in the medical school in return for $500,000, or there is not, and in this case it ought to be permitted in the other departments without any inducement at all. And, as your correspondent implies, there are hundreds of people who would doubt the desirability of men and women studying medicine together, who would not doubt the desirability of their studying everything else together.

Can any one give an explanation of the state of mind of the trustees that shall make it seem less unreasonable, both to the British critic and to the American observer of social phenomena? D. N.

A NEWS CHRONICLE.

To the Editor of The Nation:

Sir: Allow me to echo the sentiment of your correspondent who, in the issue of the *Nation* for August 13, under the title, "Wanted—A News Chronicle," pictures a most attractive weekly journal of contemporary history, "intended to have a permanent historical and literary value," and wishes the *Nation* would undertake the enterprise.

Such a publication would be of inestimable value to teachers, who are expected to be strong in current history though their textbooks leave history at a standstill about 1886, with perhaps a statement concerning elections in this country since that date and a reference to the Columbian Exposition, and with possibly a suggestion that things are not yet finished in Europe. One must read more widely and wisely than the ordinary teacher can do, to speak clearly to classes on recent history. Such a journal as Mr. Terry calls for, helped out by the *Nation's* editorials on the important facts in daily history, would make the matter easy. Cannot such a "News Chronicle" be supplied?—Very truly,

Alice E. Hanscom.

Willoughby, Ohio, August 25, 1896.

[We have received several communications of the same tenor with the above. The enterprise, we believe, is far more costly and difficult than its advocates realize.—Ed. Nation.]

Notes.

An abridgment of Bryce's 'American Commonwealth' in collaboration with Jesse Macy, Professor of Political Science in Iowa College, will shortly be issued by Macmillan Co., who announce also a volume of historical studies, 'The Year after the Armada,' by Martin A. S. Hume, editor of the calendar of Spanish state papers of Elizabeth in the Public Record Office; and 'The Hope of Immortality,' by the Rev. J. E. C. Welldon.

Further announcements by the Century Co. are 'American Highways,' by Prof. N. S. Shaler, and 'The Shadow Christ,' by the Rev. Gerald Stanley Lee.

Thomas Whittaker has in press 'The Historic Churches of Paris,' by Walter F. Lonergan, freely illustrated by B. S. Le Fanu; 'Tudor Queens and Princesses,' by Sarah Tytler; a popular Life of Edison; 'Popular Telescopic Astronomy,' by A. Fowler; and a 'Madonna Calendar' for 1897.

'An Essay on the Present Distribution of Wealth in the United States,' by Charles B. Spahr, will form volume xii. of Crowell's "Library of Economics and Politics."

Little, Brown & Co., Boston, will publish 'The Western Avernus; or, Toil and Travel in Further North America,' by Morley Roberts, with illustrations by A. D. McCormack; Salomon's 'Memoirs of the Internuncio during the Revolution, 1790-1801'; and an edition of Mérimée's fifty-year-old 'Carmen,' translated and illustrated by Edmund H. Garrett.

Roberts Bros. have in hand 'An Eclipse Party in Africa (1889-90),' by Eben J. Loomis, and 'Leaves from Juliana H. Ewing's "Canada Home,"' by Elizabeth S. Tucker.

'Bacon vs. Shakspere,' by Edwin Reed, a "Baconian," will bear the imprint of Joseph Knight Co., Boston.

D. C. Heath & Co. will soon bring out 'French Selections for Sight Translation,' by Mary Stone Bruce, of the Newton High School, and Mérimée's 'Colomba,' equipped with exercises in French composition by Miss A. C. Kimball of the Girls' High School, Boston.

Ginn & Co. announce 'First Principles of Natural Philosophy,' by Prof. A. E. Dolbear of Tufts College.

A. C. McClurg & Co., Chicago, will publish a new novel, 'The Joy of Life,' by Miss Emma Wolf of San Francisco.

Under the auspices of the Saxon Ministry of Worship and Public Instruction, Prof. Conrad Cichorius has undertaken an exhaustive account of the bas-reliefs on Trajan's Column in Rome ('Die Reliefs der Traianssäule,' Berlin: George Reimer; New York: Lemcke & Buechner). Of the seven volumes two will consist of plates, reproduced in heliogravure from the plaster casts in the Lateran; and of these one has just been published, giving the reliefs of the first Dacian War in fifty-seven plates, accompanied by a volume of letter-press commentary, containing sixty-five illustrations and a map of the seat of war by Heinrich Kiepert. Together, these volumes sell at fifty-four marks (say $14); the letter-press alone at six marks. The rest of the series will appear partly next year, and partly at a still later date. The editor has visited the scene of Trajan's military operations, and discusses the subject from a military point of view; but above all he has made valuable ethnological observations on the present inhabitants, from Rumania to Servia, of whom a great number of typical photographs will be brought to bear in the comparison with the barbarian portraiture of the Column. The specimen plate before us is a beautiful reproduction.

The recurrence of the festivals at Bayreuth always brings with it additions to the Wagner literature. Countless pamphlets on the Nibelung Trilogy were printed twenty years ago, when it was first performed. Most of them were violently hostile, and of these none have survived as living issues. Of such as grasped the significance of these dramas, the most successful has been Hans von Wolzogen's 'Thematic Guide,' of which no fewer than 150,000 copies have been printed in German, English, and French. Of the new pamphlets issued apropos of the revival of the "Nibelung's Ring" at Bayreuth this summer, the most promising seemed to be J. E. Kloss's 'Zwanzig Jahre Bayreuth' (Berlin: Schuster & Loeffler). Under that head some extremely interesting remarks might have been made regarding the difference between Wagner's régime in 1876 and 1882 and Frau Wagner's practices at all the succeeding festivals. But to Herr Kloss everything done at Bayreuth at any time is superlatively good; he is even bold enough to claim that it remained for Frau Wagner to reveal the true inwardness of "Tannhäuser," when, as a matter of fact, the Bayreuth production of that opera was a complete failure except as regards the superb scenery. Herr Kloss has nothing to say regarding the growing disposition of Frau Wagner and her son Siegfried to neglect the vocal side of the music dramas for the sake of the scenery. The list of singers engaged by them this year is scandalously bad compared with Wagner's list in 1876, which remains to this day a monument to Wagner's selective ingenuity. Yet an equally good, if not better, list might have been made up for this year had Frau Wagner so chosen. Towards the end of his brochure Herr Kloss attacks Weingartner, who, in his recent essay 'On Conducting,' told some truths about the present management of the Bayreuth festivals.

About a year ago Dr. Karl Rosner of Munich delivered an address before the Gesellschaft für Psychologische Forschung on 'Shakspere's Hamlet im Lichte der Neuropathologie' (Berlin: Kornfeld), in which diagnosis takes the place of criticism in representing *Hamlet* as the victim of nervous disease. Rosner discovers a number of "pathological moments" also in the life and conduct of Shakspere himself, and asserts that the delineation of *Hamlet* is symptomatic of the poet's own psychical condition. In Dr. Fr. Rubenstein's brochure, 'Hamlet als Neurastheniker' (Leipzig: Haacke), this theory is examined and refuted in its application both to the Prince of Denmark and to the Bard of Avon. The author shows that *Hamlet's* actions and utterances throughout the whole play prove conclusively that he is neither insane nor diseased, but only "mad in craft." If Shakspere was "neurasthenic," where shall we find mental soundness in the annals of literature?

In 'Thier- und Menschen-Seele' (Frankfort) Dr. W. Wurm records some original observations on the manifestations of mind in men and animals, and comes to the conclusion that the soul or spirit is neither an absolute principle nor a material substance, but a force emanating from the nervous system stimulated and modified by the action of the physical organism under the manifold influences of the outer world. It is doubtful whether this "neue Realdefinition," as the author calls it, will convey any very clear conception to the mind of the reader.

An important addition to the already voluminous Bismarckiana is 'Bismarck's Briefe an den General Leopold von Gerlach,' edited by Horst Kohl (Berlin: Häring). The letters begin June 22, 1851, and end May 4, 1860. Especially interesting is that of October 7, 1855,

from Frankfort, in which Bismarck complains of the cold and uncivil treatment of himself and wife by King Frederick William IV., the Queen, the Princess of Prussia, and the whole rabble of courtiers, who took their cue from the monarch. The only exception was the Prince of Prussia (afterwards William I.), who had the manliness not to join in this conspiracy of rudeness, and showed himself especially courteous and cordial.

In 1893 the railroad director, Gustav Ebermayer, the civil engineer, Georg Ehrne von Melchthal, and the mechanical engineer, Valentin Zehender, were commissioned by the Bavarian Government to visit the Columbian World's Fair at Chicago and to report the results of their observations. This report is now printed, under the title 'Bericht über eine im Auftrage der k. bay. Staatsregierung ausgeführte Reise nach Nordamerika und zur Columbischen Weltausstellung in Chicago' (Munich: Wolf & Sohn). A brief description of the journey by sea and land is followed by a condensed account of the achievements of civil and mechanical engineering in the United States, the construction, equipment, and administration of railroads, steamboats, and workshops of all kinds, with statistical tables. A "Beilage," or supplementary volume, contains 128 pages of excellent illustrations, drawings of machinery, interior views of cars, etc., serving to elucidate the text.

'La Critique Littéraire: Étude Philosophique,' by A. Ricardon (Paris: Hachette), is a very complete manual of criticism, in which the various forms of criticism are fully discussed and the reader acquires a method which he can apply for himself to any work. The book is divided into two parts, the first comprising a chapter on the utility of criticism, one on the different varieties of literary analysis, and three on historical criticism. The second part, which is by far the longer, discusses impressionism, dogmatism, impersonality, humanism, suggestion, truth and morality in criticism, while a final chapter sums up the views of the author. The book is different from any other critical work issued of recent years, including Brunetière's volume on the evolution of criticism. It is practically a definition of criticism and a guide to the proper application of it. For this reason it is a valuable work, and the clear style of the writer adds considerably to its worth. M. Brunetière has written an attractive preface to it.

Jules Martin's interesting little work 'Nos Académiciens' (Paris: F. Bellanger & Cie.) should have had much earlier notice. It contains portraits and biographical notices of the present members of the French Academy, lists of the occupants of the forty *fauteuils* since 1635, of the various prizes in the gift of the Academy, and the statutes and other historical documents connected with the creation of this famous body.

Eugène Gilbert's 'Le Roman en France pendant le 19e Siècle' (Paris: Plon, Nourrit & Cie.) is not the work needed by students of French fiction during the present century, but it is in parts well done and on the whole will be useful in its restricted way. If the typical works and the great writers had had given them the space devoted to mere lists of names and enumerations of books, the scheme would have been much improved.

The international spirit of higher education, so frequently illustrated in the past, is just now emphasized by the appointment of an American branch of the Franco-American committee whose headquarters are in Paris, and whose aim is to bring to the notice of American students the advantages (recently extended) offered by French universities to graduates of foreign colleges. Students are to be reminded that at French universities there are practically no fees, that living expenses are small, and that the Compagnie Générale Transatlantique, between New York and Havre, offers a reduction of 30 per cent. to duly certified American students going to France for purposes of study. Dr. H. J. Furber, jr., is the representative of this Franco-American committee, and the American members are: Presidents Low of Columbia, Dwight of Yale, Eliot of Harvard, Gilman of Johns Hopkins, G. Stanley Hall of Clark University, Schurman of Cornell, and Whitman of Columbia University, Washington; Profs. Gould, Chicago, and Simon Newcomb, Washington; and Messrs. G. Brown Goode, W. T. Harris, S. P. Langley, Carroll D. Wright, and Andrew D. White. We note the absence on this committee of any of the women educators of the country.

The term for applications at the Women's Higher Courses in St. Petersburg (corresponding to Radcliffe and Barnard Colleges) closed on August 12. Five hundred applications were received for the one hundred and fifty vacancies in the entering class. The preference will be given to those graduates of the gymnasia and Government institutes who have medals. The course of instruction has been considerably enlarged for the coming year. A new chair of the Theory of the History of Pedagogy has been established. Lectures on zoölogy and pedagogy are to be given again. Zoölogy and physiology were discontinued several years ago as imbued with a tendency to create strong-mindedness of the wrong type—the revolutionary. There is also to be a new course treating of the Investigation of the Soil. It is interesting to note, in connection with these new arrangements, that several young women who left the Higher Courses and entered the University of Geneva have petitioned to be readmitted to the Courses. They state that the instruction in Geneva is less serious than in St. Petersburg, and leaves much to be desired.

Of the 26,092 recruits for the Bavarian army in 1895 only eight were unable to read and write. Three out of 4,526 recruits from the Palatinate, two out of 4,002 from Upper Bavaria, and one each out of 3,520 from Lower Bavaria, 2,728 from the Upper Palatinate, and 3,068 from Middle Franconia were found deficient in this respect. Of 3,029 recruits from Upper Franconia, 2,521 from Lower Franconia, and 2,698 from Schwaben, not a single one was unable to read and write. In France the effects of the introduction of obligatory school-attendance are perceptible, although the improvement in elementary education is rather slow. In 1890 the percentage of French recruits unable to read and write was 8.14; in 1893 it was 6.43, in 1894, 5.74, and in 1895, 5.53. In Germany the percentage is 0.40, including the Polish provinces; in Bavaria it is only 0.04.

—Mr. Andrew H. Allen has just sent out the calendar of the letters to Thomas Jefferson included in the Jefferson MSS. in the Department of State. Priding himself as much on his scientific as on his political knowledge, Jefferson conducted a correspondence with many descriptions of persons, ranging from the "crank" to the philosopher. Naturally the political letters stand first in interest for their historical value. The splendid series of letters and Cabinet memoranda from Gallatin, Madison, Smith, and Dearborn are supplemented by as valuable series of letters from Monroe, Paine, Gerry, Rush, Duane, and Callender. This publication brings into prominence the fact of many gaps in the political features of the collection, and gives color to the belief that Jefferson examined his papers and made away with many of them before his death. Much remains of a nature to have led to its destruction had such an examination been thorough; yet we should look for much more than is found from Giles, Nicholas, Pendleton, John Taylor, Randolph, and other members of the Jefferson following in Virginia, and from the Republican leaders in other States. There are few letters dating before 1780, and those few are not among the most interesting. The proof-reading of this Calendar shows intelligent care, and Mr. Allen could not have bestowed a greater boon on workers in American history. Congress should complete this notable collection by purchasing the four or five thousand letters written to Jefferson now in the hands of his descendants.

—Few men with any experience in public life have been so transparent in their records as Jefferson. Upon his accession to the Presidency, he became the target for every schemer. The politicians sought his support in their local contests, and, making himself the centre of activity in foreign policy as well as in domestic politics, he invited a correspondence as remarkable for its variety as for its size. Much of it was a mere interchange of formal sentences, but more is curious as showing the types of men who appealed to Jefferson's sympathies and appreciation. Such correspondents as Dupont de Nemours, Volney, Priestley, Ellicott, and Peale, were of high worth; but the compilers of school-books, the inventors of perpetual motion, and the discoverers of the immutable laws of morals and physics turned to Jefferson, sure of receiving at least a recognition which might have a market value. This great collection of MSS., one of the largest in the possession of the Government, is probably the most interesting, because of its many-sidedness. The political career of Jefferson in the Presidency has been so fully treated by Henry Adams as almost to defy further delineation; but the biographer of Jefferson is yet to appear.

—Though having a more restricted membership, field, and object, the four-year-old Colonial Society of Massachusetts could not escape the appearance of being a rival of the Massachusetts Historical Society, oldest of its kind in the United States and now in its second century. It was well that the newcomer quickly repaired the error of its original confusing appellation of "Massachusetts Society." Its present designation indicates its scope, for it admits to membership no one "who cannot prove, by documentary evidence satisfactory to the Council, his lineal descent from an ancestor who was a resident of the colonies of Plymouth or the Massachusetts Bay," while its charter defines its aim to be a special cult of colonial history, through collections, publications, the encouragement of research, etc. The vigor of this impulse is strikingly shown in the superb first volume of Publications, dubbed Transactions, 1892–1894 (Boston: Little, Brown & Co.); and the soil from which the new organization has sprung is equally revealed in Mr. Andrew McFarland Davis's comprehensive survey of "Historical Work in Massachusetts," begin-

ning with the parent Society of 1790–91, and enumerating a great variety of historical and sub-historical associations, including the Bunker Hill and Wadsworth and Miles Standish Monument Associations, the Shepard Historical Society (First Church) of Cambridge, the Backus (Baptist) Historical Society, the Universalist Historical Society, the Military Historical Society, the Old South Historical Society of Boston, the Bostonian Society, the Old Residents' Historical Association of Lowell, and an Oak Tree Association of Charlemont—to mention only types. It is noticeable that while the Rumford Historical Association of Woburn, incorporated in 1877, has a library and collections constantly increasing, the Webster Historical Society of Marshfield, incorporated in 1884, was sold out under the hammer a few years ago.

—Mr. Abner C. Goodell's paper on John Saffin and his slave Adam is the most curious and readable of all, for it exhibits the New England conscience successfully revolting against slavery at the close of the seventeenth century, and involves Chief Justice Sewall and his 'Selling of Joseph,' which Mr. Saffin answered in a tract here reprinted in full, with title-page facsimiles of both tracts and a portrait of Sewall. The narrative is very amusing. Mr. Goodell also incidentally, in other connections, throws much light on Anne Hutchinson and the Antinomians, with a specification of how much Massachusetts owes to the Quakers for her religious freedom; and has some candid remarks on patriot mobs and the Boston tea party which show that the Colonial Society is not given over to mere ancestor worship. Mr. Davis, again, makes a valuable examination of Colonial Corporations, and we can but mention Mr. Robert N. Toppan's "The Right to Coin under the Colonial Charters," Mr. S. L. Thorndike's "Psalmodies of Plymouth and Massachusetts Bay," Mr. Edward Wheelwright's unhackneyed memoir of Francis Parkman, and Mr. Lindsay Swift's enumeration and sampling of the Massachusetts Election Sermons which, begun in 1634, were discontinued only in 1885. To Mr. Swift also was intrusted the making of an index of surprising fulness. The next volume will be stamped "Collections," and will consist of a full set of copies, from the Public Record Office in London, of the commissions of the royal governors of New England and the Bay from 1686 to 1774, together with their instructions, etc. The satisfaction which every one must take in the making of the present volume is much enhanced by the numerous inserted maps and documentary facsimiles. The future development of the Society will be eagerly regarded.

—The indirect consequences of a World's Fair are well illustrated by the six volumes of 'Bibliographie Française' (Paris: H. Le Soudier; New York: Lemcke & Buechner). This work is the French equivalent of the parent American 'Publishers' Trade-List Annual' and the British 'Reference Catalogue of Current Literature,' and consists, for five volumes, of the French publishers' catalogues for 1895 bound together alphabetically. M. Le Soudier, who has the honor and the distinction of having persuaded his nearly 200 fellow-publishers to agree for this purpose on a uniform catalogue size, relates that his determination to engage in so enormous a labor was fixed by his visit to this country in 1893—no doubt in connection with the Exposition at Chicago. In this instance, emphatically, it is the first step that costs, and hereafter the 'Bibliographie Française' will appear yearly with as great regularity as our own 'Trade-List.' But quite another sort of pains had to be bestowed on the sixth volume, which is the key to these numerous catalogues, and here we find an author-alphabet, with the title of each work abridged and a reference to the page of the publisher's catalogue; and a classified index of subjects with some 400 headings. These two tables are to be kept standing in type, for changes and additions. During the twelvemonth, recourse must be had by inquirers after new books to M. Le Soudier's weekly *Mémorial de la Librairie Française*, which will enable the volume of tables to be issued independently, if need be, of the accompanying catalogues. It would not be easy to overpraise this publisher for his invaluable achievement; and the cheapness of the total work, substantially bound in half-leather, is surprising ($13.50). But this price is likely to go up.

—The American School of Classical Studies in Rome will have its quarters during the coming year in the Story villa, on the Via Gaeta, which has been leased for its use. The house is conveniently situated for the work of the School, and is sufficiently large to provide, in addition to the library and suitable rooms for instruction, apartments for the Director and his family, and possibly for two or three students. The Director for 1896-'97 is Prof. Minton Warren of Johns Hopkins University, with whom will be associated Prof. Allan Marquand of Princeton as Professor of Archæology. Applications for admission may be made to the Director (in care of Sebasti & Reali, 20 Piazza di Spagna, Rome), or to the acting chairman of the managing committee, Prof. C. L. Smith, Cambridge, Mass. Under the energetic direction of Profs. Hale and Frothingham the School has in its first year certainly made a creditable and encouraging showing. Amicable relations have been established with the Italian Government and the Vatican, and with the other foreign schools in Rome. The German Institute especially has been friendly and helpful. Through these relations the opportunities for study and instruction open to our students were enlarged much beyond the necessarily limited resources of the School itself; and the regular courses to which they were admitted were supplemented by visits to museums and excursions to various points of interest in Latium and Etruria, often under such competent guidance as that of Prof. Lanciani at Ostia and of Prof. Marucchi in the catacombs. The year's programme included a visit of some weeks' duration to Greece, where some of the students enjoyed the rare privilege of accompanying Dr. Dörpfeld on his famous *Inselreise*; and on their return they spent ten days at Pompeii and in the Naples Museum under the excellent guidance of Dr. August Mau.

—Meanwhile the School has attempted to do something in a modest way for the advance of knowledge and to interest its students in this kind of work. Under Prof. Frothingham's supervision a careful examination has been made of the site of Norba, an ancient town in the Volscian hills, and a topographical plan has been prepared of the ruins, which have lain undisturbed since the destruction of the town in the time of Sulla. Prof. Frothingham also discovered a network of roads connecting Norba with the neighboring towns. Under his direction, also, and with the aid of subscriptions specially raised for the purpose, a series of moulds has been made of Trajan's arch at Beneventum, one of the best preserved of the Roman arches and representing the best period of Roman sculpture; and the School is now prepared to supply casts to museums. Finally, Prof. Hale, in revising the work of his students on the Vatican manuscripts of Catullus, came upon a manuscript of the poet, hitherto overlooked because "hidden under a false number," but in his opinion of high importance. Prof. Hale has undertaken its collation, and will publish his results in the first volume of the Papers of the School. At the same time the Vatican will publish, at his request, a complete facsimile of the manuscript itself. The two volumes are promised for the coming winter.

—We have already mentioned the discovery of the Delphic pæan to Dionysus, which is edited in the current *Bulletin de Correspondance Hellénique* by M. Henri Weil. It differs from the hymns to Apollo in that it is not accompanied by musical notes; it is, however, older than these, dating from near the close of Philip's reign or the beginning of Alexander's. Its interest is political as well as historic. The author, Philodamus of Locris, *philippizes;* he is inspired by pan-hellenic rather than Athenian sentiments; he indicates also that, at the time of writing, some restoration of the temple was going on. To this work he invites the attention of the faithful, and pronounces that generation blessed which shall behold its completion. His pious muse is rewarded by the priesthood and the Delphians with a decree of thanks and of the customary privileges. The ode, while using the ordinary poetic commonplaces, follows the best traditions in its metrical structure. Apropos of its metres, which are glyconic and are ordinarily called logaœdic, being reduced by modern scholars to trochees and dactyls, M. Weil recalls the fact that the highest ancient authorities, Aristoxenus, Aristides Quintilianus, and Hephæstion, did not so divide or understand the glyconic rhythm. They regarded it as choriambic, as consisting of iambs and trochees, in which the trochees are sung *à contretemps*. This is an offence and a surprise to the modern ear; yet it is the testimony of experts who had heard Greek music sung. Moreover, it is a view supported by the historical development of the choriambic metre, beginning with Anacreon, and by the notation of the musical inscription found at Tralles.

A HEADMASTER OF ETON.

Memoir of Edward Craven Hawtrey, D.D., Headmaster and afterwards Provost of Eton. By Francis St. John Thackeray, M.A., F.S.A., Vicar of Mapledurham. London: George Bell & Sons; New York: Macmillan. 1896. Cloth, 8vo, pp. xii, 267. Illustrated.

It would be difficult to think of two figures more contrasted, or either of them more characteristic, than that of Dr. Arnold, the Headmaster of Rugby, and that of Dr. Hawtrey, the contemporary Headmaster of Eton. Arnold's school was that, generally speaking, of the professional and higher middle classes. We see the great public-school reformer seated, with a face of earnestness almost approaching to sternness, amid a circle of boys on whom his own image was deeply impressed, and studying in the most serious spirit the philosophic work of his favorite Thucydides, or in the college chapel fervently preaching the highest Christian morality. Eton was the special school of the aristocracy and landed

gentry. We see Arnold's counterpart seated with his sixth form in a class-room which he had adorned with specimens of his classic taste, robed in a gown and cassock of the richest silk, his gold pencil case suspended by a golden chain, his neat foot complacently put forward in a patent-leather boot, his whole air that of a most elegant and highly refined gentleman, lightly dallying with an ode of Horace, and perhaps letting fall some observation which showed the connoisseur on the remarkable "body" of the ancient wines. The foot was the only part of his frame of which he could well be proud; the face was a favorite subject of caricature, in both carving and crayon, and lent itself kindly to that art, as engravings in this volume show. Hawtrey was an exquisite, almost a *petit-maître*, a scholar elegant, not deep, a composer of graceful trifles in several languages. In vacations he moved, a favorite, in high society, both in London and in Paris. He had as headmaster a very large income, which he spent with a princely liberality. His hospitality was profuse, his liberality to poor scholars unfailing. He made a fine collection of rare and valuable books superbly bound. Neither as a teacher nor as a headmaster could he be said to be strong. As a teacher he cultivated taste, as headmaster he had tact and well understood his boys. A perfect gentleman himself, he always treated them as gentlemen and scrupulously respected their sense of honor. He was inclined to make some reforms; but above him was old Provost Goodall in full canonicals, with wig, knee-breeches, and shoe-buckles, who, like George III., would have no innovation in his time.

A curious institution was Eton in those days. Nothing was taught in the school but classics. Mathematics were an extra, and were in a sort of uncovenanted state. The mathematical master taught, not in school, but in his own lodgings, and did not, like the classical masters, receive from the boys the homage of "capping." Even in classics the teaching in school was almost a form. The same thirty lines of Homer, Virgil, Horace, 'Poetæ Græci,' or 'Scriptores Romani,' formed the lesson of the five upper forms and the last three years or more of the course. Exercises in Latin composition were the most serious part of the work, and, as they were done out of school, the boy might do them himself or not, as he liked. Latin verse was the accomplishment most valued, and that which brought prizes and marks of honor after your name in the school list. There was a scholarship for which the more ambitious boys annually competed, and which in their case supplemented the regular school course. There was always one whole holiday and one half-holiday in the week; when saints'-days fell there were more, and you were never in school more than three-quarters of an hour at a time. Saying Greek and Latin poetry by heart was the most serious task, and with Homer, Horace, and Virgil a boy's memory was well stored. What the masters set themselves in earnest to enforce, and not without effect, was a social code, deemed to be that of the English gentleman, including strict personal cleanliness as well as the manly virtues. There was attendance at chapel with full choral service five or six times a week, as prescribed by the mediæval statutes, but the real worship was that of Jupiter. It was said that a boy, having once been simple enough to seek spiritual advice of Dr. Keate, the Doctor, on recovering from his surprise, gave him an order on a bookseller for a Greek Testament with notes.

Many of the Eton boys of those days went into the army, especially into the Guards or light-cavalry regiments, while others went into the diplomatic service and other public services where at that time patronage prevailed and no previous training was required. Eton, however, took a fair share of honors at the University, and, as might have been expected from the social position of her alumni, a still larger share of the honors of public life. There was not a little intellectual activity in the place of a spontaneous kind. Coming from political homes, the boys took a lively interest in public questions. Gladstone, and Canning before him, were fruits of this unforced culture. Perhaps the Eton boy was partly compensated for his lack of severe training by not having his brain overwrought when he was young. This may be the cause of the vigor and power of work which many eminent Englishmen show in their old age. When the weight is not put early on the horse's back, he does not prematurely break down. The recollection of little work and much play no doubt combined with boyish friendship and the historic beauty of the place to produce the intense attachment of Etonians to their school.

The place was a museum of survivals: the mediæval "bounds" were still nominally kept up; you had to defer to the obsolete tradition when you met a master by pretending to conceal yourself. The river, on which half the boys passed the summer day, was out of bounds. When a match was rowed with Westminster on the river some distance off, it was totally ignored by the authorities and no time allowed for it, though the rate at which readers and choristers rattled through the college service that afternoon to let the boys get away in time showed plainly enough that something was at hand.

Eton, however, though still the special school of the aristocracy and gentry, has yielded to the requirements of the age. Its curriculum is now expanded and brought up to the latest improvements. Only a few old men remember the antediluvian state of things. So much time has elapsed since Hawtrey's death that his biographer has not been able to recover many facts or anecdotes. It was characteristic of him and of the place that, finding at his door two boys fighting, he said: "Well, boys will quarrel, and when they quarrel I suppose they had better fight. But you needn't fight close to my door." That little slide has passed through time's magic-lantern certainly to appear no more.

RECENT FICTION.

The Veil of Liberty: A Tale of the Girondins. By Péronne. London: Adam & Charles Black; New York: Macmillan.

Confession. By Elizabeth E. Evans. London: Swan Sonnenschein & Co.

A Colonial Wooing. By Charles Conrad Abbott, M.D. Philadelphia: J. B. Lippincott Co.

Clara Hopgood. By Mark Rutherford. Dodd, Mead & Co.

A House of Cards. By Alice S. Wolf. Chicago: Stone & Kimball.

The White Rocks. Translated from the French of Édouard Rod. Thomas Y. Crowell & Co.

Pirate Gold. By F. J. Stimson. Boston: Houghton, Mifflin & Co.

The Bachelor's Christmas, and Other Stories. By Robert Grant. Charles Scribner's Sons.

The Massacre of the Innocents, and Other Tales. By Belgian Writers. Translated by Edith Wingate Rinder. Chicago: Stone & Kimball.

In the Village of Viger. By Duncan Campbell Scott. Boston: Copeland & Day.

A Gentleman Vagabond, and Some Others. By F. Hopkinson Smith. Boston: Houghton, Mifflin & Co.

Tom Grogan. By F. Hopkinson Smith. Boston: Houghton, Mifflin & Co.

The Damnation of Theron Ware. By Harold Frederic. Chicago: Stone & Kimball.

The Reds of the Midi. Translated from the Provençal of Félix Gras by Catharine A. Janvier. With an Introduction by Thomas A. Janvier. D. Appleton & Co.

Emanuel; or, Children of the Soil. From the Danish of Henrik Pontoppidan by Mrs. Edgar Lucas. London: J. M. Dent & Co.; New York: Macmillan.

Camilla. Translated from the Swedish and Danish of Richert von Koch. Thomas Y. Crowell & Co.

The Cruciform Mark. By Riccardo Stephens, M.B. London: Chatto & Windus.

Of making many books of stories out of the French Revolution there is no end. Naturally they have all certain features in common which can be predicted before reading. Péronne justly indicates the especial trait of his tale in acknowledging, among other literary debts, that due to Adolf Schmidt's collection of secret police reports which "throw some light on the point which even that diligent student of the Revolution, M. d'Héricault, admits to finding obscure, namely, how plain folk contrived to live and get about during the general upheaval." "The unimpassioned and realistic narration of the police agent," then, if it has to an extent shorn the book of brilliancy as a novel, has lent it the rarer interest of a faithful chronicle whose facts are more deeply moving than any garniture could be. We recall no story of the period that reveals so intimately the life and manners, even to the costuming, of the ordinary people; homely details abound, which give peculiar reality to the tragedy and bring it close to the vision. At the same time there is more to be learned than in the average Revolution novel, of history, of minor biography, of the relations of the political parties to each other, and of the private religious constancies and apostasies which made the public martyrs. 'The Veil of Liberty' is well worth reading as a book of wide study and of deep instructiveness and interest.

Mrs. Evans is again at her task of warning against evils which one must hope are exceptional. It should be said, to her credit, that the sorry story is told as by one convicted of a mission, and with not the least gloating over evil or self-pluming on knowledge. The air of complacent acquaintance with the rotten core under the fresh fair skin of innocent seeming, which defiles so many latter-day books, we find not here. The warning is solemn, and it is solemnly, if daringly, given. Yet, allowing all credit for dignity of motive and for genuine abhorrence of sin, the inquiry survives whether, on the whole, benefit accrues either to the library or to morals from such expositions. It may be that girls without a sympathetic home-training might in the rueful tale find a tonic vision of sin; we take leave to think, however, that the author, even

as preacher, has made a mistake in reckoning with the wrong end of sin—the inevitable climax rather than the avoidable beginning. If the moral falls, the book falls, it being emphatically a "problem-book"; yet it may be added that the writing is creditably done, and that there is a deal of cynical humor in the picture of a villageful of maids and matrons fervent in the business of pursuing the bachelor clergyman.

Dr. Abbott's 'Colonial Wooing' is a variation from the majority of colonial stories in having its scene laid, not in New England, but in the township of Chesterfield, among the Friends, whose nearest seaport was "the thriving village founded by Penn." A sleepy atmosphere of river-ferry and blacksmith's forge under spreading oak, the songs of many birds, plainly personal friends of the writer, well create an illusion of the Pennsylvania and West Jersey borders. The story, even though it concerns a midnight rescue, the mention of firearms, and a pretty Quakeress so undisciplined that the elders, looking upon her, remembered that there was witchcraft in New England, and were troubled, yet remains (appropriately enough) a rather gray and drab little story, beautifully printed.

"Precious and rare," says Mark Rutherford, "are those divine souls to whom that which is aerial is substantial, the only true substance; those for whom a pale vision possesses an authority they are forced unconditionally to obey." More precious and more rare, we venture to think, are the souls who put the pale visions behind them and cultivate and obey the promptings of common sense. What but yielding to pale visions brought Clara and Madge Hopgood to grief? Madge could not agree with her lover upon what poems of Wordsworth's were the best. She therefore, and not because she was betrayed by him, discarded him, with the approval of all the women in the book, although he begged to marry her and care for her and their child. Ultimately she married a Jew who was a bibliophile. Clara also loved the Jew, and he her, but she gave him over to her sister and became one of Mazzini's martyr agents in Italy. And thus the woman with a past advances from grace to glory. To marry the man who should have been her husband becomes a crime if they cannot agree upon matters of literary taste. That there was any duty to the child seems never to have occurred to Madge, her mother, or sister, and only temporarily to the motherly women who befriended her—they, too, rejoicing that she would not accept the reparation urged on her by the man who would probably make her life dull. It is all very sickish and sickly, but it claims notice because the writer shows rare ability, scholarliness, and power of narration; because, too, there are glints of insight and nuggets of wisdom which one would like to sift out and preserve.

She persists—this type of woman—but plays only a secondary and remote part in 'A House of Cards,' so that we may gratefully ignore her, as a humble but sincere contribution to her suppression. The scene of this novel is laid in California, and it is not a dialect story, but one of society. The characters continually give and are given in picnics, theatre-parties, dinner-parties, and drives. When they are assembled, they fall a-chattering, and contrive to say a few bright things, or to make a few clever quotations, upon which the party breaks up, like a gun discharged and stood in a corner. The numerous persons are not well differentiated, and some are singularly spasmodic, coming in without cause or effect, after the manner of the Picninnies and Joblillies. A trace of Occidentalism lurks in such expressions as "I am equally as determined not to," and (at a dinner) "Yorke was careful at the beginning of each course to give Mrs. Yerrington her queue," wherein the ethnologist will readily see the resultant graft on Caucasian stock of Chinese cheap labor. The ground plan of the novel, turning on certain phases of heredity, is by no means wanting in strength or originality, and the defects mentioned have not hindered it from being interesting reading.

In Édouard Rod's touching story of 'The White Rocks' is to be found a more than usually artistic piece of workmanship. Searching as a study in human nature and the temptations flesh is heir to, it is also at once a poem, in its delicate grace and the speaking picture of a Vaudois community. The very air of Switzerland breathes in it: the sombre religion of Calvin, the snow-crisped sunshine, the sparkle of lake waters. While reading it one is a dweller in Bielle, walks in and out among the vineyards, sits with the townsfolk, expectant, to hear the first sermon of the new pastor, and shares the town gossip. The pastor, his peasant mother, the great lady, her husband and child, the light-weight American father (whose surprising name is Leen), and all the manifestations of Mrs. Grundy to be met in a narrow town, are admirably delineated. It is only a skilled craftsman who can combine sadness and humor in such wise that, as in life, they blend; the one, indeed, often the cause of the other. The translation trips here and there, but on the whole goes with spirit.

Mr. Stimson's story of 'Pirate Gold' has a salt and breezy flavor of early, tar-scented, India-trading, Abolitionist Boston—of the day when merchants stepped out of their counting-rooms upon the wharves and watched their ships come in; ships which might bring in, besides their expected cargoes, pirate prisoners; and when, as the same merchants walked home, they might meet a runaway slave getting sent back to the South, with the slave-catchers, under Federal escort. The story, laid against such pictorial background with excellent effect, deals with the gold doubloons and the golden-haired little girl left by a pirate with the mercantile house of Bowdoin in 1829. Out of the fortunes of the gold and the little girl, and taking as his heroes the old head of the firm and his bookkeeper, Mr. Stimson has made a fresh and interesting book. As to probabilities, nothing need be said, since the story runs plausibly; and as to the taste of some of Mr. Bowdoin's pleasantries with his humorless wife, unto the Commonwealth Mr. Stimson may render his account. The peppery old gentleman cannot fail to win love for himself and pleasure in his portrait; while cautious, devoted, old Scotch Jamie is so real that one does not ask if he be probable.

Mr. Grant's half-dozen stories afford an hour's sufficient entertainment. Beyond that hour they are not likely to live in the memory, if we except the amusing account of the fagged architect who goes to an abandoned farm to spend the Fourth of July in stillness and speechlessness, even bribing his children to accept rabbits in place of firecrackers, and who then is whisked by adversity through a series of adventures which contribute to the gayety of readers.

A dozen short stories by nine Belgian writers are translated for English readers by Edith Rinder as a bait to the further study of "what is best in the poetic and prose literature of the Belgian Renascence." The names of Maeterlinck and Eekhoud, the latter "the Zola of Flanders, as he is sometimes called, though somewhat inaptly," need not affright the timid, nor yet, we make bold to say, need the lovers of stories be powerfully attracted by the work of Demolder, "the direct literary descendant of the old Dutch painters of Scriptural subjects," nor by the "psychic episode" as explored by Messrs. Jenart and Richelle, nor by the two contributions of Lemonnier, "commonly accepted as one of the ablest of the French realists." Delattre's Walloon sketch and the three by Eekhoud, with Krains's "Mountebanks" (a masterpiece of dreariness), are the best of the book. The allegoric writing is overstrained and phantasmal, the realistic largely real and nothing else—real costumes, real properties, real landscape, real kitchen utensils, real blood, real barley-sugar, real horseplay, but not real interest. There is, however, interest in making excursions into territory so little explored, and the best of the stories are justification for the existence of the collection in its pretty and well-translated form.

The glimpses of the French settlement of Viger given by Duncan Campbell Scott are miniatures of village oddities with French characteristics. They show a lively sense of situation and incident together with an affectionate appreciation of nature. But some of them have been done with an impressionist brush, which has on miniatures a smearing effect.

Mr. Hopkinson Smith's brush touches lightly, freely, and firmly, in his new volume of sketches, on many of the subjects he has already taught us to associate with him. The immortal and "just grand" Southern Major; sundry laboring men with picturesque clothes, homely language, and valiant hearts; the memorable Bronx River, and some gentlemanly dogs, are among his heroes. Excellent company they are, and thoroughly master is Mr. Hopkinson Smith of the art of putting his figures, human or otherwise, into the precise surrounding that best suits and balances them, so that they neither awaken unfulfilled expectations of importance nor yet hang in mid-air with no excuse for being. In sketching places and odd characters he is happiest. As he approaches incident or plot he is less successful, to our thinking, both in these short tales and also in the longer flight essayed in 'Tom Grogan,' a romance of Staten Island. While his eccentric and lovable heroine is a new figure in story—the woman who hauls and whose home life is beautiful—and while the glimpses of Labor Unions, Village Boards, and political pulls are cleverly worked in as background matter, and while neither the sagacious hoodlum nor yet the goat of the suburbs is wanting, yet does the whole go to prove the author *par excellence* the artist of episode.

The Rev. Theron Ware was so weak and damnable a being that his damnation was but a trifle to accomplish, and by itself might not have been worth writing a book about. The force and interest of Mr. Frederic's book (and though painful it has both) lie in the presentation of the seamy side of creed and dogma. We have not only the Methodist preacher who comes to grief, but the Methodist debt-raisers—a man and woman whose past has been full of alarming variety, and who are delighted to settle down into the "chance and change" of being "good frauds." There is

the Catholic priest who talks about the "Christ-myth," yet remains an active and devoted priest, and whose hope for the American church is that the Irish shall take to lager beer and become in time a new type of American. There is the Catholic girl who is avowedly "Greek." There is also the man of science who declares all art to be decay, pointing to the perishing of nations in "artistic riot," and proclaiming the end of the Jews because they begin to produce painters and sculptors. The trenchant talk of all these persons is brilliantly set down, and there are curious pictures of the mechanism of Methodist worship and organization which we should think might stir up ire in high places. The story, however, leads nowhither, and the reader is advised to make the most of the panorama as it passes.

It is occasionally the reviewer's happy lot to come upon a little book with neither *if*, *but*, nor *perhaps* lying in ambush in its pages. Such treasure-trove is 'The Reds of the Midi,' translated from the Provençal of Félix Gras. In old Pascal's shoemaking shop of an evening, when the neighbors are met, and a little boy who should be at home in bed is sitting in the corner on a bench with the cat, Lou Materoun queries: "I've always wanted to ask you, Pascal, how it was that you, a peasant from Malemort, happened to be in the Battalion from Marseilles that went up to Paris the year of the Revolution." Old Pascal's answer is the story, retold by the little boy on the bench, whose autobiographic reflections are Félix Gras's own, as we learn, and who makes as charming a vignette of himself as ever hung pendant to an historical picture. The story of the rousing of the peasants of the South against "the tyrant King," their private grievances, their march to Paris singing the "Marseillaise," is lifted by the peasant recital into wonderful reality. It is history made alive, not merely telling the tale of deeds, but plucking out the very heart of the time. Yet in the subject lies only half the charm. It is the touch of the poet, the unerring instinct of the artist, the great heart of the Provençal, that indescribably attract and make the book a thing of gladness. The quality of Mrs. Janvier's translation is admirable, and the very sympathetic and delightful introduction by Mr. Janvier affords a glimpse of the author and his works which adds the final grace to a volume teeming in graces.

Henrik Pontoppidan's story treats of an interesting period in Danish history about twenty years ago, when, to the freeing of the peasants from serfdom nearly a century before, succeeded the movement to free their minds from ignorance as well as their bodies from slavery. The establishment of "people's high schools" for the encouragement of an enthusiastic patriotism was the great work of Bishop Grundtvig in the beginning of the century, and the influence of this institution, as well as of a popular religious movement, is seen reflected in the twin villages of Pontoppidan's story. To our thinking, the facts of the case, as stated in the preface, are more interesting than the novel, which, however patriotic, moves but listlessly for the general reader. The aristocratic priest, his democratic curate, the heresies of a preaching weaver, the manners and customs of a not too interesting peasantry, lists of their clothes, food, and amusements, with the final triumph of the plebeian over the patrician idea, are the leading features of a book more significant to students of Danish progress than to seekers after an entertaining novel.

Danish progress is further set forth in the story of 'Camilla,' an eccentric young Dane who visits Stockholm and sets society by the ears with her heresies. "Her heterodoxies, if expressed in Swedish, would have been quite too shocking," therefore the author lets her speak Danish, in which tongue, we are told, "they sound most piquant and original." Her lack of orthodoxy is mainly in the theological line, so that no well-disciplined novel-reader is surprised to have this shocking young seeker after Ibsen's "higher view of things" an angel of ministration to the sick, visiting cholera patients, healing diphtheria by Swedish massage (full directions given in the text), and alternating these offices with abuse of the orthodox Christian's Deity and liberal flirtations with Stockholm's nobility. There are side views of Swedish family life, a Salvation Army meeting, and plentiful talk of the bringing up of sons and daughters, by a perplexed baron (who finds it "much harder to be a father nowadays than it used to be") and his wise wife (the best character in the story). When Camilla, in a delirium of fever, converses by telephone with the heavenly Powers, her theology is found to be lenient if not strictly orthodox; and of course in loving and marrying a strict Lutheran, she rouses hopes of her rehabilitation. If this is the highest point contemporaneous Swedish fiction has reached, it must be said to be still in the raw.

A very medical and medicinal book indeed is 'The Cruciform Mark,' by a bachelor of medicine. He knows his Edinburgh well and describes it agreeably. He knows the University well, and takes the reader into the medical student's life there, with a knowledge born of evident intimacy. So, too, the Highlands, to which we go a-shooting, and the Tweed, in which we go a-fishing. Then there is Edinburgh society, teas, dances, dinners, Royal Society lectures, functions innumerable, private and public; there is dissection, astrology, snake-venom, second sight, hypnotism, and suggestion. We will not solve the mysteries of the book here by saying which of these agencies is the cause of the many tragedies. The reader curious in the abnormal relations of mind and matter will find here a strange and clever story, brimming with terrors, yet related in a temper both sane and sweet. There is too much in the book of everything, whether relevant or irrelevant. In his overflowing enthusiasm for his many subjects, from the black arts to trout fishing, the writer has allowed himself to put the material for three books into one, which, though nowhere dull, except in astrological moments, becomes oppressive from the too long imposed strain of mystery and suspense, as well as from an excess of the matter introduced to lighten the horrors. We shall be surprised, however, if the book does not attract attention and discussion, and if Riccardo Stephens is not heard of again.

Elements of the Theory of Functions of a Complex Variable, with especial reference to the Methods of Riemann. By Dr. H. Durège. Authorized translation from the fourth German edition by George Egbert Fisher and Isaac J. Schwatt. Philadelphia: Published by the Translators. 1896.

THREE years ago we had not a treatise in our language upon that subject to which the attention of most of the strongest mathematicians has been chiefly and increasingly devoted for now near a generation. Two admirable and extended manuals (neither of them, however, exhaustive) have since appeared; and in this publication the strictest essentials of the theory are presented in an easily comprehensible form, free from unnecessary details and subtleties. The translators may be sure that their work will find welcome from teachers. Two classes of students are likely to use the book. Even to a man who does not intend to pursue mathematics, and to whom any training in working algebraical operations or those of the calculus would be time thrown away, the theory of functions may prove interesting. It will give him a tourist's glimpse, at least, of a new world of thought. It will show him that, scattered about in the community, are men of our race, in ordinary costume, some of them transacting affairs in down-town offices, just as any man might do, who are yet filled with ideas far more foreign to the rest of us than are those of the Chinese in Mott Street. Surely, it were consonant with a generous education to gain some glimpses of the mathematician's world, even if there were no lessons to be learned from it but that of a phenomenon in anthropology. But when we consider that the very finest and most prolific deductive logic can scarcely be learned in any other quarter, and that the life-thought of these who wield that logic cannot fail to afford some useful hint towards a solution of the problem of what sentiments we ought rationally to entertain towards matters and things in general, it becomes all the more plainly worth the while, even of the ἀγεωμέτρητος, to look into the easy and pretty elements of the theory of functions. The first class of students, then, who are likely to want this book consists of those who do not mean to go deeply into mathematics.

The other class consists of those who purpose subsequently to attack the large treatises, perhaps even the memoirs, but who desire a preliminary introduction to the subject. For these last, supposing they already have some ordinary acquaintance with the calculus, it is hard to see how a book could be better suited than the treatise of Durège. It presents the leading ideas so that the student can see how they are applied; and when he has read its pages, he will feel quite confident that he understands at least the general theory of functions, if he be not even ready to handle it himself. At the same time, students who have learned their calculus out of a modern treatise have no need of a separate preliminary work upon the theory of functions. They are already in possession of its governing ideas, and might as well pass at once to more elaborate treatises. For students of all kinds the best way to teach the calculus is to make it a part of the doctrine of functions.

Decidedly, for mere tourists into the world of mathematics, a minuter guide-book than the present work would be preferable, were there one that was not too difficult. One of the chief uses of the study for such a student lies in the accurate yet productive logic it inculcates. Of late years a great deal of research has been devoted to the exact analysis of the conceptions of the theory of functions, such as infinity, continuity, differentiability, etc. The science of logic has been advanced, in no small measure, by those studies. They ought not to be neglected by any close thinker, nor does their exposition necessarily involve difficult technicalities; but of all these recent investigations Durège might, for all his book shows, have heard nothing. His aim, not to say his boast, seems to be that he shall present the theory just as it appeared to the thought of Riemann, sixty years ago. He

discourses at great length of the topological characters of Riemann's surfaces; but he never points out, perhaps is scarcely aware, that the connectivity of space, as it is imagined to be in the theory of functions (and as Listing also conceives it), is essentially different from that which is attributed to it in modern geometry. For example, according to the theory of functions, upon a plane surface four colors suffice to paint a map, while, according to projective geometry, six colors are requisite. For the student of ideas, the development side by side in mathematics of two disparate notions of space, and that, too, without giving rise to any dispute, is surely of sufficient interest to be noticed. Again, the logic of the interchange of roots in making a circuit round a branch-point is passed over with all the naïvetê of Cauchy, who first remarked the phenomenon. Cauchy was a miraculous algebrist and a great logician, but it is notorious that the feet of his agile logic are rather apt to trip. In this matter he skips over a cañon so easily and so lightly that one can hardly make out how he does it, even if one remarks that any cañon is skipped.

The publication will be well received, as it deserves to be. Yet the translation appears to be of the most rudimentary literalness. We say "appears," because we have not made comparison with the original, and also because in sundry places we have been puzzled to guess what the German words could be. Thus, on p. 46, in an italicized sentence, "other" is used where "second" or "additional" would be much clearer; one cannot think the original reads "andere." "This" is frequently used where the English idiom calls for "that." In perusing the pages we are continually coming across such sentences as the following: "By this also the name *modulus of periodicity* is justified, since we can say, analogously to the language of the theory of numbers, that z acquires equal values for such values of w as are congruent to one another to a modulus of periodicity." Such language is not English. In many passages it is not even good German, unless logically confused expression can be said to be supported by such a weight of usage in Germany as to make good sense kick the beam.

Life and Speeches of Thomas Corwin, Orator, Lawyer, and Statesman. Edited by Josiah Morrow. Cincinnati: W. H. Anderson & Co. 1896.

THE career described in Mr. Morrow's pages belongs to a period not very distant from us in time, but in fact completely bygone. Corwin was born in 1794, and the stage on which he played a conspicuous part was that on which the curtain rang down with the outbreak of the war; the part could no more be repeated now than that of Webster or Calhoun. In the United States of to-day the chief interest of life centres in cities, in which the ends of the earth are daily brought together by steam and electricity. In Corwin's prime, life in this country had a local, bucolic, and primitive flavor, which in politics was grotesquely exaggerated. Clay is commended to the people by the fact that he is the "mill-boy of the slashes"; in the campaign of 1840 the Whigs show their love of the people and their sympathy with simplicity of life in public men, by putting up log cabins and serving out hard cider from them; Corwin, having had to find employment in early life by driving a wagon-load of provisions for the army in the war of 1812, is, later on, favorably known in politics as "the Wagon-boy," and his friends and supporters, while singing "Van, Van's a used-up man," and "Tippecanoe and Tyler too," do not forget to unite with these inspiring strains the manly stave:

> "Then let us cheer that wagon-boy
> Who drove that noble team, wo-hoy!"

This was the tribute which politics paid to a genuine simplicity of social condition, reflected in all walks and professions.

The Ohio community of Corwin's boyhood was a community of pioneers—their dwellings were actually of logs; so, for that matter, were their first schoolhouse and their first church. They prided themselves on their simplicity, which was considered to recall and improve upon that of the best and purest days of Rome, when matrons still counted their children for their jewels, and Cincinnatus preferred the plough to public office. The presiding justice first selected for the southwestern circuit of Ohio was not a lawyer, but qualified himself for admission to the bar by practice in his judicial capacity. The salary attached to the office was $750; at the bar the highest professional income was $1,000. The common dress was of homespun or buckskin; a professional man wore black and shaved himself. Corwin was throughout his life "Tom" Corwin. In 1828 one James Shields, a Jacksonian, was nominated for Congress against Corwin. In order to damage him irretrievably, a certificate was published to the effect that prominent men of his own party had declared, among other things, that it was his habit, on going to bed, to exchange his cambric shirt for a nightshirt, and Corwin afterwards confessed that it was this charge that gave him his first hope of an election, as he felt confident that Jacksonian Democrats would never unite in support of a man who was too good to sleep in the same shirt he wore during the day.

Such were the times and the community which produced Corwin, and early recognized in him a spokesman. To those among whom he grew up, he was, and to them he remained throughout life, a great advocate, orator, and statesman. More than this, he was, what few statesmen are, a born humorist. When we read of audiences first moved to tears and then convulsed with laughter we feel that it is not a figure of speech. His hearers hung upon his words; his jokes and stories became bywords, until he himself began to feel that he did not produce a sufficiently serious impression, and confided to some young man who asked what course he ought to pursue to achieve success in public life, "Be as solemn as an ass." On this profound truth he did not act.

Corwin's political career was not as remarkable as might have been expected from his powers, partly because his energies tended to speech rather than to definite action. He did not lack boldness, as his speech in favor of refusing further supplies for the prosecution of the Mexican war shows, but even this speech does not seem to have been anything more than the expression of strong feeling. As a prophecy of the "irrepressible conflict" between North and South and an analysis of the causes which were tending to produce it, this oration was remarkable, and is said to have made a profound impression; but it led to nothing, and, down to the very outbreak of the war, he thought that a compromise of some sort could be devised by means of which the South might be reconciled to the Union, and the further extension of slavery be at the same time restricted. Like so many lawyers, he could be contentious enough if he had a definitely marked-out cause to win or defend; but when it came to striking out an initiative in public affairs and making himself the leader of a campaign of any sort, that was not in his line. As Minister to Mexico he displayed the same trait, evidently not caring to make an avenue to fame out of the unusual diplomatic difficulties with which he was confronted. His name is connected with no positive measure of legislation, and his oratory was great on the stump rather than in the Senate.

He was always careless about money matters, and generally involved in pecuniary difficulties; but there was nothing against his honor, though in the case of a Government claim in which he had been interested an investigation was necessary to show that there was no ground for accusing him of wrongdoing. He is reported to have said that he wondered whether any other man ever hid from the constable to read letters proposing him for the Presidency.

The reputation of a great stump speaker must be evanescent. Corwin's declaration in the Senate that were he a Mexican he would offer his own countrymen a welcome with bloody hands to hospitable graves, has become an oratorical commonplace. His translation of the impression produced by the nomination of Polk for the Presidency, "After that—who is safe?" is one of those jokes which are sure of a long life. But his set speeches are not likely to be studied, for either their statesmanship or their oratory. His life was centred in the expression of the thought or sentiment or humor of the hour, and one cannot but feel gratified to remember that his consciousness did not survive the shock which deprived him of the power of speech, and that his last conversation was addressed, as everything said by him had always been, to an audience of friends, crowding about him, and eager for more.

Ulster as It Is; or, Twenty-eight Years' Experience as an Irish Editor. By Thomas MacKnight. 2 vols. Macmillan. 1896.

THE editor of a daily paper is not always the best historian of his own times. His vision is likely to be limited, and his training too often has been to bring into prominence small daily points as against his opponents. We can recommend these volumes as an antidote to the exaggerations of the *Irish World* or *United Ireland*. They will prove of little assistance to those anxious for enlightenment as to the causes of states of feeling and popular outbursts. In the main, Protestant Ulster did her fighting and "outraging" a century ago. She then gained certain rights and privileges regarding the occupation of land which have since staved off the worst results of landlord exaction and agricultural depression. The people of the rest of Ireland, of a more compliant type, bent until they could bend no longer. Protestant education was in the past encouraged; Catholic education was banned. At the period in the last century when, as has since been proved, it was all-important regarding the future of manufactures where the discovery of steam should find them established, the industry of the north of Ireland, for which the soil was suited, was in every way encouraged; the industries of the rest of Ireland were all but extinguished.

It is therefore misleading to expatiate upon the peacefulness, the education, the industry

of "Ulster," as proof of the natural superiority of its inhabitants. And "Ulster" itself is a most misleading expression. What Mr. MacKnight and other writers of his class mean is the geographical limits (four out of the thirty-two counties of Ireland, or nine of Ulster) within which Protestant and Unionist feeling largely predominates. Taking him at his word, Ulster is in truth more illiterate than either Leinster or Munster. The Protestants, from their past history, are better educated than the Catholics. Yet neither Protestants nor Catholics in Ulster are as well educated as their co-religionists in the rest of Ireland. Moreover, in the deplorable Irish illiteracy brought into view at late elections, Ulster takes the lead, and Belfast, Londonderry, and Newry show double the proportion of illiterates to Dublin, Waterford, and Limerick. If Belfast has increased in population, the rest of Ulster, and even the contiguous counties, have declined. It is not fair to compare "Belfast," which includes, with "Dublin," which does not include, its suburbs. Taking the average personal valuation for taxation of the provinces all round, we think we are correct in saying that Ulster is behind Leinster and Munster; and, running our eyes down the list of Irish counties in order of average wealth, we pass twelve before we reach one situated in Ulster.

Bearing such considerations in mind, and what we may entitle the bumptiousness of "Ulster" as against Ireland, while Ireland generally takes "Ulster" little (perhaps too little) into her consideration, we may find these volumes useful antidotes to extreme nationalist propaganda. They bring out clearly the strength and steadiness of Irish Protestant opposition to home rule. They show strikingly the individual go there is in Protestantism as compared to Catholicism. The Protestants of all denominations in Ireland form but twenty-five per cent. of the population. They still practically sway the destinies of the country. In a concluding chapter Mr. MacKnight declares: "There is no community of feeling, and therefore can be no common citizenship, between the two sections of the Irish people." We cannot reconcile ourselves to such a dreary outlook. If antagonism such as this exists in Ireland alone of all English-speaking countries, it may be that the political environment is also different.

The Makers of Modern Rome. By Mrs. Oliphant. Macmillan.

THIS is a very characteristic specimen of the vicious tendency of the age towards hasty bookmaking, in its text as in its illustrations. Mrs. Oliphant is a gifted and prolific writer of fiction, biography, and history; she produces several works yearly, and treats her various subjects with the same facile pen; but her method applied to the great moments of the world's history is wholly inadequate. It has the same relation to history that a series of tableaux-vivants has to a tragedy of Shakspere. She seizes the dramatic moment, saturating it with all the local color that anecdote, detail, and fancy, and an immense facility in stringing adjectives together can give. In her preface to this work Mrs. Oliphant disarms serious criticism by her conviction that "nobody will expect in this book or from me the results of original research or the settlement—if any is ever possible—of vexed questions." And further on: "The work has been much interrupted by sorrow and suffering, on which account, for any slips of hers, the writer asks the indulgence of her unknown friends." But to undertake a work extending over six hundred pages, under similar conditions, is a mistake, all the greater that Mrs. Oliphant, in her first chapter, gives as her reason for treating of this particular moment of history its having been as yet neglected by English authors, though as a time of transition it is as interesting as important.

The opening chapter begins with a description of life in Rome during the middle of the fourth century: the debasement which had taken possession of all classes after the seat of empire had been transferred to Constantinople, the extreme luxury of the patrician class, and the love of amusement, amounting to degradation of the populace; the struggle between Christianity, already strong as a system, and Paganism, which Julian had in vain attempted to revive. The Christian Church itself in Rome had, during the four centuries of its existence, wandered wildly astray from the teachings of the Master. Jerome himself tells of one of the highest Roman officials who proposed to Bishop Damasus to become a Christian if in return he would make him Bishop of Rome, indicating that appointment as more valuable than any in the Government. Mrs. Oliphant quotes Jerome himself railing at the demeanor and dress of the popular young priests of the time, whom he likens unto bridegrooms rather than teachers of religion. In the midst of these excesses of luxury and idleness, a revulsion of feeling among the more refined was brought about, taking its first impulse after the arrival in Rome of Athanasius, driven from his see in Alexandria by persecution in the year 341. Athanasius came with two of his monks, and seems to have been welcomed chiefly in the house of a noble widow, Albina. He brought with him the life of St. Anthony, which he left on his departure to the daughter of Albina, Marcella. This work had a marvellous influence on the devotees of the Christian faith, impelling them to seek to lead a more spiritual life, often ending in asceticism. Marcella, whose history is told by St. Jerome himself, founded a home in her palace on the Aventine for the noble women who had aspirations for this higher life.

"Honourable women not a few" Mrs. Oliphant calls this first division of her book, and with irritating persistence she insists continually on comparing this company of earnest Christian devotees with the Hôtel Rambouillet or with the most modern æsthetic sect of souls. It is this desire to popularize her subject, however remote, which imparts a tone of gossip and vulgarity to her treatment of the history of St. Jerome, Milania, Paula, Blaesilla, and other noble ladies who were his disciples for long years in Rome, some of whom followed him to the East, when, after the death of Damasus, the breath of scandal embittered his life and made his position in Rome intolerable. It is strange that, while continually quoting from St. Jerome's own earnest and vigorous prose, Mrs. Oliphant cannot refrain from using the most bombastic language, thus spoiling a story so interesting in its incidents. After a string of high-flown questions on the expediency of Paula's deserting her children and going to the East, which our authoress leaves unanswered, she returns to the modern parallel:

"But is there not a Murray, a Baedeker of the fourth century still existent, the 'Itinéraire de Bordeaux à Jerusalem,' unquestioned and authentic, containing the most careful account of inns and places of refuge and modes of travel for the pilgrims? It is possible that the Lady Paula may have had that ancient roll in her satchel, or slung about the shoulders of her attendant for constant reference."

The second part treats of the Popes who made the Papacy—Gregory the Great, the monk Hildebrand, Pope Gregory VII., and Innocent III. As one might expect, the narrative of their lives is too fragmentary to give any comprehensive idea of their importance to any one who is not already acquainted with their history. It is in the third book, treating of Cola di Rienzi, that Mrs. Oliphant finds a truly sympathetic theme for her pen in the meteor-like apparition of this fantastic personality. She has taken the old chronicle for her subject-matter, and she could not have done better in this choice, for no romance could be as interesting as the 'Vita di Cola di Rienzo' by the unknown chronicler whose patriotism was as great as his admiration for the Tribune. Then we have minute descriptions of the pictures on the wall by which Rienzi secured the attention of the people, his sermon in St. John Lateran, the extraordinary *mise-en-scène* which seemed indispensable to all his acts, his strange costumes, the feuds of the Orsinis and Colonnas, Rienzi's wonderful assumption of power, and, last of all, his miserable fall and sudden loss of initiative. Mrs. Oliphant gives us the whole story at length, with extracts from the narrative and translations of Petrarch's letters, yet Rienzi can hardly be called a maker of Rome; "lo buono Stato," which he so liberally promised, was of too short duration.

Our author has but little sense of proportion: the concluding section, "The Popes who made the City," brings us down to Leo X., passing over the pontificates of Innocent VIII. and Alexander VI. The text is throughout profusely illustrated with pen-drawings after photographs, by Mr. Joseph Pennell, who is capable of better work.

An Introductory Course in Japanese. By Clay MacCauley. Yokohama: Kelly & Walsh. 1896.

AS with the language of other peoples, that of the Japanese is a sensitive mirror of changes in the national life. The mutations of history, political, social, and industrial, are distinctively recorded in the growth of speech. In the literary development of Dai Nippon we have first the unwritten songs and poems, then the documents and annals, in which Chinese logograms are used, chiefly for their phonetic value. After three centuries or so of use of the cumbrous ideographs, we find that the imported speech has tinged the vernacular with plentiful synonyms and occasional idiom; while, for practical writing, there has grown up a body of nearly fifty phonetic and syllabic characters, abbreviated from as many Chinese ideographs. One might now suppose that, with a syllabary fairly adequate to express native thought, the wise men as well as mediocrity would fully employ it. In all the old world of Chinese influence, however, a reputation for learning was closely associated with things formal, mechanical, and visible. Originality or naturalness was not at a premium. The "face" of things was more important than reality; the raiment of thought was more than its body. Hence the learned Japanese clung to the Chinese writing and vocabulary, using what to common folk was as Latin or Greek among us. This for a thousand years has been the general attitude of most Japanese authors.

Fortunately, however, the women at court,

especially in the tenth and eleventh centuries, made use of both the *kana* or abbreviated script and of the pure vernacular. It is their works which have always been recognized as the standard of pure Japanese. Several mediæval stylists of the masculine gender actually saved their prose writings from oblivion by employing this "woman's way" of writing. After the political revolution of the twelfth century, when, through long degeneracy, monarchy gave way to duarchy and feudalism, the chasm between the written and spoken language widened. As soldiers and peasants constituted the vast majority in the war-scourged empire, the language of scholars became unintelligible, and the degradation of the colloquial went on. Under the Tokugawa regency, 1604–1868, literature (that is, the study of Chinese history and philosophy) revived. Out of the mental activity thus engendered grew up the Mito school of historians, the Genroku (1688–1703) novelists, and the Shintō investigators of the almost forgotten native classics. These writers produced the "Sinico-Japanese," that is, a written language which shows "a wholly successful incorporation of Chinese words into the Japanese sentence." In this modern standard written language Japanese structure and idiom control the Chinese words, which furnish vocabulary and meaning but take the native inflections, just, as in English, terms of classical or Oriental origin do with us. Even the enormous additions made to the language during the present Méiji era have been in word only, the Chinese being appropriated in its Chinese form and the European into writing as far as the sounds can be represented by means of the *kana* syllables. The most striking phenomenon in recent printed and written Japanese has been the increased use of the *kana* for the purpose of giving the uneducated the pronunciation and the meaning, or both, of the borrowed Chinese.

The change of greatest moment, however, is in speech, for in New Japan life is now worth living for every one. Everything is for the whole people—law, science, education, and literature. What was once the exclusive property of the nobles and gentry is now free to all. Hence, the colloquial speech is rising in dignity. The stately icebergs of the written forms bid fair to melt into the ocean of common speech, and the spoken and written language to become one. As in Tudor England the dialects of Kent and Surrey became dominant, and Latin fell out of use except to enrich the colloquial, so, in Dai Nippon, Chinese has fallen and the maturing Tokyo colloquial seems destined to be Japan's standard language of pen and tongue; and this, early in the twentieth century. The more active life with its pressing needs will compel the abolition of the complex ideographs, and *kana* will become the basis of the future medium of literary expression.

At such a time, our countryman, the Rev. Clay MacCauley, President of the Senshin Gakuin (School for Advanced Learning) in Tokyo, sends forth his book. Showing his faith by his works, he uses the *kana* script all the way through. After a general introduction, which presents briefly and brilliantly a history of the life of the Japanese language, he devotes nearly a hundred pages to the progressive mastery of writing and pronunciation. The *kata kana* or square character is easy enough for the beginner, for there is no variation of forms. The *hira-kana*, however, have many variances that bewilder and annoy. Instead of the hundreds of forms which it is possible to find in native books, Mr. MacCauley selects a standard half-hundred of unvarying forms. Nearly two hundred pages are devoted to the grammar, the author striking a golden mean between the elaborateness of Hoffman and the bald severity of Hepburn. Practice in the colloquial is furnished most admirably by selecting forty-eight out of hundreds of Japanese proverbs, and making the conversation turn on these verbal coinages—each "the wisdom of many and the wit of one." The stilted, unnatural, and useless verbiage found in ordinary phrase-books is thus avoided, and the student learns the mastery of real speech. The texts in *hira-kana* and Roman are printed on opposite pages, and a sufficiency of notes elucidate the syntax. There is a good index.

The author dedicates his work to his former preceptor, Prof. Charles Carroll Everett of Harvard Divinity School. He has evidently profited by the study of Whitney, for he brings to his work clearness of vision, penetration, and remarkable powers of simplification. Being somewhat familiar with the other aids to the acquisition of Japanese, we hazard little in pronouncing this the best manual for the beginner. It is natural, progressive, and simple. Its wonderful clearness comes from the author's thorough familiarity with the subject, and his happy knack of applying the latest achievements of science to his task. Both printing and proof-reading are excellent.

BOOKS OF THE WEEK.

Boname, Louise C. Study and Practice of French in School. Parts I., II. Philadelphia, 258 S. 16th St.: The Author.
Doudney, Sarah. A Vanished Hand. Boston: A. I. Bradley & Co. $1.
Fredericq, Prof P. Corpus Documentorum Inquisitionis Hæreticæ Pravitatis Neerlandicæ. Part 2. Ghent: J. Vuylsteke.
Geary, Sir W. N. M. A Lawyer's Wife. Philadelphia: Lippincott. $1 25.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 10, 1896.

The Week.

THE honest people of Vermont have earned the hearty gratitude of the country, and the returns indicate that the credit is due in equal shares to Republicans and Democrats. There is not the slightest evidence that a single Republican voter deserted his party on the free-silver issue, and thousands of Republicans who would ordinarily not have voted must have determined that the present crisis demanded an unusual exertion. It is idle for the Bryan party to assert that no effort was made to influence the vote of Vermont for free silver. The Populist candidate for Governor, a man of considerable wealth, has for a number of months been actively engaged in distributing free-silver documents throughout the State. He owns a newspaper in which he has published the speeches of Teller and Tillman and Bryan and their like, and has proclaimed that this silver literature should be placed in the hands of every voter in Vermont. Speakers were engaged in behalf of the silver cause who went nearly everywhere in the State, and it was openly boasted that the farmers were thoroughly posted on the matter and would show it at the election; a boast which seems to have been quite justified by the event. It must not be forgotten that the Vermont farmers have suffered of recent years probably quite as much as those of the West. They have had almost to give away their sheep, their horses have been unsalable, their butter has never brought so little, their potatoes could not be sold last year for enough to pay their freight, and in Vermont if anywhere the promise of higher prices might have been expected to draw farmers to the silver cause. But when it came to getting higher prices by national dishonor, the Vermont farmers arose with righteous indignation and smote the enemy hip and thigh.

It is especially gratifying to see that fully 25 per cent. of the Democrats not only refused to support the candidate of their own party, but followed the advice of Mr. Phelps and voted the Republican ticket. It is of course impossible to prove this assertion positively, but it is quite incredible that there were 15,000 Republicans not usually voting who were drawn out on this occasion, and it is altogether reasonable to believe that at least 5,000 Democrats voted for maintaining the honor of the country. Considering the tenacity to party which has always characterized the Vermont Democrats, it seems probable that the Chicago platform and candidates will in some States not obtain half the regular Democratic vote.

The law which governs State elections in Arkansas is theoretically a good one. The Governor, Secretary of State, and Attorney-General, as a State election board, appoint three commissioners for each county, whose duty is to appoint three judges and two clerks for each voting precinct. The law provides that the county boards shall not be all of the same political party, and that the judges of election shall not be all of the same political party "when competent and discreet persons" can be found of the opposite party. But as a majority controls the action of the county board, the two Democratic Commissioners always appointed can use the provision regarding "competent and discreet persons" to rule out all but members of their own party, or to name as representatives of the Opposition ignorant or mercenary men. This is what has been done this year. The fact seems to be established that in a dozen counties where the Republican strength is greatest, the Democratic majority of the county election boards ignored the nomination of the Republican member of the board, and refused to appoint the man suggested by him in each precinct, and, instead, either appointed all the election officers from the Democratic party, or selected men claiming to be Republicans, but not regarded as such, or as being trustworthy, by the Republicans of the county. Of course there could be but one motive for such action. The Democratic managers proposed to make the count in these counties what they chose, without reference to the way the ballots were actually cast. Charges of gross fraud are already made, and there is no reason to doubt that such charges are well founded. Under these circumstances the size of the majority for the Democratic ticket (some 60,000) possesses absolutely no significance.

The quality and temper of the Indianapolis convention were alike remarkable. It is not too much to say that the delegates represented the intelligence and character of the Democratic party more fully than any regular convention of recent years has done. They were chosen because of their character, rather than selected because the machine decided to have them go. There were few of the regular Boys among them, and the usual Tammany contingent, which lowers the average of any body it sits in tremendously, was not present. The convention was made up entirely of men who were in it because their convictions took them there. They believed in definite principles so profoundly that they were willing to defy "party regularity" in order to maintain them. The vigor and force of their convictions were shown by the frankness with which they expressed their honest opinions of Mr. Bryan and the platform upon which he stands. The ticket presents a very striking contrast to that nominated at Chicago. Messrs. Palmer and Buckner come before the people weighted with years and honors. Both have shown in military and civil life qualities which have commanded the respect and admiration of their fellow-men. They have been tried and found worthy in various fields of public service. Senator Palmer was a brave and distinguished Union soldier in the civil war; was afterwards Republican Governor of Illinois, and in more recent years has been a Democratic Senator from the same State. He was a Democrat before the war, and, after a few years of association with the Republicans during and after the war, returned to his former political affiliations because he could not approve Republican tendency toward federal centralization. In all positions he has shown the same qualities of unswerving devotion to principle, of clear and strong intelligence, and of genuine patriotism. Gen. Buckner's career has shown like qualities. He was a brave Confederate soldier, and has served in recent years as Governor of Kentucky. He was in retirement when his party in Kentucky became infatuated with the silver craze, and immediately took the field in opposition to it. No man has ever questioned his courage or his honesty, and, like Senator Palmer, he has shown, in every position which he has held, those abilities and attributes which command the respect and confidence of men.

How can any Democrat of intelligence and character hesitate for a moment between these two representatives of all that is best and worthy in their party and Bryan and Watson or Bryan and Sewall? Bryan is a harum-scarum young man of thirty-six who has been in several professions, making no mark in any, and leaving behind him in all no impression of either strong ability or steadfast character. He is something of a lawyer, a little of a journalist, and more of a politician than either. His speeches leave no doubt in any trained mind that he is only a half-educated man. He is worse than untried, for he has been tried and found wanting. He is going about the country pouring forth at every railway station silly and ignorant talk about finance, currency, government, syndicates, railways, bankers, and property-owners. All that is stable in the country, all that has tended to its development as a civilized state, he denounces and promises as President to overturn and destroy. His associate on the ticket who will be most generally supported with him is Tom Watson, a roaring, ignorant demagogue who is totally unfit for any public office, and whose

nomination would have been possible in no national convention except one which represented the discontent and ignorance of the land. That any self-respecting Democrat should under any conditions persuade himself that he could vote for such a party ticket as this, when a really admirable one is in the field for his support, passes comprehension.

The importance of putting a check to the extravagance of Congress, as recommended by the Indianapolis platform, is very well shown by a recent publication of the Treasury Bureau of Statistics. In this publication, the receipts, expenditures, and debt of the United States, from 1789 to 1896, are exhibited, together with the annual appropriations from 1873 to the present time. One of the diagrams shows that the net expenditures of the Government declined pretty steadily from 1868 to 1878, and rose gradually again until they were in 1888 about what they were in 1867. By 1893 they had increased nearly 75 per cent., and have since declined very little. The pensions are responsible for a large part of this, but the new navy and "miscellaneous" appropriations have had much to do with it. Another diagram shows in a startling way the increase of appropriations per capita. In 1885 they amounted to about $2.50 per head, while in 1892 the average had risen to $5.20. By examining the diagram showing the receipts of the Government, we see that the increase of these receipts has had the effect of stimulating the appropriations of Congress after a short time; the enlarged appropriations generally beginning at about the time when the revenue began to fall off. During the earlier years of the century the total gross expenditures varied to a surprising extent. From 1840 to 1846 they hardly rose above $30,000,000, but in 1847 and 1848 (during the Mexican war) they were $60,000,000, falling below $50,000,000 in 1850-'52. In 1854 they were $75,000,000, and but $77,000,000 in 1860. In 1865 they reached the enormous figure of $1,906,000,000, and since 1868 they have averaged roughly about ten times what they were before the war. These gross expenditures are swollen, of course, by payments of the interest and principal of the public debt, but the net expenditures are approximately double what they were twenty years ago. Considering what we have suffered in the way of pernicious legislation, our Congress is a pretty expensive body to maintain.

The *Tribune* announces that "a heavy deficit in August confronts the party which has reduced the tariff," and asserts "that it is absolutely necessary to raise more revenue," and that the only way it can be raised is either a "heavier tax on beer or different duties on imports." The answer is that it is unlikely that any change in the tariff can be made for at least a year, and that it is unlikely that any change can be made even in a year, so long as the Senate is composed as at present. To get a new or changed tariff now through the Senate, both the Republican party and Mr. McKinley would have to violate their vows not "to do something for silver." That is, they would have "to do something for silver," and that something would have to be something that would hinder or prevent the maintenance of the gold standard. The Senate would not be content with anything less. Consequently all discussion of the tariff in the present canvass is not simply confusing to the public, but futile. The one topic is now and has been from the beginning the currency. Supposing, however, the question of revenue to be an important one, no discussion of revenue in the case of a nation any more than of an individual, is proper without discussion also of expenditure. No honest man ever thinks of asking, "How much money do I need?" without also asking, "How much money must I spend?" The same thing is true of a nation. Every country possessed of respectable and orderly finance always links income and expenditure. It bases expenditure, as every prudent man does, on income. Our last two Congresses have started on a course unknown since the establishment of constitutional government. They have voted expenditures without any reference to income. The last river and harbor appropriation was even voted out of an empty treasury. In other words, they have wilfully made deficits, just like any careless young spendthrift. So that to expect us to cast about for increased sources of income without ever asking whether an expenditure is not too great—that is, whether we cannot make ends meet by reducing our expenses—is a little too much. All, or nearly all, our difficulties are due to reckless outlay, indulged in during the past few years for the sole purpose of making a high tariff seem necessary. This is not the time to go again over this sorrowful tale.

The "yardstick argument" used by Mr. Bryan in one of his speeches in Ohio discloses in a way that is almost startling the confusion that prevails in his mind concerning the most elementary principles of monetary science. He said, in reply to the argument that it was impossible to have two yardsticks of different lengths or two dollars of different values, that there was no analogy between the cases. To make the comparison perfect, he said, it would be necessary to have a yardstick made out of some material that would grow longer or shorter under varying conditions. But that, Mr. Bryan very correctly observed, would be a very bad kind of a yardstick. It would lead to incessant quarrelling over the standard of measure. The man who was buying would insist on using the long yardstick, and the man who was selling would want the short yardstick, and instead of trading they would come to blows. The most obvious inference from these premises is certainly that a varying dollar would be worse than a varying yardstick. Whenever there has been any doubt as to the value of money, the very evils described by Mr Bryan have always taken place. The financial history of every people is largely made up of the record of the disputes and mischiefs that have arisen from the use of money that had been tampered with, in one way and another, by the Government. But the inference that Mr. Bryan drew was that the amount of money should be fixed by legislation. According to his theory, "the toiling masses who produce the wealth of the nation" would adopt legislation in favor of "a dollar that will keep pace with property." The experiment has been often tried, generally with the claim that the toiling masses wanted it, but the dollar never seems to keep pace well when legislators take it in hand. They can produce a varying "legal-tender," but they cannot make gold change its place in the estimation of men.

One cannot read Mr. Schurz's masterly speech at Chicago on Saturday evening without recalling the old simile of "using dynamite to split a pumpkin," for surely never before was such power and lucidity of statement, such weight of argument, such patient marshalling of facts brought to bear upon so weak a subject as Mr. Bryan. All his ignorant and silly assertions are exposed and refuted with such care and thoroughness that one marvels at the orator's patience in continuing his task to the end. In fact, the most extraordinary feature of the present campaign is the amount of time and energy that all the forces of intelligence and civilization are called upon to devote to the elucidation of rudimentary truths and principles which ought to be taught in every schoolroom. Mr. Bryan and his disciples have turned the whole country into a primary school, and made it necessary for all of us to go into the business of teaching the multiplication table and other elementary courses of instruction to 70,000,000 of people. Mr. Schurz puts the case well in the following passage:

"However, the ultimate result is not at all uncertain. After a period of infinite confusion, disaster, humiliation, suffering, and misery the American people will at last regain sanity of mind and arrive again at some very simple conclusions: That, if you call a peck a bushel, you will have more bushels, but not more grain; if you call a foot a yard, you will have more yards, but not more cloth; if you call a square rod an acre, you will have more acres, but not more land; and if you call 50 cents, or 1 cent, or a bit of paper a dollar, you will have more dollars, but not more wealth—indeed, a great deal less chance of wealth, for you will have far less credit, because far less honesty. We shall then have learned again that the wit of man cannot—although insanity tries very hard—invent an economic system under which everything you have to sell will be dear and everything you have to buy will be cheap. And having got

hold of these very simple truths, the American people will then in sackcloth and ashes repent of this insane free-coinage debauch."

Mr. David A. Wells contributes to the literature of the campaign, through the *Tribune* of Monday, a remarkably forcible demonstration of the real causes of the fall in prices which the silver advocates attribute to the demonetization of silver in 1873, and to the consequent "appreciation in the value of gold." In the matter of this appreciation we venture to hope that Mr. Wells has made so thorough work now that further refutation will be unnecessary. His demonstration shows that, so far as actual proof is concerned, there has been a depreciation rather than an appreciation during the past twenty years. Mr. Wells makes equally clean work of the other branches of the subject, such as the real causes of the fall in prices, and Senator Jones's real reasons for being a silver advocate; and he disposes of the voluble President of Brown University in this neat manner:

"The fact of it is that the world is confronted with the most remarkable phenomenon that has ever characterized its civilization, and has not yet fully recognized its importance (the least so, apparently, in the United States)—a phenomenon sequential and in harmony with the assertion recently made by the eminent French chemist and economist, M. Berthelot, in an address before an association of European scientists, that practically more has been done for the development of man during the last three quarters of a century than during the preceding 6,000 years. President Andrews of Brown University, who regards free coinage in the light of a panacea for all evils, has caught glimpses of the situation when he expresses the opinion that 'the money question at the present time is the greatest question of civilization.' But he had not sense enough to distinguish an effect from a cause, and so takes rank with an untutored Indian who connects the death of his chief with an eclipse of the moon."

Some of the results of upsetting the standard of value are indicated by the position taken by the leading shipbuilders of the country concerning their bids for constructing new vessels for the navy. It is reported that they have asked the department to postpone the bidding until after the November election, which request has been refused on the ground that the advertisements for proposals had already appeared. Disappointed in this, the shipbuilders now talk of stipulating for gold payments in their contracts; but they can hardly believe that Mr. Bryan's Secretary of the Navy will carry out any contracts of that description, even if their legality were certain. The shipbuilders have contracts already on hand the completion of which will require years, and they are naturally nervous at the possibility of inflated prices for materials. Of course there is but one thing to do if they are going to bid at all on these contracts, and that is to put their prices high enough to secure a profit if we come down to a silver basis. Then if we do they cannot lose; while if we maintain the gold standard, they will gain enormously. This is but a repetition of what took place when the Government began to issue fiat money during the war. It raised prices against itself prodigiously, and ran into debt a thousand millions more than it needed because it had hurt its own credit. All these bills, of course, are eventually paid by the poor and ignorant people whom Mr. Bryan is trying to persuade to look for prosperity in the ruin of their employers.

The parliamentary committee of the Trades Union Congress, which began its sessions in Edinburgh on Monday, "blames" the Tories for not having passed a single measure "in the interest of labor," and for even preventing private members of Parliament from promoting such measures. This seems to be a shaft aimed at Mr. Chamberlain's bosom, as he was the man most lavish in promises of what he and Salisbury were going to do for the workingmen. But the latter should consider how many things Mr. Chamberlain has had to occupy him in the process of developing England's "colonial estate." The first thing he did was to stir up an exceedingly bad neighbor in the person of old Krüger, who looked angrily over the hedge and said that this developing of estates was all mighty fine, but that developing of other people's estates was one of the things he proposed to draw the line at. Then the worried Colonial Secretary had to devote himself to his grand scheme for an imperial zollverein, in order to see it condemned by the best financial authorities at home, and coolly received or openly flouted by the colonies themselves. How could a man with these great problems on his hands be expected to remember all he had said about old-age pensions and workingmen's insurance? Both he and Mr. Balfour now say they are going to do better after the grouse-shooting is over. But the trades-unionists are evidently sceptical about this. On the other hand, they doubt if it is "prudent" for them to have anything more to do with international socialist congresses, after the lamentable exhibition given by the last one in London. Cut off thus from both parliamentary action and radical agitation, the gloomy prospect is before the trades-unions of being compelled to discuss prosaic matters such as work and wages and coöperation and fraternal societies and the improvement of the morale and discipline of workingmen. The other is much more ideal and enlivening, but this is, after all, the way to fill the pocket and the stomach.

The Royal Commission of thirteen, which has been sitting for three years on the subject of Irish taxation, has made its report. The Commission is composed mainly of Englishmen, and contains such men as Lord Farrer. It has reported, by ten out of the thirteen, that England has regularly been taking from Ireland each year for fifty years about $13,750,000 more than her due proportion through a government carried on for most of the time by Englishmen, hostile to or ignorant of the country. The question what is now to be done is the hardest Irish nut Parliament has to crack, far harder than any produced by O'Connell or Parnell. It shows that England owes Ireland £100,000,000 sterling. What is to be done? Pay the debt or ignore it?

The returns of the census recently taken in France show that the hope that was aroused a few years ago that the decline of the birth-rate had been arrested is not likely to be realized. It was reasoned that the destruction of men in the prime of life at the time of the war with Prussia was still showing its effects, and that in a few years the operation of this cause would cease. But there is no indication of anything more than an insignificant growth in population, and, what is especially grievous, the increase due to immigration forms a large part of this. The French newspapers are now embarrassed with the problem of providing colonists for their colonies. They have plenty of colonies, which cost a great deal of money and the lives of many soldiers, but if Frenchmen will not multiply sufficiently to keep up the population at home, it is certainly a doubtful policy to encourage them to go abroad. If they emigrated from France, their places would undoubtedly be filled by Italians and Germans and Belgians, so that the condition of the population would be more unsatisfactory than ever. As a correspondent points out, the usual speculations as to the cause of the growing sterility of the French race are indulged in by the European journals, but they seem to attach insufficient importance to the frightful burden of governmental expenditure. The debt of France has grown by leaps and bounds, and, in spite of some feeble efforts to check extravagance, every year shows a large deficit in the budget. New taxes are continually devised, inheritance taxes, income taxes, and Government monopolies, the effect of which can only be to increase the revenue of the Government by diminishing that of its subjects. But it is notorious that no people in the world is so anxious to provide well for its children as the French, and if the share of the tax-gatherer in all earnings is continually increased, the share of posterity must be diminished. We venture to say that, if the truth could be got at, the French parent reasons that if he cannot leave property enough to provide comfortably for three children, he will not leave three children to be provided for. There have been many instances in history where population has declined under the pressure of taxation, and there is no reason why France should be an exception.

THE PLATFORM OF THE GOLD DEMOCRATS.

NOT since the two Republican platforms of 1856 and 1860 has there been any party deliverance so businesslike and so free from claptrap as that adopted by the gold Democrats on Thursday in Indianapolis. We do not recall any platform which contains in so succinct a form a description of the American government and a statement of the principles of sound currency. In both these particulars it is superior to that of the Republicans; but we must remember how times have changed since the Republican platform was drawn. Politicians, although they loudly demand trust in the people, rarely do trust them. It now appears pretty plain that the Republicans so late as June had but small knowledge, if any, of what was passing in the mind of the public. The candidate was thinking of nothing but protection, and was afraid not only to declare openly for a gold standard, but to use the word "gold." The result was that the platform fell a good deal behind popular sentiment in clearness and directness and emphasis.

This cannot be said of the Indianapolis platform. The gold Democrats have found within a few weeks that they cannot call too loudly for the gold standard as the standard of the civilized world, in order to satisfy the public. There is no compromise or placating in their attitude. They do not bargain; they proclaim. Their utterances, too, on the tariff, on the condition of our shipping, on the extravagant expenditures of Congress, on civil-service reform and currency reform, on international arbitration, and on the Supreme Court, are fully up to the latest modern thought on these subjects. Possibly, it may be said, we should not have obtained from them so clear and excellent a statement of their views if they had expected to win; but we must nevertheless thank them for the credit and honor they have done to American politics, by laying before the world the best thought of rational Americans on the great questions of national polity. At this crisis, when so much nonsense is talked and written by people who pretend to represent us in the eyes of foreigners, it is a great thing to have the common sense of America produced in plain prose.

The platform denounces

> "the further maintenance of the present costly patchwork system of national paper currency as a constant source of injury and peril, and asserts the necessity of such intelligent currency reform as will confine the Government to its legitimate functions completely separated from the banking business, and afford to all sections of our country a uniform, safe, and elastic banking currency under Government supervision, measured in volume by the needs of business."

This year is the first time any political party has been called on for a plan of positive financial reform, and the great defect of the Republican platform is that it failed to meet this demand—a fact which was pointed out by the London *Economist* at the time of its promulgation. The United States is to-day in the position of a rich man whose affairs have fallen into disorder, partly through his extravagance and partly through bad management, but whose resources are still large, and who has called a meeting of his creditors. Now, if he were to tell them simply that he was determined to keep his credit as untarnished as his honor, that he came of honorable ancestors, and was an honorable man himself, and that if his word was not as good as his bond, he was going to find out the reason why, and said not one word about the ways and means by which he expected to pay his debts, about the amount of his assets, or the way in which he meant to turn them to account, would they not conclude that he was either crazy or meant to fool them? They certainly would. We are making to-day tremendous exertions to assure the world, through every organ we have, that our credit is good and our financial integrity undiminished, but neither the Republican party nor the Bryan party has submitted any plan of reform.

The Republicans have said they are going to keep our honor untarnished by an increased duty on foreign imports, but the last time they tried this they were overwhelmingly defeated at the polls. The Bryanites say they are going to do it by adulterating the coinage and scaling public and private debts. We all say we are going to maintain our existing currency at par in gold, cost what it may. But what the world wants to know is exactly, not in terms of politics, but in terms of business, how we are going to do it. Is it by quarterly loans, or by withdrawing the silver and greenbacks? In short, what the world is waiting for from us, is what is called a "business statement" of our affairs and expectations.

We must be thankful to the Democrats, therefore, for having called for the withdrawal of the greenbacks and the establishment of an elastic banking system, as party doctrine, something for people to vote on and support. This is what the situation demands. It is with this the next Congress should occupy itself first of all. Its chief business should be to place our financial system on a basis of facts and not on a basis of windy rhetoric. The difficulties of this we do not underrate. In every other civilized country, when the Government gets into financial difficulties, it calls into council the leading bankers, exchange brokers, and other men of the country whose business it is to deal with money and maintain credit. They are the experts of the money market. The Minister of Finance asks their advice whether he had better borrow, or tax, or establish institutions of credit, and he takes it just as a man in financial trouble takes the advice of his lawyers or brokers. We, on the contrary, take the opinion of the long-haired men, the shady politicians, the blathering orators, and of nearly every one we can hear of who knows nothing about money or its functions, and who has himself failed in life, and we load the bankers and exchange brokers with abuse. We use the suggestions of the bankers as lists of things which we must on no account do or even talk about. The long-haired men, in fact, recently frightened us so much that we were afraid to say "gold," like naughty children who had been caught cursing.

If we are to get back to civilized finance, this must cease. Money and exchange, and banking and credit, though not mysteries, are among the numerous complications of the wonderful modern world, and those whose business it is to deal with them daily are experts like any others, whose knowledge and experience are of supreme value. The way we have been in the habit of treating them of late years is a characteristic of barbarous communities like Paraguay or Somaliland. Civilized finance cannot be carried on and the credit of a civilized commercial nation be maintained by the first comer. There is little use in supposing that we can get out of our financial slough by consulting Populist farmers, or broken-down politicians, or "boy orators."

DENIS KEARNEY AND W. J. BRYAN.

THE people of the East have been listening of late to a voluble young demagogue from the West, who came to preach a war of classes, and to tell the masses that they are threatened with ruin by good money, since "money," according to this new financial authority, "may be too good" for the poor man. It has been a somewhat surprising experience for the people dwelling east of the Alleghanies, numbering as they do nearly one-third of all the people in the republic, to learn that they live in what a candidate for the Presidency considers "the enemy's country," and to be told that they are engaged in a conspiracy to defraud the other two-thirds.

But we are not this year for the first time hearing a Western demagogue denounce Eastern people who have accumulated any money as public enemies, and prophesy the ruin of the masses if the policy of the Government shall keep all of its currency always as good as gold. Nearly twenty years ago, before specie payments had been resumed, and while the success of that experiment remained to be proved, there came across the continent another demagogue with a mission to those oppressed by the despotism of gold. In the summer of 1878 the ears of Eastern people were assailed with the loud cries of an orator from the Golden Gate, and Denis Kearney appeared in our cities as the rescuer of the down-trodden masses.

A fellow-feeling had irresistibly attracted this demagogue of the San Francisco Sand Lots to the champion dema-

gogue on the Atlantic Coast, and Kearney made his way straight to Gen. Benjamin F. Butler, with whom he held sweet converse in the interest of suffering humanity. The memory of that trip has grown somewhat dim in the minds of men who lived through the period of a depreciated currency, and hundreds of thousands will vote for President next November who were hardly more than babies then. It is well, therefore, to recall some of Kearney's speeches in 1878, and to show how perfect a prototype he then was of the William J. Bryan of 1896.

Kearney reached Boston on the 28th of July, and began speaking as soon as he had left the train. He informed his "fellow-workingmen of Boston" that he brought "glad tidings," having "left the plains of California strewn with the festering carcasses of public plunderers." He declared that his "simple mission was to address the horny-handed sons of toil," and that he had "proclaimed from the inception of this movement death to the machine politicians, death to the thieving capitalists, and death upon death to the murdering, plundering land-pirates." Of course Kearney was bitter against the press. He took occasion to "thank God that I am not a man who was made by the newspapers," and announced that he "despised the corrupt, monopoly-fostering press of the United States." He denounced the "murdering monopolists, who are day by day grinding the workingmen in the East," but comforted the miserable victims by the assurance that "we propose to ameliorate the condition of the laboring men."

On the 5th of August Kearney spoke in Faneuil Hall, and there was "one of the largest gatherings ever held within and around its walls." The Sand Lots orator had met Butler in the presence of a reporter, who furnished the press a verbatim report of the conference between these two unselfish men upon the best means of righting the wrongs of the masses, and Kearney opened his address in the old cradle of liberty by "bringing a message of greeting and love to the man who is lesser than *Macbeth*, yet greater—to that fiery and incomparable Rupert of debate, to that chivalrous and white-plumed Navarre of the rostrum—gallant, gifted, glorious Butler," who, he hoped, would "receive the reward from the workingmen of Massachusetts he so justly merits for his bold and outspoken action in behalf of downtrodden humanity." At this point, the report reads, Kearney "took off his coat and loosened his cravat." Being thus ready for business, he proceeded in this strain:

"What means this outpouring of people? What means this grand tidal wave? What is the matter with the country, that the workingmen are arising from North to South, from West to East? To do what? To take charge of their own affairs. This vast uprising of the people—what does it mean? Does it not mean death to the railroad robber and the lecherous, thieving bondholder? And does it not mean political oblivion to the rancorous, villanous political bummer?"

Kearney "paid his respects to the press" at length in his usual strain, and concluded as follows:

"I hope you will profit by my advice, which is to pool all your issues—put all your issues into one pot—and next November you will be able to announce victory for the honest workingmen of Massachusetts. Drop all other issues, and get together for bread and butter. All in favor of pooling issues hold up their hands. [All hands were raised.] All opposed. [No sign.] Now I hope no one will state to-morrow that this was not a unanimous meeting—unanimous to fight for a common cause."

On the 12th of August Kearney visited Lynn, Mass., and spoke on the Common to a crowd of about 12,000 persons. "If you take care of your issues," he said to the workingmen, "Massachusetts will be all afire inside of a month. Of course, I don't mean practically, but afire with the love and welfare of the workingman. Workingmen are going to put their soldiers on duty, and simply elect the men they want to live under in Massachusetts. Make all the necessary preparations for entering the White House in 1880."

Of course Kearney was "down" on gold, and in love with the depreciated greenback currency then in use. Equally of course, he was bitterly opposed to the idea of resuming specie payments in 1879, as then proposed by existing law, and perfectly sure that the carrying out of the policy would mean ruin to the masses. He discussed this subject in his New York speech on the 6th of September, delivered in Union Square. He began by declaring that "this is a movement of the American people—a second uprising of the people who have recorded an oath in heaven that they will be free," and that "the question is now in the coming fight between honest men and thieves." He proceeded to commend the Greenback party, and then drew this contrast between gold and greenbacks:

"In our recent trouble, when the American Republic was in danger, what became of gold? What became of the gold of the country in the times of war? Oh, it lowered its cowardly head. Greenbacks were called into requisition, and now why discard greenbacks in times of peace? If they were brave enough to protect you in times of war, why discard them, I ask, in times of peace? Be honest, American workmen! Let me give you a fair estimate of what Shylock wants. The thieving bloodsuckers of labor, who ride in tally-ho coaches, who spend their time in foreign countries, who spend their time and money outside of America, living off the sweat of American labor—when you issue greenbacks you cut off that great army of bloodsuckers at one fell swoop.

"One hundred and thirty-six million dollars is all the money we have got to redeem the greenbacks with. We are supposed to redeem $346,000,000 of greenbacks by $136,000,000 in gold. Then when these Shylocks call upon the Government—and let me tell you that they will use the law and strain the law to get what they want every time—then of course up goes the gold; the gold rushes up to double its present value, and Shylock will declare the American Republic bankrupt if he wants to. This is a business proposition, and I don't propose to discuss that question any further, as every schoolboy knows just as well as I do that resumption means bankruptcy."

The Western demagogue of 1878 was more violent and vulgar in his language than the Western demagogue of 1896, though Bryan is steadily sinking in this respect when he gets to talking about the Creator's not using better mud to make the financier than the laboring man. But in the attempt to array one class against another, in the denunciation of those who have property, in the condemnation of the gold standard, in the praise of cheap money, Denis Kearney was the forerunner of William J. Bryan.

EX-POST-FACTO JUSTICE.

Not many ages ago it was common to inflict torture and confiscation of goods in the cause of religion, and the Reign of Terror in France showed the world what could be perpetrated in the name of liberty. Religion no longer arouses the passions that it once excited, and the abolition of class privileges has lessened the force of appeals to liberty; but the spirit that caused these former cruelties is not extinct, and as it requires some sacred name with which to attract supporters, it has of late taken to invoking justice. Every revolutionary proposal, every attack on property, is supported by the claim that the present social order is unjust, and we are now face to face with a scheme of general confiscation under the guise of a measure of justice to the poor in general and to the oppressed debtor in particular.

The peculiarity of the present outcry is that it is directed against creatures of the imagination. A hideous conspiracy is declared to be in existence, and to have been for a whole generation in existence, but no one ever thinks of naming the conspirators, or of offering anything in the nature of evidence as to who they are or were. Mr. Bryan takes the safe course of declaring that the gold standard is a conspiracy in and of itself—a proposition that is outside the field of logic, either to prove or disprove. Senator Stewart of Nevada drivels about "the crime of 1873," meaning an act of Congress for which he and nearly every one else voted, and which merely recognized the fact that silver dollars had formed no part of our currency for many years. But neither Senator Stewart nor any of that ilk names the criminals engaged in this act, or proposes to punish them for their misdeeds. What he and they all agree upon is that the crime itself must be punished in the name of justice, and they propose to inflict punishment upon millions of their fellow-citizens who can by no possible perversion of facts be shown to have participated in any conspiracy of crime whatever. Their zeal is only surpassed by that of Philip II. of Spain, whose enthusiasm for religion was so consuming that in an access of fervor he sentenced the entire population of the Low Countries to death on account of the existence of heresy among them.

This extraordinary theory of justice has been explicitly maintained by Mr. Bryan. In his celebrated speech at the Chicago convention he declared that "we, the people," could change the monetary system without protecting those who had loaned money before the change was made. Creditors were entitled to no protection now, because the act of 1873 did not protect debtors. It is not important for our present contention to remark that this proposition is false. Mr. Bryan knows as well as any one that when the law of 1873 was passed, the gold dollar was cheaper than the silver dollar, and that the act was in so far a "protection" of debtors and not of creditors. He knows perfectly well that the internal business of the country was then done on a paper-money basis, and that the laws making irredeemable paper legal tender for debts were laws for the "protection" of debtors to an enormous extent. He knows that not one contract in ten million in 1873 was payable in silver, and that every contract payable in dollars was payable in depreciated paper money. He knows that it was five years after 1873 before contracts to pay dollars came to mean payment in gold or its equivalent, and that not one contract in a thousand of those in existence in 1879 had been in existence in 1873. He knows that the debts of 1873 have long since been extinguished, that the debtors and creditors of that day are for the most part dead, or have closed their business lives. He knows that the debts that are now existing have been contracted with full knowledge that the money borrowed was as good as gold, and was to be repaid in money as good as was borrowed. He knows that creditors have accepted lower and lower rates of interest, and that debtors with a reputation for honesty could borrow on terms so favorable as to more than counterbalance any real or fancied appreciation of gold. He has sat in Congress and has heard all these truths fully and clearly presented, and he now goes about the country proclaiming what he knows to be false.

All this, however, is beside the point that we set ourselves to discuss. That point is the conception of justice as requiring the infliction of suffering on the innocent because, some time in the past, a measure of legislation did not "protect" debtors. We may grant that the act of 1873 was a blunder or a crime; that it was passed by a conspiracy of bankers; that it was fraudulent in its conception and corrupt in its consummation; but how does that affect the question of the justice of free coinage now and to-day? If any perpetrators of the crime were known, they might have been punished. But none were known. If any sufferers from the crime had claims to present, they could have been indemnified. No claims were presented. Debtors and creditors affected by the act, if any were affected, have long since squared their accounts. If silver were now coined freely, no one that profited by its former demonetization would be injured, none that was injured would be profited. Those whose mortgages were foreclosed would not get their lands back again; those who foreclosed the mortgages would keep their gains. It is the men and women who are now active and who are to be active in the coming years that would be affected; and yet their rights are to be sacrificed for the sake of taking vengeance on an abstraction—of executing justice, not on criminals, for they are not to be found, but upon the "plain people" who are so unfortunate as to live under a government which enacted an obnoxious law in the time of their fathers. Whether we may reverently conceive the Almighty as visiting the sins of the fathers upon their children we need not here ask; but we have no disposition to allow the members of the Chicago convention and its nominee to exact this form of vicarious sacrifice. Mr. Bryan is fond of referring to that great and stirring epoch when our forefathers asserted their independence. Do the American people need to be reminded that independence was demanded because of ex-post-facto laws, and that the theory of ex-post-facto justice was denounced and repudiated by the great statesmen of the Revolution in the Constitution which they framed for the protection of coming generations against the wicked schemes of future demagogues?

A STRIKING ILLUSTRATION.

WHAT might happen here during a "craze," supposing we had no constitution and were completely at the mercy of a Croker or Platt or Bryan legislature, has, happily for the whole world, been abundantly made manifest in Australia during the last seven years, where unchecked Bryanism has been rampant. The "workingman's party" has there been in complete possession of the Government, without other restraint than the Queen's veto, which is rarely used about internal affairs. It is not possible to go over the whole ground at once, but we may recur to the subject. M. Pierre Leroy-Beaulieu has made a study of the matter during a residence in Australasia, and has published the result in an interesting article in the *Revue des Deux Mondes*. Confining ourselves to what he says about New Zealand, we find his account of the land tenure most instructive. The Government of New Zealand has taken possession of the land on the Henry George plan, and for the most part let it out on various terms and conditions to the occupants, though it sells to some extent. This right to sell in fee simple is seriously modified by an act, passed in 1894, which gives the State a right to buy anybody out who has more than 200 acres of arable land, 400 acres of half arable, half pasture land, or 1,000 acres of pasture, for a price to be fixed by a special commission, if the owner does not accept what the State offers him. The object of this is, of course, to increase the number of small holdings.

To do this more effectively the plan of "Village Settlements" was devised in 1893. Each "Settlement" or association has to contain at least twenty persons, to which the Government allots about 130 acres, and advances $250 for each member, to be repaid in instalments, with interest at 5 per cent., within ten years. The Settlement is governed by a Board of Trustees, and each individual is to have as much and what land is assigned to him by this board, and can acquire none other. Any one, male or female, except an Asiatic, can become a member, but as a rule women have not been admitted. The Board is supreme in the matter of admission and expulsion, and may expel for "insubordination," "disobedience to the rules," or "absence without leave." An expelled person can appeal to the "General Assembly," which decides by simple majority. In case of expulsion, resignation, or death, the owner's property reverts to the association, so that he cannot make a will, but the trustees may, in their discretion, provide for his widow or family.

The powers of these trustees are settled in twenty articles. They conduct the relations of the Settlement with the Government; they direct the cultivation of the land and the erection of buildings. They decide what industries shall be established, and pass on all purchases and distributions made for the community, and decide what is necessary for the maintenance of the members. They direct and superintend the labor of the members and fix the length of the day's work. They distribute coupons in exchange for produce brought to the magazines. They watch over the public health and the maintenance of good order and discipline. They can fine to the amount of $50, and can increase a member's hours of labor, or cut down his allowance at the store, as punishment for breach of the rules. They appoint and dismiss all officers and fix their salaries. The Settler is bound to be obedient and respectful to the trustees, and to reside on the land allotted to him except when away on leave of absence; but he is entitled to a fortnight of vacation each year. He must undertake no labor outside, and neither buy nor sell without the permission of the trustees. He owns his furniture, clothes, and cooking utensils, but all tools or instruments of production belong to the association. The Villages were, it will be seen, a sort of slavery, of the semi-military kind, which all socialistic organizations must be.

Well, how did the plan succeed? A parliamentary inquiry instituted in 1895 told the whole story. Of thirteen Settlements that were started, all but one had in eighteen months exhausted their allow-

ance from the state and were clamoring for more. They were also heavily in debt; the most heavily indebted owed $650 per head. All except three said they could not go on without more advances from the state. In some, land had remained uncultivated, because the members could not agree as to the crop to be planted. A great variety of unsuccessful experiments had been made to "placate" cliques or individuals. The standard of living fixed by the Board was very low. The day's work—seven hours and a half—was too short for farming. The women were not admitted to deliberations. One village had four presidents in fifteen months. A trustee rarely served out his term, owing to little risings against him on account of unpopularity. Fights and riots were frequent and unpunished. A trustee who was "pounded" while at work in the field said he could not get redress, because it was a trustee who had done it and all the other trustees were on his side, and he believed they might commit murder with impunity. He also testified that a Settler having been assaulted, and one of his limbs broken, the trustees decreed his expulsion, but the General Assembly, on being appealed to, refused to sanction it. In another village, thefts were numerous, and thieves were arrested but not punished. One witness declared that when he joined he was a great supporter of "land for the people"; but, after what he had seen, he was in favor of "land for himself." The government was, in fact, very much what the government of Tammany would be if it had unchecked sway anywhere. They are still trying these experiments in Australia, and the way they propose to remedy the decided failures is, as might be expected, to increase the advances from the state. In fact, if one wants to see Populism, Bryanism, Tillmanism, Crokerism, and Plattism in full sway, one ought to go to Australia.

The cause of this wretched blundering is plain enough. All successful governments, if they are not to depend on pure force—that is, to be simple slavery—must be founded on principles of human nature and on human experience. That is, in establishing them we have to consider what man as we know him, men like ourselves, are likely to do under such and such conditions, and to read what man has done under such and such other conditions. We have, in short, to examine our own hearts and read history. But Popocrats and Bryanites refuse to do anything of the kind. What they insist on is, that when a few long-haired men tell us they "know," or "contend," or "feel," or "believe," or "predict" something, we are to take their word for Gospel, and upset everything which the race in ten thousand years has hit upon and practised as most conducive to its happiness.

ENGLAND: THE GOVERNMENT AND THE SESSION.

LONDON, August 24, 1896.

THE history of the session which has just closed has been surprising and instructive, and may have some interest for American readers even in the midst of their far more exciting struggles. At its beginning everything augured well for the Government. They were supported by a majority in the House of Commons far larger than any since 1833, a majority of 152. They had a cabinet no doubt inconveniently large, but one which contained such able and experienced administrators as Lord Salisbury, the Duke of Devonshire, Mr. Goschen, and Sir M. Hicks-Beach, and two effective debaters in Mr. Chamberlain and Mr. Arthur Balfour. They had not only a small British Opposition to confront them, but an Irish Opposition divided into three mutually hostile factions—an advantage of immense value. The country was not anxious for much legislation, having been rather alarmed by the number and gravity of the measures which the preceding ministry had put forward, and would have been well content had the new Government given it a prudent and business-like administration of foreign and domestic affairs. The session, however, has proved a disappointing one to the dominant party; and the Government emerge from it seriously discredited, if not substantially weakened. They have been forced to drop their principal measure, the Education bill. They have carried only two measures of magnitude, the Agricultural Rating bill, which has disgusted many of their supporters in the boroughs, who look on it as a plundering of the urban taxpayer for the benefit of the rural ratepayers (*rate* is the term used in England for a local tax), and the Irish Land bill, which has offended many among the landlord party, without satisfying the Tory tenant farmers in the north of Ireland. Many of the other promises made in the Queen's speech and still more of the promises made at the last general election remain unfulfilled. Some of those promises need not have ever been made, but, having been made, the failure to deal with them gives rise to much hostile comment. Thus this strong Government, with its large majority, has accomplished comparatively little, and has not only exposed itself to the taunts of its adversaries, but incurred the scarcely concealed distrust of its friends.

What have the causes of this failure been? Three may be selected as the most important. For one of these, the largeness of their majority, they are in no way to blame. But a majority of 152, though it was received with exultation, is anything but a blessing. It makes the leaders over-confident and even reckless. They think they can carry anything, and become less cautious in their strategy. It also impairs party discipline. Although the Tory party is naturally very obedient and cohesive, some of its members are much more apt to show independence and attack the measures of their chiefs when they feel they can do so without the danger of turning the chiefs out of office. The Government have never been in any risk of losing a division, and have usually obtained nearly their full numbers, but there has been a good deal of criticism of them in debate from their own side, and a good deal of discontent which might have failed to find expression had the majority, because smaller, been more in awe of the Opposition.

The second cause was their carelessness in the conduct of business in the House of Commons. To arrange that business, and keep pushing it steadily through, selecting the most important bills and pressing each in its proper order, while keeping the House as a whole in good humor by not requiring too many late sittings, is a task of some difficulty. It does not require brilliant talents. The late Mr. W. H. Smith, who was so far from being a brilliant man that he could not even make a passably well turned speech, discharged it successfully, for he brought to it plenty of tact, strong common sense, and unsparing diligence. The Ministry, however, showed no diligence at all, and often seemed to let the business of the House drift. Mr. Arthur Balfour, who was leader, was frequently absent during debates, and seemed to take his duties as leader much too easily. Mr. Chamberlain, who is nothing if not a practical parliamentarian, absented himself so frequently that people began to suppose some motive for his absence. This want of assiduity on the part of the leaders was not redeemed by their lieutenants. Thus the business of the House got into confusion, much valuable time was lost, and bills that might have been carried had to be abandoned. Mr. Balfour is very popular with his own side, and is well liked personally by the Opposition. His methods of leading have, however, been the object of many strictures from friends as well as opponents. Even the *Times*, usually the Government's warmest advocate, attacked him. Were it not for his personal popularity and the distrust felt in some sections of the Tory party for Mr. Chamberlain, his position as leader might have been threatened. That it is really threatened few competent observers believe, though all agree that more care must be shown next session.

The third chief cause of the discredit the Ministry have incurred is the want of judgment they showed in framing the Education bill, which was the principal measure of the session, and the one which roused by far the keenest feelings. People had expected it to be a comparatively small affair, mainly designed to provide additional grants for those denominational schools, nearly all of them belonging to the Church of England or the Roman Catholics, which are called voluntary schools because they are supported, not by the local taxes, but by the subscriptions of the denomination, which, however, now represent a smaller sum than the grant which they receive from the central public treasury. But it proved to be a large measure, which raised three sets of questions, each of which in England, as in most countries, excites warm interest—questions of finance, questions of local government, questions of religious teaching. A bill handling any one of these, and still more a bill handling all three at once, was sure to raise opposition and be subjected to the closest scrutiny. The financial provisions provoked a controversy between two sets of supporters of the bill—those who wished the denominational schools to be subsidized (as now, but more largely) from the central treasury, and those who wished them to receive a share of local taxation. The provisions regarding local government menaced the authority, or even the existence, of the School Boards in many parts of the country, and the friends of the School Boards were up in arms. The proposals which affected religious teaching raised a still more serious storm. The Protestant Nonconformists, or at least all their most active and influential leaders, looked on these proposals as an attack

on religious freedom and a breach of the compromise arrived at in 1870; and though most of the Nonconformists, being Liberals, would in any case have been unlikely to favor the bill, that section of Nonconformists which had left the Liberal party on the home-rule question, and had supported the Tories at the last election, were also alarmed, and began to threaten a revolt if this part of the bill were persevered with.

Nor, indeed, was the religious disquiet entirely confined to the dissenting bodies. Within the Church of England itself the section which holds doctrines approaching or sometimes scarcely differing from those held by the Roman Catholic Church, has of late years made great progress. Its leaders, both ecclesiastical and lay, are energetic and untiring. They attach, like the Church of Rome, immense importance to the control of elementary education and to the power of teaching dogma in their own way and by teachers whom they have selected. They are therefore, as a rule, warmly opposed to the schools under the control of the School Boards, and eager to promote denominational schools in which strictly denominational instruction may be given. Their zeal in this cause has excited some suspicion and even alarm among the general mass of the Church of England laity, who are still very far from being Anglo-Catholics; and this suspicion extended itself to the Education bill, leading not a few old-fashioned Conservatives to regard it with a distrust none the less real for being sparingly and obscurely expressed. Thus the bill had enemies among the friends as well as the opponents of the Government. Its troubled life and its early death were due far more to the many currents of hostility which thus converged upon it than to the lateness of the period at which its consideration in committee began. That so experienced a cabinet could have erred so gravely excites no great surprise. Lord Salisbury knows but little of public opinion and the temper of the House of Commons; constructive legislation has never been Mr. Balfour's strong point; and Mr. Chamberlain's judgment is not thought to be a sound one. It was supposed that the Duke of Devonshire, who has plenty of shrewdness and knows the House of Commons, would have warned his colleagues; but he is apt to take things easily, and may have acquiesced against his own forecasts.

Although the collapse of their principal measure has tarnished the reputation of the Government, or, as the man in the street says, "has rubbed the gilt off the gingerbread," it must not be supposed that their political position is seriously shaken, and that either they or the present Parliament are likely to come to a speedy end. Even more serious blunders in parliamentary management and schemes of legislation may be committed by a party which has only just come into power, and whose majority in the House of Commons desires nothing so little as a dissolution. If the country at large were very keenly interested in politics, a reaction might no doubt set in which would shake the fidelity of a considerable part of that majority. But the country is apathetic. Not for many years past have political questions moved so small a part of the electors, and moved them so languidly. The newspapers report debates in Parliament far more briefly than they did formerly; and if one were to judge by the sale of the newspapers, especially the evening papers, all kinds of amusement, especially athletics and the other forms of sport, fill the mind of the average man much more than political questions do. There is small likelihood that any one of the domestic questions now pending will dispel this singular apathy, which is evidently due quite as much to causes outside the sphere of politics as to the present position of English parties. A crisis in foreign affairs, however, might change everything in a moment; and no one can say that a crisis in foreign affairs is impossible, for the state of the East is disquieting, and other matters pending between the Great Powers contain elements of trouble. But this is a subject too large to be dealt with now. Lord Salisbury's foreign policy, and the causes that have so greatly lowered the prestige which for a time he enjoyed as a foreign minister, deserve a letter to themselves. C. E.

THE THIRD INTERNATIONAL CONGRESS OF PSYCHOLOGY.

GENEVA, August 20, 1896.

THE third Congress was held at Munich, August 4 to 9, under the presidency of Prof. Stumpf of Berlin. It was the largest and in many respects the most successful of the three. Of course the German attendance was fuller than at the last one, held in London in 1892, and German delegates are always most welcome. When we take into account the fact that Germany is to-day the country where psychology is most vigorously and successfully pursued, it follows that this Congress is, up to date, the greatest gathering of eminent psychologists ever seen. As to France, the attendance was disappointing in numbers, although the delegation was very representative; and the same is true of the British contingent. The other countries, except America, were adequately represented; the small attendance from our side of the water being a matter of the more surprise in view of the tendency of our professors to take their vacation abroad—indeed, the attendance at the last Congress in London was considerably larger.

In its general character the Congress tends to recall the remarks which I made in this journal four years ago on the London meeting. The tendency to allow the popular attendance upon the meetings to swamp the scientific proceedings was more marked in Munich, and it is not too much to say that this constituted a very great defect in the arrangements. The membership was over four hundred. There was a constant flow from hall to hall, and the corridors were filled with bewildered persons. Some limit must be put on the popular membership at the next congress, or the scientific people will yield the field to the sightseers and amateurs. The other possible improvement which I suggested in the earlier letter also comes to the front again apropos of this meeting in Munich—the crowded condition of the programme. Besides the general meetings, which came in the forenoon sessions, the committee arranged for five sections all running simultaneously, and all subject to constant give and take, as respects their audiences, from one to another. Besides the constant interruptions and great confusion which this produced, it practically prevented a person from hearing any readers whom he especially desired to hear. Since the time limits were not enforced upon the papers or discussions, one could never tell how far on this section or that had progressed, and so could not time his presence for any particular reader. Moreover, the papers were as usual so generally accepted by the committee—any one who wanted to present something had only to send his name and topic beforehand—that many were read which were of little or no scientific value; and the titles of papers were entered on the programme in advance, so that there was no way to learn infallibly whether a particular reader had arrived and would present his dissertation or not. The gaps left by the absentees were consequently quite an unknown quantity. Every such meeting should have a committee to read and select from available papers, arrange them strictly according to unchangeable time-divisions, and require each reader to report finally a day or two before the meeting as to his actual attendance, the final programme being only then printed. This would have the further advantage of ruling out titles and names which are from the first doubtful; for it is astonishing to what an extent men fail to carry out what should be their serious intention when they give their names to be printed on these Congress programmes.

So much for the general character of the Congress. Of course, this is not the place for an account, in any detail, of its scientific features. The division into sections will show something of the remarkable range that modern psychology finds itself obliged to take: "Normal," "Sleep and Hypnotism," "Mental Pathology," "Neurology," "The Senses and Psychophysics"—the titles being somewhat abbreviated in this list. In each of the sections there were some great papers and one or more lively discussions. The most interesting thing in the way of neurological work—it was presented, however, in one of the general meetings—was the paper by the veteran Flechsig on "Association Centres." It will be remembered that Prof. Flechsig has been engaged for some time on comparative studies of the brains of human infants at different ages, attempting so to arrive at a view of the order of development of the elementary mental functions, with the corresponding progress in brain anatomy and physiology. He has published very rich results from time to time, and among them is his determination of certain so-called "association centres." He thinks that the much discussed frontal region of the brain is the location of associations of a higher and more abstract kind; and that in the region back of the well-known "motor region," extending to the visual centre in the occipital region, is a great centre for the associations which bind the sense functions together. This in brief, and without the discriminations which an accurate account of his views should make. The reason which he gives for these determinations is that only after some growth, and after the senses are well developed, do we find the great masses of connecting fibres which traverse these regions forming in the child's brain. Apart from the question of fact, as to which Prof. Flechsig's researches may be considered as being of the greatest importance (especially when we consider his method), it is difficult to see how these regions can be, in any true sense, "association centres"; for, admitting that the connections between the sense centres run through these regions, the main thing about the associations must be the things associated, not the mere fact of connections between them. One would hardly call the bunch of telegraph wires on the house-top a "communication centre"; the loci of communication are still at the telegraph offices. Without them, the wires would be possibly even more helpless than the

offices without the wires. Prof. Flechsig's paper was a model for imitation in the manner of its presentation, and its interest was enhanced by slides showing the infant's brain, in sections illustrating the periods of its growth.

Another contribution to the understanding of the relation of Psychology and Brain Physiology was that of the well known neurologist, Prof. Edinger of Frankfort, on the question, "Can Psychology make use of the results so far attained in Brain Anatomy?" He did not confine himself to anatomy, but presented a series of interesting notices on the development of the nervous system in the scale of life, and made a strong plea for a corresponding genetic study of comparative psychology. Genetic psychology, he says, is so far behind analytic psychology because psychologists have confined their attention, on the anatomical side, to the cerebral hemispheres, while what they should do is to study the evolution of the nervous system all the way up, and see the progress of consciousness with it. "Gerade auf diesem Gebiete müssen anatomisch-physiologische und psychologische Studien durchaus Hand in Hand gehen." All this is true and remarkably opportune, I think, despite the fact that in his main illustration Prof. Edinger falls into one of the glaring fallacies into which this sort of analogy between body and mind may lead. He says there are certain creatures (fishes) which have no hemispheres, and it follows that, on the psychological side, we must deny to these creatures "all that the hemispheres are necessary for in the higher creatures." This overlooks the great principle that, in the lower forms, less differentiated structures may do what more differentiated ones do in the higher forms. To press this point consistently, he would seem to have to deny consciousness altogether to these fishes. The lesson of this paper, however, is a most timely one; psychologists, especially in Germany, are not half awake to the genetic problem, and when they do awake, no doubt it is true that the richest lessons that the physiology of the nervous system will have to teach them, will be derived from such comparative study as Prof. Edinger advises.

Several papers of general interest were read in the open meetings. The President's address was rather more severe and *wissenschaftlich* than the earlier addresses of the presiding officers have been, but it was an exceedingly interesting and discriminating review of theories on the connection of mind and body. The arraignment of Parallelism was very effective—possibly more so than the positive doctrine of the paper. Prof. Ebbinghaus of Breslau gave a new way of testing the mental condition of school-children at different periods and in different conditions of fatigue, etc. It differs from the methods already in vogue in that it endeavors to test the child's correlating or apperceptive faculty rather than his sense-perceptions or his memory. The method, which teachers will find extremely interesting, consists in taking a passage from some interesting narrative-text, and, after striking out various words and phrases and printing the passage with blank spaces where these erasures have been made, telling the child to fill in the spaces as he thinks the sense requires. This requirement certainly calls upon the child for more than memory, and the results of its application, as reported by Prof. Ebbinghaus, seem to show its superiority; but it would appear to be applicable to children of a more advanced age, after the memory tests are outgrown. This general judgment, however, I must make with reservation, since the synopsis of the paper did not reach my hands. This may suffice to indicate the scope of the method, and to call the attention of our educational authorities to it. They will also be interested in Prof. Ebbinghaus's severe criticism of what he called the "American method" of testing the mental condition of school-children by the memory tests.

The fact that the papers on "Hypnotism" were less than in earlier congresses, in proportion to the entire number, and that there were a bare half-dozen on thought-transference and telepathy, shows the general tendency of psychology. The hypnotic period is past, even in France. Not that the gain from the study of hypnotism has not been permanent and great; on the contrary, its results are only now getting so absorbed into the body of psychological truth that it no longer makes sensational appeals for a hearing. As to telepathy, I think there is a real decay of interest in the subject, much as this is to be deplored. The most interesting paper in the hypnotic field was a general one by Prof. Pierre Janet.

The section on the Senses and Psychophysics did much exact work. Dr. Stratton of the University of California communicated some valuable experiments of his on the artificial reinverting of the retinal image and its effects on the sense of bodily position in space, which will be of especial interest to those who think the normal inversion of the image requires a theory.

Two other general questions of great interest were discussed, with as much ability as vehemence, by the Vice-President of the Congress, Prof. Lipps of Munich. One of his papers was a very important contribution in the sadly neglected field of the æsthetics of visual form. I can do no more than recommend his paper in the Congress "Proceedings" (to appear very soon) to those who are concerned with elementary æsthetic principles. The other topic was the much-discussed one on the "Unconscious" in psychology. The question, Can mental states be unconscious? has a peculiar fascination, because of the great number of verbal distinctions of which it admits. It must be confessed that Prof. Lipps's paper did not make the number of these verbal distinctions less. He reaches a sort of return to the soul-substance theory—a hidden thing in which mental states, and especially tendencies of an active kind, may be preserved when we are not conscious of them. This has long ago been refuted as a general conception, I think; but the main point of interest, and that for which I bring the matter up, is, that the results of pathology, dual consciousness, "multiple personality," etc., which are considered by many as giving the strongest evidence for the "unconscious," require quite a different theory. The "unconscious" of the pathologists is a body of conscious data gathered into a new and secondary consciousness of its own. While these states of mind are not conscious to the major person—and so, by a certain license, are called "unconscious"—still it is just the evidence that they are conscious in their own way and in their own seat in the nervous system that enables us to say that they are mental. So all this evidence goes, after all, to show a correspondence between the mental and the conscious. This Prof. Lipps does not seem to see, and his treatment of the question, from a purely verbal and analytic point of view, was consequently very inadequate.

In the higher fields of Ethics and Anthropology there were interesting papers, of which my space allows the mention of only one, on "Ethical Values," by Prof. Ehrenfels (just called from Vienna to Prague), and one on the "Category of Individuality in Savage Thought," by Mr. Stout, the editor of *Mind*. Mr. Stout, I may add, has just been called to a lectureship in Comparative Psychology in the University of Aberdeen—a novelty for the British Isles, but appropriate in the institution which Prof. Bain has made famous in connection with psychological study. The next Congress is to meet in Paris in 1900 in connection with the Universal Exposition. Prof. Ribot will be President, M. Ch. Richet Vice-President, and M. Pierre Janet Secretary. The International Committee for the Paris meeting has the following American representation: Profs. James (Harvard), Titchener (Cornell), Hall (Clark), and Baldwin (Princeton). I cannot close this letter without referring — with profound regret, which many other American students of philosophy must also feel—to the death of Prof. Avenarius of Zurich on August 18. Where I now write, the feeling that one of the greatest philosophical thinkers of Europe no longer adorns a Swiss University is very acute; and those who know the work of Prof. Avenarius must feel it also, regardless of the place of their habitation.

J. M. B.

THE ABBÉ PRÉVOST.—II.

PARIS, August 28, 1896.

IT would be a curious study to analyze the first essays of journalism in France. We have found in *Le Pour et le Contre* of the Abbé Prévost one of the first embryos of that dangerous instrument which has become the fourth power in the State. These early irregular, transient mediums of publicity were not yet political instruments. Such papers as *Le Pour et le Contre* were obliged to content themselves with literary and social matters. Still, they already had their importance; we see Voltaire writing to his friend Thiériot on July 24, 1733: "Please thank for me the author of *Le Pour et le Contre* for his eulogy. I am very pleased to have my vanity flattered by one who has so often touched my sensibility by his works. Such a man was well made for experiencing every emotion." The eulogy of which Voltaire here speaks was written on the occasion of the 'Lettres sur les Anglais.' In another letter, to the same correspondent, Voltaire sends a message to the "tender and passionate author of 'Manon Lescaut.'"

At the end of 1733, when 'Cleveland' and 'Manon Lescaut' had been universally read by the reading public of the time, Prévost addressed a letter to the Pope, asking for his pardon; the year after, Clement XII. granted him the remission of his error and gave him an induct of transference to the ancient *observance de Saint-Benoît ad benevolum receptorem*. The Council of Trent forbade all regular monks to change their congregation so as to enter a less severe order. The Benedictines of Saint-Maur, to whom Prévost belonged, did not appeal against the Pope's indulgence. Prévost had to make a second, short novitiate, after which he was matriculed at the Abbey of Le Grénatière, in Vendée. There is no trace of his having lived there. We find Prévost back in Paris, continuing *Le Pour et le Contre*, living in the society of Mme. de Tencin, of the Duke of Kingston, of Piron; he is still obliged, however, to spend some time in an abbey of his order. He writes in English from this abbey to his friend

Thiériot (November, 1735): "Cleveland and that dear Fanny are not out of my mind, but a great many friends of mine, on whose counsels and wisdom I rely, have advised me to publish no love-works till my retreat is over. . . . I am condemned to live here till the 10th of December, for no solicitation could prevail with the Pope to lessen my spiritual punishment." We need not be surprised if he wrote in English to his friend Thiériot, though Thiériot was a Frenchman, as we find in the same letter phrases like this: "No compliments for your Psyché, since you think it so dangerous for my repose. I won't see her more neither, till I have got a hundred thousand a year. Then I can love, and tell it and hope to be well received." Prévost clearly had no vocation for a conventual life. The salon of Mme. de Tencin was more congenial to him than a monastery.

We do not know by what influence he became, after his new novitiate, an almoner in the household of the Prince de Conti; he was thus regularly dispensed from the obligation to live in a convent. Louis François de Bourbon was a profligate prince. "With a revenue which was augmented by five hundred livres annually," says D'Argenson, "his domestics were not paid, people died of hunger in his house and had no fire in winter." Prévost received no salary, and his functions were purely honorary. La Harpe writes in his literary correspondence: "The late Prince de Conti was not fastidious on the subject of the mass. He wished to have for his almoner the Abbé Prévost, the novel-writer. 'Monseigneur,' said the Abbé to him, 'I have never said mass.' 'Never mind,' says the Prince, 'I never hear it.'" Prévost, meanwhile, continued to write in *Le Pour et le Contre*, wrote the 'Dean of Killerine,' and translated the "Conscious Lovers," a comedy of Steele's (this translation appeared in *Le Pour et le Contre*). We find in that journal a curious critical theory of Prévost's. He maintained that "a language which needs as puerile a help as rhyme in order to be suitable to poetry betrays accordingly its imperfection and its weakness." He proposed to abolish rhyme and thus "to render a great service to the French Parnassus." These articles were written on occasion of some English epigrams.

In 1739, the Abbé Prévost left *Le Pour et le Contre*. His father had died, leaving some little fortune; but, having taken the vow of poverty, he could not inherit. His affairs were so deranged that he thought for a moment of returning to London. He offered to Voltaire to write a 'Defence of M. de Voltaire and of his Works,' an offer which Voltaire politely refused. "You wish, sir, to make my apologia. . . . The only reason which hinders me from accepting is the same reason which prevented the great Condé from writing his memoirs. (You see that I do not choose mediocre examples.) He said that he could not justify himself without attacking too many people." Voltaire offered his services to Prévost with Frederick the Great, a famous patron of literature. Prévost answered him that before leaving for Prussia, he had first to pay his debts, something like four or five thousand francs. He left France, however, in 1741, for a little time; his exile was caused by some sort of collaboration with an abbé who published a paper, a *gazette* (it was the word of the period, which is still retained by the old *Gazette de France*), containing the petty daily news of the capital. He spent the term of this exile in Brussels, in Frankfort; he was allowed to come back to Paris in 1742, and began a translation of Richardson's 'Pamela' (the first edition of 'Pamela' in English was published in London in 1741-42). I will say at once that he translated 'Clarissa Harlowe' in 1751 under the title of 'Lettres Anglaises, ou Histoire de Miss Clarisse Harlowe.' It is curious to have Voltaire's opinion of Richardson: "It is cruel for a man as lively as I am to read nine volumes without finding anything in it. . . . 'Clarissa' and 'Pamela' have succeeded because they excite the curiosity of the reader by a chaos of inutilities." The Abbé Raynal writes: "The Abbé Prévost has just translated in France a manuscript entitled 'Lettres Anglaises.' This long work makes more noise in Paris than it has had success. . . . I have experienced in reading this book something extraordinary, the liveliest pleasure and the most crushing tedium." Faithful to Richardson, the Abbé Prévost published in 1754 a translation of 'Sir Charles Grandison.' He probably maintained personal relations with Richardson, as he announced his translation in 1753, and the original English edition appeared only in 1754; it is true that another translation appeared in Göttingen before Prévost's, which appeared in Amsterdam. Prévost worked at the same time at translating Middleton's Life of Cicero, and Cicero's Familiar Letters, and (in his 'Histoire Générale des Voyages') John Green's 'New General Collection of Voyages and Travels,' published in London in numbers from 1745 to 1747.

Prévost spent a part of a year at Chantilly—it would be more exact to say at Saint-Firmin, a small village near Chantilly (where the Duke de Chartres often lives now, in a house situated on the Grand Canal in the park which surrounds the château). In a small pamphlet, written in 1762, 'The Triumph of Chantilly, or Letter of M. Quin to M . . . on the fêtes given there three months ago,' we read that

"M. l'Abbé Prévost, who spends a part of the year in this Canton, attached to it by the beauty and retirement of the place, by the plan of his studies (he is at present engaged upon the History of the House of Condé and of Conti), and probably even more by the marked proofs of kindness with which he is honored by his Serene Highness, is asked to compliment the Prince on his arrival; he accepts with alacrity this honorable invitation. . . . We awaited the orator. He was not visible. In a few moments he appears, out of breath. His residence being at some distance from the château, he had been deceived by the rapidity of the Prince."

The Prince de Condé asked him to leave him in writing his compliments, which he was not able to sing. Prévost evidently himself wrote this part of the relation: "Here the old orator, who once on a time liked to sing, would have gayly sung two or three couplets of his invention—that is to say, very bad, as nature had not made him a poet." It is not necessary to cite these verses, which Prévost himself judged very mediocre. We have also a letter written from Saint-Firmin on the 18th of December, to one of his relations. As for the history of the House of Condé, it is possible that Prévost may have collected some documents on the subject, but there is no trace of them in the archives of the House of Condé. Prévost had so many irons in the fire, he was so occupied with his novels, his translations from English authors were so incessant, that he must have had very little time left for the work he had undertaken, at the request of Quin, superintendent of the Gardens of Chantilly. In 1760 he published a translation of Hume's History; he translated, at the same period, the 'Memoirs of Miss Sidney Biddulph,' written in three volumes by Frances Sheridan, mother of the celebrated Richard Brinsley Sheridan. M. Harrisse gives us an account of all the literary work of Prévost, showing a total of 112 volumes, 65 of which were original writings, and 47 translations. His last work has for its title 'Letters to a Young Lord, translated from the English by the Abbé Prévost,' and, curiously enough, the work is not a translation, it is original; but English books were the fashion, and Prévost had more than anybody contributed to it. Grimm was taken in, and writes in his correspondence about "the original of this book, which had much success in England, while in France nobody looked at the translation."

During the latter part of his life, the Abbé Prévost resided constantly at Saint-Firmin, in a house which belonged to the widow of a lawyer. We read in the *Nouvelles à la main* that "on the 1st of December, 1763, the Abbé Prévost, very well known in the republic of letters by the works which he has issued, was found dead in the park of Chantilly from the effects of an attack of apoplexy which overtook him while out walking." M. Harrisse has taken the pains to examine and to compare the various accounts given at the time of the death of Prévost, and he comes to the conclusion that Prévost did not die of apoplexy, but from the rupture of an aneurism, not on the 1st of December, but on the 25th of November. He proves, also, that Prévost, at the time of his death, was not, as has been sometimes said, in a state bordering on poverty; he was in possession of a priory, which yielded him more than 2,000 livres annually, he had been able to procure a nice country-house, he was surrounded with friends. Nor did he die out of the pale of the church; the Benedictines claimed him as still belonging to their order, and buried him under the pavement of one of their churches. In the priory of Saint-Nicolas d'Acy there could be read before the Revolution this epitaph:

Hic jacet D. Antonius Prévost
Sacerdos majoris ordin. S. Benedicti
Monachus professus quum plurimis
Voluminibus in lucem editis insignitus
Obiit 25. Novembris 1763.

Correspondence.

EDUCATE THE YOUTH BETIMES.

To the Editor of The Nation:

Sir: Whatever may be the outcome in November of the present political contest, it is plain to one who for twenty-seven years as a merchant has had ample opportunities of observation in four States adjacent to Ohio, that the present controversy has aroused in the minds (or rather in the hearts) of a large portion of our people sentiments on various topics that will not be laid to rest with the termination of this struggle. Never before in any question of great public moment has the phantom of the French Revolution stalked abroad in the land as to-day. Not alone in the great cities is this spirit manifest, but it has permeated all strata of our people. The towns and the villages teem with evidence of the malignant envy and hatred felt by the man who has nothing for him who has something. Our system of general if not universal education, which has been held as the sufficient safeguard in a free country against the possibility of such conditions, seems not to have justified the hopes of its advocates.

Our schools have taught their pupils to be "smart," but the average voter, especially of the younger generation, has no understanding of obedience to authority or veneration for law or established rights and conditions. With "book learning" enough to be "sharp," respect for or submission to anything not to his whim is an unknown tenet in his limited category of virtues.

The present discussion of the money question, and the tendencies developed by it, reveal to the most casual onlooker a density of ignorance among our people as distressing and appalling as it is dangerous. The people of the Eastern States have scant appreciation of the volcanic situation on their western borders. The demagogue and political charlatan never found fairer field for his efforts on the stump than among the discontented masses who form his applauding audiences. If the country is to be conserved in its integrity to future generations, it must devolve upon those who have the brains and the means to guide its destinies, to stop long enough in the mad pursuit of wealth to build on surer foundations, or their castles of gold will be found to rest but on shifting sands.

The present free-silver movement is no more than a grand rally of all the malcontents of the land. One has but to look at the banners of the Bryan cohorts to see whence his retainers are recruited. And if dispersed in November, they will gather again, in the near future, to war for destruction and spoliation. It is not possible to educate the people of a country like ours on any economic question in the brief period of a ninety-day campaign. "In time of peace prepare for war," and the work can begin none too soon.

The past ten years of utter disregard for every sound principle in the management of national, State, and municipal finances, and the flagrant and criminally reckless methods of corporate and individual business, are not understood or seen or realized even by those who have been the heaviest direct sufferers. Not the lack of money, but the unwise readiness to extend credit and incur indebtedness, has brought us to the present conditions of financial unrest, where repudiation of honest obligations is made the battle-cry of a revolutionary wing of one of the great national parties. To combat all this in the future should be the ambition of every lover of his country. The schoolboy of to-day is taught nothing of the certain difficulty and probable danger of incurring debt, nothing of the sacredness of a money obligation. It is not surprising that he should grow to business manhood with perverted financial instincts. The ability to borrow is to him the acme of business shrewdness, the astuteness to defeat his creditors and evade legal punishment is too often the sum of his financial morality. The example of success in others, attained by devious methods, stimulates his perverse ambition, while it engenders in all classes a contempt and disregard for all property rights, be they founded in justice or in iniquity, and the whole social structure is shaken. The present anarchistic silverite campaign is sowing deep in fertile soil the seeds of future trouble. Surely, unless those to whom much has been given and of whom much will be required, awake to the higher duties of citizenship, the outbreak will come to us as it came to France in the "days of terror." JOSEPH DEBAR.

CINCINNATI, Ohio, September 1, 1896.

WHO HITCHED THE CART?

TO THE EDITOR OF THE NATION:

SIR: The correspondent who, under the caption "The Cart before the Horse," in your issue of August 27, raises the question of the admission of women to the Johns Hopkins University, recalls a former editorial in the *Nation*, reprinted on page 164 of the collected essays ('Comments and Reflections, 1865-1895'), of Mr. E. L. Godkin. The first point emphasized by Mr. Godkin is "the unprecedented advantage of the Hopkins Trustees . . . of being left in possession of a very large bequest with complete liberty, within wide limits, as to the disposition of it, . . . and ready or willing to look at the subject [University education] from every side. . . . In other words, they are to found a University; . . . but as to the kind of University, they may exercise their discretion."

No contemporary who has watched the brilliant and public-spirited career of Johns Hopkins's president will be likely to attribute to him the University's reactionary policy towards the higher education of women. Is it, then, the Faculty or the Trustees—credited in this essay of Mr. Godkin as being "without bias or bond"—or is it the baneful influence of a conservative locality, to which the puzzling exclusion of graduate women from Johns Hopkins's graduate department is due?

Yours truly, FAIR PLAY.

NORTH-EAST HARBOR, MAINE, September 6, 1896.

Notes.

THOMAS Y. CROWELL & CO. have in preparation as gift-books Browning's 'Saul,' illustrated by Frank O. Small; 'Shakspere's Heroes on the Stage,' by Charles E. L. Wingate; 'Famous Actors of To-Day,' by the same author in collaboration with F. E. McKay and the aid of numerous portraits; and André Theuriet's 'Rustic Life in France,' translated by Helen B. Dole, with Lhermitte's illustrations.

Prof. George W. Field of Brown University has translated the first or general part of Dr. Richard Hertwig's 'Lehrbuch der Zoologie,' and it will soon be published by Henry Holt & Co.

A monograph by Judge Tourgée, 'The Battle of the Standards; or, Coin *and* Credit the Antidote for Coin *without* Credit,' is to be issued at once by G. P. Putnam's Sons, together with a new edition of Shaw's 'History of Currency.'

'A Century Book of Famous Americans,' 'Quotations for Occasions' (from Shakspere and other writers, for dinner menus and the like), and 'A Christmas Guest and Other Tales,' by Mrs. Ruth McEnery Stuart, will be published next month by the Century Company.

The Baker & Taylor Co. have nearly ready 'A Daily Thought for a Daily Endeavor,' by Eleanor A. and Eliza P. Sutphen; 'The Colonial Parson of New England,' by Frank S. Child; and 'The Regicides: A Tale of Early Colonial Times,' by Frederick Hull Cogswell.

The Macmillan Co.'s list for the coming season embraces 'Guesses at the Riddle of Existence,' with other kindred essays, by Goldwin Smith, and, by the same author, 'A Political History of England'; 'A Text-Book on the English Constitution,' by Prof. Jesse Macy of Iowa College; 'The Castles of England: Their Story and Structure,' in two volumes, fully illustrated, by Sir James D. Mackenzie, Bart.; 'European Architecture: An Historical Study,' by Russell Sturgis; 'The Bible in Old English Writers,' by Prof. Albert S. Cook of Yale; 'Old English Ballads,' edited by Hamilton W. Mabie, with designs by George Wharton Edwards; 'Selections from Chaucer for High-School Use,' by Prof. Hiram Corson of Cornell; a translation of Georg Brandes's 'William Shakspere: A Critical Study'; 'Victorian Influences,' essays by Frederick Harrison; a translation of Ratzel's 'History of Mankind,' in three volumes, with many colored plates, maps, and cuts; 'Principles of Mental Development: Social Interpretations,' by Prof. J. Mark Baldwin of Princeton; translations from Leibnitz, by Alfred Gideon Langley, under the title 'New Essays concerning the Human Understanding'; 'A History of Elementary Mathematics,' by Prof. F. Cajori of Colorado College; 'An Introduction to Public Finances,' by Prof. Carl C. Plehn of the University of California; 'The History of Modern Painting,' by Richard Muther, in three volumes, imperial octavo, with more than 1,300 illustrations (a subscription work); 'Stained Glass,' by Henry Holiday, with colored and other illustrations; 'Rocks, Rock-Weathering, and Soils,' by Prof. George P. Merrill of Columbian University; 'The Norfolk Broads,' by Mrs. Anna Bowman Dodd, illustrated by Joseph Pennell, who also embellishes a new edition of Irving's 'Alhambra' for the Cranford Series; 'African Travels,' by Miss Kingsley; 'Sir George Tressady,' by Mrs. Humphry Ward; 'The Other House,' by Henry James; 'The Choir Invisible,' by James Lane Allen; 'Soldiers' Stories,' a book for boys, by Rudyard Kipling; 'Gutter Children,' described with pen and pencil by Phil May; 'On Blue Waters: The Life and Experience of a Yankee Sailor,' by Fred. B. Williams; 'Elements of Grammar,' by Prof. George R. Carpenter of Columbia; and 'The Foundation of the German Empire, 1815-'17,' by J. W. Headlam. We must pass over numerous new editions, but will make exception in the case of Miss Fay's useful 'Music Study in Germany,' and of Mr. John Bartlett's 'Concordance to Shakspere' at a price within the reach of every one who can afford books of reference at all.

Copeland & Day, Boston, have nearly ready 'The Listener in the Town,' 'The Listener in the Country,' by Joseph Edgar Chamberlin, "Listener" for the Boston *Transcript;* and Dr. Richard Garnett's 'CXXIV Sonnets from Dante, Petrarch and Camoens,' in translation.

'Science Sketches,' by Dr. David Starr Jordan, of Leland Stanford University, and 'The Method of Darwin,' by Frank Cramer, are announced by A. C. McClurg & Co., Chicago.

Pending the decision of the question whether support can be found for a complete edition of the works of Théophile Gautier, including both his dramatic and artistic *feuilletons* in their entirety, his admirer, M. de Spoelberch de Lovenjoul, offers to make a free gift to the publisher, on the realization of the enterprise, of the inedited correspondence of Gautier, collected by him from his youth upwards.

A reprint of John Morley's Life of Richard Cobden in two volumes (Macmillan) must be thought timely in the midst of our economic awakening, even if the tariff discussion be for the nonce in abeyance. The logical relation between protection and free silver can never be severed by the protectionist party getting on to a gold platform. The price of this work

has undergone the usual reduction. From the same firm we have received a fourth edition of Charles Cowden Clarke's winnowed 'Riches of Chaucer,' with its memoir to which much must be added from later researches; and two further volumes in each of the charming Dent series of translations—from Daudet, 'Thirty Years of Paris and My Literary Life,' and 'Recollections of an Artist'; from Balzac, 'César Birotteau' and 'Modeste Mignon.'

In William T. Hornaday's 'The Man who became a Savage' (Buffalo: The Peter Paul Book Co.) a man of means, in a New York city, thoroughly disgusted with a place "where the air is blue with aggravations and annoyances," unwilling "to wear his life out fighting mean men, mean corporations, mean courts, and mean politics," learns of some "honest, moral savages" among the head-hunting Dyaks, and at once starts for Borneo. On the way "the absconder is held up" by typhoid fever in Montana, and is nursed to health by a much-abused woman, whose relish for society equals his own. They fall in love, they marry, they go to Dohong, where they are well received, and, after helping to drive out liquor-traders and gold-hunters, are adopted by the grateful natives. This sort of love story is interspersed with many thrilling adventures, and some accounts of Dyak battles, of their head-houses and customs in general, tells of the capture of the orang-utan, and makes a roundabout appeal for women's rights, a novel temperance lecture, a depressing exhibit of lawless white men, and an altogether favorable picture of savages not yet spoiled by civilization. The author's field, in his first venture into fiction, is somewhat out of the travelled routes. His purpose was not so much to do fine writing as to produce an interesting story; in this he has succeeded.

Dr. George Albert Boulenger's 'Catalogue of the Snakes in the British Museum (Natural History),' completed by the third volume, is a most important contribution to ophiology. In most respects the work is very well done indeed. Besides the great additions to knowledge by the author, his book furnishes a new point of departure in the study of the order, and prepares the way for advances by others that could not be made with a literature scattered over the pages of all sorts of publications. The catalogue is descriptive; it recognizes 1,639 species of snakes. The arrangement is much improved, though a general criticism to be urged applies to the amount of bunching together. The sea snakes and the cobras are put in the family of the most common harmless species, and the rattlesnakes are made to belong to the same family as the vipers. Similar bunching is apparent in genera, species, and varieties. Mainly the synonymy is drawn from descriptive publications. Those relating to anatomy, habits, etc., are ignored, as also all those in which the names are not accompanied by definitions, even though they refer to species previously described by competent and cited authorities; the amount which they in the synonymy might add to knowledge of genetic affinities or of distribution being thus entirely disregarded. In consequence, there is confusion in regard to authorities, credit being given to later authors for what really was pointed out by the earlier, and a considerable number of the genera will be renamed in attempts to restore prior designations. The omission of many synonyms that had been defined is probably due to inadvertence. Such a work is necessarily an approximation; the present ranks among the best.

An exceedingly valuable contribution to the painful history of witchcraft persecutions is Dr. Sigmund Riezler's 'Geschichte der Hexenprozesse in Bayern' (Stuttgart: Cotta). Hitherto no adequate account of the origin and spread of this delusion and the prosecutions to which it gave rise in Bavaria has ever been written, so that Dr. Riezler may be justly regarded as a pioneer in this special province of research. He calls attention to the inveteracy of these phenomena, and states that the authentic history of the Bavarian stock, comprising fourteen centuries, is, during nearly thirteen centuries of this period, pervaded and more or less conditioned by a belief in witchcraft, which had its source in old German paganism and was therefore treated at first by the Christian Church as mere superstition. During the thirteenth century, however, witchcraft began to be regarded as a terrible reality, in which the Church detected the direct agency of the devil, and thus laid the foundation for the fearful persecutions of the sixteenth and seventeenth centuries (1589–1631), so vividly described in the third chapter of the present work. The first effective reaction against prosecutions for witchcraft in Bavaria emanated from the jurists of Ingolstadt; also the 'Theologia Scholastica' of the Jesuit Tanner (published in the same city in 1626–27) contains as bold a protest against judicial torture and other perversions of justice in such trials as the prudent father perhaps dared to make. In the concluding chapter we have an account of the gradual disappearance of the delusion, leading to the abolition of judicial torture on July 7, 1806, and the publication of a new criminal code on October 1, 1813, in which heresy, witchcraft, and magic are not mentioned. In the appendix we have a full analysis of Hartlieb's 'Buch der Zauberei,' written in 1456 and preserved in a Heidelberg codex, and the text of an "Interrogatoria" dated 1622 and printed from a manuscript in the Munich archives.

In a pamphlet of fifteen pages entitled 'Vater, Sohn und Fürsprecher in der Babylonischen Gottesvorstellung,' and just published by Hinrich in Leipzig, Dr. Heinrich Zimmern, Professor of Assyriology in the university of that city, makes a short, but exceedingly suggestive, contribution to the science of comparative religion. The Babylonian Trinity consisted of Ea the Father, Marduk the Son, and a fire-god bearing different names, Gibil, Girru, and Nusku, and performing the office of a paraclete. In the passages cited, Marduk serves as mediator between Ea and the human race, and is sent to heal men of their infirmities and in one case to cast out seven devils. In the ceremonial of the Babylonian court, the function of intercessor between the sovereign and his subjects was assigned to his oldest son, who graciously heard the requests of suppliants and laid them before the monarch. The same ceremonial was naturally assumed to be observed in the court of heaven, where God the Father could be approached by the children of men and made to listen to their petitions only through the mediation of his Son.

Kiepert and Huelsen's 'Formæ Urbis Romæ Antiquæ' (Berlin: Reimer) contains three maps. The first is of the republican period, the second of the imperial, and each is on the scale of 1:10,000, half the scale employed by Canina. The third, on a much larger scale (1:2,500), covers the Palatine, the forums and their neighborhood in the imperial age. All three are entirely new maps, based upon the latest surveys and discoveries. Ancient remains are entered in black, modern streets and important buildings in red. The maps, a little over two feet square, are folded loosely in the cover of an accompanying volume, which contains, besides the preface and a bibliography, a most welcome *Nomenclator Topographicus*, compiled by Huelsen in 100 pages. This does for Rome what Milchhoefer's *Schriftquellen* has done for Athens. It is a list of all the ancient buildings and the most important other monuments, together with references to the ancient authorities and to significant mediæval and modern books in which they find mention. The names of the editors are a sufficient guarantee of the excellence of this work, which from its convenient size and moderate price will take a place that Lanciani's great map can never obtain.

The important work which is being done by Mme. Th. Bentzon in making American life and American literature known to the French is continued in the last number of the *Revue des Deux Mondes*, in the form of a study of the work of Mary E. Wilkins. The best method is chosen for giving the readers of the *Revue* some comprehension of Miss Wilkins's artistic quality. One story is in the first instance translated entire, choice being happily made of 'A New England Nun,' and there follow sketches of other situations, and a fuller rendering of the outline of 'Pembroke,' together with much keen and sympathetic criticism. Madame Blanc (to give her her rightful name) is fully alive to the difficulty of the task of making the New England temperament, and especially the New England abhorrence of a life of self-indulgence, intelligible to the French consciousness, but she is successful, here and elsewhere, so far as the difficulties of the task are not insuperable. The critic is herself not only a skilful novelist, but also an energetic worker in the movement for the reformation of French manners, of which Melchior de Vogüé, Paul Desjardins, and M. René Doumic are the chief leaders.

A frank, though anonymous, writer in *La Réforme Sociale* gives a very gloomy view of the present condition and future prospects of the French Congo, a territory three times as large as France. Since 1884, the second year of the colony, the number of mercantile houses has increased from nine to fifteen, of whom seven only are French. There are four planters, one being a Frenchman with capital; but the officials have multiplied sixfold, from 32 to 187. The receipts from customs have risen from $40,000 to $170,000, an increase due chiefly to the fact that the duties are three times as great as they were twelve years ago, though a rebate of 60 per cent. is allowed on importations from France. Since 1890 the commercial development has been stationary, and is now apparently beginning to decline, a Dutch company being the only one conducting its business with a profit. The only persons benefited by the colony are the officials, the missionaries and the blacks dependent upon them. The writer closes with the remark that it seems as if the European nations had been blinded by Providence in their mad rush to acquire in equatorial Africa territory which had no present or prospective value.

—The September number of *Harper's Magazine* meets a need of the moment by calling attention, through Prof. Woodrow Wilson's article "First in Peace," to the qualities of character which, in the opinion of our forefathers, constituted a leader of the people. It clearly appears from this chapter of Washington's history that dignity and reserve of

manner were no obstacles to popular confidence and affection, "a grave sincerity" having characterized his bearing at all times. Fulsome congratulation of his fellow-countrymen upon their greatness, real or imaginary, formed no part of his public utterances, which were marked rather by a determination to impress upon them a sense of their peculiar dangers and mistakes. Wealth, with sound judgment and economy in the care of it, did not make him less a hero in the eyes of the plain people, his pleasure in the profitable and thrifty management of his estate having been patent to all observers, and forming now a point on which Prof. Wilson dwells with picturesque and vivid detail. No time could be better than this for clearing up false conceptions of our national ideals, and for bringing out in their true proportion the full personality of the leaders with whose names our politicians still conjure. Mr. Theodore S. Woolsey has contrived, while dealing with so apparently remote a subject as old silver, to keep his patriotism in view by suggesting that the productions of silversmiths who emigrated to this country and "did as good work here as at home" should be at least as valuable and interesting to ourselves as any other. To give to old American-made plate, he goes on to suggest, an historical and commercial value, collections similar to those shown within the past fifteen years in Amsterdam, Carlsruhe, Budapest, and many European capitals must be exposed to examination in this country. From a third article, "A Summer among Cliff Dwellings," may be drawn flattering proof that our western desert is not outdone by the so-called Old World in its capacity to fire imagination by the antiquity of its relics.

—In the current *Atlantic* Prof. McMaster emphasizes his own dissent from the belief of the fathers that the people were not fit to be intrusted with the high duty of electing the President. His article, however, which begins at the point of time when the reader has been loath to break off in Prof. Wilson's, leaves room for an opinion that the changes between the first elections and that of 1840, memorable for the introduction of "all the paraphernalia still resorted to as a means of arousing the ignorant, the prejudiced, and the emotional voter," have been of the nature of a revolution as much as of an evolution. A further transfer of political power which has taken place since the time when the Constitution was still practically unamended by the action of successive political parties, is dealt with by Prof. Frederick J. Turner in an article on "The Problem of the West." The unprejudiced temper in which this Western scholar treats of the questions of the now ruling section of the country gives another cause for regret that "the influence of the scholarly, thinking, philosophical class is not felt in American progress nearly as much as it ought to be." For the faith of those who believe in the inherent capacity of democracies to work out their own salvation in the long run, there is ample encouragement to be found in Booker T. Washington's "Awakening of the Negro." The school directors of most Northern towns might profit greatly by a careful consideration of the results of industrial training (joined with academic) in promoting "thrift, economy, and push" in certain portions of the "Black Belt of the South." Fiction in this number, which includes part of a serial by Henry James, is represented by Miss Jewett, Kate Douglas Wiggin, Kate Chopin, and Mary Hartwell Catherwood—a fair indication of the proportion of creditable work in this line now done by women, inasmuch as the *Atlantic* eschews the story, short or long, which is lacking in literary merit.

—The loss which all lovers of good quality in current fiction have lately suffered is brought home to readers of *Scribner's* by Prof. Brander Matthews's sketch of the life and work of his friend and former collaborator H. C. Bunner. Mr. Bunner's versatility, as editor of *Puck* and as a maker of bound volumes, broadened the circle of those to whom he gave pleasure, while the sentiment with which, as Prof. Matthews points out, he clothed his native city of New York, constantly gave to his prose and his verse an American color and tone of a sort that can ill be spared. The new National Portrait Gallery on the "finest site in Europe" finds an efficient introducer to the public of the magazines in Cosmo Monkhouse, who does, with the aid of illustrations, as much, perhaps, as can be done by the unsatisfactory medium of words to show what has been added to the overflowing wealth of the sights of London by the better housing of scattered and hitherto partly inaccessible paintings. "Song, Youth, and Sorrow," by William Cranston Lawton, is a creditable experiment in metre, full of agreeable suggestions of poetic studies. Frederic Irland and Frank French supply two articles of the type, now almost indispensable to a magazine, which deals with open-air themes, and leans heavily on illustrations for support; one describing "Sport in an Untouched American Wilderness," the other making "Country Roads" its subject. August F. Jaccaci continues the account of his rambles in the country of Cervantes, while Vierge keeps up the vivacity and finish of his spirited illustrations.

—Rival handiwork to that of this clever French draughtsman is to be found in the *Century* in the pictures by Joseph Pennell, who has chosen the south of Spain as the scene of a summer's work. The element of human interest, so conspicuous in Vierge's work, dwindles before the beauty of the architecture or the "almost exaggerated picturesqueness" of the landscape as seen and portrayed by Mr. Pennell. Mrs. Pennell, as usual, plays cicerone to her husband's pencil, and keeps her accustomed balance between enthusiasm and common sense. The results of thirty years of almost continuous palæontological exploration are put before the reader in condensed form in Prof. Henry Fairfield Osborn's "Prehistoric Quadrupeds of the Rockies." The elaborate illustrations to this article are by Charles Knight, who, by aid of skull and skeleton, has attempted to reproduce for the American Museum of Natural History a pictorial idea of the living forms of ancient beasts over whose graves about three miles of rock has been lying vertically for more than a million of years. In another paper an Arizona miner briefly rehearses his adventures in the goldfields of Guiana, and casts his vote in favor of the stringent enforcement of the British colonial laws, as preferable to the rule of chance. But the more noticeable portion of the number consists of serials, upon one of which at least, "Sir George Tressady," all eyes are expectantly turned.

—Mr. Oscar Browning, the editor of Lord Gower's dispatches from Paris during the early years of the Revolution, has given, in the August *Cosmopolis*, an analysis of certain documents which will, if authentic, "make it necessary to rewrite the tragedy of the Reign of Terror." They are one part of the Dropmore papers, and belong to the fourteenth Report of the Historical Manuscripts Commission. They consist of twenty-eight bulletins, and purport to be an account of the proceedings of the Committee of Public Safety written day by day by one of its secretaries, an ardent royalist, and transmitted to the British Government through Francis Drake, the English Resident at Genoa. Mr. Browning evidently does not regard the papers as above suspicion, but to any one familiar with the history of the Great Committee it seems surprising that he should have deemed an extended account of them necessary until their character had been carefully determined. On their face they contradict much that has already been established on the best historical evidence; and, among other things, represent the committee as more reckless and ferocious than the *Septembriseurs*. They reveal Sieyès, who was "content during the Terror with the simple glory of living," in the rôle of one of the most energetic and bloodthirsty of all. Fortunately, through the editorial skill of the French historian F. A. Aulard, the acts of the Committee are now in course of publication, the ninth volume, which recently appeared, carrying the records well into the winter of 1793–1794. These records show, to take one example, not only that the Committee did not plan the famous scene of the 7th of November, as Mr. Browning's documents assert, but that the members took the lead in repressing the anti-Christian crusade. Truly, if Pitt expended much English gold upon documents of this sort, he was not a thrifty statesman.

—Prof. E. B. Tylor has in the *Nineteenth Century* for July an article on the Matriarchal Family System, which, like everything he writes, is valuable. He thinks that Westermarck's inquiry (in his 'History of Human Marriage') tends to prove that the groundwork of the human family is, in accordance with the older view, patriarchal. If it is true, as naturalists and hunters tell us, that a sort of family life, lasting, for the sake of the young, beyond a single pairing season, exists among the higher manlike apes, it is difficult to avoid the conclusion that the family is an instinctive and not an artificial institution. If the male gorilla keeps watch and ward over his progeny, it is difficult to avoid seeing in him the antetype of the "house-father" and patriarch. What, then, are we to say of the rival theory, that the patriarchal family is a late institution—that, in the real primitive family, descent was traced from the mother? According to the matriarchal theory, the early condition of mankind was "promiscuity." There was neither marriage nor giving in marriage; instead of organized society there was a horde. Paternity being impossible to establish, descent was traced on the mother's, or "safe," side. What are we to do with all the evidence relating to very primitive races still extant, who reckon descent, not as we do, but on the female side?

—Prof. Tylor's answer to these questions is, that the essential point in the maternal system, where it exists (as among the Pueblo Indians, visited by him in 1884), is that the wife remains in her own family. The husband may live with her, or live elsewhere than in the wife's house, but in any case the family is the wife's, the power is lodged in the hands of her brothers and uncles, and the husband cannot be the "head of the house."

Under the patriarchal system, the Sabine women are carried off by force; young Lochinvar secures his bride in the same manner; under the maternal system families keep their married daughters. The system is also, confessedly, connected with that of exogamy, by which a people is divided into intermarrying classes or clans, no man or woman being permitted to marry within his or her own; but while maternal peoples are exogamous, exogamous peoples may be either paternal or maternal. Exogamic rules are certainly not contrived to prevent all marriage between kinsfolk, because they take account of only one line of descent, prohibiting the remotest cousins on the mother's side, but allowing the nearest on the father's, or *vice versa*. Prof. Tylor's conclusion from these facts is that the object of exogamy is not moral, but political; the purpose of intermarriage being to bind together in peace and alliance clans which might be otherwise hostile. The same cause which leads to exogamy will lead to the maternal system, but it is an artificial system, introduced as a substitute for and in opposition to the natural paternal system. Whenever the social pressure is removed, the maternalized husband will emancipate himself from his inferior position, and the tendency will be towards a universal paternalism, both in family life and in the system of descent such as generally exists throughout the world to-day. Falling in with a party of Ojibwas, Prof. Tylor asked a girl what was her totem, to which she replied that she was a Beaver. "'Then,' I said, 'your mother was a Beaver'; but her reply was, 'No, it was my father.' They all seemed as much surprised at being thought to count clanship on the mother's side as I was to find that the customs of their forefathers had become strange to them."

—M. Victor Turquan publishes in the *Revue Bleue* of August 15 a curious study entitled "La Statisque aux Salons," in which he enumerates the works which have been exhibited at the Palais de l'Industrie and at the Champ-de-Mars, together with the artists who have produced them, classified by sex, civil condition, nationality, and, in the case of those of French birth, by their native department. The Salon of 1896 was the one hundred and twenty-second in order. This does not mean that the Salon is only a hundred and twenty-two years old, for its exhibitions have not always been annual. There were ten Salons under Louis XIV., twenty-six under Louis XV., nine under Louis XVI., nine under the First Republic, five under the First Empire, six under the Restoration, sixteen under Louis Philippe, four under the Second Republic, thirteen under the Second Empire, and twenty-four under the Third Republic. The Salons were quite as irregular in other respects as they were in their chronology. There are surprising differences, for example, in the number of works shown. To take the records of this century only, the exhibition of the year 1800 included only 275 numbers. This figure increased gradually until it became 1,210 at the end of the first decade. Then it fell off for a while until the year 1817; since that date it has steadily increased, until at the present time the number of works offered each year is about 9,000. The number accepted and shown annually varies naturally as the severity of the jury varies. Under the reign of Napoleon III. the number of works shown averaged about 3,000. In the year 1872, 4,367 were offered, of which 2,067 were received. In 1875, 7,345 were offered and 3,862 received. In 1880, when the jury was extraordinarily yielding, 9,254 works were offered, of which no less than 7,327 were shown. In 1891, however, the pendulum had swung to the other extreme, and out of 8,181 works presented only 3,660 were received. This severity has not been kept up, and in the present year 4,879 works were exhibited, being almost exactly half of those presented.

—This year, too, showed at the Champs-Élysées the work of 1,517 painters, of whom 339, or more than a fifth, were foreigners. In the 197 women included in this number 67 were foreigners, or one in three. Among the women painters there were twice as many spinsters as there were wives and widows. The United States stands first in numbers on the list of nations to which the foreign painters belong. We furnish 65 of them; the British Isles 60, Russia 24, Spain 27, and so on. Almost all countries are represented at the Salon except those of the yellow race. M. Turquan furnishes a map of France shaded so as to show graphically the relative fertility in the production of artists of different parts of the country. The most favored regions are the valley of the Seine, Marseilles and its neighborhood, Toulouse, and Bordeaux. Morbihan, Landes, Gers, a half-dozen central departments, Savoy, Basses-Alpes, and Corsica are the most barren. The northern half of France is, much more than the southern, productive of artists, and of this the valley of the Seine is by far the most fertile part—the *hortus inclusus* of the Muse.

THE SPEAKER OF THE HOUSE.

The Speaker of the House of Representatives. By M. P. Follett. With an introduction by Albert Bushnell Hart, Ph.D. Longmans, Green & Co. 1896.

THE Speakership of to-day is a product of our legislative circumstances and conditions. This office, without a prescribed term, and almost without a prescribed power, which is merely mentioned in the Constitution and hardly mentioned in the statutes, and is filled by one of the houses of Congress without the co-operation of the other or the approval of the President, has become, in the opinion of many wise observers, the most powerful position in the Government. At the same time, at the other end of the Capitol, is an officer presiding over the higher branch of the national legislature, who is of higher rank, who is chosen by the people of the United States, whose term of office is prescribed by the Constitution, yet whose office is also regarded by many wise observers as the most *powerless* in the country.

The legislative circumstances and conditions which have produced this result are these: During the present century the business management of the House of Commons has gradually and practically become vested in a "steering committee," as it would be called in Congress, popularly known as the Ministry. This committee determines, with some exceptions, what business shall be brought before the House, and what shall not be. It is true that the Ministry is not termed a committee, and that it is not formally appointed by the House, and that its members perform executive duties; nevertheless it manages the business of the House, and, if it becomes incapable of maintaining that management, the House discharges it and incidentally turns its members out of their executive offices, and obtains a new committee of management, a new ministry. The Constitution of the United States did not provide for legislative management. It was supposed that each of the houses could take care of itself. In the Senate this is still done, and in the House it continued to be done so long as the House continued to be a self-manageable, compact body. But as the House grew larger and was composed more and more of undisciplined and inexperienced material, management became more and more necessary; and this management gradually but ever increasingly was assumed by the one man who possessed a semblance of authority over the House. Only two powers were intrusted to the Speaker—the power to recognize members or not recognize them, and the power to appoint committees. But these two powers may be likened to two grains of mustard seed planted in a hotbed. From them has sprung, and out of them has grown, all the overshadowing authority, positive and negative, which is wielded by the Speaker of the House of Representatives. The story of this extraordinary growth is told in the book which we are now reviewing.

The explanation of this book, the reasons why it came to be, the lines upon which it proceeds, and the methods by which it has been wrought, are best told by a few sentences in Prof. Hart's introduction and the author's preface:

"This book," says Prof. Hart, "represents the strenuous labor of a well-equipped investigator for more than half of each year during four successive years. Whatever may be done by diligent search into the records, by visits to Washington, by conferences with ex-Speakers, and by a comparison of all her varied material, has been done by the author. . . . Miss Follett has made her own discoveries, arranged her own material, and expressed her own results in her own words, subject only to criticism and suggestion."

"To Prof. Hart," says Miss Follett, "under whose direction this work has been prepared in the Radcliffe College Seminary of American History and Institutions, I am under the deepest obligation for advice, for valuable criticism, and for constant interest; without his continued help, and without the stimulus of frequent discussion with him, this study would never have been completed."

In saying this, we have no doubt that Miss Follett speaks as truly as modestly—that is, that she states her case with scientific accuracy. It is always reassuring to reader or critic when he finds that an author understands his own limitations; for that indicates hopefully that the author comprehended the details of his work ere he welded them together and set them before the public in the form of a book. Many people will admit that this is a remarkable book for a young author; many more people will admit that it is a remarkable book for a young lady; but when we read what may be called the practical part of the book, the multifarious instrumentalities of the Speaker's power, the things which he does, the things which he refrains from doing, the reasons upon which he acts and the influences which restrain him from acting, and view in it, clearly, the complexities of that tumultuous parliamentary body which we know sometimes as the "bear garden" and sometimes as the House of Representatives, we are tempted to go farther and say that it is a remarkable book to have been written by any other person than a member of Congress—by a member having much experience, studious habits, commendable industry, and endowed with unusual powers of analysis and generalization. Miss Follett, we are informed, is a daughter of "good old New England

stock," a graduate of Radcliffe, and a student of history in other institutions.

Having said this much of the author, we shall now speak of the book precisely as if it had been written by any other person. It consists of eleven chapters, which may be assigned to five parts. First, we have the history and growth of the Speakership—the first appearance of a Speaker in the House of Commons, the English Speaker, the Colonial Speaker, the Continental Speaker, and so on to the Speakership of the Constitution. Second comes the choice of the Speaker, the process of selecting him, the method of electing him, the troubles of contested elections, and the great contested election instances of 1839, 1849, 1855, and 1859. Third, we have the most attractive portion of the book, "The Personal Element in the Speakership"; the early Speakers; the eminent Speakers; the Speakers in whose hands the powers of the Speakership have been expanded or abused—Clay, Polk, Winthrop, Banks, Pennington, Blaine, Keifer, etc. Fourth, we have the most useful portion of the book, to which seven of its eleven chapters are given, the powers and prerogatives of the Speaker. It is this portion of the book which is a valuable contribution to studies of Constitutional law, and the study of a vital subject. It should be read by every thoughtful citizen. Finally there comes "The Speaker's Place in our Political System," or, rather, the controlling influence of the developed Speakership as it now exists upon the law-making power, and the part it plays in directing or thwarting the political purposes of the country.

It is evident that the author has kept a tight rein upon herself with the intent of scrupulously keeping in the proper road of one who journeys through the regions of constitutional history; but there is one part of her work in which, we think, she might well have allowed herself more rein—we mean the part in which a young author is expected to err in the opposite extreme, the dramatic part. By dramatic part we of course do not refer to the screechings and howlings and all the crudities and absurdities which biennially demonstrate how much infantile material there is in the House of Representatives. The dramatic element plays no unimportant part in the affairs of men; and there have been times when the election of the Speaker was a matter of supreme national importance and the event one of truly dramatic interest. Miss Follett sketches in a dozen pages, clearly but too briefly, "the four great crises in the choice of Speaker, in 1839, 1849, 1855, and 1859." The most important of these was the election of Banks in 1855, or rather in 1856, for the contest lasted more than two months, and in a community quivering in the excitement of distractions which were soon to plunge the country into civil war. If any parliamentary conflict was ever entitled to full historical treatment, including the dramatic, it was this election of the Speaker in 1856, and if there is any book in which one might reasonably expect to find it, it is in this book devoted exclusively to the Speaker of the House. Miss Follett gives four pages to it, and depicts the political situation clearly; but she does not tell us of the counter attack on Banks which came perilously near to defeating his election—the attack founded on the once famous phrase which he used in a speech out of Congress, that he would, if necessary, "let the Union slide." Neither does she tell us of the technical objection which was raised to his election on the 133d ballot; nor of the handsome conduct of his leading opponent, Gov. Aiken of South Carolina, who rose and conceded the election of the member from Massachusetts, and requested permission of the House to escort him to the chair. This portion of the book will bear amplifying, and amplification will make it more interesting to the general reader, and will preserve some bits of history which should not be lost.

In this connection, too, it may be noted that Miss Follett's mind is so stored with the facts and incidents of our legislative history, and her intercourse with historical scholars like Prof. Hart has been so frequent and familiar, that she has come to overestimate the knowledge, or at least the memory, of ordinary readers. We do not recall a page in the book for which we would recommend condensation—a rare virtue, indeed, in books of the present day—but there are many pages which would be the better for amplification. The reader of history in a busy world needs to know what the writer is writing about without stopping to cogitate and recall. What, for instance, will the reader who is not fresh from Adams's 'Administration of Jefferson' make of the following paragraph (p. 322) on the first reading of it?

"An extreme illustration of executive influence was Jefferson's plan for breaking up Randolph's coterie in order to stop their steady opposition. An attempt was made to awe Monroe; Nicholson, Randolph's strongest supporter, was made Judge of the Maryland Circuit. 'The Speaker remained to be dealt with,' continues Mr. Adams in his account of this incident; 'to buy him was out of the question; to crush him was only a last resort; no other resource was left than to coax him. "Some enemy, whom we know not, is sowing tares between us," wrote the President to the Speaker, at the moment when he was warning Monroe, and lifting Nicholson to the bench. "Between you and myself nothing but opportunities of explanation can be necessary to defeat these endeavors. At least, on my part, my confidence in you is so unqualified that nothing further is necessary for my satisfaction."' Jefferson's tactics were successful. He infused his own ideas into the House, got rid of the most rebellious spirits, triumphed over the Speaker, and successfully dominated Congress."

On the subject of the quorum, Miss Follett deflects from her plain historic road and takes part in what must still be regarded as an unsettled and recurring political controversy. Her views and opinions and reasons, moreover, are but a reflex of those of Speaker Reed. A partisan argument is pardonable if there be somebody at hand ready to answer it. Miss Follett's is not a partisan argument; but her book is one which lays down principles intended not merely for the last Congress, or the next Congress, or the present condition of things, but apparently for all time. Such a book, if it would be philosophical, must, on a controverted question, fully present both sides. It is not enough for it to state objections merely to bowl them down. It must go deep—deeper than the disputants—and treat the subject in a truly comprehensive way. Miss Follett, like Mr. Reed, goes no deeper than the facts upon the surface—that there are members present who do not vote, and without their votes there is no quorum, and without a quorum nothing can be done. Thereupon, like Mr. Reed, she concludes that the way to have a quorum is to count it. Political expedients which are good enough for a strong, determined, partisan presiding officer are not good enough for a philosophical writer, whose business, if he take up the problem at all, is to go to the bottom of it and fully discuss it and thoroughly solve it. Here, one side perceives an evil, the absence of a quorum, and the other side perceives an evil, the danger of allowing one person on his mere inspection of the House to declare a quorum present; but behind these lies a third and greater evil which both sides may perceive, and should perceive, and some day will perceive—an evil which the philosophical writer certainly should perceive—viz., that this "counting a quorum" means minority legislation—the artificial enactment of a law by perhaps one-third of the House plus one vote, when nearly two-thirds of the House may be opposed to it.

Miss Follett apparently regards the refusal of a member to vote and make a quorum and a dilatory motion as one and the same thing—as obstruction—the obstruction of national legislation by the perverse conduct of the individual member. She cites "one of the oldest rules of the House" as the moral and legal authority which governs the case, and says that every member is "under strong moral obligation to obey the rules requiring him to vote," and that "his acceptance of his trust, and especially his oath of office, make it incumbent upon him to discharge the duty of voting, or at least to help to make up that number by which alone business can be accomplished." But there is an immense moral difference between the member who sits still and holds his tongue and simply refrains from helping the minority of the House to impose their will on the country in the form of a statute, and the member who forces himself upon the House, consumes its time, and, by his positive action, obstructs its business and thwarts the will of the majority. The difference is that the one is trying to maintain and the other is seeking to overthrow the principle that in this country the majority must govern; or, stated differently, the one member is merely *not helping the minority to govern*, and the other is *preventing the majority from governing*. It is true that members should attend the sittings of the House and assist in the transaction of its business, and should not evade the responsibility of voting. These, speaking in a general way, are their duties. It is also true that the Constitution makes a majority of the House a quorum, and allows the majority of a quorum to pass a bill, and that in ordinary matters of legislation this is a convenience. But does this mean that a minority of the House, when it chances to be the majority of a quorum, may seize its opportunity and pass a measure of great magnitude, and at the same time compel those who are opposed to the measure to help enact it into a law? In such tactics the less said about "moral obligation," the better. If the majority of the House think that a bill should be passed, it is their duty to be there and pass it. But should an upright, conscientious man, against his inmost convictions, be compelled by a rule of the House to assist in enacting a statute which he deems to be unjust, unconstitutional, or prejudicial to the general welfare? And is not the obligation imposed by such a rule in such a condition of things a very artificial "moral obligation"—one which must count for very little against the higher obligation which requires the legislator to legislate for what he deems the good of the country? And what matters it whether a man votes "aye" or "nay" so long as his vote will pass the bill?

It does not seem to be observed that there are, indeed, two classes of legislative matters, the ordinary, in which there is no moral or

political question involved, and the extraordinary or political, in which the whole country is interested (as the "salary-grab"), or upon which the whole country is divided (as a tariff bill). In the former, public convenience requires that the majority of the quorum may legislate. In the latter, public convenience is a secondary and trivial consideration. Public honesty and political responsibility are not to be frittered away by rules of the House. What would have been thought of the moral obligation of a member who, by keeping silent, could have defeated the "salary-grab," and by voting "nay" could have passed it? In this country it is the majority which rules, and the majority must be held to its political responsibility. If a new political policy cannot be established by a political majority, it must wait. Obstructing the action of the majority is one thing; relieving them from responsibility is another.

Starting from the premises of "the absolute necessity that some one must assure to the House the opportunity for the proper discharge of its functions," and of the need of leadership and "the lack of leadership" in the House, Miss Follett reaches the conclusions that "the Speaker's power is necessary and salutary"; that "he was never intended to be a moderator"; that "he is the only visible means of escape from a legislative chaos," and that "it is to the interest of good government that the Speaker exercise the responsibility which has gradually come upon him." We deplore this, or rather we deplore that the premises do not cover the whole case, and that the conclusions stop where they do; for our author reasons with such strength and clearness, and fortifies her position with so many illustrative facts, that a large part of her readers will accept her statements as the whole of the case and her conclusions as the end of the whole matter. Even so good a constitutional scholar and so clear a thinker as Prof. Hart says: "I am convinced by it that the Speaker's present status is a natural, normal, and inevitable development of our system of government, and promises good and not evil." These views may be sound for to-day and to-morrow—for this Congress and the next—but they are assuredly short-sighted. Moreover, the ability with which they are presented serves to veil the dangers and evils of the system from the growing intelligence of the country.

What is that system? Miss Follett accurately defines it: The House of Representatives "*is no longer the legislative power*"; "*it is not even the maker of the legislative power; it is but the maker of the real maker, the Speaker.*" The legislative work of the House is done, not by the House, but by fifty-two little star-chambers termed "standing committees." They sit in secret; they keep no record of their proceedings; nothing can be considered which they do not bring before the House; they report what they choose; they withhold what they choose; they are appointed by the Speaker; his power to appoint "is an absolute power"; and he can "constitute the committees so that he may to a great extent procure or prevent what legislation he wishes." Finally, the Speaker can recognize whom he will, and can refuse to recognize whom he will. He can "practically take away the representation of a district." "Cases are not wanting where members have sat through two years of service without ever being permitted to 'catch the Speaker's eye.'" Who is this national dictator? A man selected and chosen by the 357th part of the people of the United States. Well does Miss Follett say: "His status as the leader of the House of Representatives should be looked squarely in the face"; and his position is now "the possession of such important prerogatives without definite responsibility."

Under the head of "omissions" we must express a regret that Miss Follett has not added a chapter on the business methods of the House of Commons. Her work is entitled "The Speaker of the House of Representatives," but it might with equal propriety be entitled "The Way Congress Does Business." A clear statement of the modern methods by which the House of Commons does business would, in connection with her other work, form an invaluable lesson for her countrymen at this time and upon this subject. She alludes to Parliamentary proceedings and the control of the Ministry; but she does not tell us how the legislative time is apportioned between the majority and minority; nor how it is divided between the Government and the members; nor how the right of recognition is distributed without favor among individual members by lot. She alludes to the selection of the committees by a committee; but she does not point out that these committees are composed of members as absolutely impartial as jurymen; that the committees sit with open doors; that they keep a record of all that is said and done, and that that record is published daily for the information of the House. She extols the control of the Premier over the business of Parliament, and, most wisely, his responsibility for what is done and for what is not done; but she does not delineate how his authority is regulated and limited; how he must daily apprise every member of every motion or resolution or bill or amendment which he will bring before the House; how he must yield part of his authority to the Opposition, and part of it to the individual member, and how he and the Opposition and the youngest member stand, when on the floor of the House, upon an equal footing before the higher authority of an impartial Speaker. Of our new American Premier she forcibly says: "He *at one moment* decides what business shall come before the House; *at the next*, appoints the man who shall guide the House during its deliberation upon that business; then may himself take a responsible part in the affair—managing it, debating, and voting upon it—and, finally, he decides questions of order which have arisen *from this very matter.*" Assuredly this is Premiership run mad. Miss Follett has shown herself to be admirably qualified to analyze and depict the procedure of English legislation and show the American citizen that the British Premier does not and cannot exercise the unlimited and inconsistent powers of the American Speaker, and that there would be a revolution if he did. Let us hope that a future edition of her work will give us this much-needed lesson.

MORE FICTION.

An Odd Situation. By Stanley Waterloo. Chicago: Way & Williams.

A Mountain Woman. By Elia W. Peattie. Chicago: Way & Williams.

Jersey Street and Jersey Lane. By H. C. Bunner. Charles Scribner's Sons.

HITHERTO we have regarded the introduction of an unknown novelist by one of established reputation as the expression of a kindly desire to give the struggling confrère a good send-off, to induce the public to buy his book and afterwards to read it. In his introduction to 'An Odd Situation,' Sir Walter Besant convinces us that this view of the matter is narrow, if not quite wrong, and shows that the literary introducer is under no obligation to confine his attention either to the person or the thing ostensibly to be introduced. On the contrary, he may detach himself from the supposed subject of discourse and free his brain of whatever burning thoughts happen at the moment to be demanding utterance. When Sir Walter Besant undertook to introduce Mr. Stanley Waterloo and his work, the pressure of accumulated information about the city of Chicago was apparently more than he could bear. He was feeling that the ignorance of the British public about Chicago was intolerable and must be enlightened, no matter under what pretext or at whose expense. So he proceeded to write an historical sketch uniting the Chicago of sixty years ago, "a kind of barbican, or advanced post, against the red Indians," with the Chicago of last April, which, we infer from his description, was then a kind of Athens, or last defence of refinement and cultivation against barbarians of whatever color. His appreciation of the greatness of Chicago is really very affecting, and, "given" all the facilities and capacities which he says must be "given," we see no reason for dissenting from his reflection that "it would be strange indeed if there did not come out of all this a growth of literature worthy of joining the literature of Shakspere, Milton," etc.

Probably no deprecating protest will be heard except, perhaps, from Mr. Stanley Waterloo, who may feel that his story will be judged as an illustration of the progress already made by Chicago towards a juncture with the great English literature. One cannot help sympathizing with the unfortunate gentleman for having been used as a milestone, for there is nothing in his work to suggest a vanity so complacent as to claim, or an ambition so vaulting as to covet, such distinction. The story is written in the first person, and the narrator frequently regrets that he has not the skill to make it as interesting in the telling as it was in the living. The regret will be perfectly comprehensible to most readers and ungrudgingly approved by all. The characters are plain farmers—very plain, indeed—slow in talk, sober in reflection, very genuinely uninteresting. The incidents, chiefly relating to the annoyance inflicted on those farmers whose lands lie partly in the United States and partly in Canada, are not exciting. A gift of humor might have saved the tale, but Mr. Stanley Waterloo of Chicago lacks that as completely as the gift of narrative. Sir Walter Besant, having arrived at his author in the last paragraph of the introduction, says cautiously that it is not his business to speak in commendation of the book. There we differ with him without apology, and say that, in the premises, it is rather more his business than to "boom" Chicago or any literary group or publishers therein. If he could not praise Mr. Waterloo, he should have let him alone and confided his precious impressions to a railway bill or other advertising medium.

Such shabby treatment of an author by an introducer is, we believe, unparalleled, for it is equivalent to announcing that there is nothing in the book to praise, and is therefore grossly unjust to Mr. Waterloo. Few authors have a finer or juster sentiment for nature, and very few are so modest, serious, and sincere. Moreover, he is instructive, having gone rather deeply into the effect of perpetual fried pork and pie on the body and mind of the

American rustic. His conclusions on this vital issue are admirably acute. Equally just, and supported by neat little parallel columns of statistics, are his reflections on the absurdity and positive harmfulness of the invisible customs line between the United States and Canada. Canada appears to be the chief sufferer, and the political argument tends to indicate her folly in preserving allegiance to the Empire. Putting one thing together with another, we have a suspicion that the loyal British novelist may not have read the book he introduces.

The transportation of a magnificent primitive female, a daughter of nature, from a mountain fastness or isle of the ocean to a giddy centre of fashion is a favorite operation in fiction. Long ago Mr. Black performed it successfully in 'A Princess of Thule,' and recently Mr. Meredith has done it vigorously and volubly. As a matter of fact, no woman ever inspired the same sort of sentiment as a mountain or a cataract—an abstract, impersonal sentiment exclusive of sympathy; and the sight of one whose appearance actually did suggest such objects would probably inspire more dismay than admiration. Against the few successes in humanizing a dryad, nymph, or mermaid may be scored innumerable failures, and of these none more complete than "A Mountain Woman," the first of a volume of short stories by Elia W. Peattie. This author has not shown discrimination in giving the first place to the stolid, enigmatical lady, described by an ardent lover as a "remnant left over from the heroic ages." All the subsequent tales, some soberly realistic and some pleasingly fantastic, are infinitely better, both in idea and in treatment. "Jim Lacy's Waterloo" is an impressive sketch of the trials that encompass the farmer in Nebraska, and the horrors of loneliness and thankless labor that frequently drive mad the farmer's wife. It is easy to see why a man with Lacy's strong passions and limited intelligence should fall on the Government and Eastern capitalists as responsible for untimely drought, the casual cyclone, dear transportation, and low prices. He must vent his bitter disappointment on something tangible, or curse God and die. His raving about the relation between fiat money and universal prosperity is just as much like argument as is the familiar declamation of the professional Populist orator. The assumption is false and the words are foolish, but in Lacy's case, as in many others, the facts behind are tragic. The remaining stories of the volume have a pathetic strain, with enough lightness to mitigate the hopelessness of "Lacy's Waterloo."

Mr. Bunner's last volume, entitled 'Jersey Street and Jersey Lane,' includes reminiscences of the New York of his boyhood, sketches of life seen from his office window, and some incidents of suburban life, trivial in themselves, but of absorbing interest to the participators. The work, with its casual narrative and accompanying serious or humorous reflection, is that of an essayist—work in which Mr. Bunner was not so perfectly at home as in verse or fiction. It is all pleasant and smooth and supremely tolerant, but there is something lacking, and we think that something is control of his subject and spontaneity, both characteristic qualities of most of his work. In some of the sketches the matter is a little thin; only a very accomplished essayist could use it effectively without seeming to strain points and to be finding the affair rather tiresome. In others, noticeably "The Bowery and Bohemia," there is a surplus of matter, and here we find a failure of synthesis and concentration. The knowledge and the feeling for a great picture of New York's most famous highway are both evident, but the composition is capricious and scrappy, the impression is tantalizingly incomplete, and the reader feels that the Bowery has just missed a chance of assured immortality.

Proportional Representation. By John R. Commons. New York: Thomas Y. Crowell & Co.

Mr. COMMONS gives a fair account of the origin, progress, and present condition of the movement for minority or proportional representation, now nearly forty years before the public. The conclusions which the story seems to establish are, first, that there is no great difficulty in making a proportional system work so as to produce a legislative body in which the numerical relations between the parties will reflect pretty accurately those in the electorate; second, that the other results predicted for it have never been attained. Its advocates in this country have always made the mistake of expecting too much from it. See, they say, what a shocking condition our legislatures are in: assemblies of unknown, ignorant, corrupt men, legislating in the interest of jobs and at the dictation of a boss—why do we not find our best men there? Why do we not elect our leading lawyers, merchants, publicists, scientific men? What is it that keeps such men out? The answer they give is, that the whole thing is due to a single cause—the fact that the voter, by the present system of representation, is compelled to choose between one of two party tickets, the names on which he has little or no voice in selecting. It ought to be possible for him in a free country to vote for any one he desires to see elected. Give him the combination of the "cumulative vote" and the "free ticket," says Mr. Commons, and he will vote freely, put good men in nomination, fill our legislatures with them, and redeem the country.

Now, as a matter of fact, wherever any sort of proportional representation has been introduced, as, for instance, in Illinois, where the cumulative vote has been on trial for twenty years, no difference in the character of the representation has been produced. The nominations are the old party nominations, and the Legislature is the same old body that it always was. Ah, it is said in reply, but that is because the cumulative system is not the true plan. Under it the party is still supreme; a plan must be introduced which will make the individual independent of party. A slight change in the machinery will do that. But the difficulty about the whole matter is that the argument rests on the assumption that the voter wants to be independent of party, and of this there is very little evidence. All the evidence brought forward in this book is that wherever any sort of proportional representation is introduced, what the voter tries to do, and usually succeeds in doing, is to make it tell, not in the way of freeing himself from party, but of getting all the advantage out of it he can for his party. Moreover, there is nothing in the present system to prevent voters, say in a city like New York—a community more important in population and wealth than most of the States—from combining together and putting up independent candidates. Not only this, but it has been demonstrated over and over again that, by combining against both parties, an independent mayor can be elected. How often is it done?

The fact is, and no political system can afford to ignore it, that the natural inclination of the average man is not to be independent, and spend his time thinking and consulting with his friends and neighbors as to who is the best person for mayor or representative or even coroner; but to let some one else do it for him, while he shelters himself behind the Party in whose name it is done. An obscure person—and the greater part of the human race are still obscure—gives himself importance by being able to label himself Republican or Democrat. It connects him with a great historical organization, a nation within a nation. Independence of character and mind is exceptional; independent movements are exceptional; and even when independent persons unite for a temporary object, their independence will drive them apart again when that object is attained.

This very peculiarity of human nature no doubt makes it all the more important that every opportunity for independent action in politics should be given, and it need hardly be said that we are in favor of reinforcing motives to independence wherever they exist; but it seems to be still an open question whether any system of proportional representation yet invented does tend in the direction of independence or not. One thing is quite clear, that a system difficult to understand cannot encourage independence, because one reason why people are not independent is on account of the mental effort it costs. One great beauty of party is that it saves mental effort and study. Now for anybody to make an intelligent use of the combination of the cumulative vote and the free ticket requires a good deal of mental effort, and the average voter will not make it. The people who will make it are the party managers, but not in the interest of independence. To sum up the whole matter, the impression produced on our mind by the arguments and by the evidence of Mr. Commons is precisely the opposite of that which he seeks to produce. It is that the general tendency of the elaborate system of proportional representation which he recommends would be to increase rather than to diminish the hold of the party managers on the great mass of voters.

The Ouananiche and its Canadian Environment. By E. T. D. Chambers. Harper & Bros. 1896. 8vo, pp. xxii, 357, illustrated.

OUANANICHE is a Canadian name, from the Montagnais Indian, applied to the common salmon of eastern North America. Individuals that reach the sea change slightly in appearance, and then are differently named. The landlocked salmon, so called, of New England and the ouananiche of the region to the northward differ only in name. Excepting an occasional outside excursion, the territory covered by Mr. Chambers's book is the great Labrador peninsula, and attention is directed chiefly to the region about Lake St. John. The author is more than a contemplative angler and a good writer; he is a careful student and an excellent observer. By scientific treatment of his subject he has produced one of the most valuable works in the literature of angling. Beyond the direct interests of the angler, immediately relating to the salmon, their haunts, habits, capture, and fellows in the waters, it contains the latest information regarding the country, with the best accounts of the scenery, routes, guides,

or game, and a chapter on the Montagnais, their folklore and their language. With frequent glimpses of forests and lakes and streams, hardly yet explored, which year by year attract greater numbers of our brethren to the other side of the St. Lawrence in pursuit of adventure, sport, or recreation, the pages are enlivened by vivid portrayals of scenes in the wilderness telling of the perils of navigation, of the skill of the guides, of the struggles with the game, of the blessed freedom from restraint, of the wild men and the abundance of wild things in the midst of the wildest surroundings, in such terms as surely will quicken the pulses of men whose souls inspire in sympathy with that of nature. Tourists and lovers of the rod and gun have special reason to be grateful to Mr. Chambers.

There are repetitions, and it would be strange if there were not. The book is something too long. It would have been more readable if divided into two parts; the diversity of subject-matter, and the fact that nearly every chapter is an essay in itself, making such a division practicable. Apart from these minor faults we have noted one or two unimportant inaccuracies, born of the writer's enthusiasm for his subject. One could wish that he had devoted more space to the final chapter, on the Montagnais Indians. This tribe, until the most recent times, has been almost unknown to the world outside of the Hudson's Bay trappers and traders, and, in its unenlightened savagery and strange traditions, its tenacity of ancient customs and wild and unexplored habitat, offers a more interesting study to-day than does any other North American tribe.

The Works of Max Beerbohm. Charles Scribner's Sons. 1896.

We have here seven essays in a light vein. They could have been produced only by the life of London, and London essays they emphatically are. The best of them, "The Pervasion of Rouge," is in praise of Artifice. Everything about it is artificial, the style, the subject, and the ideas. Yet it is based upon an underlying truth which redeems it from absurdity. Hardly any one can question that there is a tendency to reaction in many quarters against the worship of nature which marked the taste of a previous generation. Especially is this true of London, where from time to time a cult—such, for instance, as that of æstheticism—breaks out without rhyme or reason, except that it is in some way connected with art—art being in these cases merely a particular kind of artificiality. Euphuism in the Elizabethan period must have been produced by the same sort of fashionable reaction in favor of the artificial. According to Mr. Beerbohm, rouge and the paste-pot are coming in again as a protest against too much nature; and being, in this field, a reformer, he predicts all sorts of good results. One of them is that the face will no longer be regarded as a vulgar test of character or emotion—a view which tends to "degrade the face æsthetically"—but as something to be prepared by its owner as a thing of beauty for the delectation of observers. Not only this, but the face, well painted and rouged, being no longer a thermometer of the emotions, literature will have to give us real psychological studies in order to make us know what goes on in the mind and heart. A blush, for instance, will no longer mean anything as an indication of shame; a sudden paleness, as the index of fear, will be out of the question. Thus soul will be separated from face, and one will cease to be a mere key for the study of the other. Besides, of all kinds of artifice, surely self-beautification is one of those most obviously suggested by reason and instinct. This, it may be said, raises the question whether such artifice is not open to the objection that it is natural; but the difficulty will be insisted on only by pettifoggers.

Mr. Beerbohm's volume is one of conceits, marked by a good deal of humor and cleverness, and marred by the single fault that he has little or nothing to say. Under these circumstances it is not without reason that he sings the praises of the artificial.

BOOKS OF THE WEEK.

Amram, D. W. The Jewish Law of Divorce according to Bible and Talmud. Philadelphia: Edward Stern & Co.
Balzac, H. de. Modeste Mignon.—The Rise and Fall of César Birotteau. Macmillan. 2 vols. Each $1.50.
Barss, J. E. Cornelius Nepos: Selected Lives. Macmillan. 40c.
Chetwood, J., jr. Immigration Fallacies. Boston: *Arena* Publishing Co. 75c.
Daudet, A. Thirty Years of Paris and of My Literary Life. London: Dent; New York: Macmillan. $1.
Edwards, Rev J. T. Addresses Educational, Political, Scientific, Religious. Eaton & Mains.
Field, E. Revolutionary Defences in Rhode Island. Providence: Preston & Rounds. $2.25
Hill, C. S. The Chicago Drainage Channel. New York: *Engineering News* Publishing Co. $1.50.
History of Banking in all the Leading Nations. Vol. III. New York: *The Journal of Commerce and Commercial Bulletin.*
Houssaye, A. Souvenirs de Jeunesse. Paris: E. Flammarion; New York: Brentano's
How, W. W., and Leigh, H. D. History of Rome to the Death of Cæsar. Longmans. $2.
Kölbing, E. Lord Byron's Werke. 2 vols. The Siege of Corinth.—The Prisoner of Chillon, and Other Poems. Weimar: Emil Felber; New York: Lemcke & Buechner.
Larison, Dr. C. W. Elements of Orthoepy. Ringoes, N. J.: Fonic Publishing House
